Forms of Tenders, and of detailed estimates, will be received on application at this office; and tenders in any other form will not be attended to.

Each Tender must be accompanied by the names of two or more respectable parties, willing to become securities for the due performance of the Contract or Contracts tendered for.

The Directors reserve power to accept of any Tender which they may think fit, whether it be lowest or not.

Tenders must be lodged at the railway office here, before 10 o'clock on Wednesday the 21st April next.

By order of the Directors,

I. H. MUMFREY, Secretary.

Railway Office, 13, Gordon street,
Glasgow, 15th March, 1841.

NORTH KENT RAILWAY, Office, 42, London-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, R.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone, other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

TO RAILWAY DIRECTORS, &c.—Wanted by a respectable young man, a situation as Station Clerk, Station Master, or Superintendant, having filled a similar situation. Testimonials of the most satisfactory description can be given; apply by letter prepaid to C. N., care of Messrs. Williams and Sons, 54, West Smithfield.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,

THOMAS WOOD, Secretary.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of six per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1844.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Halifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 1st, 1841.

RAILWAY MATERIALS AND IMPLEMENTS.—Messrs. MULLINS and MAC MAHON will Sell by Private Treaty on the Lancaster and Preston Junction line, the following articles, in excellent condition for immediate use:—

Three LOCOMOTIVE ENGINES and TENDERS, in good working order, one a 12 inch cylinder, with 5 feet wheels coupled, and two of 11 inch. One with 4 feet 6 inch driving wheels, the other with 5 feet driving wheels.

200 to 300 Earth Waggons, of the very best construction, part equal to carry 2½ yards, with 2 feet 6 inch wheels, and part 1½ yards per waggon, with 2 feet wheels.

Together with a large quantity of Railway Bars, from 30lbs. to 50lbs. per yard, with Chairs and Crossings, and a variety of other articles used in extensive Railway works.

The whole of the above materials, &c. are in convenient situations for either water or railway conveyance to any part of the kingdom.

Application to be made at their Office, Fishergate, Preston.

10th March, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Published this day, price 1s.

PRACTICAL RULES for the MANAGEMENT of a LOCOMOTIVE ENGINE in the Station, on the Road, and in cases of Accident. By CHARLES HUTTON GREGORY, Civil Engineer. In extra cloth, bds.

John Weale, 59, High Holborn.

Digitized by Google

MANCHESTER AND LEEDS RAILWAY COMPANY—GENERAL MEETING.

(Continued from our last.)

The CHAIRMAN said, it would probably not be deemed necessary that they should read over the items of the accounts, as they were in the hands of the proprietors. They showed that the expenditure of the Company up to 31st December last, had been 2,523,508*l.* 19s. 6d.; and that the funds of the Company were then minus, balance being owing to the bankers of 4,691*l.* 10s. 2d. Before the Report was submitted to their consideration, he begged to offer one or two observations. The Report contained matter both of congratulation and regret; congratulation, that they had at length overcome the difficulties which had opposed themselves to the formation of this the most difficult of all lines; and regret, that these difficulties had not been overcome without a much larger expenditure than the Directors ever anticipated, or had communicated to the shareholders. This was a matter of regret to the Directors, not only as being invested by the shareholders with the superintendence of this work, but in their capacity as shareholders, and very large shareholders, as most of them were, in this undertaking. It was to them matter of deep regret that they had not been able to limit the expenditure within the estimate given to the shareholders on a former occasion; they had, however, given such estimates and reports as they themselves had confidence in and felt justified in giving. If they had fallen short of the expenditure as it was now actually anticipated, it had arisen from circumstances over which they had no control. In looking at those circumstances, it was not necessary for him to go over the particular heads of excess, as was done in the Report, but he might state generally that there was a cause of an excessive expenditure in this undertaking which was peculiar to itself, and which, though it was very plain to be seen now that the expenditure was incurred, was certainly not anticipated in the first instance. It arose from the natural difficulties presented by the country. In most undertakings the engineers had a considerable latitude in the direction of their lines. The essential condition of a railway, in order to adapt it to the most beneficial mode of conducting the traffic, restricted it, both in its gradients and in its direction, within certain limits. In their case, the narrow and contracted valley through which they had passed, the very valuable property through which the line had been conducted, the public works—such as canals and roads—which had already occupied the lower part of that valley, and the difficult nature of the ground, had placed the Engineer in a situation where he had not that usual power of deviating, when he met with obstacles, which was afforded in other parts of the country. The fact was, in this line they had been restricted to inches and feet, when, in general, a latitude of 20, 30, 40, or 50 yards was given. In many cases, such restriction had imposed upon them an expense which could not have been contemplated before their actual experience of it. The whims and caprices of particular individuals in the narrow part of the valley had cost the Company, in one instance, as much as 20,000*l.*, without adding one penny to the value of the line. (Hear.) This was a general reason why the expenditure had so far exceeded the estimate. But it might be very naturally inquired why, at the last half-yearly meeting, the Directors had not found that this would be the case. And the Directors, particularly himself, were placed in a mortifying situation by having, on that occasion, so recently stated to the proprietors that the undertaking would be completed for 2,800,000*l.*, when they now found that the total capital required would be 3,172,000*l.* He would just observe, that the estimates were not formed on exactly the same basis. The present estimates were the foundation of an application to Parliament; and it was necessary that they should not only provide the means of doing all that was immediately needful, but that they should look forward and provide the means of finishing and completing the line in a way which they conceived would ultimately be necessary in a few years. The consequence was, the present estimate was formed on a more liberal scale than that of September last, and they thought they were justified in stating to the shareholders what would enable them to place the concern in a situation to do all that was needful for conducting the traffic. A very considerable outlay beyond what was necessary for the traffic in the first instance, was found from experience in the history of railways to be advantageous; but it was only expended in the course of years, and as experience pointed out where and under what circumstances such outlay might be required. Another ground on which allowance might be made for the excess above the former estimate, was this. Since September last, a very considerable portion of outlay, which could not then have been foreseen, had been caused by the necessary requirements of the works. Still there was enough to make it a subject of regret with the Directors that there should be such an excess on the present occasion. All he would say was, that they had endeavoured at all times to ascertain, asaccurately as possible, the amount which would be required, and had on all occasions stated that which they believed would be sufficient for the purpose. In looking back upon the history of the undertaking, he believed, if they had it to do over again, in the same time, and under the same circumstances, that there were few points in which they could save any money. The error was, not that money had been lavished, but that they were unable to ascertain the exact cost. (Applause.) At present, from the best estimate they could form, the main line, with its full complement of engines, stations, and every thing that was necessary, would cost 2,864,000*l.* The confidence he claimed for the present estimate arose from the Directors (finding that their previous estimates had not been borne out) having been doubly anxious, and used further means for coming to a correct conclusion. The engineers did not say that in this estimate any larger sum was included than it would ultimately be for the advantage of the Company to lay out; still, they said that ample provision was made, and that they expected the future expenditure would be rather under than over the present estimate. (Hear, hear.) With regard to another important branch of the undertaking, that of traffic, he would not offer any remarks, as they were now leaving the fields of conjecture, and entering on that of experience. (Applause.) During the eight weeks that had elapsed since the partial opening of the line, the goods had averaged 1,600 tons per week. The Parliamentary estimate had been 2,000 tons; but, considering the break in the continuity of the line, and the circumstances of disadvantage under which the Company had laboured in the first instance, they were convinced from the experience which the superintendent, Captain Laws, and Mr. Gill, who had paid particular attention to that part of the business, had derived within the last few weeks, that they might ultimately expect a much larger portion of goods than they had ever anticipated. (Applause.) That was also one cause why the present estimate for locomotive engines, carriages, &c. was considerably increased; for the amount of carriages and engines required to produce a given revenue, as compared with those necessary for the passenger traffic, was about as four to one. Therefore, seeing that they were likely to have a larger proportion of goods than they expected, they had been anxious, as early as possible to provide for it. They had ordered sixteen more engines than they considered necessary at one time, and there was every reason to believe that there would be full work for them. The only other subject on which he would detain them was the passenger tax, than which no subject was of more importance to the Directors and shareholders of this Company. It was well known that this Company had adopted the principle of carrying the larger number of people at a comparatively low fare, in preference to carrying the smaller number at a large fare. (Applause.) In the first instance, there was the ground of public convenience, which was accomplished by the adoption of this system. It was evident, that of the two modes of proceeding, supposing each to produce the same income, it was the duty, and would be the desire of the proprietors of every line, on public grounds, rather to accommodate the larger number of the public at low fares, than the smaller number at high fares. The only question was, which would produce most revenue. The Directors had given that subject their utmost attention, and had arrived at the conclusion, that it was for the interest of the Company, and they believed of all Companies, to carry the larger number for the smaller fare. (Applause.) It might be proper to state the grounds on which they had arrived at this conclusion, inasmuch as the longer the consideration of the question of tax or duty was delayed by Parliament, the difficulties would increase; and they were exceedingly anxious to press its consideration on members in the present session. They believed the question was not well understood. There had been experiments on other lines with third-class passengers, but not conducted in a way likely to promote their success. Two conditions were essential to make railway traffic pay,—a sufficient number of passengers to bring in the revenue, and that each class should be carried in such a way as to leave a profit. It had been too much taken as a point not to be disputed, that the expense of conveying passengers was at least 1d. or 1¼d. per mile. It was true first class passengers cost that or more, but the principle this Company had adopted was, to endeavour so to arrange the accommodation, and to adapt the means of conveyance, that each class of passengers should be carried at a profit, and that that profit should, as nearly as possible, be equal, as derived from each class; that is, that the ratio of profit should be the same in proportion to the fare. If they received a profit of 50 per cent. from first class passengers they endeavoured so to economise in the mode in which they carried third class passengers as to receive 50 per cent. of their fares. It was true it required three third class passengers to pay into their exchequer the same amount as one first class passenger paid; consequently it was more profitable to carry first than third class passengers; they had thence the strongest motive and inducement to prevent, as far as they could, the first from becoming second, and the second from becoming third class passengers. What they contended for was, that in this district particularly, and they believed it would be found the same throughout the country, were they to confine themselves simply to first and second class passengers, the amount of revenue, however large, which they would derive from these passengers, would not be equal to what they required. They knew that by extending their accommodation, so as to include the highest class of travellers in the country and the lowest, they were thereby conferring the greatest benefit on the public, and they believed also on the proprietors. (Hear.) They maintained a distinction between first, second and third class passengers; and it was essential that that distinction should be such, that first class passengers should not be induced to become second, nor second to become third. They had had many suggestions from the public as to the accommodation they afforded; many second class passengers told them that if they allowed a little glass in the windows it would be much pleasanter than shutters, and others suggested that cushions would make the seats much more comfortable. (Laughter.) Now, it was not that the Directors did not wish to afford to the public every comfort that was compatible with their own interest, for it was not only the interest of the proprietors, but the interest of the public was concerned; for unless railways paid the proprietors the public would be deprived of the advantages of railways. The consequence was, they were obliged to make such distinctions between the accommodation afforded to first, second and third class passengers, as should prevent one class merging into another. That was the principle they had adopted, and if followed out, he conceived it would answer the purpose of the Company. As a proof of that he would state the proportion of passengers of the different classes carried upon this line. In half a year they had carried 35,000 second and 154,000 third class passengers. (Hear.)

Digitized by Google

Had they not adopted the system of third class passengers, but confined themselves to first and second, they would have required 119,000 second class passengers to have yielded the same amount of revenue. No one familiar with their traffic but would feel that no such excess of the second class passengers would have arisen from laying aside the third class carriages. The principle they wrought upon was this,—the expense of conveying passengers along the line depended, as nearly as possible on the weight of the carriage. They carried eighteen passengers in a first class carriage, about thirty in a second class, and sixty in a third. Assuming, as in fact was the case, that each carriage was about two-thirds full, it so happened that the first, second, and third class carriages were exactly the same weight. The consequence was, each carriage load of passengers cost the same money to convey it from end to the other; and they had so adapted the fares, that each carriage, so loaded, yielded the like amount; so that it was quite a matter of indifference whether a first, second, or third class carriage went out; if it went two-thirds full of passengers, it would cost the same money to take it to the far end, and they should have some revenue from it. By keeping up the essential distinction between first, second, and third class passengers, and by working the traffic in this way, it would not only be beneficial to this Company, but to all those who had failed,—and failed because, in providing third class carriages, they had been anxious to provide greater accommodation than they could afford. Some had been anxious to provide seats. Now, if that were done, it immediately nearly doubled the expense, for, instead of the carriages containing sixty, they would only hold thirty-five or thirty. There was only one other subject which he would notice. Yesterday the Directors had received four memorials—two from clergymen of the Established Church in Manchester and Huddersfield, and their respective neighbourhoods, and two from ministers of the Wesleyan body in those places, on the subject of Sunday travelling. The object was to present to the shareholders the importance of closing the line on the Sunday; the grounds were set forth at length, and every argument was used which could be brought to bear on that important subject. The Directors, in considering these memorials, had thought that it would not be doing justice to the subject to discuss it on the present occasion; they had therefore resolved merely to communicate to the proprietors the fact of these memorials being received, and leave the meeting to direct what steps should be taken thereon. (Hear, hear.) He need not add that the Directors would be exceedingly glad to enter into all the details that the proprietors might require, with regard to the heads of the excess of expenditure. They were prepared with every detail that it had been possible to provide on the occasion, and were anxious that every explanation should be given.

Mr. JAMES WOOD said he was not about to move any resolution with reference to the important subject which had just been adverted to by the Chairman. He rejoiced that it had been taken up by the clergy of the Established Church, and by another respectable body; and that the Directors had given the memorials a serious and deliberate consideration. Mr W. dwelt at some length on the importance of observing the Sabbath, and expressed a hope that the Directors would reconsider the present arrangements for Sunday trains, and when the mails were ordered to be conveyed on the railway, only allow the mail trains to travel on the Sabbath.

In answer to a question from the Rev. R. Bassett,

The CHAIRMAN said the memorial from the clergy of Manchester was signed by 12 or 15, and and that from the Wesleyans by six or eight ministers. The Huddersfield memorials were also numerously signed.

EDWARD LOYD, Esq., banker, moved the adoption of the Report.

Mr. KAY wished to know what would be the expense of the whole line, including the making of stations, carriages, and every thing which the Company would require?

The CHAIRMAN said the cost of the main line would be, according to the present estimates, 2,864,000*l*.

Mr. KAY wished to know the cost of the summit tunnel?

The CHAIRMAN replied that the entire cost of the summit tunnel was 251,000*l*.

J. C. HARTER, Esq., seconded the resolution.

THOMAS FIELDEN, Esq., said he wished to ask a question. As Mr. Kay had made an inquiry as to the expenditure of the Company on the line, which had so far exceeded the estimate, he wished to know whether it was the intention of the Directors to reduce their salaries or not?

The CHAIRMAN begged to say that the salaries so liberally granted by the Company to the Directors, had certainly never been taken into consideration by them. The grant, which had shown so satisfactorily to them the confidence reposed in them by the shareholders, had been the means more than any other cause of enabling the Board to carry out their operations to their present position with success, because it had been the means of enabling them to secure the services of one gentleman of their body (Mr. Gill) to devote the whole of his time and energies to this great undertaking. They considered the time had not yet come when they could take into consideration the proposition of the shareholder (Mr. Fielden), or make any change in their arrangements with advantage to the Company. He could assure the meeting that there was no subject more spoken of at the Board, and more generally studied, than that of economy. (Hear, hear.)

JAMES WOOD, Esq., would say in reply to the observations of Mr. Fielden, that the sums paid to the Directors for their services was not too much: he, indeed, conceived them far too little. (Hear, hear.)

Mr. KAY expressed great regret that the estimates at different times brought forward should have been so much exceeded by the actual cost; and were it not for the confidence he had in the individual character of the gentlemen composing the Board, he should have felt exceedingly distrustful.

The CHAIRMAN could only say in reference to the estimates, that it was a matter over which the Directors had no control; their duties were confined more to acting on the best estimates that could be obtained, to seeing that the money of the Company was not wasted, and in making such arrangements as seemed most likely to secure the performance of the undertaking in a business-like way. If gentlemen would have a guarantee for the faithful discharge by the Directors of their duties to the best of their ability, he thought they had it in the fact of their holding one-fifth of the whole stake of the Company in the undertaking. (Applause.)

Mr. THOMAS FIELDEN hoped the Directors would reconsider the subject of their salaries again. (Disapprobation.) In the next place, he wished it to be observed that they had stated their anxiety to accommodate all classes of the public by providing first, second, and third class carriages, at certain rates, but they went on to state that the waggon passengers (third class) would be required to be at the station and booked ten minutes before the time. Now he thought that these were the best customers to the railway, and were the class that paid best. (A voice, "No.") He wished to know why they should be compelled to wait ten minutes in the open air before they started.

The CHAIRMAN said, the simple answer to Mr. Fielden's last question was that the number of third class passengers was so great, and the time they required to get into the carriages was such, that they felt it impossible to guarantee the strict departure of trains at the appointed times without this arrangement. (Hear, hear.) And though they were not willing to undervalue the advantage to be derived from third class passengers, they were not anxious to make too many. Mr. Fielden would know enough of arithmetic to understand the value of converting a third class into a second class passenger, for by this regulation they did not deprive a person of the chance of going by the train if he arrived at the station late; if his business were urgent he could take a second class fare, and so save his time. (Hear, hear.)

Mr. FIELDEN disagreed *in toto* with the Directors on this point. He thought that no difference ought to be made to the disadvantage of the third class passengers, and if they persevered in this course, the result would be that they would lose their short-stage passengers, who would prefer walking to waiting ten minutes. The coaches to Oldham were already loading excessively in consequence of this regulation.

The CHAIRMAN assured the shareholders that no one should be obliged to walk if they could help it.

Mr. FIELDEN would not be content with any thing less than a promise of alteration; and if that was not given, he would take the sense of the meeting. Mr. Fielden was about to submit a motion, when the Chairman reminded him that other business was now before them, but intimated that he might propose his motion before they separated.

The motion for adopting the Report, &c. was then carried.

Mr. GEORGE SANDARS moved, "That the Directors of this Company be authorised to apply to Parliament for powers to increase the capital stock of the said Company to the extent of 487,500*l*., and to issue new shares for that purpose; and also to borrow money, and to pay off the money borrowed; and to apply for such alterations and amendments of the existing Acts as the Directors may think proper. That the draft now laid before the meeting, of the proposed Bill, until it be presented to Parliament, be approved of, and that the Directors have full authority to alter and modify the same as they may think proper." In proposing this resolution, Mr. Sandars said the sum asked for was a large one, but when they considered the magnitude of the works they need not be surprised at it. He would recommend every proprietor to take the trouble of going over the line, to examine the works and the magnitude of the difficulties with which they had to contend, and they would find that, great as was the sum it had cost, the only surprise was that they should have been able to overcome so many difficulties at all, for any sum. (Hear, hear.) There was one other subject he would allude to, now he was on his legs, and he was sorry to have to make allusion to it, because he differed in some respects with the Directors on the line of policy they had adopted. He did not wonder at the Directors being anxious to reap all the benefits they could of a traffic upon their line, but he thought that in attempting to reap all those benefits they should at all events confine themselves to that traffic alone which was legitimate, and he thought that to convey passengers at a reduced rate, and by that rate to reduce the traffic on other lines, was neither politic nor expedient. He regretted to have to make this remark, but he made it in the character of a general railway shareholder, and he thought that if such a system were commenced and carried on it would be very injurious. They might think the difficulties attendant on making their line so great that there was little chance of a rival line, and that they were thus secure of a monopoly, and secure from retaliation; but he thought the time would come when they would have an opposition themselves, and when they would have cause to regret this policy. ("No, no.")

Mr. COBB, of Bembury, seconded the motion.

Mr. ROBERTS thought the meeting ought to have some knowledge of the proposed Bill, before they were pledged to it by this resolution.

The CHAIRMAN said, it was intended that Mr. Brackenbury should state the principal features of the Bill to the meeting.

Mr. BRACKENBURY said, the Bill began by reciting the previous Acts, and the sums of money they had power to raise, and then stated that those sums were not sufficient, and that it was expedient the Company should be authorised to raise a further sum, and that the powers of the said Acts should be extended and enlarged; and then as that could not be done without additional power, there followed clauses for that purpose. Then there came a clause

Digitized by Google

that the Company should from time to time, at any special meeting of proprietors, have power to raise by subscriptions from among themselves, or by the addition of other shares, a sum of money amounting to ——, and here a blank was left for the sum.

The CHAIRMAN—487,500*l.*

Mr. BRACKENBURY—That was as the additional capital stock of the Company. And then as to the mode of distributing the shares, that would have to be decided at another meeting of proprietors. In addition to this the Bill contained a clause to enable the Company to raise money by mortgage on the works to the extent of one-third of the capital, so soon as one-half the capital should be paid up.

The resolution, after some further discussion, was carried.

The next subject before the meeting was the election of Directors, and the retiring members, Messrs. Simpson, Gill, and Entwistle, were re-elected. The meeting then separated.

SHEFFIELD AND ROTHERHAM RAILWAY COMPANY — HALF-YEARLY GENERAL MEETING.

(From the *Sheffield Mercury*, with additions.)

ON the 11th instant, this Company held their Half-yearly General Meeting at the Sheffield Station. There was a very large attendance, among whom we observed a considerable number of gentlemen from Leeds, Bradford, Wakefield, and Barnsley. Mr. William Vickers, the Chairman of the Board, presided. He opened the meeting by apologising for their not being able to put into the hands of the proprietors before the hour of assembling, a printed copy of the accounts and of the report. That had arisen from their not having until yesterday, been able to make up their accounts with the North Midland Company, a delay which he thought would not be likely to occur again.

Mr. HENRY VICKERS, one of the law clerks, read the notice convening the meeting, and laid on the table the register of proprietors, which having been sealed by order of the meeting,

Mr. BADGER read the Directors' Report and accounts, which stated that they had delayed the holding of the present meeting to almost the latest day permitted by the Act of Parliament, in order to afford time for the settlement of the accounts with the North Midland Railway Company—accounts of considerable complexity, in the outset, but which could, (being better understood) be much easier of adjustment in future. The Directors congratulated the proprietary upon the realisation of the expectations, which they always indulged, that this railway was to be the main inlet and outlet to the town of Sheffield. Already was seen upon it passengers and goods, and the mails for north, south, and east—a portion also of Western traffic (*via* the Manchester and Leeds Railway) had lately found its way upon it; and this promised (for a time at least) to be an important auxiliary. As regarded goods, although the return was already very encouraging, the Directors believed it would be more than doubled in the next half-year's account. The Company's local traffic was reported to be in a healthy state. The number of passengers conveyed on the line during the half-year ending 31st December, was as follows:—By the local trains, 194,878; by the North Midland trains, from 11th May to 31st December, 78,893;—making a total of 272,972. The numbers would be greatly increased on the revival of trade. It appears that on this railway, since its opening, to the present time, upwards of one million persons have been conveyed without a single serious accident to any passenger. The Directors were convinced that it is to the determination of Companies to engage and retain in their service none but vigilant and intelligent servants, that the public are to look for safety of conveyance, rather than to any Government interference, which, by dividing responsibility, would inevitably increase the chances of accident. Upon this line 60 trains pass to and fro each day; and yet they saw no benefit which could arise, but, on the contrary, a positive injury and inconvenience, if Government were to step in and imperatively require a quarter of an hour's interval between the trains. It appeared from the abstract of income and expenditure, that the receipts of the half year, including a balance from the previous account of 46*l.* 4s. 4d., amounted to 12,114*l.* 16s. 1d., and that the total half-year's outlay was 5,916*l.* 16s. 9d., leaving a balance in hand of 6,197*l.* 19s. 4d. Out of this clear profit, the Directors recommend the payment of a dividend of 1*l.* per share on original shares, and 6s. per share on new shares, which would leave a surplus to the reserved fund of 997*l.* 19s. 4d., making that fund on the whole 2,292*l.* 12s. 8d., while all the outstanding demands upon it were only estimated at 450*l.* The Report proceeded to state that the undertaking being now in a condition permanently to remunerate the proprietors, the Directors conceived that they were fully justified in going to some additional outlay, in order the better to accommodate the increased and increasing traffic. They had therefore thought it right to commence the erection of permanent station houses at the Holmes and at Brightside, in lieu of the temporary boxes there, which are now inadequate. Each building would contain a dwelling for the man in charge of the station. At Rotherham, also, some improvements have been rendered necessary in the offices and entrance, and are now in active progress. Two bridges are in course of erection at Hall Carr Wood-lane, and near the Sheffield station, in order to carry two roads over the railway instead of their crossing on the level as at present. The Directors concluded with recommending to the support of the proprietary the proposed line of railway to Doncaster, an application for which is intended to be made to Parliament next session. It is deemed a project of much importance to this Company as well as to the North Midland, and its establishment would considerably augment their revenue. The Directors propose, at a future period, to submit some distinct propositions on this subject, and in the meantime solicited the sanction of the meeting to their promotion of the measure.

R. S. CHAMBERS, Esq., of London, rose and said, he was sure the meeting joined in the satisfaction which he felt on the reading of the Report, and at the prosperous position which the accounts showed this Company to be in. He had never expected, when he embarked in this concern, more than 5 per cent. for his money, but now they had got 8 per cent. For this success they were mainly indebted to the industry and good management of their Directors. His views were pretty well known on the question of Sunday travelling, and although he had on a former occasion brought it before this proprietary, and it had been set at rest by its being left in the discretion of the Directors, he could not but again raise his voice against the practice. The whistle of the half-past three o'clock train was a great annoyance to the persons attending Divine service in Rotherham church. [The honourable proprietor was here interrupted by a statement from the chair, that there was not a train at that hour on Sundays.] Mr. Chambers in continuation said, he was, it seemed, mistaken as to the hour, but still, the running trains at any time of the Lord's day was equally an infraction of it with their running during the stated hours of worship. However, not to pursue the discussion further, he would return to the Report, and conclude by moving that it be adopted, and the accounts be passed and agreed to.

Mr. BEVERLEY, of Leeds, briefly seconded the motion.

Mr. ISAAC IRONSIDE said, the honourable gentleman who had moved the resolution, had thought fit to revive the question of Sunday travelling. That question had been discussed, and it had been decided by a large majority to leave it to the Directors. As this was the case he must say, that he thought it was in bad taste to revive it on the present occasion. However, as it had been done, he should feel it his duty to reply to the statements that had been made. Mr. Chambers moved in a respectable sphere; he had the comforts and elegancies of life in abundance, and it was quite a relief to him to go to church on Sundays, but it was not so to the poor Sheffield cutler, who had to toil from six in the morning till eight at night, to eke out a subsistence, and who could scarcely scrape together the sixpence necessary to afford him a ride on the railway. He was convinced that God could be worshipped in the fields, on the mountain, and in the wood, quite as well as amongst pews, and paint, and putty. Nothing pleased him more than to observe the numbers of the working classes who availed themselves of the railway on Sundays, and he trusted the Directors would never attempt to curtail the few opportunities of pleasure they had. With respect to the late trial at York, he would observe, that at the last meeting the subject excited much interest, and in consequence of that the Chairman stated, that when the subject came before the shareholders, he could satify them that the step the Directors took was the best. The meeting was now called on to pay the costs, near 300*l.*, and he thought the statement promised by the Chairman was due before the Report was adopted. There was another question to which he would allude before concluding. Some time since, a placard appeared in the town purporting to be a resolution ordering Percival to withdraw his omnibus from the station. That resolution, unexplained, appeared the most monstrous and pig-headed that could possibly be conceived, and he wished to know the facts upon which it was founded, in order that the Directors might not appear so extremely silly as, in his opinion, they now did.

The Chairman said, that the Directors had used every possible means to avoid the trial at York. They had been unwillingly dragged into it; various attempts had been made to settle it without going to trial; money had been offered, but it was refused unles accompanied by an apology, and they thought a Director ought not to be disgraced in that manner. They had employed a first-rate counsel at the trial, who had not time to look at his brief before the case was called on; and he felt convinced that had they employed a second-rate counsel, who could have attended to the case, the result would have been different. As to Percival's omnibus, the Directors found that one omnibus was insufficient for the wants of the station, and Mr. Percival was asked if he would put two on, which he declined. They had then no alternative but to prohibit his from coming to the station, and let some one have the business who would engage to find two omnibuses, for they had complaints from passengers that their luggage was seized by the cads of different omnibuses, and from ladies that their dresses were torn in the same manner.

Mr. IRONSIDE said, that it appeared the Directors did not wish one of their number to be disgraced. He thought, however, that it would have been much better for a Director to have been disgraced, than for the whole Company to be disgraced, as he thought it was by that trial. It also appeared, that the law clerks were to blame for the result of the trial, in having employed an improper person as counsel.

Mr. WILLIAM VICKERS.—I did not say an improper person.

Mr. H. VICKERS.—We employed Mr. Cresswell.

Mr. IRONSIDE.—The Chairman stated, that a person was employed who had not time to do his business. If so, he was an improper person; and as the law clerks had employed him, he thought they ought to pay the bill of costs. The explanation about the omnibus was in some degree satisfactory, but he hoped the Directors would give no one-sided encouragement. He recollected what a deal was said, when this railway was projected, about monopolies, and vested rights, and so on; and now we were established, we turned round and shoved out a man who was acting upon our own principles.

The CHAIRMAN.—It was his own fault; he might have had the whole of the business had he done as the Directors wished.

Mr. IRONSIDE.—But that would have been a monopoly. All that is wanted is that there shall be a clear stage and no favour.

Digitized by Google

Mr. Booth, of Rotherham, begged permission to ask a few questions. He commenced by saying that he was, in consequence of his former connection with the Board, acquainted with the nature of the agreement made with the North Midland Company, having personally had a considerable share in the negociation of it. He wished, therefore, to inquire whether any and what portion of the aggregate receipts stated in the account as derivable from passengers, arose from the North Midland traffic.

Mr. Henry Vickers—The accounts are not now on the table, but speaking from recollection, he should state, that of the aggregate receipts of 6,500*l.* and upwards for passengers, about 1,600*l.* arose from North Midland traffic, and the rest was the local passenger traffic.

Mr. Booth—Then what becomes of the passengers booked only to Masbrough, which by the agreement belong to this Company exclusively?

Mr. Henry Vickers—They are included in the local traffic, and the receipts are handed to us weekly.

Mr. Booth—What does the item of upwards of 1,000*l.* received for interest, arise upon?

The Chairman—Upon our outlay at the station.

Mr. Booth—Yes; but I wish to know what the amounts of the outlay are, as we were to receive different rates of interest upon two classes of expenditure.

Mr. Henry Vickers—Precisely so; the item included interest from the 11th May (when the North Midland was opened to Sheffield), to 31st December, at 5 per cent. on 11,000*l.* (in round numbers), expended by us in land and compensation, and expenses attending its purchase—and interest for the same period at 6½ per cent. on about 15,000*l.* in works executed, such as rails, ballasting, fence walling, earthwork, and the shed. The next half year there will be an addition of about 1,400*l.* of expenditure, on which we shall be entitled to interest, for works in progress. The North Midland Company's claim for interest will be larger next half year. The outlay on the goods' warehouse, just erected by the North Midland Company, will not, practically, be a charge on the station fund, because it will be let to carriers at a rent of so much for every ton of goods passing through it, which, it is estimated, will pay more than the interest of the outlay upon it. (Cheers.)

The Report was adopted unanimously.

G. W. Chambers, Esq., moved the declaration of a dividend of 1*l.* per share on the original shares, and 6*s.* per share on the new shares, being at the rate of 8 per cent. per annum; which was seconded by Mr. Harrison of Barnsley, and carried by acclamation.

Mr. Ridsdale, of Leeds, moved a vote of 300*l.* to the Directors, for their services for the past half year, which having been seconded,

Mr. Booth rose and said, he thought the present Directors ought not to run off with all the glory and all the pay. It ought fairly to be proportioned among the Directors also who had retired last year. (A laugh.) Besides, he thought these votes ought to be made at annual meetings, and not at half-yearly meetings like the present.

The Rev. H. Watkins, of Silkstone, agreed in opinion with the last speaker, and therefore moved, as an amendment, that the vote for the services of the Directors be deferred to the next annual meeting, which was seconded.

Marrion Fierville, Esq., of Wakefield, supported the original motion, and spoke in eloquent and laudatory terms of the obligations which the Company owed to their Directors.

The Chairman called for a show of hands, and put the amendment first, which, he thought, had the majority.

A Proprietor suggested that the votes should be taken, but,

The Chairman thought that the matter had better rest on the show of hands, and be postponed, which suggestion the Proprietor acquiesced.

Mr. Booth moved a vote of thanks to the Chairman, and the meeting broke up.

The proprietors afterwards had a trip down the line, to inspect the new stations now in progress at Rotherham, Brightside, and the Holmes, and returned much gratified with the day's proceedings.

TAFF VALE RAILWAY COMPANY—GENERAL MEETING.

[From the *Bristol Journal.*]

The report of the Directors of this undertaking, read at the recent meeting of proprietors, refers to the gratifying fact, that since the last general meeting, 16 miles of the line have been opened, and that the traffic is such as to justify expectations that it will defray the interest on the capital created by the last Act of Parliament. There is however, a temporary difficulty in raising money for opening the main line and colliery branches; but the Directors hope to open the whole of the main line to Merthyr before the end of this month. The report of Mr. Bush, the engineer, bears out this expectation, and says—

Of the six locomotive engines building for the Company, four are so far completed that they will arrive about the first week in March; and in addition to the stock of carriages and waggons now at work upon the finished portion of the railway, I expect those building for the Company will arrive at the same period.

The Directors state that, in the depressed state of the money market they had been convinced that they should least injure the interests of the proprietary by recommending the issue of the new shares on such terms as would best insure their falling into the hands of the present shareholders, in the exact proportion of their original shares. The Directors recommend that the new shares be issued on the following terms, viz.:—

1. That on paying a deposit of 5*l.* on each new share of 25*l.*, every proprietor should be entitled to two new shares for every old share standing in his name, at a discount of 20 per cent.

2. That in case of any proprietor delaying to signify his acceptance of the offer of new shares in one week after it has been made to him, or neglecting to pay his deposit in one week after such acceptance, the Directors will issue such new shares to the public, on the best terms they are able to dispose of them, not exceeding a discount of 20 per cent.

3. That the new shares should have a preference of interest pursuant to the resolution of the special general meeting held on the 13th day of January last.

The Directors cannot help congratulating the proprietors upon the great regularity with which their calls have been paid, as at this moment there is not a deficiency upon the total calls of more than 4,550*l.*; at the same time, that they extremely regret they have been compelled to recommend a sacrifice so large as they have done upon the issue of these new shares, which they have hitherto by protracted (but now pressing engagements endeavoured to avoid.

The cash account is as follows:—

Taff Vale Railway Statement, from 30th June to 31st December, 1840.

DEBTOR.

The total expenditure from the commencement is £427,923.

Cheltenham and Great Western Union Railway.—We may expect the opening of this line as far as Cirencester by the 26th of next month, the Company having given notice to the Great Western Directors that it will be ready by that day. The latter Company has taken this branch on lease at 17,000*l.* per annum.—*Cheltenham Paper.*

ULSTER RAILWAY COMPANY—GENERAL MEETING.

[From the *Northern Whig.*]

On Thursday last, the Half-yearly Meeting of the Ulster Railway Company was held in the Board room, Belfast; James Goddard, Esq., in the Chair. The report as annexed, having been read, and the first resolution approving of the report having been moved, a conversation took place respecting several portions of the report, and particularly the statement of accounts appended to it.

Mr. James G. Bell, who originated the conversation, declared, that he himself perfectly understood every item, and that he was satisfied with the correctness of the statement; but he conceived that it would be more satisfactory to the shareholders, particularly those who lived at a distance, and could not of course have ready access to the Company's books, if the statements furnished with the Report were more detailed.

The observations on this subject met with very general approbation, and the Directors expressed their willingness to meet the wishes of the Company upon that point; and, accordingly, the second resolution, instructing the Directors in regard to that matter, was unanimously passed.

In reference to the paragraph in the Report, expressive of the opinion of the Directors, that the railway should not be opened to Trummery (six miles above Lisburn), on the 1st of July next, but that it would be more advisable to wait until it could be opened to Lurgan.

Mr. T. Tennent wished to know, whether it was the intention of the Directors, that, when the line was open all the way, there should be no stopping place between Lisburn and Lurgan, as he thought the Report obscure in that respect?

To this it was answered, that the Directors had no such intention; that the meaning of the paragraph obviously was, that it would be unprofitable, and therefore unadvisable, to run the train, and stop at Trummery or Moira—a mere country village; while, on the contrary, it would be better to delay the opening until the way was complete to Lurgan, an important market town.

Mr. Robert Grey, in moving the next resolution, called the attention of the Company to the practice of the English Railway Companies, in having an Engineer's Report appended to their Directors' Report, and thought that the example should be followed here.

Mr. M'Cammon seconded the resolution, which was carried, in favour of having the Directors' Report accompanied with a Report from the Chief Engineer.

Mr. James Cunningham then moved the fourth resolution, by which a dividend for the half year, of 3*s.* per share, is declared.

Mr. John Boyd moved the fifth resolution, conveying a vote of thanks to the Directors.

After some further conversation, of not much general interest, respecting the Company's affairs, the meeting separated.

The following is the

REPORT.

The Directors, in their last Report, expressed their satisfaction at being able to congratulate the proprietors on the successful working of that section of the line now open to the public; and they also alluded to the system of economy which their more matured experience had enabled them to carry into effect.

They have now the gratification of stating, that their efforts in this particular have been, to a considerable extent, successfully carried out, as will appear from the fact that, notwithstanding the excitement and consequent large influx of passengers caused by the opening of the line, a larger dividend is now recommended than at the corresponding period of last year. This has arisen from a general reduction in the expenditure, and particularly that connected with the locomotive department, in which, among other matters, a saving in the consumption of fuel, amounting to nearly one-third, has latterly been effected.

The following statement of accounts, made up to the 28th February, according to the provisions of the Act of Incorporation, shows a clear profit of upwards of 4 per cent. per annum on that section of the line now working, and enables the Directors to recommend a dividend of 3*s.* per shares which will leave a surplus of 555*l.* 3*s.*

The gross receipts for 181 days ending 28th February	£4,345	0	7
Surplus, last year	361	16	3
Total	£4,706	16	10

Digitized by Google

The expenditure in working the line for this time, including an allowance of 470*l.* for wear and tear of engines and carriages, is..	2,537	4	10
Leaving a clear profit of.....	£2,169	12	0

Agreeably to the resolution of the general meeting of the 12th of March last, the Directors inform the Company, that the following members of the Board vacate office at the annual general meeting in September next, namely:—William Steen, John Kane, William Gray, William Coates, Thomas Walkington, James B. Boyd, and George Scott.

The progress made by the contractor, with the works on the extended line to Portadown, has been so far satisfactory, the heavy embankments between Lisburn and Lurgan being for the most part completed, and the ballasting already commenced. The Directors would remind the Company, that, according to the contract, the line will be ready to be opened on the 1st July next, as far as Trummery, and the whole distance to Portadown on the 1st November following. The Directors, however, would not deem it expedient to open to Trummery, agreeably to the contract, provided that, by a short delay, they would be enabled to open as far as Lurgan, a place affording a much more suitable terminus.

The iron rails, and other materials for the extended line are in the course of delivery, and are creditable to the parties connected with their manufacture.

The Commissioners of Public Works for Ireland, having recommended a loan to this Company, and the Treasury having confirmed this recommendation to the extent of 20,000*l.*, the Directors have to report that an instalment of 10,000*l.* of that loan had been received.

The works of this undertaking as far as Portadown having now so nearly arrived at a completion, it will be obvious that promptitude in the payment of the arrears of calls is imperatively necessary, in order to enable the Directors to meet the demand upon them. The Directors therefore hope, that the shareholders will see the necessity of reducing, as quickly as possible, the amount of those arrears, and would thus enable them to bring the labour, so far as the formation of this important portion of the line is concerned, to a successful termination.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—A Special General Meeting of Proprietors of the Glasgow, Paisley, and Greenock Railway Company was held yesterday in the Sheriff Court Hall here, to consider the Bill now before Parliament for increasing the capital of the Company. After reading the advertisement convening the meeting, the new Bill was submitted, clause by clause, and unanimously approved. In answer to a query regarding the opening of the line, the Engineer, Mr. Errington, stated that he could, with the utmost confidence, assure the proprietors that the line should be opened to the public during the present month, on what day he was not quite prepared to say. The announcement gave great satisfaction, and the meeting separated.—*Greenock Advertiser*, March 9.

ATTEMPTED ESCAPE OF A PRISONER FROM A RAILWAY CARRIAGE.—On Monday sennight, as a police officer was taking prisoners from Halifax to Wakefield House of Correction, in the Manchester and Leeds railway carriages, one of them, committed for housebreaking, asked to have his handcuffs taken off as he was in great pain from the pressure on his wrists. The request was, from kind feeling, no doubt, complied with; and the man no sooner felt himself liberated, than he leaped out of the carriage, although the train was then going at full speed. An alarm was given, the engine was stopped and put back, and the poor wretch was found with his skull fractured and both his legs broken. He was taken up into the train again, and conveyed from the railway station on a board to the House of Correction.—*Derby Mercury.*

FATAL RAILWAY ACCIDENT.—Tuesday evening, before dusk, a labourer named James Howles, employed on the line of the Birmingham and Gloucester Railway in the neighbourhood of Norton, was on the line for the purpose of picking up a hammer, when the train came up, and before he could retreat he was run over, and so dreadfully mutilated and injured, that he was immediately removed to our Infirmary, where he died early next morning.—*Worcester Journal.*

GREAT NORTH OF ENGLAND RAILWAY —GENERAL MEETING.

We now publish the very satisfactory Reports made to the late general meeting, by the Board of Directors, and the Engineer, Mr. Robert Stephenson.

DIRECTORS' REPORT.

At the last half-yearly general meeting, it was with great pleasure that the Directors anticipated that the portion of their Railway, between York and Darlington, would be open for general traffic on the 25th of November, 1840. This anticipation, founded upon the Report of Mr. Storey, *then* the Company's engineer-in-chief, has not been realized. The 25th of November, 1840, passed, and much work remained undone; though the Directors, anxious not to disappoint the proprietors and the public, had urged forward the several contracts by every desirable means. At last they gave peremptory orders that the line should be open for the coal trade, if not for general traffic, on the 4th of January, and by great exertions this was accomplished, but only one line of rails, for one month from the 4th of January, the state of the weather prevented the prosecution of the works; and in the meantime circumstances led to a change in the Company's engineering department.

The Directors will not occupy the proprietors with a detail of these circumstances, nor dilate upon their deeply-felt mortification, in being unable to redeem the promise as to the opening, put forth at the last meeting. Suffice it to say, that Mr. Storey resigned his situation as engineer-in-chief; his resignation was accepted, and the Directors instantly requested Mr. Robert Stephenson, the eminent engineer engaged upon the continuous line of railways from London to York, to give the Company the benefit of his professional skill and advice in completing the unfinished works. No time was lost by Mr. Robert Stephenson; and, without checking the progress of such work as the weather permitted to be done, he proceeded to make his inspection. The result of that inspection is embodied in the following Report, which the Directors beg to lay before the proprietors:—

To the Directors of the Great North of England Railway, &c. &c.

GENTLEMEN,—Having received a letter from your Secretary, dated the 18th ultimo, which informed me of the resignation of your Engineer-in-Chief, Mr. Storey, and of your wish that I should report on the state of your line between York and Darlington, communicating to you whatever suggestions I might deem essential for its speedy completion, I have gone over and examined the various works, both executed and in progress, and now beg to submit to you my remarks thereon.

As regards, in the first place, the main direction of the line, and the principal features of the country which it traverses, with which you are undoubtedly already well acquainted, I shall confine myself to observing that they are of a most favourable character—that straight lines to an extent unparalleled in this country are obtained without sacrificing the gradients, which nearly approach to a level, that few if any works of magnitude occur to increase the cost of construction (the earth works consisting of long but very light excavations and embankments), and that lastly the few curves introduced are of large radii.

As my examination of the engineering details has in consequence been almost solely confined to those bridges and viaducts which are yet in an unfinished state, to the condition of the permanent way, and to the arrangements contemplated for the accommodation of the traffic at the various stations, I think I cannot better comply with your instructions than by reviewing separately these various works in the order in which they present themselves to notice in the progress from York to Darlington; and I therefore commence my notes with the station at York.

Of the various dispositions for furthering and facilitating the passengers' traffic, which have been carried out in conjunction with the York and North Midland Railway Company, and which will doubtlessly be found sufficient, I should hardly have thought it necessary to speak, were I not anxious to remind you that these very arrangements, which have led to the establishment of a joint station, should also, in order that all parties may receive the full benefit of the combination, be controlled and directed according to a system common to both the Companies, and, as complete unity is so essential here, I may express a hope that it will be possible to conclude such an arrangement on the most equitable terms. The remainder of the station which at present is either completed or in a very forward state, comprises a coal depot now in active use, and an engine house, coke shed, and tank; to that little remains to be done previously to the opening of the line for passengers, the unfinished works resolving themselves into the laying of a few sidings and a small portion of the ballasting. The land which has been purchied, and the whole of which is of great prospective value, is situated close on the outside of the city walls, and a large quantity remains unoccupied, which eventually will be used as a general merchandize depot. The position is such, with reference to the other arrangements, as to admit of all the erections which the traffic may demand, being completed in such a manner as to preserve the general unity of the plan; and in this respect the bearings of the station appear to me to have been well considered. The only part of which I could in any way object, is the position and arrangement of the engine-house, and I decidedly think that some inconvenience will be experienced from its having been placed on the inner side of a curve. I should also have preferred a plan which would have admitted, in its internal distribution of the various locomotives passing in and out without requiring to be uncoupled from their tenders and moved over turn plates, a necessity attended with loss of time and labour; but, with this sole exception, I again repeat that the details of the station seem to me to have been properly conceived and satisfactorily executed.

My next observation, proceeding onward, refers to the Holdgate embankment, the position of which, with relation to the currents acting during a late extraordinary flood of the Ouse, so as to some extent to injure the foot of the slopes, is such as to suggest the necessity of increasing these to the full extent of the land which you possess; and I would also at the same time advise that they should be thickly covered with sward, to prevent the possible recurrence of any contingency. Beyond this, after passing several roads and occupation bridges, which are exceedingly well designed and constructed, and after traversing the Ouse on a handsome viaduct of stone, the Shipton station is attained.

The side work of a bridge which crosses over the line here is not quite completed, and a culvert under one of its approaches has yet to be built; little else, however, remains to be done at this point, unless it be a crossing and siding, which will be necessary at the station.

The line now proceeds for some distance nearly on the surface of the ground, until a brook at Newton Beck is crossed. The pressure of the embankment against the wing walls and abutments of the bridge here has displaced these to some extent, but as no immediate apprehension of any further movement need at present be entertained, I think that by strutting up the weak points and carefully watching to detect any indication which might show that the bridge has not yet come to a solid bearing (an anticipation scarcely to be feared), the repairs may very well be postponed until next summer. I would then advise the erection of projecting wing walls, with an inverted arch thrown in between them—as the present one, which merely lies against the abutments, can hardly be viewed in any other light than that of a mere pavement. With these additions, I feel confident that no apprehension need be entertained of the perfect stability of the bridge.

For a considerable distance beyond this, the line is entirely finished and in very good order; and I have solely to mention that the approaches to the Aine Forest Bridge, which in no way affect the line, will not be quite completed previously to the middle of March.

The Aine station, excepting some sidings and a permanent water station (the temporary are sufficient at present), is almost ready, and the coal depot is in use; but a bridge of three arches over the railway having shown considerable symptoms of instability, has rendered it necessary that the principal arch should be taken down, and the final termination of the works here is thus in some measure retarded.

The original failure of this bridge is, I believe, to be principally attributed to the thrust of the main arch not being quite counterbalanced by that of the lateral openings. To remedy this the centre arch should be carefully rebuilt in cement; and, as I feel confident that such a precaution will prove sufficient, I am bound to observe that little delay will be incurred in enabling the trains on both lines of railway to pass under the bridge. A portion of the permanent way beyond Aine station is not yet laid; the requisite materials are, however, all on the ground, and I am therefore satisfied that a fortnight of favourable weather will suffice to get this all finished, no other works remaining incomplete, except the parapets and wing walls of a bridge over the Raskelf brook, and the necessary sidings and crossings at the second class station of that name.

After passing this, the line proceeds principally in shallow cutting till we reach a bridge for the road from Helperby to Raskelf, which has manifested a slight movement: but as the Resident Engineer is taking the necessary precautions, I do not think that there is the least reason to fear the occurrence of any accident.

The western line of permanent way in this district also still requires to be slightly raised to attain its proper level.

For some distance further on, nothing very materially calls for any remark from me. A few unimportant works remain unfinished, which can all easily be concluded by the middle of March, I shall consequently pass on to Sessay station, where a bridge having the same defect of construction as the one described at Aine, though in a less degree, should be strengthened by the introduction of counterforts under the side arches, which will, I am convinced, suffice to prevent the chance of any injury.

The line having traversed an embankment of considerable length, next enters a cutting nearly two miles long, and which averages a depth of fifteen or sixteen feet; at the further extremity of which, and as we approach the Thirsk station, two bridges are passed, which have been proved defective for the reason assigned when I spoke of the Aine bridge. One of them is an occupation bridge, whilst the other is intended for the turnpike road from Thirsk to Ripon. It will not in either of these cases be necessary to reduce the flatness of the centre arches; and I am quite satisfied, that by setting these in cement, and also giving them the additional support of counterforts, as proposed in the case of the bridge at Sessay, these arches may be brought to as firm and solid a bearing as any other on the line. The centreings, and every obstruction to the regular traffic, can, I may also add, be removed some time before the general opening.

The first class station at Thirsk, as it will prove one of the most important, has required the erection of a large building; in addition to which, a large coal depot has been opened; a merchandise warehouse is in progress, whilst an engine-house remains to be erected. This last is to be commenced immediately, as, although a temporary water station will at first prove adequate to all demands, it is essential that at this point, where every train will probably take in a fresh supply, the permanent arrangements should be completed with as little delay as possible. The building, according to the directions I have given, will be in the most simple style, in order to lessen, to the fullest extent, the service of any unnecessary contingent expense.

I have lastly to add, that a considerable space of ground yet remains unoccupied, to be devoted to various sidings and other accommodations; but even in that case, enough space will remain to satisfy any additional demands of the traffic.

From Thirsk, and as far as South Otterington, the works are of the highest description, and it is unnecessary to dwell upon any point. The parapets of one or two of the occupation arches, and the spandrils of the bridge for the Newsham road, are not quite finished; about half-a-mile of one of the lines of way is also not laid; but there is nothing in this district which in any way can affect the termination of the works within a short period.

At the Northallerton station, where we next arrive, some quantity of work (chiefly masonry) is, however, yet incomplete. The embankment on which the line is here carried, requires to be widened to admit of sidings, and, in consequence, a retaining wall is also necessary to confine the extent of its slopes. The engine-house, &c, although contracted for, has not yet been commenced, and cannot probably be completed in less than three months. A temporary pump, will, however, as at Thirsk, supply the tenders of the engines in the meantime; nor is there the urgent necessity for permanent arrangements here which there is in the other case. The coal depot is in use, and the unfinished works, which in no way can impede the use of the line, can with ease be brought to a close before the end of March, unless the weather should prove remarkably unfavourable.

After crossing through the Castle-hill, near Northallerton, the line proceeds principally on a slight embankment by Danby Wiske, crossing the river Wiske to Cowton. About 4,600 yards of the permanent way in this distance have not yet been laid; and I am also called upon to observe, that the material of which the embankment in this part of the country is formed be-

Digitized by Google

ing clay, some additional difficulty has been experienced to maintain the rails in their proper position, owing to their being laid on stone blocks; and in consequence of the more extensive subsidence of the embankments here than where the material is principally gravel, as is the case in the southern divisions of the line, it has become necessary to introduce sleepers, which will produce the requisite effect of maintaining a more uniform line. I should also observe here, that wherever the permanent way is not yet laid, I have directed that an additional support should be introduced in every length of sixteen feet, the Company possessing a quantity of blocks far exceeding their present wants.

At Cowton station, one of the buildings is not completed, and crossings and sidings also must yet be laid.

The excavation which we enter on quitting this station being one of the heaviest works on the line, still requires for its termination that about six thousand cubic yards of earth should be removed, and nearly four thousand yards of one of the lines of permanent way must also be laid. These works are, however, carried on with vigour, and will, I trust, soon be completed. Hitherto, also, but few casualties (as the slipping of the slopes, &c.,) have occurred to retard their progress.

In one spot near the commencement of the cutting, a pitched overflow will lastly be necessary, as a protection against floods, which otherwise might possibly prove injurious to the works.

Crossing over the road from York to Darlington, by an iron girder bridge, and over the Tees river on a large structure of stone, the line now skirts the valley, and alternately proceeds through short cuttings and embankments.

The slopes of two of the excavations have been slightly injured by the slipping of the clay, which induces me to recommend that during the course of next summer the rate of inclination of these should be increased; and this is the last point to which I have to call your attention before we reach the Darlington terminus. I found that a temporary station for passengers at the Bank Top is nearly completed here—that an engine-house, capable of containing ten engines, has been erected—and that workshops where the necessary repairs of every description can be executed, are also in progress, which, although they may at first sight appear to be on too extensive a scale, will nevertheless, I am convinced, be required on a line of such importance. I must here, lastly, congratulate you on the very effective state in which I found your locomotive department.

I do not, at this moment, think myself called upon to detain you with any observations respecting the two bridges which it will be requisite to construct for the roads to Yarm and Houghton before more permanent measures are proceeded with at the station; the restriction which forbids your engines crossing these roads on a level with loads preventing, at present, any definitive arrangement, I shall merely, therefore, state that the subject of the construction of these bridges shall have my immediate attention.

Having thus enumerated the unfinished works on the line, before I proceed to give you an estimate of the outlay necessary to complete them, I must be allowed to remark that both with regard to these generally, and to all the other details, I cannot sufficiently express to you the satisfaction which the inspection has afforded me. A general unity of design prevails as regards the masonry, which, added to the excellent manner in which the work has been executed, calls for the warmest commendation. The permanent way also, over far the greater part of the line, is in an admirable state of maintenance, and the works, with those few exceptions I have detailed, have been substantially and well executed. Not being in a position to judge of the immediate circumstances which led to the resignation of your late Engineer-in-Chief, I cannot therefore refrain from expressing my regret at such an occurrence at a moment when he was on the point of reaping the award of praise due to his labours.

It may not be improper that I should, however, here observe, that although the general mode adopted in laying down the inclinations of the line, has been quite in accordance with the views which my own experience has led me to prefer, I nevertheless think that the highly favourable nature of the country has probably been the cause that the gradients have hardly been undulated enough for the purpose of obtaining such a fall in the excavations as would admit of their perfect drainage; the cuttings having also been made rather too narrow, it has become necessary, in order to procure a sufficiently wide drain, to support the ballasting on either side by means of dwarf walls. The mention, however, of these few points, will show my general concurrence in the proprietary of the various works executed, and must be remarkable, when, in the review of nearly 50 miles of railway, I cannot state any more important a difference of opinion.

The estimate which I shall now submit to you has been carefully prepared under the direction of the Resident Engineers on the lines, whose perfect knowledge of the prices prevalent in the country, cannot fail to afford an additional security for their probable accuracy. I have, therefore, merely confined myself to adding to their various returns such increase as experience has shown to me to be required, in order to be fully prepared in the event of any unexpected increase.

I therefore feel assured that the following sums will be found to suffice amply for the completion of the works; but I must observe that they in no way include any of those buildings at the stations which are in progress under the direction of the Company's architect.

Amount required to complete Mr. Whitwell's district, 5,962*l.*; Mr. Farrell's, 9,322*l.*; Mr. G. Stephenson's, 13,846*l.*; total, 29,130*l.*

It only now remains for me to observe, that I am satisfied that without unnecessarily pressing the works in progress, the line may be ready for the conveyance of passengers by the 31st of March next, and although a few details may, even then, be incomplete, these will be quite immaterial, and such as are, of necessity, almost dependent on the opening of the line.

My attention not having been especially called by your instructions to the extension of your line to Newcastle, I must apologise if, before I conclude, I now offer to you spontaneously my opinion, which, though based on my intimate acquaintance with the principal features of the country, and with the localities in the county of Durham, is still formed, it must be observed, without those materials necessary to give it professional weight. Having, however, been for several years alive to the importance of a continuous railway communication not only between Darlington and Newcastle, but between England and Scotland, to which the public are most anxiously looking forward, I feel that I have yet a duty to perform in reminding you of its influence on the revenues of the company. That the sooner such an augmentation is brought into effect the more beneficial it will prove, cannot admit of a doubt; and on this account, as I should be the first to advise that you should pause before involving yourselves in the outlay consequent on completing your Parliamentary line, so I cannot but point out to you that the same object can be attained by more simple means. Assuming that the line already selected will be found as eligible as any other, as far as Thrislington, it must be borne in mind, that on reaching this point, not only a great extent of railway ramifications uniting all the principal towns of the district, are brought in connexion with your railway, which will prove of immediate and vast benefit to it. By availing yourselves of communication already in operation, there only remain from six to seven miles of new railway to be constructed to effect a continuous, and by no means unnecessarily circuitous connexion with the banks of the Tyne. The importance of this course, which would secure, at a period comparatively close at hand, to the public the anticipated accommodation, and to the Company its expected revenue, causes me to doubt whether I could advocate, at the present moment, to any extent, your Parliamentary line beyond Thrislington, although future circumstances may justify the expediency of incurring the very serious outlay attendant on its execution.

I am, gentlemen, your obedient servant,

ROBERT STEPHENSON.

35½, Great George-street, Westminster,
February 3d, 1841.

Since this report the Directors are happy in being able to inform the proprietors that by far the greater part of the works alluded to by Mr. Stephenson as required to be done have since been completed.

DIRECTION.—The following gentlemen retire from the direction by rotation, but are eligible to be re-elected:—Messrs. Rutson, J. C. Backhouse, Thomas Backhouse, R. Plews, Wm. Shields, and R. A. D. Gressly.

The Directors now beg to lay before the Proprietors the following statement of the receipts and expenditure up to the 31st of December, 1840:—

[This report we must defer till our next.]

The Directors think it will be satisfactory to the proprietors to have the state of the shares laid before them, completed to the present time, as follows:—

Number of calls.	Amount of calls.	Number of shares paid up on 3rd March, 1840.	Number of shares paid up on 5th March, 1841.	Increase since 5th March, 1840, upon which calls have been made.	Total number of shares.
2	2½	6926	7677	751	10000
3	2½	6288	7285	997	..
4	3	6276	7166	890	..
5	3	6181	7089	908	..
6	5	6083	7057	974	..
7	5	6035	7039	1004	..
8	7	5687	6987	1300	..
9	5	5653	6956	1303	..
10	5	5500	6942	1442	..
11	5	....	6858	6858	..
12	10	....	6320	6320	..
13	10	....	5994	5994	..
14	5	....	5275	5275	..
15	10	....	3521	3521	..

By the foregoing table it will be seen, that there has been during the last year a satisfactory increase in the number of shares upon which instalments have been paid, notwithstanding the heavy depression of the money market which has extended throughout the country, and the consequent delay on the part of many of the shareholders to make the required payments.

Seven thousand shares may be now said to be quite available for calls, and by a continuation of the diligent exertion hitherto exercised, these may probably be increased to 7,500 or 8,000, even should the money market remain in a state unpropitious to railway investments. But if the prospective traffic which the partial opening has given every reason to anticipate comes to be realised, the Directors doubt not but that the shares will rise to their intrinsic value, and the whole 10,000 shares now constituting the capital of the Company will, without difficulty become available.

It is true that the outlay has already greatly exceeded the original estimates, to an extent that the Directors had not been led to expect; but, notwithstanding this circumstance, which has been common to all the great railways in the kingdom, with scarcely an exception, the Great North of England Railway will be found one of the cheapest in the country, and not exceeded by any in the straightness of its course, the excellence of its gradients, the stability and permanent character of the works throughout the line. It must be borne in mind that the Company have more than 48 miles of double way, including all the branches, besides a considerable extent of valuable land, and that these, together with stations, warehouses, and workshops, 36 locomotive engines, coaches, and merchandise waggons, with every other outlay required for profitably working the line, will not exceed 21,500*l.* per mile

The Company are making application to Parliament for an extension of time to purchase land, and for power to raise an increased capital of 300,000*l.*, should such be required to advance the interests of the shareholders, and the convenience of the public.

The Directors doubt not that the proprietors will unite with them in the opinion that the suggestions appended by Mr. R. Stephenson to his Report are entitled to the most serious consideration, as insuring within a very limited period all the advantages of a railway communication through a very populous and trading district to Newcastle, Sunderland, North and South Shields, and many other ports and places of great importance, as well on the western as on the eastern coast.

The coal traffic along the railway, though in its infancy, and notwithstanding it has had to contend with an already supplied market at York and at Alne, has averaged 2,068 tons a week, producing in its present limited extent, a weekly revenue to the Company of 414*l.* 8s. 8d., independent of 12*l.* 10s. per week on account of general merchandise, making the weekly average income 426*l.* 18s. 8d. per week, and the Directors are authorised to state, that several coalowners, in consequence of the very superior quality of the Durham coal and

Digitized by Google

soke, have already entered into, and others are about entering into, extensive contracts for the supply of the southern railways, and other parties who were previously supplied with these articles from other quarters. There now remains no doubt that the revenue to be derived from this source will be very large, and that as the Company's works are pushed northward, the facilities for the extension of this most lucrative description of traffic will be still further increased.

The Directors might dilate upon the extensive arrangements that are making by several parties, for the supply of the agricultural districts with lime; and also by the fish merchants of Hartlepool, Redcar, and Staithes, for the supply of Leeds and the West Riding of Yorkshire, Manchester, and even as far south as Birmingham, so that many tons of fish daily will traverse the line; but they prefer that the traffic returns should speak for themselves on a future occasion on these points.

Every arrangement is now in train for opening the line to the public, on the 31st of March; due notice has been given to the government authorities that the Railway will be opened on that day: and further, the Company have received notice from the Postmaster-general to carry her Majesty's mails on the 6th of April.

In conclusion, the Directors have only to say, that they anticipate the pleasure they will have in announcing to a future general meeting of the proprietors, the satisfactory commencement and progressive advance of the traffic and their revenues.

D. O'BRIEN, Secretary.

YORK AND NORTH MIDLAND RAILWAY COMPANY—SPECIAL MEETING.

On Monday week, a special meeting of the proprietors of this Company was held at the station in Tanner Row, to assent to the Bill now in Parliament for amending the existing Acts, such assent being necessary in compliance with a Standing Order of the House of Lords.

George Hudson, Esq., Chairman of the Company said, in the Bill now before Parliament, the Hull and Selby Company wished to introduce a clause, by which he was certain neither that Company nor the public would be benefited. He offered to accept a clause which was introduced into all railway Bills last year, for equalizing rates of carriages, which compelled them to charge all parties under the same circumstances the same rate of charges, but they insisted on a clause, that whether the parties wished to send their goods throughout by railway or partly by water—whether they wished for extra despatch or otherwise, they should be charged alike under all circumstances; that they should make no difference between expedition and slow carriage. Now, it was well known that in one article—cotton twist—there was no anxiety for quick despatch—a difference of twenty-four hours was not material; but a difference of one penny per ton carriage was so material that it would determine the preference between the railways and the canals. If the Hull and Selby Company succeeded in this clause, its effect must be to give this commodity an extensive preference to the Aire and Calder navigation. He had resisted that clause, and should this Company be defeated in committee he should think it necessary to divide the house upon it, because he considered this opposition was factious. It amounted to this. If the Hull and Selby Company could not get the traffic, they would endeavour to prevent the York line from having it. The next clause in their Bill to which he would refer, was that which related to the making of a new bridge and a street for amending the approaches to their station. He had introduced a protecting clause, providing that neither of the approaches should be made by this Company until a majority of the shareholders had given their consent, and that it should be lawful for them to agree to make them, or either of them, or any part thereof, or to contribute thereto. This clause was necessary in order to protect them from the effects of a *mandamus* to which they might have been subject, to compel them to exercise the powers which they had obtained, although the Company might be disinclined so to do. He had also introduced a clause, providing, that if the Company refused to make these approaches, or any part thereof, the corporation, with consent of the Lords of the Treasury, or city Commissioners, or the Great North of England Company might make them, or any part thereof, or contribute conjointly towards the making of such works. Lord Shaftesbury, in the House of Lords, had assented to these clauses, and he had no doubt, but for the opposition which had been got up, they would now have stood part of the Bill. The next object which they sought to obtain by their Bill was to introduce a clause, by which they should be enabled to raise a further capital of 167,000*l.* by an issue of half-shares, which would make a total capital of 600,000*l.* Also, to obtain a power of borrowing to the amount of one-third of the proposed new shares; that would not, however, be done without the consent of the shareholders at a special meeting. They had also introduced clauses applying to the lease of the Leeds and Selby Railway—these were struck out by Lord Shaftesbury, but he subsequently had an interview with his lordship, and succeeded in getting them re-introduced. The Bill contained clauses for stopping up useless footpaths across the line, and for altering a road in Ulleskelf. It also repealed a clause in their original Bill, in which it was made compulsory on them not to pass Ulleskelf-green at a rate exceeding three miles an hour. There was also a clause empowering them to reduce the number of their Directors to six. He would observe, that at the meeting of the Hull and Selby Company, Mr. Edwards appeared to be very indignant at the idea that it was possible this Company might offer to lease their line; he could assure that gentleman that for one he felt that he had quite sufficient of railway business on his hands, and that he was not at all disposed to spend his money in taking a lease of such a line as the Hull and Selby.

Mr. Newton, one of the solicitors to the Company, then read a breviate of the clauses, and in answer to an inquiry from Mr. Tuke,

The Chairman said clause 7, appointing an inspecting director, had been withdrawn: it was introduced without his knowledge.

Mr. Tuke and Mr. Rowntree both approved of the withdrawal of the clause.

Mr. Rowntree objected to the Directors being reduced to a less number than twelve. Without wishing to make the slightest imputation on the Directors, he must say that he considered that to vest the management of so large a concern in few hands would be offering an inducement to jobbing, and to the conversion of railway patronage into political influence. He thought twelve was not an inconvenient number for a working body, and that as they would have the control of undertakings which had a million of capital expended upon them, (including the Leeds and Selby line,) the Directors ought not to be reduced below twelve. He moved a resolution to that effect.

Mr. Alderman Meek supported the reduction to six. It was in accordance with what had been done on other lines, and he preferred a small body in preference to a large board of Directors, who would depend on each other for transacting the business of the Company.

Mr. Backhouse also advocated the reduction; as did likewise Mr. Catton.

On a division Mr. Rowntree's amendment was negatived.

Mr. Tuke then moved that the Directors be not reduced below nine; when the chairman suggested eight, and it was agreed to adopt that number.

It was stated, in answer to a question, that the York and North Midland Company would have the lease of the Leeds and Selby line entirely to themselves, which he considered was most desirable, and would be beneficial to this Company.

Some desultory conversation ensued, and the meeting separated.—(Abridged from the *Yorkshireman.*)

RAILWAY ACCIDENTS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 3 and 4, Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

1. Report of Lieut.-Colonel Thomson on Eastern Counties' Railway, addressed to the Right Hon. the President of the Board of Trade.

Dover, 9th October, 1840.

Sir,—In conformity to instructions communicated to me in Mr. Laing's letters, dated the 14th and 15th ultimo, I lost no time in proceeding to examine the Eastern Counties' Railway, and to give my earnest attention to such details as are calculated to throw a light on the causes of the late melancholy accidents on that line, or which might suggest a greater security for the public in future.

I put myself into personal communication with the Directors of that Company, and also with their manager, secretary and chief engineer; and it is due to these gentlemen to state that they met my inquiries in the best possible spirit, and afforded me every facility to inform myself on the several matters requiring investigation.

Having carefully considered all that I have seen, and compared it with information and evidence obtained in various other ways, I have now the honour to report, for the information of the Lords of the Committee of Privy Council for Trade, as follows:—

I inquired of the Directors if the engine-men employed in their service were furnished with instructions for their guidance; they answered yes, and gave me a copy of their printed regulations, which is forwarded herewith.

I asked, supposing that an engine-man could not read, whether the regulations were read and explained to him in that case, and the answer was, that all the men in their service could read.

I inquired as to the length of railway finished or unfinished, and the answer was, that the total length from London to Brentwood is 17½ miles, of which about 15 miles were laid with double lines of railway, and the remainder was expected to be completed by the 1st of October. At that time the trains ran upon double lines for 12 miles only, consequently, for 5½ miles (there being one line of rails only, on which the up and down trains must both travel) the risk to the public must necessarily be greatly increased; and it becomes a question of serious consideration, whether, in future, any railway should be suffered to open for the conveyance of passengers until both the up and down lines of rails shall have been laid and completed in all respects.

I am of opinion that no railway accident can be conceived so terrible in its consequences as the meeting of two engines travelling at great speed in opposite directions on the same rails, and therefore it would be a prudent measure to prevent the possibility of such a collision. I could not learn, however, that any accident of this kind had occurred on the Eastern Counties' Railway.

By recent experiments on level rails it appears that an engine was stopped, when going at a rate of 30 miles per hour, in 15 seconds, and within 65 yards. This was accomplished by turning off the steam, reversing the engine, and the application of the break. The rails were dry, and in good order, and the stoppage was more readily effected than if the weather had been wet. But 180 yards would be sufficient to stop in wet weather. Thus two engines approaching each other from opposite directions, at the velocity stated, would require 360 yards in order to stop at the moment of meeting, after having used every exertion in their power to do so.

I asked the Directors whether they had made any alterations in their instructions to their servants, in consequence of the late accidents, but they replied that they considered their regulations sufficient. I am of opinion, however, that they require revision.

The Directors furnished me with a printed paper, showing the time of departure of the several trains from London, Stratford, Ilford, Romford and Brentwood, with the fares, &c., which is forwarded herewith.

Much has been said respecting the youth of George Foster, who drove the engine, No. 6, on the 19th August. I was therefore anxious to put this question at rest, by procuring a certificate of his baptism, which the Directors obtained from his native parish, and supplied me with. I now forward that document herewith, from which it will be seen that the young man was 23 years of age at the time of his death.

The Directors complained much of the difficulty of

Digitized by Google

is great, and the supply small, owing to the want of a school where they could be instructed. The usual mode in which these persons are obtained is by attaching them to tenders or to ballast-engines (that is, engines for removing excavation from works in progress) until they become well acquainted with their duties, and then to promote them to conduct passenger trains. This is stated to be the mode in which George Foster was reared as an engine-man. He appears to have stood high in the opinion of the Directors, as a steady and trustworthy man, and they much regret his unfortunate death.

The duties of engine-men, however, are so important, and the risk to the public is so great, arising either from their want of knowledge or want of conduct, that it becomes a question for serious consideration whether they ought not to be appointed, after a careful examination and certificate from competent persons, in the manner in which pilots are appointed to navigate ships. Without some measure of this kind, travelling on railways cannot be conducted without frequent and fearful accidents; for, although the engineers will no doubt do every thing that their science and genius can suggest to secure the public safety, yet, without a competent knowledge of the powers of the engine, and the greatest sobriety, prudence and vigilance on the part of the conductors, the most ingenious labours of scientific men will avail but little.

The late accidents had induced the Directors to turn their thoughts to some means by which the power now placed in the hands of the enginemen, of accelerating the rate of speed, should be limited and restrained to a reasonable number of miles per hour. With this view, Mr. Braithwaite informed me that he was engaged in trying experiments to introduce a self-acting governor on locomotive engines.

The Directors have also ordered two of their engines to have a pair of additional wheels fitted to each of them, by way of experiment, not so much from a conviction on their parts of the utility of six wheels in preference to four, as to meet the views of the public. There can be no doubt, however, that an additional axletree must act as a safeguard in the event of one of the axletrees breaking; and, by dividing the total weight of the engine by six, instead of four, a less weight is thrown on each wheel, and consequently a less strain on the unsupported part of the rail.

The rails are of wrought iron, and are laid at 5 feet apart in the clear. Each rail is formed 15 feet long, and of the section shown on the drawing sent herewith, that is, of uniform depth throughout, viz. 5½ inches; middle, 2¾ inches; upper web, 2½ inches broad; and the lower web consists of equal and similarly disposed parts as the upper web, or what is called a double or equal flanched rail, so as to admit of its being placed for wear in four different positions. Their ends or joints are cut at right angles to the line of rail, or what are called butt-joints, and one-sixteenth of an inch is allowed for expansion and contraction at the meeting ends.

The rail is said to weigh 75 lbs. per yards; but I do not make it more by calculation than 72 lbs., which is sufficiently slight when judged of by the rules laid down by Tredgold, who wrote a work on railroads in 1825, which, although the light of experience was then wanting, is still considered a very able work.

With respect to the particular form of equal flanched rails, in reference to a work on the strength of materials, written by Peter Barlow, in 1837, that able writer states, "that some projectors have made the upper and lower tables of equal figure, upon the distant contingency that when the upper table has been worn down the rail may be turned and the lower table made upper. But this is certainly providing without foresight; for the bottom table is the most efficient for strength, and it would be a very dangerous experiment after one side of a bar has been submitted for many years to a high compressing force, and its substance greatly worn, to turn the rail, and expose this worn part to a still greater strain, but tensile instead of compressive, which could not fail very soon to destroy it. Instead of this, therefore, I should certainly recommend to work whatever metal is introduced into the lower table or web, into that form which is most efficient for present purposes, without regard to the contingency alluded to above."

I have been thus particular on this part of the subject because of its great importance, and it struck me that the company rather plumed themselves on their rails; whereas it appears from the best authorities of the day, that neither as regards weight per yard, nor with the respect to the disposal of the metal in the form of section, can they be considered perfect. The weight of an engine is 18 tons, which divided by four, gives 3½ tons on each wheel; but if the engines be provided with only four wheels, the weight on each will be more proportionate to the section of the existing rail.

The rails are supported on fir sleepers, laid at right angles to the line of railway, at three feet nine inches from centre to centre; each sleeper is nine feet long, and of a semicircular (or natural section of its growth, split in two longitudinally) section, having 10 inches diameter at the smaller end. The sleeper is merely laid in gravel, not secured in its place by pickets, nor prepared by Kyan's or any other process of preservation; consequently their durability cannot be great, and the time must arrive when a large proportion of them must be reduced to an unserviceable state; and as it is the interest of all companies to defer extensive repairs as long as possible, accidents arising from the failure of the sleepers must be looked for.

I am aware that wooden sleepers are preferred to stone by many experienced engineers in railways, owing to their greater elasticity, the stone sleepers producing a greater concussion; but this circumstance would seem to enforce the necessity of subjecting wooden sleepers to some process of preservation.

The rails are attached to the sleepers by means of cast-iron chairs spiked down to the sleepers, and secured in their places by oak wedges, which appears to me a very simple and practicable plan, and would be perfectly efficient if the chairs were sufficiently strong. But it will be seen on reference to the section sent herewith, that the metal is very thin, more particularly on the side B., where the greatest strength is required, owing to the pressure of the guide-flanches of the wheels, which act on the side of the upper table at A.; and in the event of any obstacle opposing itself on either rail, so as to produce a rocking motion, the pressure against the side B, must be very great indeed, particularly at a high velocity.

In designing chairs the minimum of strength should not be thought of, for their efficiency under circumstances of unusal strain is of the first importance to the public safety, as I shall have occasion to show in a subsequent part of this Report. I would therefore propose to strengthen the chairs, as shown by the portions coloured with a blue tint on the section.

The inclined plane where the accident occurred on the 19th August, extends from the Brentwood station towards London for two miles and 308 yards, in a straight line, having a fall in the proportion of one perdendicular to 100 of base. The length of this gradient is so great that it may be doubted whether the public safety is compatible with allowing any force of steam whatever in descending, beyond what is necessary merely to start a passenger train, and then to shut off the steam, and to suffer the train to proceed to the lowest point by the force of gravity. I found, however, that the engine-men generally prefer a small portion of steam in descending gradients, with a view, as they state, to keep the connecting chains tight, the carriages steady, and if any check be necessary, to apply the drag upon the last carriage of the train. I therefore requested the Directors to enable me to judge of these two cases by practical experiment, to which they readily assented; and we accordingly proceeded down the inclined plane with a train, by the first method, that is, by the force of gravity alone, at the rate of 20 miles per hour. Finding our way back to the Brentwood station, we proceeded a second time with another train, having a small portion of steam on, and performed the distance at the rate of 24 miles per hour, without any drag. I did not perceive any difference in the steadiness of the carriages, nor do I think that any inconvenience could arise on this account, provided all the carriages of every description were fitted with buffer-springs, a measure which it appears to me should be insisted on. I also strongly recommend that 20 miles an hour should not be exceeded in descending gradients, particularly those exceeding a mile in length.

It will be seen on reference to page 17 of the regulations that Rule No. 11 is not sufficiently explicit on this head.

Mr. Secretary Bulkeley states in his letter, dated 22nd August, that "the engine-drivers have had the strictest instructions to shut off the steam in descending this plane" (alluding to the Brentwood gradient, where the accident happened on the 19th August) "and to allow the train once fairly started to descend by gravity." The instructions adverted to must therefore have been merely of a verbal nature.

A rapid speed on railways is undoubtedly the great desideratum to be attained by this mode of travelling, but it is also evident that there is a maximum velocity, which it would neither be safe for the public to exceed, nor consistent with the permanent interests of railway Companies. On those parts of the railway which are level, a speed of from 25 to 30 miles per hour appears to be quite safe, and may be practised without apprehension of danger; the usual precautions, of course, being observed. This observation is intended to apply to railroads which have been sometime made and are perfectly consolidated; but on new railroads, and on long gradients of both new and old, the speed ought not to exceed 20 miles per hour. Mr. Braithwaite calculates the speed of the train, at the moment of the accident on the 19th August, at 64 miles per hour.

The cause of that awful catastrophe was no doubt excessive speed, but in what manner that speed operated to drive the train off the rails it is difficult to explain, and has given rise to a variety of opinions. Some have attributed it to an obstruction on the rails, causing a rocking motion; others to the application of the break, at such a high velocity, producing a jumping motion. Both these motions were probably produced, but still they do not account satisfactorily for the effect of driving the engine off the rails. It appears to me, that if a body weighing 13 tons were to move down a gradient at a rate of 64 miles per hour, that when the jumping motion was produced from either of the causes before mentioned, the force of percussion would be so great as to break the cast-iron chairs, and if a joint chair were broken, an opening in the rail would immediately be produced, by which the engine would rush on one side. On reference to the evidence of Mr. Henry Flowers, given before the coroner, at page 27, it will be seen, that he "found a broken chair about there." I have made a strict inquiry, with a view to find this broken chair, because I was anxious to examine it, thinking that it would fully explain the cause of the accident; but it has not been found. I am, however, still of opinion that the rapid velocity and the very weak chair were the immediate causes of that calamity.

I found the engine, No. 6, still in the field, having been left on the spot where the accident happened for my inspection. As the unfortunate man, George Foster, had declared on his death-bed to John Ward (see page 32 of the evidence taken before the coroner), that he did not know what had caused the accident, "unless the wheel got loose on the axle," I considered it important to examine the wheels particularly, and accordingly I did so. The nave and axle are turned to fit each other, and are secured together by two keys through the whole width of the nave, and also by a three-quarter screw of 2½ inches long, the female screw being cut half into the nave and half into the axle, the whole being covered over by a circular brass plate of about six inches diameter, for ornament, which is screwed on to the centre of the axletree. These plates were removed from all the four wheels, and a working party of labourers were applied to the spokes of each wheel to push them with all their force in both directions alternately, with a view to prove whether they were loose or not, when it was quite evident that they were all firm and tight, and in a perfectly effective state. I further examined each of the guide-flanches minutely, and I found that they were not cut through nor destroyed in any part of their periphery.

The embankment was in good order, and as complete as any embankment could be which is as yet only half formed, that is, having only one set of rails laid where two sets are intended. Indeed, all the earth works upon this line appear to me to have been well constructed and with much pains, with a view to their drainage and consolidation.

I received, however, a letter from Mr. John Truscott, dated Welling, Kent, 24th September, stating himself to be a retired engineer and offering to furnish me with information as to the state of the railway on the 19th August, inspected by himself immediately after the fatal accident, he having been a passenger with the train at the time. Being anxious to obtain all the information in my power, I wrote to him to accept his offer, and I received his second letter, dated 3d instant. Both letters are transmitted herewith. These letters do not contain any information capable of throwing a new light on the subject, and as I have no knowledge of this person, and his statement is not made on oath, I conceive that it can only be received with great caution.

With regard to the top-heaviness of the engines, I had an opportunity of comparing No. 2 engine, constructed by Messrs. Braithwaite and Co., belonging to the Eastern Counties' Railway (and which is similar in construction with No. 6) with No. 121 engine, constructed by Messrs. Tailour and Co., belonging to the North Eastern Counties' Railway. The engines were placed within four feet of each other on the rails at the terminus at Shoreditch. It was plain that No. 2 had the advantage in this respect, the centre of gravity being a few inches lower than that of No. 121. Neither of them can be considered objectionable on this score, the driving wheel of each being six feet

Digitized by Google

rails five feet, and the weight being disposed as low as possible, much lower than on a stage-coach.

No. 2 engine had four wheels, the driving wheels six feet diameter, the fellies four inches broad, besides the flanch, with guide-flanches an inch and three quarters deep; the two remaining wheels four feet six inches diameter, with guide flanches and fellies, the same as the driving wheels.

No. 121 engine had six wheels; the driving wheels six feet diameter, with fellies five inches broad, without any guide-flanches; the four remaining wheels four feet diameter, having guide-flanches on their fellies an inch and a quarter deep.

With respect to the death of Thomas Osborn, who was killed on the 10th of Sept., I made every inquiry as to the cause of his death, and I find that it was purely accidental, and that the description given of that accident in Mr. Secretary Bulkeley's letter, dated 12th of September, is quite correct. If the unfortunate man had had presence of mind, at the time of falling, to lie down flat between the rails, the engine would have passed over him without injury, but the attempt to scramble out was the immediate cause of his death.

As regards the third and last accident, which took place on the 14th of September, that appears to have been occasioned by disobedience of orders, (see page 19 of Regulations,) as well as by culpable negligence on the part of the engineman, William Moore, not having kept a good look out, and by going at a greater speed than the train which had left London five or six minutes before him on the same line of railway. Moore's train overtook the train in his front, and a violent collision took place at Old Ford, near Bow, Middlesex, by which four of the passengers were thrown out and received grievous bodily harm, one of them since dead. The Directors informed me that they had dismissed William Moore from their service, which was all the punishment they could inflict.

This accident suggests the necessity of some regulation as to the time which should elapse between the starting of trains from the same station; and whether half an hour should not be the minimum of time; also whether such a negligent person as Moore should not be rendered incapable of serving any other Company as an engineman.

With respect to "the period at which, and the state of construction in which, a new line may be safely opened, and the precautions and limit of speed necessary before the line is fully completed and consolidated," I would observe that the period must depend upon the soil, and the nature of the cuttings and embankments, as well as the pains and judgment bestowed upon the works, with a view to their drainage and ultimate consolidation. The question, therefore, can only be answered in a general way, by stating that both lines of rails on a new work should be laid, and completed in all respects, before it should be opened to the public for the conveyance of passengers; and the rate of speed, either on level portions or inclined planes, should be limited for the first year to 20 miles per hour; also that the sleepers on embankments, and more particularly at the lower portions of gradients, should be secured by pickets of sufficient length, either of wood or iron, driven in at their ends, to prevent any lateral movement.

Having adverted to all the various matters on which my opinion was required, I would now, in conclusion, briefly state the several points to which I would more particularly direct the attention of the Board, viz.—

1st. That a school should be formed for the education of enginemen, where they may be instructed in the principles on which the steam-engine acts, the names and uses of its parts, and be made acquainted with its hand gear, so that they may be enabled to start, back, or stop the engine; and that each candidate should undergo an examination by competent persons, and receive a certificate, before he can become eligible to be appointed to the charge of a passenger train on any railway.

2d. That the maximum rate of speed should be regulated from authority, both for new and old railroads.

3d. That no new railroad should be opened to the public for the conveyance of passengers until both lines of rails shall have been laid and completed, and the sleepers on the embankments, and more especially at the lower portion of gradients, should be properly secured by pickets.

4th. That when notice is given by a Railway Company of their intention to open a new railroad to the public, they should be requested to send a section of their rails, a sample of their chairs, to give a description of their sleepers, the distance apart from centre to centre, and the engines intended to be used.

5th. That the time at which the down trains should start from the several stations on railways should be fixed by authority, and that no deviation from the same should be allowed, except in case of accident, without the sanction of a superintending officer; and that due notice should be given to the public of the time at which trains start, and of any deviation therefrom.

6th. That all carriages on railways of every description should be fitted with buffer springs.

7th. That all engines should be fitted with six wheels.

8th. That every line of railway should be marked with milestones or iron castings, having letters or figures conspicuously shown upon them, so that every passenger so disposed, may have an opportunity of checking the rate of travelling.

9th. That the chairs of the Eastern Counties' Railway are much too slight.

I return herewith the enclosures which were forwarded to me for my perusal, viz.—

A copy of the evidence taken before the Coroner, Charles Carne Lewis, on the 1st August.

Two letters of Mr. Secretary Bulkeley, dated 22nd August and 12th September.

I have, &c.,

R. Thomson,
Lieut.-Col. R. Engrs.

(To be continued.)

The North Midland Railway.—We have recently had several opportunities of travelling on this railway from end to end, and we are glad to say that it is working in the best possible manner. The trains make their trips with the utmost exactness: the engines are even more than adequate to their work: the accommodations are every thing that could be desired: the attention of the servants of the Company is exemplary; and the journey to Derby, Birmingham, or London, is made with all imaginable comfort and pleasure. The other day we timed a train for four miles between Belper and Derby, and found that it performed the distance in five minutes and eleven seconds, which is at the rate of 47 miles per hour, and yet it was done with so much smoothness and steadiness as not to be in the least alarming. We believe no railway in the kingdom is working better than the North Midland.—*Leeds Mercury.*

Excursion Carriage for the Leeds Railway Company.—A carriage for the Leeds Railway has just been completed, from designs by the chief superintendent, Captain Laws, R.N., and built by Messrs. Melling and Son, coach-builders, Greenheys; which for beauty and workmanship, together with utility and convenience, may be considered almost unequalled. The body is 18 feet long by 7 feet wide, and built after the Italian gondolas, with a centre compartment, 8 feet long by 7 feet wide, and 6 ft. 6 in. high; allowing parties to promenade with the head covered. The interior of this compartment is fitted up to give the appearance of a splendid saloon, with rich carved mahogany sofas, lined with crimson plush and trimmed with silk gymp, and at each corner is a mirror of large dimensions. The painting is of a very superior character, the body being of a handsome lemon colour; and upon the panels are emblazoned the arms of Manchester, Leeds, London, York, Hull, Birmingham, and Derby, painted in most beautiful relief to the rich and delicate body colour. The lightness of the under carriage is equally characteristic with the superior accommodation of the interior. The buffing apparatus consists of a box of small elliptic springs, with single plates, each corner being free from those large and heavy buffer springs hitherto used.—*Manchester Courier.*

Stockton and Darlington Railway Company.—This Company is at present engaged in an undertaking near Yarm, which will in all probability be expensive and annoying. The Railway Company have for some time past been inconvenienced for want of water, between Stockton and Darlington, for the supply of their engines, and to meet the emergency, they have entered into an engagement with Messrs. Bainbridge, of the Tees Paper-mill, to supply them with steam-power to lift and force the water from the Tees, by means of cast metal pipes, to a reservoir at the station. Several of the pipes have burst from the pressure occasioned; the elevation being great, and the distance to the extreme end near the Yarm station, being upwards of a mile in length.—*Northern Times.*

Brecknock and Merthyr Railway.

Starting from the Dowlas branch of the Taff Vale Railway, near Pantecoed-Ifor, the line will pass by Blaen-y-garth, were would be a short tunnel to Aber-eriban Bryn Jack, crossing the Taff-fechan above the latter place, and passing on the west of Pont Lutton crossing the river, through the level below Danyrallt, and entering the mountain opposite the Ystrad with a tunnel 2000 yards in length, emerging in the Glyncollwng Valley, and following the Vale by Capel Glyncollwng, Abercynhafen, Rhyd-y-bine, Aber, to the West of Cui, by Derwen-y-groes, Llanfigan Rectory, through the village of Llanfrynach, by Maes-derwen Lodge, crossing the Usk near Aber-cyndrig, and passing between the canal and river to the terminus near the Gas Works at Brecon. Compared with other railways, the cost of land will be low, as a great portion, being mountain land, is of little value; and where the land is of good quality in the neighbourhood of Brecon, we are persuaded the landowners will meet the proprietors in a liberal manner, considering how greatly their land will be enhanced in value by the impetus afforded to agricultural improvement. The cost of construction will be light; the strata is favourable—lime and stone in abundance. The tunnel through the mountain, being sandstone, will not require arching, so that a great saving will be made in that item. We think there can be but one opinion of the advantages to be derived to this district from the formation of the proposed line. A new market will be opened for our agricultural produce in supplying the immense population employed on the hills, with the advantage of enriching our lands with an abundant supply of lime at a low cost; coals also would be much reduced at Brecon and its neighbourhood. The passenger traffic on the Taff Vale already is a good guide in estimating the probable traffic on this line; by affording the facilities of rapid and cheap travelling, the public of all classes gladly avail themselves of of its advantages; and the increase of travelling by railway is beyond all credence. We believe the measure is supported by influential parties, and we have no doubt that managed with economy, this line will prove a lucrative investment. The plans, we hear, are deposited with the clerks of the peace. The regulation requiring the deposit of plans nearly a twelvemonth before the application can be made to Parliament, is highly conducive to the interests of the landowners, as they have ample time to examine how the line affects their property, and for its merits or demerits to be generally discussed.—*Silurian.*

Greenwich Railway.—On Monday evening, about nine o'clock, an accident which occasioned much inconvenience, fortunately unaccompanied by any personal injury, occurred near the point of divergence to the Croydon line. By some casualty of which no explanation has been given, the up-train was thrown off the line of rails, and some of the carriages were drawn across the trams used for the down conveyance. The engineer and stoker blew out the fire, and the passengers were at length, after much alarm and excitement, handed out of the vehicles, and shown to a lateral staircase, from the foot of which they might thread their way through the dirty streets in the neighbourhood. On the remonstrance by a member of Parliament who happened to be a passenger, one of the attendants consented to light the passengers on their way by the line of the railroad; and on their arrival at the terminus it was found that the attendants were in ignorance of the accident, and were preparing to start a train downwards. Had this occurred a few minutes earlier, or had a train arrived by the line from Croydon, fearful indeed would have been the collision with the carriages out of place, and lives would probably have been lost. The arrangements on this railway appear to be extremely defective; there was no superintendant at hand to give directions in clearing the line, and no spare engine ready at the terminus in the event of any accident.—*Globe* of Thursday.

TO CORRESPONDENTS.

London and Croydon Railway.—*The anonymous "Proprietor" who complains that his remarks at the late meeting were "garbled," must labour under a mistake. The Reporter pledges himself that the account of the meeting was an uncoloured and impartial one, and conveyed a fair notion of what transpired. Of course it would be impossible to find room (and our readers would not thank us if we could) for everything that is said on such occasions. The Reporter must use his own discretion as to what may be deemed most important, however much he may offend those who talk for the sole purpose of appearing in print. He assures us, that on this occasion he treated the "Proprietor" precisely as he felt compelled to treat many others.*

Railway Reform,—*We are again reluctantly obliged, by a pressure of matter of immediate interest (or none) to defer the letters of* Examiner *and* A Railway Shareholder *on the new Birmingham and Gloucester system of Direction. We do not see, in a large mass of matter standing over, in type and in hand, any two communications which can bear keeping so well. They are of the class which are for "all time."*

A great deal of valuable correspondence is, for the same reason unavoidably deferred.

Omega.—*A complete history of the dark intrigue, from first to last, would certainly be edifying, but we could not go into it without entering into matters of purely personal concern, which it has from the first been our study to avoid. We have confined our attention invariably to the public acts of the parties referred to, and only touched on their private vagaries, so far as they served directly to illustrate the wickedness or folly of the former.*

A Friend of Competition *is mistaken. Ministers took as such no part on the second reading of the Stafford and Rugby Bill. The Attorney General, indeed, voted for it, but "Young Dudley" may account for that.*

A Loser of Five Thousand.—*We sympathise with him under his loss, though, of a truth, he abuseth us consumedly. It is idle in him to impute motives when he admits that "facts are with us." We dare say we shall survive his resentment.*

M. L.—*We dislike obliging him in the way he proposes, but we shall take an opportunity of explaining.*

H. H. *will be delighted with us to find that the decision of Parliament renders the publication of his letter now unnecessary.*

G. C.—*Some of the suggestions he sent us were excellent, and shall be noticed in due time.*

Communications received from A Well-wisher to the Blackwall—P. D. Y.—Mainchance—A Stoker—F. D. S.—Sam. Secundus—Q. in the Corner—D. K.

A small Book of Practical Instructions for Railway Engine-Drivers *has been sent us, published by Mr. Charles Hutton Gregory, the Engineer of the Croydon Railway. We hope to be able to notice it more particularly in our next, but cannot defer recommending in the meanwhile every Board of Railway Directors to put copies of it into the hands of their servants. It is very clear, sensible, and business-like production.*

THE RAILWAY TIMES.

SATURDAY, MARCH 20, 1841.

THE Manchester and Birmingham Extension Bill (Stafford and Rugby) has been thrown out by the House of Commons on the second reading, by a very large majority—the numbers being, in favour of the Bill 94, against it 154. It has been thrown out, too, not upon any point of form, nor on account of any merely temporary consideration, which after the lapse of a month or two might lose its weight, but after a full discussion of the Bill in a very full House, *on its merits*, and solely because no case had been made out, to the satisfaction of the members, for the pernicious interference which it threatened, with the vast pecuniary interests embarked in the existing railway communications between the Metropolis and Lancashire. Neither can the promoters of the scheme complain that it had not all its pretensions, such as they are, duly presented to the consideration of the House. Whatever the most able and skilful debater of modern times could do for it, Sir ROBERT PEEL did, but only to be told at last by the ingenuous and high-minded STANLEY, that he had thrown a vast deal of "art and ingenuity" away to no purpose, for ends in which the public had no interest. Stafford and Rugby were not London and Liverpool; nor yet the borough of Tamworth identical with all Scotland or Ireland, or even so much as North Wales! The scheme had not originated in any pressing want felt by the public, and, if sanctioned, could only end in loss and disappointment to all concerned (the professional and office-seeking promoters of it always excepted); justice to the one and mercy to the other, therefore alike required that a final extinguisher should be put upon it; and so the House, by the large majority we have mentioned, decided.

We heartily congratulate the whole railway interest on this gratifying result. It may be said to have increased the security of all railway property by many degrees, since it shows that capital once invested in a railway, under the sanction of the legislature, may safely depend on every needful protection against all uncalled for and wanton rivalry. We may—without presumption, we trust—take credit to ourselves, at the same time, for having contributed in some slight degree to the triumph on which we congratulate our friends. More than two years are gone since we first took the field against this Extension scheme, and ever since, we have never failed, as often as fitting opportunity offered, to expose its hollowness, and to denounce its injurious tendency. We have now our reward. The principle for which we have all along been combating, is precisely that by which the House of Commons has been governed in its present decision. Writing as far back as the 16th February, 1839, our words were—"We take our stand on the principle, that a railway south of Stone competing with the existing lines, would be unjustifiable as an invasion of their interests, and is not required by the wants of the public. In opposing the scheme upon such grounds, we feel satisfied that we are doing the best we can for the furtherance of that system which it is the boast of this journal to uphold—as apart from the injustice of the case, nothing tends more to weaken the claims of really necessary lines, than the promulgation of schemes wholly uncalled for by public accommodation."

THE Croydon Company, in their petition to Parliament praying for a modification of the passenger tax on railways, after urging upon the legislature the substitution of a per-centage amount upon the fare in lieu of the existing mode, express a confident belief "that it would not be necessary to fix the maximum per-centage on the fare higher than that which the present duty bears to the highest fares now charged on any railway." We presume from this, that the petitioners are favourable to a graduation scheme, although unquestionably it cannot be said of any scheme of that kind yet propounded that it would not inflict injury upon some of the higher class of railways. That a scale *might*, however, be devised which would very materially relieve the poorer Companies without inflicting a corresponding injustice, or any injustice at all, upon their neighbours, we have all along maintained, and our only regret is that some tangible practicable measure of improvement, having this object in view, has not yet been brought forward. It is quite clear that the revenue must not be allowed to suffer, and equally clear that the Companies who would be prejudicially affected by the operation of the scheme recommended by the Select Committee of last year, will not submit, and ought not to be obliged to submit, to a proposition which would be a direct inroad upon the rights guaranteed to them by the legislature, inasmuch as it would increase the proportion which the Government tax bears to the gross revenue of particular undertakings. No Company would have any right to complain of any alteration which should place them in no worse position than before, but they have a right to complain that *they* should be made to suffer for the relief of other parties, who were equally cognizant as themselves of the exact weight of the burden they were called upon to bear, before they voluntarily subjected themselves to it.

Much as we are opposed to the present mode of levying the railway tax, conceiving that it is not less oppressive to the public than injurious to the revenue of the State, we would much rather see it persisted in than that the principle should be sanctioned of imposing additional duties upon the wealthier and more powerful Companies, for the sake of affording relief to the poorer and more obscure. Such a course would be in effect imposing a penalty upon works of vast magnitude and surpassing importance. What is it that leads some of the great Companies, or rather, we ought to say, that *compels* them, to charge a higher rate of fare per mile than others? It is not that they may realise a larger net income, but because their original outlay has been necessarily so immense, that to realise any income at all, it is indispensible that the public should be taxed in a corresponding ratio for the facilities which the undertaking presents. We know that it is a favourite dogma with some—with the Chairman, for instance, of the very Company whose petition we are now discussing—that first cost is no legitimate element in the consideration of the rate of such railway fares as will be most profitable; but surely common sense shows that first cost is not merely one of the elements which must be taken into account before an accurate judgment can be formed, but *the most essential element of all*. As well might it be expected to secure a good dinner at the London Tavern at the same cost as a similar entertainment could be got for at a common eating-house, as to expect that you can be carried over a railway which has cost 50,000*l.* per mile at the same rate of charge as over a line the expenditure upon which has not exceeded 25,000*l.* The edibles may be as choice in quality in the one case as in the other, but the tavern-keeper has expended thousands of pounds upon the accommodations of his house, where his neighbour has not expended half as many hundreds, and his customers must make him a suitable return, or the business be given up. We are not advocates of high fares upon railways; far from it; but we hold that unless a reasonable return *upon the outlay, be it large or small*, be secured to proprietors, it is useless to think of keeping railways open, and we know of no means whereby the probability of such return can be guessed at except by taking into account the amount of first cost, and regulating the charges accordingly.

To return, however, to the subject of taxation, we think it would be by no means amiss

Digitized by Google

legislature the propriety of subjecting steam conveyance by water to similar imposts as steam conveyance by land. Other parties, the advocates of common-road communication, are ready enough to press for an equalization of tax so far as railways and horse-coaches are concerned; but why should not both unite to bring about a more equitable distribution of the State burdens, by including a species of conveyance which has hitherto escaped totally free? We cannot imagine any valid ground for exempting steam-boats from taxation while steam-carriages are subject to the infliction. It cannot be that more capital has been embarked in the one species of adventure than in the other, that more risk has been incurred, or that greater benefits to the public have resulted or are likely to result. In all these particulars, and in many others that might easily be named, the comparison is greatly in favour of railway locomotion, and if preference is to be shown at all, ought to determine such preference towards it. No preference or partiality is, however, at all necessary as regards taxation. Let the whole of the various modes of internal communication be placed upon the same footing, and let each secure for itself such preference only as its superiority in public estimation may fairly command.

We insert a letter from Mr. R. Dawson, of Liverpool, on the subject of the differences which have arisen among the Directors of the Edinburgh and Glasgow Railway. No person out of Scotland exerted himself more in behalf of this undertaking in the earlier stages of its history, and no person is better entitled to be heard on the difficulties and dangers with which, at the very moment of its successful completion, it is unhappily beset. Mr. Dawson's letter is conciliatory; or, to speak more correctly perhaps, *meant* to be so, for though his professed object is to mediate and to soothe, he has allowed himself to indulge in not a few remarks of the class of "odious comparisons" which can have no other tendency than to irritate and exasperate. Mr. Dawson would speak the Edinburgh Directors fair, and seems inclined to go so far even as to allow that they have been rather shabbily used; yet still he would have them to yield up the entire matter in dispute, as if it were one of mere forgiving and forgetting! Now, for ourselves, we must say that he has failed entirely in convincing us that it is for *the interest of the Railway* (to which alone we look) that the Edinburgh Directors should give way. Mr. Dawson speaks of understandings *previous* to the Act of Parliament; but we beg to say that the only understanding which anybody has a right to look to, is that *embodied in the Act itself*. The question to be solved is simply this—Can the railway be efficiently and advantageously worked under the provisions of that Act? If it can, then the Glasgow Directors have not a leg to stand upon; it is they and not their Edinburgh colleagues who should give way. Let us then see how the facts of the case really are.

The Act provides that there shall be a General Directing Board, of which Glasgow shall be the head-quarters, invested with a supreme controlling power; both parties approve of this, and upto the date of the present quarrel no idea appears to have been entertained, by any one, of removing the meetings of that Board from Glasgow. The Act also provides, that there shall be two subordinate Executive Committees, one composed of Edinburgh Directors, parties must have agreed to, if not approved of, at the time the Act was passed. And both parties farther agree, that up to the present time the plan of management thus prescribed by the Act has worked well. Why then is it sought to be overturned?—Avowedly for certain *possible* and *apprehended* inconveniences only. The Glasgow Directors think it would be better if all the executive, as well as all the deliberative and controlling power, were concentrated in *one* place; and considering that the line is but 46 miles long, we should say so too, if we were now considering *de novo* how the Company should be organised. But are the advantages of such a concentration so great and so manifest, that it is worth risking the peace and prosperity of the Company for them?—worth, in short, encountering all the evils of a violent revolution—for that, and no other, is the only way in which the Glasgow gentlemen have hitherto sought to accomplish their darling concentration. The notion is preposterous. The Lancashire proprietary are deceived. There is nothing at all vital in the question. Things might go on admirably as they are, if the Glasgow Directors would but pull cordially with the Edinburgh, in working out the machinery provided to their hands, and which—let us add—*they were appointed to work out*. The Glasgow gentlemen cry out so loudly for "concentration in *one* place," simply because that one place happens to be Glasgow. Had Edinburgh been the appointed head-quarters of the General Board, and Glasgow only been honoured with a local Committee, we should never have heard one word from them about the beauties of concentration. It is a local squabble entirely, got up for local and private ends only, and with which the English proprietary, if they are wise, will have nothing further to do, except to *put it down*.

Since writing the preceding remarks we have received a very ably written address to the shareholders, signed by Mr. Learmonth, Deputy-Chairman of the Company, and nine of the other Edinburgh Directors, but of such length that we are obliged to defer its insertion till next week. The following brief extract may suffice in the meanwhile to dispose of all that Mr. Dawson says on the subject of *previous* understandings. The Committee of the Edinburgh shareholders had insisted on having "the management of the Eastern half of the line, and that both after and before the Act of Parliament was obtained," and a general meeting was called to settle definitively, that and other points preparatory to applying for the Act of Parliament.

"The general meeting took place in March, 1836, about a month after the above remonstrance had been submitted on the part of the Edinburgh subscribers. The question was discussed, and the result was that the following resolution was unanimously carried:—'That it is the opinion of this meeting that the superintendence of the EXECUTION AND MANAGEMENT of that part of the line situated between the town of Linlithgow and Edinburgh, should, *after an Act of Parliament for the undertaking had been obtained*, be deputed by the general Committee (*i. e.* the Directors) to the local Committee in Edinburgh, subject of course to the control of the said Committee.'

"The resolution was moved by the present Chairman of the Company, Mr. Leadbetter, who now advocates a resolution to take from the Edinburgh Committee that very superintendance THAT UPON HIS *own motion, in* 1836, *was committed to them, as soon as an Act of Parliament should be obtained*."

At a still later period of the week, a reply

self, for which we must in justice to that gentleman, at whatever inconvenience to ourselves, find a place. It brings to light some facts which call for explanation at the hands of the Edinburgh Directors, but it has not altered in the least the opinion we have expressed on the general question.

We alluded last week to the very cool manner in which the Rev. Francis Close, of Cheltenham, "begged" (as logicians say) the whole question of Sunday travelling on railways, by assuming at once that it involved a desecration of the Lord's day, and the violation of a Divine command. It would seem that the Reverend incumbent of Cheltenham is not singular in this easy way of disposing of a matter which it would puzzle him fairly to look in the face. In the *Worcester Journal* of Thursday, we find a copy of an address, purporting to be signed by the "Mayor, Magistrates, Clergy, and other inhabitants of Worcester and its immediate neighbourhood," in which the subscribers remark that,

"They have observed with the greatest satisfaction, the course so highly honourable to the Company, hitherto pursued on the line with regard to Sunday travelling and Sunday traffic; and they do earnestly hope that this praiseworthy example will continue to be held forth; that the Company, with considerate and Christian regard for others, will still take care that their servants may enjoy the rest and benefit of the holy Sabbath, as well as themselves; and that no views of expediency or hopes of worldly profit will be allowed to interfere with a course so eminently calculated to forward the best interests of the community in general, and to call down on the undertaking the blessing of the Most High. The undersigned, convinced from daily and hourly observation, that no one cause is more promotive of the good conduct, and consequently of the happiness of the whole frame of society, than the due observance of the Sabbath day; and on the other hand, that its desecration is the root and source of the worst evils, could not be silent at this important crisis—and they fervently pray that the proprietors may be guided to such a decision as will bear the calm reflection of that awful hour when a recollection of God honoured, his ordinances regarded, and his immortal creatures thus benefitted, will infinitely outweigh all the passing interests of the world."

This address, like the circular of Mr. Close, has reference to the special meeting of the Birmingham and Gloucester Company, summoned for Tuesday next, and will no doubt be estimated by the proprietors at its true worth. The generalities in which these reverend gentlemen deal render it impossible to meet them on their own ground. We may admit all their premises, and yet safely demur to their conclusions. Granted at once (although we might quarrel with the phraseology in which it is expressed) that "no one cause is more promotive of the good conduct, and consequently of the happiness of the whole frame of society than the due observance of the Sabbath day;" granted on the other hand, that "its desecration is the root and source of the worst evils;" but what has this to do with Sunday travelling, until it has been incontrovertibly proved that such an employment of the only day which the great mass of society can in any way call their own *is* a "desecration," and a violation of a Divine institution? The question at last resolves itself into this, and until it be fairly met upon this ground, the vague denunciations and threats of future consequences, thrown out by the lay and clerical agitators of Worcester, may be suffered to pass unnoticed. We have sufficient confidence in the good

Digitized by Google

sense of the Birmingham and Gloucester proprietary to look forward to their decision on Tuesday without the smallest apprehension.

We refer with much pleasure to the Report of the Directors of the Dublin and Drogheda Railway Company, which appears in our columns to-day. It is of a very favourable character, and even if it had no other point of interest, the exhibition of the steady and zealous co-operation of English with Irish capitalists in carrying out so important an undertaking, would be highly interesting. We trust that out of a union so desirable, may arise means for forwarding the grand scheme of Irish railways, to which we have so often had occasion to refer.

A peculiar interest attaches, in our eyes, to the proceedings of this Company, inasmuch as the principle of share-list auditors, so strenuously insisted upon in the columns of this journal, is to a considerable extent acted upon by it, and to the manifest satisfaction of all concerned.

The Half-yearly General Meeting of the Hull and Selby Railway Company has just been held. The proceedings are as satisfactory as perhaps could have been expected. The dividend declared is certainly a small one, but the line was not opened for merchandise till the 19th of August last, and cannot have its resources properly developed until the traffic of the Manchester and Leeds and the Great North of England Railway shall have been fairly brought upon it. The influence, moreover, of more than one fatal accident in which this Company were implicated, must have been very injurious to the prosperity of the undertaking. Under all the circumstances we think the present dividend offers a very fair prospect of future increase.

It appears that the whole line will be completed and placed in the most efficient working order for 50,000*l.* beyond the Parliamentary estimate, or under 19,000*l.* per mile—including the purchase, we understand, of several plots of land not originally contemplated, but which it is now considered will be required when the traffic of the line is fully developed.

We have noticed elsewhere the disastrous fire at the South-Western Railway terminus on Tuesday evening, and the improper line of conduct pursued by the railway officers upon the occasion. In a letter to the Editor of the *Times* of Friday, Mr. Stovin, who had the direction of the Company's servants that evening, attempts to justify his interference with the firemen in the cool and consistent discharge of their onerous duties. Although parties deeply interested in the welfare of the concern might naturally feel strongly excited upon such an occasion—and the excitement in this instance seems to have amounted to little short of madness—they should bear in mind that the cool and deliberate movements of men daily accustomed to such scenes, arises *not from any want of zeal*, but from habits inculcated by discipline and experience. However well the parties present might have been acquainted with the "localities and resources" of the premises, in the confusion which they themselves created, it was next to impossible to obtain any useful information. The inferior servants of the Company exerted themselves very laudably and effectually in saving a very large portion of valuable property within the buildings on the outbreak of the fire, and subsequently succeeded, in conjunction with Messrs. Beaufoy's men, under the direction of Alderman Humphrey and Mr. Baddeley, in stopping the progress of the fire in its southerly direction.

The distance of the burning building from the water was so great that it was only made available by a chain of engines, and then water was thrown by the last engine through nearly six hundred feet of hose on to the fire!

It seems to us extraordinary that in premises of such extent and containing such an immense amount of property, no local provision whatever should have been made for the suppression of fire; and under such circumstances, we think a little more courtesy might have been expected towards those who came for no other purpose than to render the utmost possible assistance. Some friends who were present, and on the correctness of whose statements we can place the most perfect reliance, assure us that they were "witnesses of conduct and language used by men professing to be gentlemen, that would be a disgrace to persons in any rank of society."

—o—

On Monday, on the motion of Mr. Robert Gordon, a copy was laid before the House of Commons, "of the fourth Report of the Committee appointed by the Lords of the Treasury in pursuance of Addresses of the House of Commons of the 12th, 14th, and 20th days of August, 1839, respecting railway communication between London, Dublin, Edinburgh and Glasgow, with Appendix." The document was ordered to be printed.

—o—

A correspondent of the *Dublin Evening Post* says:—"There is more than a likelihood that the sums required for the construction of railways in Ireland will be forthcoming. I believe a project is entertained by private capitalists to raise the sum on the security that has been offered to Government, such as has frequently been given for advances for public works—the security of the land." We have reason for thinking that there is good ground for this report. A few days ago a petition was presented to the House of Commons from the foreman of the grand jury of the county of Limerick praying for the introduction into Ireland of an "extended and comprehensive system of railways."

—o—

Among the Companies who have petitioned the House of Commons during the week for a modification of the railway passenger tax are the London and Croydon; Brandling Junction; Glasgow, Paisley, and Ayr; Glasgow, Paisley, and Greenock; Arbroath and Forfar; Dundee and Newtyle; Wishaw and Coltness; and Slamannan. Petitions to the same effect have also been presented from Kircaldy, Aberbrothick, and other places in Scotland.

RAILWAY OFFENCES AND OFFENDERS.

On Monday the Directors of the London and Birmingham Railway Company had a policeman named Hoffer taken before Mr. Rawlinson, of the Marylebone Police-court, for neglect of duty in not attending to certain switches near the Camden station. Fortunately no serious accident occurred, although the mail train got upon one of the sidings. In answer to questions, it was stated that the man had been three years in the Company's service, and had never before been charged with misconduct. It was further stated by Mr. Bedford, the Superintendent of police, that there was little doubt the offender would *be discharged from his employment*, and under these circumstances the magistrate mitigated the fine to 20s.

Last week a man named James Morgan, a guard in the service of the Manchester and Leeds Railway Company was charged before the Leeds magistrates with drunkenness and assault. The assault had not been committed on the railway but in the streets of the town, and the case had been brought forward by a gentleman named Maude, who very properly considered that such conduct on the part of a person holding the responsible situation of a railway officer ought not to pass unnoticed. The further facts of the cause are thus given in the *Leeds Intelligencer* of last Saturday:—

"It was stated by Mr. Maude that he had been to the station of the Leeds and Manchester Railway, to ask the parties having the superintendence of the servants there to appear before the magistrates with reference to the conduct of the defendant, *but they declined to do so.* On this communication being made, the magistrates directed a messenger to be sent to the station to request the attendance of the station-master and the clerk. This was accordingly done, and Mr. Wood and Mr. Glennan were shortly afterwards in attendance. The former stated, that on the train being about to leave at half-past two on Saturday afternoon, he observed that *Morgan was under the influence of liquor, but not drunk, and consequently he very properly refused to allow him to go.* He added, that the fact had been reported to head quarters at Manchester, *and the defendant was suspended from his situation until their decision should be known.* Mr. Glennan was also examined. He stated that at the time mentioned by Mr. Wood he saw Morgan, and did not perceive any alteration from his ordinary appearance.—The defendant having heard the charge, strongly denied the fact of being the worse for liquor at the time alluded to, but admitted that he subsequently got intoxicated in consequence of vexation at not being allowed to go with the train. He added that he had been in the Company's service nearly two years, and during that time was never accused of misconduct in any shape. With respect to the assault, he stated that his recollection, from the effects of the drink, had so failed him, that he did not remember what transpired. The magistrates informed him that there could not be the slightest doubt that he had committed a most gross assault, besides being intoxicated and otherwise conducting himself in an outrageous manner. Such conduct was extremely disgraceful, but especially so on the part of a person in whose hands, in some degree, the lives of the public might be said to be placed. He was further informed that had he been found in a state of intoxication whilst on duty, he would inevitably have gone to the House of Correction for two months to hard labour. The Bench then convicted him in the penalty of 40s. and costs, and in default of payment one month's imprisonment. *The money was immediately paid.*"

The conduct of the "parties having the superintendence of the servants" on the railway is very unsatisfactory. They ought at once to have attended to prove the case against the delinquent. Nor does it seem to us to be at all an adequate punishment merely "to suspend" a railway servant who is "under the influence of liquor"—we do not enter into the nice distinction of being "under the influence of liquor *but* not drunk." If the man were unfit to do his duty he ought to have been given into custody at once, and dealt with according to law. We presume that the "suspension" has by this time been converted into absolute dismissal. If not, the fellow will have escaped very easily with a temporary suspension for having been "under the influence of liquor" while on duty, and with a fine of 40s. and costs, (which of course "was immediately paid") for an assault which the magistrates designated as "most gross," and which unquestionably was so, if the evidence of the person assaulted (which we need not detail) is at all to be believed. A couple of months at the treadmill would have been a more appropriate punishment for a man who, on his own showing, gets drunk and commits a gross assault on an unoffending individual "in consequence of vexation at not being allowed to go with the train."

Thames Haven Dock and Railway.—The adjourned meeting of the proprietors of this undertaking was called for Thursday last at the London Tavern, but there not being a sufficient number present to constitute a legal meeting, the proceedings were again adjourned.

RAILWAYS IN THE EAST.

An Address to the Inhabitants of the Eastern Counties of England; being a slight Historical Sketch of Ancient Roads. With a few Observations on the adaptation of the Modern Railway to the development of the Resources of a Country. 44 pp. 12mo. SUCH. London.

THE avowed author of this production is Mr. Henry Bosanquet, the Chairman of the Eastern Counties' Railway Company. What this gentleman can do in the way of "doggrel—capital doggrel" is already known to our readers, and by all besides who have had the pleasure of perusing that inimitable little poem ycleped "Pooh! Pooh!" In the piece before us, Mr. Bosanquet's muse has taken a loftier flight. From the very prosaic and level style of the title—"Address"—Historical Sketch"—Few Observations," &c., no one indeed would suppose that there was anything of the nature of poetry within; but the fact of its not being a prose pamphlet, but an actual poem in heroic measure (or something, at least, intended to pass as such), is attested by three several decisive circumstances. In the first place, the lines, instead of being like the rails of the "Modern Railway" celebrated by the author, and like all prose lines, of equal length, are of every variety of length, with only a curious and somewhat unusual preponderance of *cæsuras* and *stop-shorts* among them—that is to say, they are of various lengths typographically considered, though syllabically they are all of that class called in the City *long tens* (how many to the pound we forget). Secondly, the "argument" is from first to last a piece of the purest fiction imaginable—and fiction, as we all know, is the very soul of poetry. Thirdly, the author himself certifies that he is poetically inspired:—

> "List ye! whilst thus I strive in these my *lays*,
> * * * * *
> Hear what results will come to thee and thine
> As sure as those old truths that fill my *line*,
> * * * * *
> Nor think I pray that my *historic song*," &c.

We meet with two or three odd things to be sure, which at first sight seem rather to militate against the author's claims to be regarded as one of the "gentle craft." For example, we encounter such startling rhymes as

> _____ dawn,
> _____ morn.
> _____ law,
> _____ war.
> _____ wrought,
> _____ sort.

But when we to call to mind that the author, besides being an *Eastern* Counties' Director is an *East End* banker to the bargain (not, to be sure, what is usually known by that name—nothing whatever to do with the old and respectable Lombard-street firm of Bosanquet and Co.,) but so far a banker that he takes his weekly or monthly turn at the Board-room table of a half million joint stock bank, located somewhere in the purlieus of Threadneedle-street—when we call all this to mind, we hesitate to deduce from Mr. Bosanquet's peculiar use of the Queen's English any reason for looking upon him as less of a poet than—*he really is*. Nothing on this side of Styx is so arbitrary as matter of pronunciation! Nothing less essential to true, double distilled poetry! Rough diamonds there are as well as smooth, and Mr. Bosanquet may possibly be one of them. Moreover, people can but speak as they have been taught to speak. A Cockney can be but a Cockney, to the end of time. When your *West-enders* learn how to pronounce *lieutenant* and *asparagus*, it will be time enough for them to turn up their noses at a respectable East-ender of Lothbury and Shoreditch, for boasting of his "law'r" and of his "saw't" of people.

But to the "argument," and to be serious:—According to a prose abstract, or analysis of it, prefixed to the "poem" by Mr. Bosanquet himself (for the benefit of town critics as well as country friends), it is briefly this:—

"First paths cut through forests necessarily crooked." Same with *some* railways, if not all.

"Change of ancient made roads to the improved modern highways and gradual formation of Railways. Appeal to the sons of the East"—not to be behind their neighbours.

"Paramount importance of, (a railway communication with the metropolis) to the resident aristocracy—mercantile interests, tradesman, agriculturist, banker, sportsman, valetudinarian—to the rich, to the poor, the thoughtful, or the gay."

"Adaptation of the modern invention of the long line of railway to the Eastern Counties' more particularly fitting."

"Situation of the Eastern Counties' if without it."

"Conclusion—Appeal to the inhabitants of the East to forward the *ob*tainment of such benefits as the modern railway presents, expostulation if they fail to obtain it and reduction, that in that case they will be like their ancestors of old '*penitus toto divisos orbe Britannos*.'"

> "Such shall you be, if stubborn and perverse,
> You *still* despise the subject of my verse,
> Spurn still the way, that art and science give,
> And teach you so to prosper and to live.
> Such will you be, to such seclusion turn,
> If you *do* still this proffered bounty spurn,
> Such shall you be; Oh! then this lesson learn,
> So taken humbly from th' historic urn."—p. 34.

We have only two faults to find with this "argument," but they are material ones. The first is, that it is founded on a false view of the facts of the case, and therefore, good for nothing. The second that it comes from a party in whose mouth all "argument" of the sort savours exceedingly of marvelous effrontery. It is *not* true that the inhabitants of the Eastern Counties' have ever "despised," or "spurned," or do now "despise," or "spurn," the advantage of the railway system. They have long known fully as well as Mr. Bosanquet can tell them (hard it were if they did not know much better) both what they are and how to value them. They were among the first to give them a cordial welcome, and if it should so unfortunately turn out, that they are to be among the last to realize them, the fault is none of theirs. In 1835-6, the great railway year, there were three sets of railway shareholders competing for the favour of the Eastern Counties—each of whom offered to make a railway throughout their whole length, and to provide all the funds requisite for the purpose, providing only the counties would contribute, their approbation and good-will. In an evil hour as it has since turned out, they gave their preference to the party which had taken for itself the title (as *par excellence*) of the "Eastern Counties Company," and that Company came under as solemn a public obligation, as any body of men ever did in this world, to make a railway the whole way "from London to Norwich and Yarmouth." How shamefully these people have broken that engagement it is unnecessary here to relate; it is known to the whole railway public, and to a larger public beyond that, with whom it has done more harm to railway interests in general than it would be easy to calculate. It can scarcely be less well-known that the foremost man of this faithless set—the Chairman of the break-faith Company, who have used the Eastern Counties so abominably—deceived and betrayed them—left them vilely in the lurch—who has been Chairman too from the first, and knows all about the promises and pledges that have been trampled under foot, is the same Mr. Bosanquet who indites this heroic expostulation to the people of the Eastern Counties, to be up and doing, and affects to wonder what they are about! Words fail us to characterise such conduct as it deserves. If the author condemned, but could not help, the breach of faith committed towards the Eastern Counties, the knowledge he has of the facts of the case might, with the addition of a very few grains of common honesty and prudence, have sufficed to restrain him from attempting to screen it from universal reprobation, by such a flimsy tissue of misrepresentation as his present "Address" consists of. And if, on the contrary, he has been an assenting party to the perfidy, he might at least have had the decency not to add insult to injury. Lucky it is for him that there is nothing in his "lays" but what is of very perishable stuff; otherwise his own grey-goose quill might have served to immortalize him, for a sort of moral exhibition, which the sooner, for himself and his friends, it is buried in oblivion, the better.

RAILWAY BREAKS—MESSRS. ADAMS AND BUCHANAN'S.

SIR,—In your paper of the 27th of February, there appeared a notice of a railway break, by Messrs. Adams and Buchanan, in the perusal of which the following objections suggested themselves, fatal it is to be feared, to the plan as now laid before the public, by the talented and ingenious projectors. A break of this description would be liable to entire derangement, if not destruction, and consequent danger to the passengers on arriving at a switch. Supposing it (the switch) open, (that is to say right for the main line) the jaws of the break would close into the notch in the rail, and be inevitably broken, provided the carriage did not first give way. If closed, in order to side the train, the jaws would be clipping two distinct rails, diverging from one another, and the like inconvenience would arise. Other objectionable circumstances, calculated to produce similar unsatisfactory results, arise from the lamination of the rails, leaving their edges quite rough, jagged, and unequal; the metals also on a line of railway frequently differ in width, as well as section, as in the case of the London and Birmingham, where they have a part 2¼ inches wide, 50 lbs. to the yard, and a part 2⅜ inches wide, 75 lbs. to the yard, which would cause a vibration to the passengers, quite incompatible with Mr. Adams's ideas of *elastic resilience*, there being no intervening springs between the break and the frame. Mr. Adams's statement concerning "a proper intersecting channel" through the "points," must be conceived to refer to the crossings, as it is difficult to see how it is to be done at the "points," as he mentions. The safety of this plan appears very doubtful, as there would be four grooves required instead of one, (it being necessary that there should be a way for the break while the carriages are crossing); this frequent intersection of the rails would alone render the thing impracticable, not to mention the expense of taking up, altering, and relaying, all the crossings. I think you will find these statements correct, and such as require attention.

I am, Sir, your obedient servant,

W. G.

March 2, 1841.

ANOTHER ACCIDENT AT THE SOUTH-WESTERN RAILWAY.—Wednesday morning the Tartar and Queen engines went to Wandsworth for water, the supply having been completely exhausted on the previous evening. They returned shortly before eleven o'clock, and the Queen was attached to the mail train, which was to leave at eleven o'clock. The Tartar, however, unfortunately got off the rails, and the wheels were deeply imbedded in the earth. Every possible exertion was made to move it, but it was not until 20 minutes after eleven o'clock that it could be accomplished, at which time the mail train started.

LONDON AND BRIGHTON RAILWAY.—The works on this great undertaking are approaching completion at even a more rapid pace than the last report of the Directors gave us reason to expect. Both the Merstham and Balcombe tunnels are finished; and a small portion only of cutting remains to be excavated at the approaches. Mr. Rastrick, the engineer, has engaged to convey a party of the Directors on the line from London Bridge to Hayward's heath in the course of a month. At Clayton the tunnel is nearly finished; and the line will be completed from Brighton to the Hassocks station in June, leaving only the small portion of the line which extends from the Hassocks to Hayward's-heath unfinished. We are assured that the opening of the line throughout the entire distance will take place by August next.—*Brighton Gazette.*

THE CADELL CORRESPONDENCE—REPLY OF MR. LEADBETTER.

To the Editor of the Railway Times.

SIR,—I have seen a leading paragraph in the last number of your journal, relative to the Edinburgh and Glasgow Railway, calling attention to what you call the "*Cadell Correspondence*," which correspondence however is all on one side; and commenting in no very measured terms on the conduct of my brother Directors in Glasgow and myself, in a dispute which has unfortunately arisen as to the future management of the Edinburgh and Glasgow Railway. I have no fault to find with the public discussion of questions of so great general interest to the shareholders of our railway, as that which regards the concentration or division of the management of the line after it shall be opened, and I am rejoiced to see the almost universal opinion which has been now expressed in favour of the latter; neither have I any fault to find with any fair discussion as to the conduct of my fellow Directors and myself, in regard to that question. But as various facts seem either to have been misrepresented to you, or altogether overlooked by you, I think it only justice to the parties with whom I have been acting, and the undertaking itself, without adverting to any thing that is merely personal to myself; to disabuse you of some of the errors into which you have fallen.

You say that the Edinburgh section of the Directors "are friendly to the concentration plan of management," "and are only opposed to its adoption for the present," on account of the offensive manner in which it has been advocated, I am not aware of the precise portion of the letter of Mr. Cadell to which you refer, as justifying the above statement; but, certainly no communication of a similar import, has ever been made to the Glasgow section of the Board, and the assertion is contradicted by the following facts:—

1st. That before the general meeting, and before any public discussion of the question, the Edinburgh Committee strongly advocated a division of the line, and that the management of the two portions should be committed to two executive Committees, one at each end.

2nd. That in reply to a letter written by me to Mr. Learmonth, on behalf of the Edinburgh section of the Directors, dated 8th February (omitted in your reproof of the proceedings of the meeting), suggesting the propriety of longer time being allowed to consider the whole subject, than what was then to elapse before the general meeting, and requiring a pledge that nothing would be done in the meantime to influence the shareholders and procure mandates for the meeting, Mr. Learmonth declined giving any such pledge.

3d. That it came indirectly to my knowledge, and was subsequently proved, that some of the Directors and their friends in Edinburgh, were at this very time procuring mandates for the general meeting, and that 300 circulars had been issued by the agent of these parties in Liverpool, requesting mandates to be sent to them.

4th. That at the general meeting when I stated from the chair that I was not opposed to the delay then for the first time sought by the Edinburgh Directors, provided they agreed to pledge themselves to abide by the decision of an adjourned general meeting of the shareholders, my proposal was rejected by them, on the ground that the proposed concentration scheme, even if considered expedient by a majority of the shareholders, was not authorised by the Act—and when a further proposition was made to allow delay, on condition of the Edinburgh Directors pledging themselves, that in the event of another general meeting deciding in favour of the expediency of a concentrated management—they would not oppose an application to Parliament, if necessary, for authority to carry it into effect—they refused to do so. In these circumstances, I cannot believe, you are correct in stating that the Edinburgh section of the Directors are in favour of a concentrated management, and only wish it postponed for *the present*.

You say that ruinous proceedings "judicial and Parliamentary, will be the inevitable result of the resolutions of the late general meeting." The Glasgow Directors are advised differently, and have no apprehension of any such result. They are confident that they are walking in strict conformity to their Act, and if unexpectedly driven to go to Parliament, all that they would require to ask for would be the same clauses, which Parliament has already under similar circumstances given to the London and Birmingham Railway Company. I must deprecate your stating that "the modern Athenians have (*confessedly*) the law on their side." No such confession has ever been asked, or made.

You quote the words of an Edinburgh correspondent, who represents the Act of Parliament "as the result of an amicable arrangement at the time between the two cities of Edinburgh and Glasgow, in which there was a good deal of yielding on both sides for the sake of the common object—it was supposed to settle definitely the constitution of the Company." This is not the case; the arrangement here alluded to had reference only to the procuring of the Act, and the management of the line while in course of being made. It did not refer to the working of the line, or to any other part of the business, which cannot with safety be entrusted to distinct executive committees, acting on different portions of the line, and having co-ordinate powers and functions; accordingly the terms of the present Act, so far as regards the constitution of the Company, were copied almost *verbatim* from the London and Birmingham, and other standard railway Acts of that period, and makes no geographical division of the line.

Lastly, you state, in the words of your Edinburgh correspondent, that if the question as to the constitution of the Company is opened up "it must be just as open to discuss the propriety of Edinburgh being the proper head quarters of a concentrated system of management, &c." To this I have never objected, and my colleagues would, I believe, have no objections still to leave it to the shareholders to decide this point—and if a majority of them were of opinion that it should be so transferred, they would throw no obstacle in the way of an Act being obtained for authorising the change. I think it right, however, in passing, to mention that you have been misinformed as to the extent of interest in the stock of the concern held in Glasgow and Edinburgh, respectively; nearly three-fifths of the whole stock of the Company are held in England, Scotland holds the remainder, in which Edinburgh and Glasgow are interested in nearly equal proportions.

In concluding, I have only to say that I am prepared, along with my brethren in Glasgow, to meet our Edinburgh friends at all times, in the most amicable spirit, and to endeavour to arrange anything that may appear to be for the benefit of the shareholders. That if they are dissatisfied with the decision of the very large representation of the shareholders, assembled at the last meeting, in favour of the resolutions then proposed, I shall be happy to call another general meeting of the Company to discuss the question fairly; provided all parties agree to acquiesce in the decision of that meeting, and to carry it, *bona fide*, into effect, either under the powers of the present Act of Parliament, or of another Act to be applied for next session of Parliament.

But in place of meeting the question as one in which the interest of the shareholders, and of the travellers on the Railway alone is concerned; it is to be represented as one in which the pride and feelings of the whole inhabitants of the two cities, at either terminus, must necessarily be enlisted, and if a struggle is to ensue between them, for a division of the power and patronage, it appears to me, that it is the duty of the Board of Directors, acting under the instructions of the late general meeting, to proceed in the course then pointed out for their guidance; and should ill-advised parties in the Direction, forgetting their duty to the general body of the shareholders, and acting on feelings of offended pride, seek to involve this undertaking in litigation, their proceedings must be temperately, but firmly, resisted; and I am happy to say, I see no reason to fear the result.

I am, Sir, your most obedient servant,

JOHN LEADBETTER.

Glasgow, 17th March, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Shareholders.

GENTLEMEN,—Six months ago our line was all but completed, our Chairman then assured us in the most unqualified terms that 2,800,000*l.* would suffice. In the Report of the 3rd March, we are coolly informed that 350,000*l.* more will be required; no reason is given for this enormous addition to the cost of 6,000*l.* per mile!!

Our Directors are forced to own, in their Report, that all the estimates furnished by them to previous meetings, have proved grossly incorrect *in every item*. That the tunnel has cost more than double the sum we were led to expect, under 250,000*l.*, the land 50,000*l.* more than the estimate, &c. &c.

This great cost may have been unavoidable, but have we not reason to complain, that we have been kept in the dark as to all these matters till now?

Why is it that no mention is made in the Report respecting the proposed junction with the Liverpool line? The progress of deepening the Irwell to Hunts Bank, or the agreement with the North Midland Company as to tolls? On all these subjects we have a right to be informed as also respecting the failure (hinted at in the Report) of the system hitherto pursued on our line of conducting the *goods'* traffic by means of the common carriers.

Our traffic receipts, it appears, are a complete failure hitherto, the working expenses absorb 60 per cent. of the gross receipts. What security have we that at next meeting in September, we shall not be told that to complete the branches, &c., a total cost of *four millions* will be incurred?

Altogether we are in almost a desperate condition as respects a dividend. Our Chairman six months ago gave us hopes of 9½ per cent. dividend. Would he now ensure us 2½? Nothing can save us from the fate of the North Midland (no dividend whatever, and 30*l.* discount), but a traffic in both goods and passengers so enormous as to be altogether *unprecedented*. But let us be humble and thankful! We shall soon know the worst, for our Directors have *at last graciously condescended* to allow us to know what is going on. They have promised to publish the traffic receipts!!

I am, respectfully,

A LEEDS SHAREHOLDER.

March 5th, 1841.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—A Proprietor attacked the Directors at the meeting last week on the subject of taking 600*l.* per annum for their services. The reply was, "Oh no, we don't take any money, but we credit the calls." So that A or B, instead of putting the Company's 50*l.* into his pocket and pulling out one of his own notes to pay the call, pays over the Company's at once, "and lays the flattering unction to his soul," (or would have us think so,) that he receives no pay.

Is this *comme il faut*?

I am, Sir, your obedient servant,

A. Y. Z.

The contemplated arrangements for the introduction of the Brighton Railway into the line now occupied by the Greenwich Company have at length been entered into, and contracts made for the erection of the necessary approaches. We understand that the terminus now occupied by the Croydon Company will be taken for the use of the Greenwich Railway, and the large house, known as the Railway Tavern, immediately adjoining the London entrance, will be pulled down at once. The shrubbery near St. Thomas's Hospital will also be removed, the Brighton line being intended to open at that point into the borough.—*Brighton Gazette.*

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—From the remarks by yourself in your paper of Saturday the 6th instant, and those which appear in the same journal on Saturday the 13th instant, I think I should be wanting in proper respect to the Directors of the Edinburgh and Glasgow Railway, were I to allow the letter of Mr. Cadell which has called forth your opinion to pass unnoticed. In thus entering upon this explanation, I beg to assure you, that I am induced by no other principle than that of a mediator, between the two contending parties. I have written to Mr. Cadell in reply to his last letter, to inform him of what had taken place in the early formation of this undertaking, facts which were apparently unknown to him, and which in the pure spirit of candor, were communicated, giving him at the same time full credit for the feelings he so warmly expressed in the concluding paragraph of his letter to the shareholders of Liverpool and Manchester.—"But as it is an attempt at peace, it will not be easy to turn me from my course." In his reply to me, which is of course private, it evidently proves to me he is in total ignorance of the whole system of management, and thoroughly unacquainted with those arrangements, which practical men have proved most advantageous, in carrying out the true principles and workings of undertakings of so extensive a nature—and therefore that the public may not be led away by the vain attempts of inexperienced parties—I venture to place this letter in your hands. I subscribe my name to prove that I am anxious to carry out to completion a work to which I have devoted much of my time and most serious attention from the earliest period of this Railway, being brought before the public, and that what I have done in support of this concern, has been for the interest of the shareholders, and general benefit of the country at large. Therefore, Sir, in order to justify Mr. Leadbetter and the Board of Directors at Glasgow, in the steps he and they have thought proper to adopt on the recent occasion alluded to by Mr. Cadell, I must inform you, that in the early progress of this work, before going to Parliament, a question of management was raised in Scotland, and, in order to ascertain the feelings of the shareholders, a deputation was appointed to Liverpool and Manchester, consisting of Mr. Leadbetter, Mr. Learmonth, and Mr. Miller. Acting then, as the agent of the Company, I called a general meeting of the shareholders, which took place at the Clarendon Rooms, in this town, where there was a very fair attendance. Resolutions were unanimously passed by the Liverpool shareholders, representing, at that time, upwards of 6,800 shares to this effect. That it was deemed advisable to have two committees during the progress of the construction of the Railway, for the purpose of carrying on the works more effectually at each end of the line; but that no definitive arrangement should be entered upon by the Board without *first* consulting the proprietors at large, it being their decided opinion, that ultimately there should be only one Board of Control, and Glasgow was considered by *all* as the seat of business. The same Resolutions as framed in Liverpool were passed unanimously in Manchester by the shareholders, representing about 2,500 shares. The reasons assigned at that time were—First, Though we all considered the Edinburgh gentlemen, men of the highest respectability, and equal to any trust that might be reposed in them, still we feared that we should have too much law in the Board, and, therefore, decided in favor of Glasgow. Secondly, That as the Glasgow gentlemen who originated this plan, were more men of business—that city also standing pre-eminently high, for the construction of steam-power and locomotive engines, and being also the centre of the manufacturing districts of Scotland—we considered the interest of the Company would be consulted by the establishment of the Board in Glasgow. These were the views taken three years since, and our worst fears have been realized, if Mr. Cadell is any authority on which to form an opinion.

From what I can learn, I fear the differences that have arisen, proceed more from the manner in which the parties have conducted themselves, than the matter. I therefore trust that on reflection, there will be spirit enough in one party to acknowledge any want of proper courtsey—and candor on the other to receive with the same feeling such admission. However in order to reconcile all difference, I have ventured to submit to the respective Boards, what I conceive may conduce to the re-establishment of harmony, without which no possible good can arise. That the two Committees should draw out their case of debate—three gentlemen from each, fairly and dispassionate to discuss the same—and that their separate reports be submitted to a party, whom I named—a gentleman who is the oldest Secretary of railways, a man of sound judgment and very extensive practical engineering experience, who would be able to give an unbiassed opinion, and thus save all the attendant expenses on legal proceedings, which appear to be the ruling passion of the gentlemen of Edinburgh. I have had no communication from the parties, since the proposal was made both to Edinburgh and Glasgow, and though I informed Mr. Cadell what I had done, his subsequent reply leads me to suppose he is not altogether actuated by that spirit which he professed, and which alone tempted me to trouble him with any observations on his printed letter to the Shareholders. Had these gentlemen in Edinburgh really intended by legal measures to enforce their claim—which on the examination of the present Act of Parliament, I cannot myself discover any pretensions for—they should have protested against the meeting and left the room—but they allowed the question to go to the vote, in which they were left in a very large minority. They afterwards joined in the unanimous vote of thanks to the Directors and the Chairman, and when the proceedings had terminated, they then entered their protests. If this is the Scotch mode of proceeding, the sooner it is reformed the better, for it is not consistent with English practise, and if our northern friends wish to have their railways completed with English capital, the sooner they assimilate their laws and customs to English rule and practice, the better will it be for all parties. It is very much to be regretted, that in a line of so much importance any differences should exist, and every effort should be made to remove the difficulties that may unfortunately arise; nor do I consider the tenor of Mr. Cadell's letter at all calculated to allay those feelings which have been excited. Numerous precedents have been laid before the two Boards on the very question now in dispute, and, in every case, the Companies have experienced all the advantages from a concentrated system of management; and I really think, that the election of four or five of the Edinburgh gentlemen on the Glasgow Board, would, or ought, to soften down all matters. Only look to the present Board of the London and Birmingham, which works well, if not better than any other Board in the kingdom. They have only four or five resident Directors; the rest have to travel more than double, and some five times the distance to attend the meetings, and we hear of no complaints; and why should not this be done with equal advantage between Edinburgh and Glasgow? The want of proper energy and exertion on the part of the inhabitants of Edinburgh, has allowed two valuable concerns to remain dormant, or nearly so, viz., one, the Trinity Harbour, the most important outlet, in a commercial point of view, for all the railways of Scotland; and the other, the main trunk of communication—the Edinburgh, Leith, and Newhaven Railway. In a former letter, written by Mr. Cadell, this latter concern was spoken of in very *unmeasured* terms, which he now considers as a most important undertaking. So much for consistency. And with regard to the extension, or, I should say, the continuation of the Edinburgh and Glasgow line, from the present terminus, at the Haymarket, to the North Bridge, I must beg leave to remark, that any person who really understands the nature of railway communications must admit, that it would be the very height of folly and absurdity to allow an interregnum of only 1¼ mile, thus cutting off the direct connexion without which the system could not be perfected. This objection to the line through the Prince's St. Garden, was raised by the Edinburgh gentlemen, who should have been the first to have proposed it, if they really wished to benefit their own property, which this very essential portion of the line is so well calculated to promote. The Glasgow gentlemen wish to extend their branches to Hamilton and Kirkintilloch, at their end of the line; but this is not to be done, because the parties are not altogether agreed about the continuation of the line through the Prince's St. Garden. I speak advisedly when I say, that eight in ten of the English shareholders are decidedly for the junction at the Edinburgh, Leith, and Newhaven station, at the North Bridge; and I sincerely hope, that the shareholders at large will adopt such measures that this, and every other branch that may benefit the concern, may be immediately taken up with proper spirit. This should be commenced as soon as possible, to be simultaneously completed with the main line. Having confined myself to positive facts, I leave you, and those most interested, to draw your own conclusions, and say, whether so valuable an undertaking ought to be sacrificed to the unfortunate feeling you so forcibly expressed in your paper of the 6th instant.

If you consider this worthy of a place in your *Railway Times*, I shall feel obliged by its insertion. My only object is the true interest of the Company, and in thus announcing to the shareholders at large, that if by conciliatory movements, on their part, the great object of peace cannot be re-established, I beg to add that they have the power in their own hands, at the next annual meeting, to appoint those who will consult the interests of all, and not allow trifling considerations to interfere with the real welfare of the Company.

I remain, Sir, your obedient servant,

RICHARD DAWSON.

Share Broker, No. 10, Exchange-Alley, Liverpool.

SOUTH WESTERN RAILWAY COMPANY.

To the Editor of the Railway Times.

SIR,—In your rapid survey of the proceedings of the South Western meeting, you have anticipated me in much that I had to say, but I have still some observations to make, chiefly upon details.

With reference to the form of making up the accounts, so properly commented on by yourself and by Mr. Keet, I beg to acquaint Directors, that if it will abridge their trouble to put the whole of this half-year's expenditure under one item, as thus—"Oil, tallow, and cotton waste, 67,000*l.*," it will be quite as satisfactory to me, in showing how the concern has been conducted, as regards economy, as are their six heads. To speak seriously, I am utterly dissatisfied with the present way of doing railway business.

The Directors' assumption, that a reduction of expenditure has been effected, because the ratio between receipts and disbursements, has changed from 47 and 44, to 40 per cent. is unfounded. With the increased traffic from the opening of the entire length, the proportions could not do *otherwise* than change; the *apparent* reduction was an inevitable consequence, and the present charge remaining, upon receipts principally from passenger traffic at 40 per cent., I much doubt whether there has been in reality any reduction of expense at all. The Directors have, I conceive, taken credit for what has not occurred.

The next point I demur at, is the agreement they have entered into for the maintenance of way; first, the term is too long—in half ten years the price of labour may so fall as to render the price paid, if it be not so now, equally unfortunate and absurd. And how do we know that this large sum of 24,000*l.* per annum, is not, at the moment of entering upon the agreement, too much and excessive? Why did not Directors put up so large a head of expenditure to public competition, and accept the lowest tender, taking good security for due performance? Why these private bargains always with

Digitized by Google

the same individual, however respectable in his vocation he may be? Whatever powers the Act may legally give them, I do not think Directors are morally justified in using them to this extent, and I dissent from their taking upon themselves to decide, that no other competent person would have taken the works at a lower sum than that demanded by Mr. Brassey.

The manner in which the Directors brought forward their scheme for raising further capital, was not only a surprise upon shareholders, but extremely direspectful to them; and the Chairman's explanation of the reason was any thing but satisfactory. At the moment of hearing a paper read, containing seven resolutions, proprietors are called upon to pass it. If Mr. Bircham was too ill to effect the "formal wording" of such a document, why was it not given to one of his articled clerks to write out a fortnight before the meeting, and then transmitted by post to proprietors for their consideration? The truth is, that it is the fashion amongst these Boards to show to their constituents a contemptuous bearing they would not think of putting forward in private life, and a dictatorial tone which would lead the uninitiated to imagine, that they were not the elected and paid agents of the general body, but their prætorian masters.

I am not going to recommend such a measure in the present instance. I am willing to give credit for good intentions, and have no wish to visit sins of inadvertence with legal penalties, but I much doubt whether under clause 111 a verdict for the loss of Wright's balance, as well as verdicts against any other Directors in similar circumstances, would not pass against the Directors personally for not taking security. To avoid the chance of unpleasant collision between Directors and proprietors, let the former, under a better system of management, keep the cash on the Company's premises, and at once avoid risk and derive interest.

Mr. Nathan appeared to think that an efficient Board could be had, if Directors abstained from filling up vacancies. He may rely upon it that popular election, though better than the present house-list plan, would not effect that object; he will never see a Board impartial, independent, and in all ways best suited to work out the real interests of his co-partners, until he secures Directors taken from the share-lists, with share-list Auditors to look after them; any other method would result in perpetuating a clique, and a clique nothing can save from falling into corruption. On chance appointments for short terms depend our hopes of success. How is it possible that men who have so much upon their hands—as Mr. Boothby, Mr. Smith, and our present Chairman—can be of any real service in the working of a Southern Railway? The Chairman is of opinion, that as he and his Board hold one-tenth of the shares, their recommendation of new Directors should prevail; but do not other shareholders hold *nine*-tenths, and are they not entitled to an opinion?

We were told by Mr. Easthope—whose secession I regret, for he worked ably and worked hard—a year or two ago, that the Directors were to be reduced to 12; the new management has raised them again to 15, for which there is no occasion. And even now so inveterately is *clique* the order of the day, that the interest of the line is abandoned by failing to appoint some shareholder residing near to or at Portsmouth. A Director in virtue of residence to look after the line in the neighbourhood of his domicile was of no consequence in competition with bringing together at another Board three Birmingham Railway Directors! The Directors charge no expenses, and have reduced their pay to 1,000*l.* per annum. This is well as far as it goes, but I would rather have Directors taken, for the reasons I have often given, from the share-lists at 1,200*l.* per annum.

Having called Mr. Kay's attention to the illegality of the refusal he met with to inspect the names of proprietors, and the number of shares held by each, it is unnecessary to enlarge upon it.

The part of the meeting which was most gratifying was the evidently greater interest and apparent determination to have a voice in the management of their own property which shareholders evinced; I consider it an earnest of brighter railway prospects, and consequently larger dividends; and I cannot close this letter without offering my best thanks to Mr. Nathan, Mr. Kay, and Mr. Keet, for the diligence and industry with which they sought for information—a practice I hope they will continue, and extend, on all future occasions.

A RAILWAY SHAREHOLDER.

RAILWAY TAXATION.

Petition of the London and Croydon Railway Company to the House of Commons. (Presented 14th March, 1841.)

Sheweth,—That the duty imposed by the 2nd and 3rd William 4th, chap. 120, is a fixed poll tax per passenger, wholly irrespective of the class of traveller, the accommodation afforded, or the remuneration received.

That such a system of taxation must necessarily prove comparatively unproductive and unpopular; unproductive, inasmuch as the total amount of the tax depends entirely on the number of passengers, the number of passengers on the rate of the fares, and the rate of the fares on the different Railway Companies,—the payers of the tax, who have, therefore, the power and a direct interest, by increasing the fares, of reducing the number of passengers, and consequently the amount of the tax; unpopular, because it has an obvious tendency to keep up the price of the article taxed, and that, too, in an exact ratio increasing with the poverty of the traveller, inasmuch as the tax being small as compared to the large fare which is readily paid for the first class carriage, may very slightly tend to the increase of the first class fare, whilst the same tax being relatively very heavy when compared to the small fare which is with difficulty obtained for the third class van, must obviously tend materially to increase the third class fare.

As a remarkable confirmation of the unproductiveness and unpopularity of such a system, your petitioners beg leave to refer to the experience of their own railway, which is rendered the more striking by the circumstance that, in addition to the said tax, they are likewise subjected to a poll charge per passenger also, wholly irrespective of the class of traveller, the accommodation afforded, or the remuneration received, payable to the London and Greenwich Railway Company, as toll for the way leave over that railway—a charge precisely similar in principle and in its practical effects, and therefore open to the same objections as the Government tax. Your petitioners being thus burthened with two fixed payments per passenger, which evidently pressed the heavier on them in proportion to the lowness of their fares, discovered that it might be better for them in a pecuniary point of view to reduce the number of passengers by increasing the fares inasmuch as the increased fares would probably produce them as large a gross amount of receipts, whilst the Government tax and the Greenwich toll being both wholly dependent on the number of passengers would necessarily be diminished, and accordingly your petitioners raised their fares 25 per cent., and the result has fully justified their anticipations as the following table will show:

	Number of Passengers.	Total amount received.	Total amount of Government Tax.	Total amount of Greenwich Toll.
		£. s. d.	£. s. d.	£. s. d.
For period of six months, from 7th July, 1839, to 4th Jan., 1840, *before* fares raised	264481	14978 10 11	918 0 5	3688 9 9
For period of six months, from 7th July, 1840, to 4th Jan., 1841, *after* fares raised	214541	15327 3 1	758 7 0	2581 4 11
	49940 Decrease	353 12 2 Increase.	159 13 5 Decrease.	507 4 10 Decrease.

Making it clear to demonstration that such a system of taxation must prove comparatively unproductive as the gross amount of the tax is lessened by the very act of the tax-payers, which has increased their receipts, and that it must prove unpopular is also equally clear, seeing that those who have enjoyed the convenience of the railway have had to pay more by 25 per cent. than formerly, and that nearly fifty thousand persons in one half year have been *altogether* deprived of the use of the railway.

Your petitioners venture to urge this matter on the serious attention of your honourable House, and most respectfully to submit that if, instead of the said tax a per centage amount on the fare were levied it would operate as a direct encouragement to low fares, would afford a great relief to the poorer classes of Her Majesty's subjects, prove more productive to Her Majesty's revenue, and altogether more acceptable to the public at large. And upon this principle, and to effect these desirable objects, your petitioners verily believe that it would not be necessary to fix the maximum per centage on the fare higher than that which the present duty bears to the highest fares now charged on any railway.

And your petitioners will ever pray, &c.

STAFFORD AND RUGBY (LATE MANCHESTER AND BIRMINGHAM EXTENSION) RAILWAY.

The following are particulars of the debate which took place in the House of Commons on Wednesday, as elsewhere referred to:—

Lord F. Egerton moved the second reading of the Stafford and Rugby Railway Bill.

Mr. Gisborne moved, "That the second reading of the Stafford and Rugby Railway Bill be postponed until the 24th instant, in order to allow time for the Report of the Government Railway Commissioners [presented to the House on the 15th instant] on the subject of the best line of railway communication between London, Edinburgh, and Glasgow, to be printed, and in the hands of members, as such Report contains information bearing upon the merits of the proposed measure."

Lord F. Egerton contended that there was no necessity whatsoever to wait for the printing of the Report of the Commissioners before proceeding to read the Bill a second time.

Mr. Labouchere did not rise to offer an opinion on the merits of the Bill, but merely to state, that Sir F. Smith, whom he questioned on the subject of the Report relative to the measure, stated that there was nothing in the Report which could make against the second reading.

Mr. Wilbraham was of opinion, that this Bill was promoted merely with the view of pre-occupying the ground, and if the present amendment was not carried, he would move that it be read a second time that day six months.

Mr. M. Philips denied that the object was merely to pre-occupy the line. On the contrary, shares to a large amount had been already paid up.

Sir R. Peel presented a petition from 700 inhabitants of Tamworth in favour of the Bill. He had never used any influence which he possessed, whether in or out of office, to influence a vote on a question of that nature, nor should he ever do so at all, but neither would he refrain from urging the claims of his constituents. The line of way proposed to be established by this railway was well worthy the attention of honourable members from Scotland, from Ireland, and from North Wales, as it would prove advantageous to the traffic from those parts, by shortening the distance nine miles and a half between Liverpool, Manchester, and London, in addition to which the gradients were much more favourable. He admitted that it would offer a formidable opposition to the other line of way, but was the protection of a great existing monopoly to be used as an argument against the second reading of this Bill? The monopoly now was complete, and if the House, by rejecting this Bill at the present stage, refused to make any further inquiry the monopoly would not only be complete, but established. £20,000 had been offered by the other

Digitized by Google

Company to the promoters of the present scheme on condition that this Bill should be withdrawn. That Company had, already, cleared a sum of 3,725,000*l.* by their line, and therefore could not justly complain, or say that no other line should be established which might compete with them. If such an argument were admitted, it would go to the extent that no competition should be allowed, and would in effect give a complete monopoly to the present Company. There was one objection to the proposed line, and only one, namely, that as there were to be junctions on two points, it might be attended with danger to the public. That certainly was a subject worthy attention, but it was one which could more properly be considered in Committee, when the opinion of Sir F. Smith could be taken on the subject. He hoped, therefore, that the House would suffer the Bill to pass through this stage, and go into Committee.

Lord STANLEY said, that to cure a loss of not more that ten minutes' time between Liverpool and London, the House was asked to sanction an expenditure of 1,500,000*l.*, or thereabouts. Notwithstanding the art and ingenuity with which his Right Hon. friend (Sir R. Peel) so well knew how to dress up a statement for the House—(great cheering)—he must take leave to say, that his Right Hon. friend had misrepresented the case, that the railway was for the benefit of the important towns of Liverpool and London, and would be of much service to the people of North Wales, Scotland, and Ireland. It might be so if there could be a terminus beyond a terminus. The real termini, and the only places that would benefit by the measure, were the important towns of Rugby and Stafford. ("Hear," and a laugh.) He trusted, therefore, that his honourable friend (Mr. Gisborne) would withdraw his motion, and allow the division to take place on the amendment of the honourable member for Cheshire (Mr. Wilbraham.)

This was accordingly done, and upon the division the numbers were—

For the amendment.....	154
Against it.....	94
Majority against the Bill.....	— 60

RAILWAY ADJUDICATION.

JONES *v.* THE GREAT WESTERN RAILWAY COMPANY.

Court of Chancery, March 17.—This case was spoken to on the question of costs. The bill was originally filed to compel the Company to pay for damage done by the severance of the plaintiffs' land. After all the resistance that could be made, the plaintiffs' obtained an opinion of this Court in favour of their claim, and a jury gave them all the compensation they demanded. Under such circumstances the Act of Parliament compels the Railway Company to pay the costs of the injury, and these costs they tendered, but they refused to pay the costs of those proceeding in this Court which led to the inquiry.

Mr. WIGRAM and Mr. GREENE were heard on Monday in support of the claim of the plaintiffs to those costs.

Mr. TURNER and Mr. STEVENS were on the other side.

The LORD CHANCELLOR was of opinion that he could not give the costs of the motion before the Vice Chancellor, on which his honour did not make any order. In that parties must pay their own costs, but his Lordship gave the plaintiffs the costs of the proceedings before him, those costs to be costs in the cause. His Lordship was also of opinion that the defendants were bound to give the plaintiffs a convenient passage from one part of the land to the other part, and to keep that passage in good repair.

RAILWAY BETWEEN BAYONNE AND BORDEAUX.—The project of a railway direct from Bordeaux to Bayonne is now under the consideration of the Minister of Public Works. An offer has been made for the execution of it by M. J. E. Larrieu, a a banker at Paris; Messrs. Lucien Dartaud and Co., bankers of Bordeaux; and Messrs. Escarraguel, civil engineers of the same place.

FIRE AT THE SOUTH-WESTERN RAILWAY TERMINUS, VAUXHALL.

A most desctuctive fire occurred in the storehouse of the South-Western Railway Company, at Nine Elms, on Tuesday evening, shortly before eight o'clock. The premises consisted of a two-story brick building, about 160 feet long, 50 feet deep, and 30 feet high, divided into three compartments; they were situated on the west side of the terminus, at the extremity of the station, from whence the trains start. The fire originated in the warehouse nearest to the station, which was filled with stores for the use of the locomotive department; the upper floor contained a large stock of waste cotton, hemp, tallow, oil, turpentine, and other combustible materials; while the basement was occupied by several hundred tons of iron, and about 400 gallons of turpentine, oil, &c., in carboys and casks.

About half-past seven o'clock the store-keeper and two assistants went into this portion of the premises with an open light, which came in contact with some turpentine that had escaped from a leaky carboy, and the place was instantly in flames. The doors were closed in the vain hope of stifling the flames, which however raged furiously, and soon communicated with the floor above. Messengers were instantly despatched to the several fire-engine stations, but their arrival was in many instances forestalled by the reflected light of the fire seen in the sky. Mr. Braidwood and a body of firemen were at the time engaged with a fire in Gravel-lane, Southwark, where the first messenger found them and communicated his disastrous news. The Watling-street engine was instantly galloped off with the utmost possible speed, towards Nine Elms. In the interim, a small engine from Mr. Beaufoy's chemical works, and another from Messrs. Burnett's distillery, reached the fire, but were not accompanied by any person competent to cope with the difficulties which attended their useful application. The greater portion of the workmen and police were absent from the works, and the assistance was very scanty; those present seemed so panic-struck, as to be incapable of rendering the slightest service, or of giving such information as to where water could be obtained, as would enable others to do so. The second division of the building used as engineers' workshops and a depository for stores connected therewith, soon became enveloped in the flames, and by 8 o'clock these two portions of the building were one vivid mass of fire from the roof to the ground, the interior presenting the appearance of a huge furnace. A few minutes after 8 o'clock Mr. Braidwood reached the railway station, and his engine was closely followed by those from the Southwark-bridge-road, Chandos-street, Waterloo-road, Morgan's-lane, Farringdon-street, Holborn, and other stations, when a most disgraceful scene ensued. There was an excellent supply of water from the Lambeth works flowing from the plugs in the road opposite the terminus, but the railway authorities insisted on the engines being driven inside the station, where no quantity of water could be obtained. Mr. Braidwood was hustled and assaulted, and the driver of one of the engines torn from his seat—the engines were taken forcible possession of, and the operations of the firemen for a time wholly frustrated. While this conflict was going on, the flames were extending to the third division of the building, which formed the engine and boiler manufactory, the roof of which was on fire; when Mr. Baddeley, who was present, ran Beaufoy's engine down to that end of the building, and got it to work from a small tank of water which fortunately happened to be there. Alderman Humphrey, who was present, assisted, both with his counsel and exertion, in this judicious and well-timed movement, which proved eminently successful, the fire in the roof being quickly extinguished, and this portion of the premises with its contents was preserved uninjured. The railway officials seeing at last the folly and consequences of their opposition to the firemen, were content to permit them to proceed in their own way, and their exertions were at first directed to the preservation of the warehouses belonging to the carriage department, contiguous to the north end of that in which the fire commenced; the safety of this building having been secured, the firemen then proceeded to attack the fire from the other end, following up the advantage previously gained in that direction. By 10 o'clock all apprehension of the farther extension of the fire was at an end. The property consumed consists of the loco-motive store-house, and the workshops of the loco-motive department; the value of the machinery destroyed therein is stated to be at least 8,000*l.* Three loco-motive engines and tenders which were under repair were destroyed, but the Comet, Chaplain, Lark, Leeds, Orion, Phœnix, Vesta, and some others, were fortunately rescued by the workmen. The total loss is estimated to be nearly 20,000*l.*, of which insurances have only been effected for 9,000*l.*; viz. 5,000*l.* in the Union, and 4,000*l.* in the Dissenters' Fire-office.

A meeting, attended by most of the Directors, was held at the Vauxhall terminus, on Wednesday afternoon, for the purpose of inquiring into the circumstances of the fire. Mr. Braidwood and C. B. Ford, Esq., the managing Director of the Sun Fire-office, attended and complained of the unjustifiable interference of the railway officers. Mr. Braidwood states, that he never before experienced such ruffianly treatment, even in the worst neighbourhoods of the metropolis. The results of the investigation have not transpired.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BRISTOL AND EXETER RAILWAY.

March 15.—Bill read a second time and committed, and referred to the Committee of Selection.

GREAT LEINSTER AND MUNSTER RAILWAY.

March 16.—Petition for Bill reported. Report referred to the Select Committee on Standing Orders.

LONDON AND BLACKWALL RAILWAY.

March 15.—Printed breviate of Bill laid on the table.

Second reading fixed for Friday, 19th March.

LONDON AND GREENWICH RAILWAY.

March 18.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Wolverley Attwood and Mr. Barnard.

MANCHESTER AND LEEDS RAILWAY.

March 15.—Printed Breviate of Bill laid on the table.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

March 18.—Bill to "alter, amend, and enlarge the powers granted to the Newcastle-upon-Tyne and Carlisle Railway Company; to authorise deviations in the line of the railway; and for other purposes;" presented and read a first time.

NORTHERN AND EASTERN RAILWAY.

March 12.—Printed breviate of Bill laid on the table.

March 16.—Bill read a second time and committed, and referred to the Committee of Selection.

March 18.—Bill referred to Mr. Bernal, Lord Viscount Mahon, Lord Viscount Grimston, and the Hon. W. Cowper; Committee to meet on Friday, 26th March.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

March 12.—Printed breviate of Bill laid on the table.

March 16.—Bill read a second time and committed, and referred to the Committee of Selection.

March 18.—Petition of the Trustees of the Cheshunt Turnpike Roads against the Bill; referred to the Committee on the Bill; counsel ordered.

Bill referred to Mr. Bernal, Lord Viscount Mahon, Lord Viscount Grimston, and the Hon. W. Cowper; Committee to meet on Friday, 26th March.

NORTH MIDLAND RAILWAY.

March 15.—Bill read a second time and com-

mitted, and referred to the Committee of Selection.

March 18.—Bill referred to Mr. Bernal, Mr. Baines, Sir W. Molesworth, and Mr. John Parker.

POLLOC AND GOVAN RAILWAY.

March 12.—Bill read a second time, and referred to the Committee of Selection.

March 16.—Petition of David Robertson, complaining that the Bill introduced is not in conformity to the petition for the same, and that the Standing Orders in respect to such Bill have not been complied with; to lie on the table.

Bill referred to Mr. Bernal, Mr. Lockhart, and Mr. Oswald.

Committee on Bill fixed for Wednesday, 24th March.

The object of this Bill is to vary some of the provisions of the Acts relating to the Polloc and Govan Railway Company, and to give some further powers to the Company. The Bill empowers the Company to raise an additional sum of 46,000*l.* by the issue of new shares, making the capital in the whole 92,000*l.*, one-half of which sum is stated to have been paid up. It empowers them to borrow in the whole 30,000*l.* (including 20,000*l.* authorised by the former Act), with a proviso that the money borrowed is not to exceed one-third of the capital stock at the time of borrowing. The Bill empowers the Company to purchase by consent 50 acres additional land for stations, roads, &c. It empowers them to provide depots, warehouses, &c. and to take such rents, &c. for the use of them as shall be agreed on. It empowers them to lay additional lines of rail on the railway. The existing tolls for passengers are repealed, and the tolls mentioned in sec. 14 are substituted. The rates on minerals and goods are to be limited to 5d. per ton. The Bill provides for giving effect to an agreement that has been come to between the Company and William Dixon, Esq., under which the Company are to pay one penny per ton for all coal and dross conveyed on the railway, in compensation for all damage occasioned by the railway intersecting Mr. Dixon's colliery estate, and in satisfaction of the value of the minerals under the railway. The Bill provides that Mr. Dixon is not to work the mines under the railway, or within 40 yards of each side. The tolls are to be applied—1. In making the railway and works. 2. In payment of the way-leave to Mr. Dixon. 3. The other expenses of the Act. The Act is not to prejudice existing securities. An annual account is to be transmitted to the Sheriff acting for the county of Lanark.

March 17.—Petition of David Robertson [presented 16th March] read:—Motion made and question, "That the said petition, together with the Polloc and Govan Railway Bill, be referred to the Select Committee on petitions for Private Bills, put, and negatived."

March 18.—Petition of David Ness against the Bill; referred to the Committee on the Bill; counsel ordered.

PRESTON AND LONGRIDGE RAILWAY.

March 16.—Printed breviate of amended Bill laid on the table.

SHOTTS AND WILSONTOWN RAILWAY.

March 15.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Lockhart, Mr. Oswald, and Mr. Dennistoun.

SOUTH-WESTERN RAILWAY (No. 1.)

March 12.—Breviate of amended Bill laid on the table.

March 16.—Bill reported; amendments agreed to; clause (power to take temporary possession of land without previous payment of price) brought up, and read first time; motion made and question proposed, "That the clause be now read a second time:" Motion, by leave, withdrawn; Bill to be ingrossed.

March 18.—Bill read a third time and passed.

SOUTH-WESTERN RAILWAY (No. 2.)

March 17.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Hawkins, Mr. William John Blake, and Mr. Benjamin Wood.

STAFFORD AND RUGBY (LATE MANCHESTER AND BIRMINGHAM EXTENSION) RAILWAY.

March 15.—Petition from Hinckley in favour of the Bill; to lie on the table.

March 16—Petition of Sir Charles Wolseley, Bart., against the Bill; to lie on the table.

March 17.—Motion made and question proposed, "That the Bill be now read a second time." Amendment proposed, to leave out the word "now," and at the end of the question to add the words "upon Wednesday next." Question proposed, "That the word 'now' stand part of the question." Amendment, by leave, withdrawn. Question again proposed, "That the Bill be now read a second time." Amendment proposed, to leave out the word "now," and at the end of the question to add the words "upon this day six months." Question put, "That the word 'now' stand part of the question." The House divided; ayes 94, noes 154. Words added. Main question, as amended, put, and agreed to. Bill put off for six months.

Petitions in favour:—from Drogheda; Bolton-le-Moors; Tamworth; Chester; Wigan; Warrington; and Oldham; to lie on the table.

Petitions against:—from bankers, merchants, and others, of Sheffield; Bilston; Wednesbury; West Bromwich; Walsall; Wolverhampton; Darlaston; Nottingham; electors of the southern division of the county of Stafford (two petitions); corporation of Walsall; London and Birmingham Railway Company; master wardens, searchers, and assistants of the Company of Cutlers in Sheffield; magistrates and others of Congleton; mayor, aldermen, and burgesses of Congleton; and magistrates and others of Dudley; to lie on the table.

THAMES HAVEN DOCK AND RAILWAY.

March 15—Petition for Bill reported. Report referred to the Select Committee on Standing Orders.

WEST DURHAM RAILWAY.

March 15.—Bill read a second time and committed, and referred to the Committee of Selection.

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

March 15.—Bill reported; Report to lie on the table and to be printed.

The following is the Report:—

Mr. John Henry Lowther reported from the Committee on the York and North Midland Railway Approaches Bill, that they had inquired into the several matters required by the Standing Orders to be reported upon by Committees on Railway Bills, and had agreed to the following Report:—

That the increased capital authorised to be raised by subscription under the powers of the Bill is 167,000*l.*, and the amount authorised to be raised by loan or mortgage is 55,333*l.*, which latter sum the Company are only empowered to borrow when 50 per cent. of the said capital has been paid up.

That it appeared to the Committee that the objects of the Bill being only for the purpose of raising a further sum of money, taking power to take on lease or make a purchase of the Leeds and Selby Railway from the Leeds and Selby Railway Company, and for improving an Approach to the York and North Midland Railway Company's station at Ulleskelf, the other matters required to be inquired into by Committees on Railway Bills do not apply to the present Bill.

The following petitions were referred to the Committee:—

From the Hull and Selby Railway Company, stating that the leasing of the Leeds and Selby Railway to the York and North Midland Railway Company will be injurious to their interests.

Counsel was heard in support of this petition.

From certain inhabitants of the city of York, stating that unless it be compulsory on the Company to make an approach from Micklegate to the Company's station in the said city, the powers sought for by the said Company will be injurious to their interests.

From Mr. John Norrison, stating that the taking his property for the Approach in the city of York will be injurious to his interests.

These petitioners were heard by their agents, and the clauses to which they objected were withdrawn by the promoters of the Bill.

Mr John Henry Lowther further reported from the Committee, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

March 18.—Breviate of amended Bill laid on the table.

RAILWAY FROM EVESHAM TO ECKINGTON.

A MEETING of landowners and occupiers of land was held at Pershore on Thursday last, to consider the propriety of assenting to, or opposing, the proposed railway from Evesham to Eckington. There were about fifty gentlemen present. Mr. Hanford having been called to the chair, stated the object of the meeting. While he admitted the benefit which the great lines of railway conferred upon the public at large, he was opposed to cutting up the country into shreds by carrying cross lines from one market town to another. The majority of the landowners and inhabitants of Evesham being against the measure, he trusted that the promoters of the scheme would yield to the prevailing opinion, and that the whole affair would be quashed.

Mr. ADDISON, of London, engineer, on the part of the promoters of the measure, informed the meeting, in reply to the chairman's observations, that a requisition was got up, about twelve months ago, in favour of the measure, by the principal inhabitants of Evesham. He had not, however, a copy of the requisition with him. Mr. Addison explained at some length the advantages which the proposed railway would confer, by giving increased facilities to farmers and gardeners in taking their produce to market. The line was intended to stop, for the present, at Eveshaun; but the projectors anticipated that it would be a kind of terminus of lines as far as Moreton-in-the-Marsh, Chipping Norton, and beyond. The cost was estimated at 65,000*l.*, and the profits at seven per cent. This the promoters of the railway were ready to prove before Parliament, from the existing traffic.—The meeting were generally of opinion that neither the traffic nor the population justified the scheme, and that no advantage would accrue to the market gardeners or farmers from a railway, as they would have to take their produce to the station at Evesham, and again from the station, on its arrival at Birmingham or other towns. It was further stated, on the authority of Mr. Pierpoint, of Worcester, that it was highly probable the Great Western Company would continue their line from Dudcott to Worcester, by Evesham. A resolution setting forth the grounds on which the meeting felt called upon to oppose the measure was then adopted, and a committee appointed to watch the proceedings of the projectors, and take the requisite measures for opposing the scheme. At the close of the proceedings, a vote of thanks was passed to the chairman, and the meeting separated.—*Midland Counties' Herald*, March 10.

GREAT NORTH OF ENGLAND RAILWAY—CROFT BRANCH.—Considerable delay and outlay are likely to be occasioned at the bridge which crosses the Tees near Croft, in consequence of an error in the elevation. It appears that the level of the bridge has been taken upwards of seven feet lower than it ought to have been. A great sum has consequently been unnecessarily expended in excavating, and it will require some thousands of pounds to rectify the error.—*Northern Times.*

TO RAILWAY COMPANIES.—Public Security, Efficiency, and Economy in FENCE for RAILWAYS.—J. PORTER begs to state, that he has within the last month introduced a new description of iron fence for railways, so strong as to resist the heaviest cattle, and prevent the possibility of sheep getting through. It is bold in appearance, and will bear the weight of men passing over or jumping upon it, without injury.

This Fence will be sound and good 50 years hence, and the cost of post and rail fence to last 10 years would purchase it.

Lighter Fence of the same description, also strained Wire Fence of the very best kind, fixed in a superior manner, by experienced workmen, at any part of the kingdom, at the lowest possible price.

This Fence is also suitable for the use of private gentlemen, Iron Bedsteads for families, public Institutions, and exportation.

82, Upper Thames-street, and the Grove Iron and Wire Fence Manufactory, Southwark.

This day, price 6d.

NATIONAL STORE AND DOCK BANKS. By CHARLES ENDERBY, Esq. Pelham Richardson, 23, Cornhill.

By Order, GEORGE BAKER, Secretary.

CROYDON RAILWAY.—SUMMER TRAINS.—REDUCTION of all FARES between New Cross and Croydon.

On and after Thursday, the 1st April, the morning trains will start from Croydon at 5 minutes past 8 and 5 minutes past each hour until 5 minutes past 12 o'clock. Afternoon trains at 20 minutes after 2 and 20 minutes after each succeeding hour (excepting 7) until 20 minutes after 9 o'clock and from London at the same hours with the exception of 5 minutes past 8 in the morning. A quick first-class train from Croydon at ¼ past 9 in the morning, stopping at Sydenham only.

Sunday Trains.—From Croydon, in the morning, 5 minutes past 8, 9, and 10 o'clock; in the afternoon, 20 minutes past 1, and 20 minutes past every succeeding hour (except 7) until 20 minutes past 9 o'clock.

From London the same, with the exception of 5 minutes past 8 in the morning.

The reduced fares between New-cross and Croydon will be as follow:—

FROM	1st class. s. d.	2d class. d.	3d class. d.
New Cross to Dartmouth Arms	0 8	6	4
Sydenham	0 9	6	4
Anerley (Jolly Sailor)	1 0	8	6
Croydon	1 0	9	6
Croydon to Jolly Sailor (Anerley)	0 6	4	3
Sydenham (Dartmouth Arms)	0 9	6	4
New cross	1 0	9	6

The third class carriages convey passengers with the trains between New Cross and Croydon only.

The fares from London to Croydon, or any of the intermediate stations, or from any of the stations to London, remain unaltered.

Annual Tickets may be obtained (upon application to the Secretary) from London to the Jolly Sailor, or Croydon, for £30, and to any other station at £27, entitling the holder to a passage in any carriage.

Day Tickets are also issued, by which, on payment of the fare to Croydon and back, passengers are allowed to stop at any or all the intermediate stations.

No alterations in the times of starting will in future be made but on the 1st day of the month.

R. S. YOUNG, Secretary.

205, Tooley-street, March, 1841.

ANDREW SMITH'S PATENT WIRE ROPE.

WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibbie and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every expectation. It has been used in Shipping Five Years.

OPENING OF THE GREAT NORTH OF ENGLAND RAILWAY.—The Public are informed that the Great North of England Railway will be opened from York to Darlington, for Public Traffic, on Wednesday, the 31st March, 1841.

The Trains will depart at the following hours:—

FROM DARLINGTON TO YORK.

5 45 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, and Manchester.
8 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, Manchester, Leeds, Selby and Hull.
12 30 p. m.—taking Passengers for Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
3 p. m.—(Mail,) taking Passengers for London, Derby, Leicester, Birmingham, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—taking Passengers to York.

FROM YORK TO DARLINGTON.

6 a. m.—bringing Passengers from York.
7 20 a. m.—(Mail,) bringing Passengers from London, Leicester, Derby, and Sheffield.
9 45 a. m.—bringing Passengers from Manchester, Leeds, Selby, and Hull.
2 30 p. m.—bringing Passengers from Birmingham, Nottingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—bringing Passengers from London, Birmingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.

Until further notice, Passengers will only be booked as far as York, where the carriages are changed.

Until the 6th of April, 1841, the London Mail Trains will leave York at 8 15 a. m., instead of the hours stated in the Time Table.

FARES BETWEEN YORK AND DARLINGTON.

PASSENGERS.		CARRIAGES.		HORSES.		
1st Class	2d Class.	On 2 Wheels.	On 4 Wheels.	One.	Two.	Three.
12s.	9s.	20s.	30s.	20s.	30s.	36s.

Parties riding in their own Carriages, and Children under 7 years of age, at lower rates.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the trains; and, to prevent disappointment, previous notice should be given to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their name and address fully marked thereon, and to satisfy themselves that it is deposited on the Carriages.

NORTHERN AND EASTERN RAILWAY.—The Directors of this Company will meet on Thursday, the 25th day of March next, at Ten o'Clock in the Forenoon, to receive Tenders for the erection of Platforms at the Tottenham, Edmonton, and Ponders End Stations.

Plans and Specifications to be seen at the Company's Offices, Shoreditch, on Monday, the 22nd instant.

The Directors do not bind themselves to take the lowest tender.

WILLIAM BOURNE, Secretary.

Shoreditch, London, March 18, 1841.

LONDON and BIRMINGHAM RAILWAY.—To CONTRACTORS, BUILDERS, IRONMASTERS, and Others.—For SALE, a quantity of useful RAILWAY STORES, of the best description; consisting of fish-bellied and light Contractor's Rails, about 40lbs. per yard, Platelayers' Tools, such as punners, beaters, long levers, &c., and about twenty loads of Ash Plank. The whole of which may be viewed at the Company's Station, Camden Town, between the hours of ten and four daily. For terms and particulars inquire at the Office of the Company's Storekeeper, Camden Station, London.

By order, R. CREED, Secretary.

Camden Station, March 11, 1841.

TO TIMBER MERCHANTS, RAILWAY CONTRACTORS, SHIPBUILDERS, and Others.—Valuable and Extensive WOODS for Sale. The Valuable and Extensive Woods of Aboyne and Glentanner, belonging to the sequestrated Estate of the Marquis of Huntly, are now for Sale.

The Woods of Aboyne, now for sale, comprehend about 900 acres, and consist of some of the most valuable Scots Fir and Larches that are to be found in the North of Scotland, all ripe and fit for immediate use; and the Forest of Glentanner contains a considerable extent of Scots Fir, of natural growth, and of very superior quality.

The Woods are situated in the parishes of Aboyne and Birse, and county of Aberdeen, and are distant from the city and sea-port of Aberdeen about thirty miles, having an excellent floating river (the Dee) intersecting them.

The quality of the Timber is admirably adapted for Railway Sleepers, Street Paving, Ship Building, and for country purposes.

Taking into view their proximity to a large river, their extent, age, and quality, these Woods are particularly deserving of the attention of men of capital.

Offers for the whole, or for such Lots as may suit intending purchasers, will be received by Donald Lindsay, accountant, No. 56, George-street, Edinburgh, trustee on the sequestrated estate of the Marquis of Huntly, until the 7th day of April next.

Lithographed Plans, showing the relative situation of the respective Plantations to the river, with particulars of the age, quantity, and quality of the wood, and other requisite information, are now ready, and may be had on application to the said Donald Lindsay, to Walter Duthie, W.S., Edinburgh; Messrs. Spottiswoode and Robertson, solicitors, No. 27, Great George street, Westminster; David Walker, land surveyor, in Aberdeen; or Thomas and Newell Burnett advocates in Aberdeen.

William Smith, overseer at Aboyne Castle, will show the woods upon the ground.

Edinburgh, 16th March, 1841.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 919, price 3d., published this day, contains Abstracts of the following Recent Patents:—Coltman and Wale's, for improvements in machinery employed in framework knitting, or stocking fabrics; Freeman's, for improvements in weighing machines; Dod's, for certain methods or processes for the manufacture of plate glass, and also of substances in imitation of marbles, stones, agates, and other minerals, of all forms and dimensions, applicable to objects both of use and ornament; Hannuic's, for certain improvements in the construction of governors or regulators, applicable to steam engines, and to other engines used for obtaining motive power; Houldsworth's, for an improvement in carriages used for the conveyance of passengers on railways, and an improved seat applicable to such carriages, and other purposes; Gilbert's, for certain improvements in machinery or apparatus for obtaining and applying motive power. Description, with two engravings, of Craig's Patent Rotary Steam-engine; Improved carriage lifter; Experiments with the Archimedean and other marine propellers; On the superiority of the Cornish single lifting engines; Description of the steam indicator, with engravings; Steam cooperage; Urwin's system of working steam expansively; Ericsson's screw propeller; the *Great Western* steam-ship, &c. &c.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, and manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 29, Cannon-street, City: in Edinburgh, by Sanderson and son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1 0 0
A ditto in a handle for the pocket	1 5 0
A ditto with Mordan & Co.'s ever-pointed pencil	1 10 0
A ditto, ditto, with reserve of leads	1 14 0

DUBLIN AND DROGHEDA RAILWAY COMPANY.—At the General Half yearly Meeting of the Shareholders of this Company, held at the Northumberland Buildings, on Thursday, 4th March, 1841.

The Report from the Board of Directors having been read, the following Resolutions were unanimously adopted—

Resolved—That the Report now read be received, and printed for the information of the shareholders.

Resolved—That the half-yearly statement of the accounts as now read, having been duly audited, be printed and circulated with the Report.

Resolved—That the Registry of the Proprietors of this Company, as now prepared, be sealed in the presence of the meeting, and received as the Registry of the Company.

Resolved—That the following gentlemen, being duly qualified, be elected Directors of this Company:—

George A. Hamilton, Hampton Hall; Lord Talbot de Malahide, Malahide Castle; William Henry, Abbey-street; Richard Wright, Pembroke-place; Peter Eckersley, Upper Gloucester-street; Richard Collins, Manchester.

Resolved—That H. B. Darley, Esq., and John Parker, Esq., be requested to audit the half-yearly accounts to be laid before the next general half-yearly meeting of the shareholders.

Resolved—That the thanks of this meeting be given to the Directors, for their persevering and zealous attention to the interest of the Company.

Resolved—That the thanks of this meeting be presented to Alexander Parker and James M'Cullagh, Esquires, for their important services in auditing the last half yearly accounts of this Company.

Resolved—That the entire approbation of this meeting be conveyed to Mr. Eckersley, the Managing Director, for his excellent management of the affairs of this Company.

Resolved—That this meeting cannot separate without expressing their entire confidence in the talents and abilities of their engineer, Mr. Macneill, and their approval of the judgment he has displayed in the remodelling of the plans for the construction of the line.

G. A. HAMILTON, Chairman.

G. A. Hamilton, Esq., having vacated the chair, and H. B. W. Darley, Esq., having been called thereto, it was

Resolved—That the marked and cordial thanks of this Company be given to G. A. Hamilton, Esq., for his uniform devotion to the welfare of this undertaking.

H. B. W. DARLEY, Chairman.

REPORT.

In submitting their usual Half-yearly Report to the shareholders, it is a source of great satisfaction to your Directors to be able to inform you, that considerable progress has been made during the last six months in furtherance of your important undertaking—and that they have not to detain you, as on former occasions, with explanations of the difficulties which they have had to encounter, but can proceed at once to detail to you the principal transactions which have occupied their attention since the last half-yearly meeting.

Soon after this meeting your Directors, anxious to obviate the necessity of again applying to Parliament for power to alter the gradients of their line (which you will recollect they were unable to procure last session, on account of a new construction which was then put upon the Standing Orders of the House of Commons), proceeded to obtain, as an alternative, the consent of the landowners and other parties interested, to the alterations required. And they are happy in bearing this testimony to the friendly feeling with which their application was almost invariably received, and the readiness with which the consents were obtained; and you will be glad to learn that your Directors are now in a position to make the alterations as recommended by your Engineer, without the necessity of again appealing to the legislature.

The effect of these alterations, while it will give to the public an excellent working line (the worst gradient being one in 180), will at the same time considerably diminish the expense of the construction, and materially reduce the depth of the cuttings, and the height of the embankments from what was originally intended, and thus prevent, to an important extent, that alteration in the surface of the country which has been urged by some as an objection to railways altogether.

Your Directors have had an important duty to perform in making agreements for the land required for the railway not already purchased. And they are happy to report that satisfactory agreements for the greatest portion have been already made, and as an instance of the liberal spirit in which they have been generally met, they are desirous of alluding to the favourable arrangement which they have made with the Corporation of Drogheda for the land required for the railway at the Drogheda terminus—an arrangement not less creditable to the Corporation for the enlightened views which they have taken of the true interests of their town, than as manifesting the general desire to promote the success of your truly national undertaking.

In pursuance of the promise contained in the last Report, your Directors have constantly borne in mind the necessity of a vigorous prosecution of the works, as, by steadily pursuing this object, they are convinced that they best promote the interests of the shareholders. In that Report you were informed that the Directors were about to contract for the execution of a large portion of the works, and accordingly, on the 10th September last, they met for that purpose, when no fewer than seventeen parties delivered proposals for the contract then to be let. On a careful examination of these various offers your Directors accepted the tender of Messrs. Jeffs and Sons, for £41,750, not only from its being the lowest, but from the character of efficiency as contractors which these gentlemen had acquired during the performance of several contracts on some of the Scotch Railways. The contract thus let commences at the Royal Canal, near the Dublin terminus of the railway, and extends to a certain point beyond the village of Raheny, a distance of about four miles. The excavations on this portion of the works are the heaviest of any which occur on the entire line. Messrs. Jeffs and Sons commenced their undertaking in the following month of October, and have proceeded with it as expeditiously as the season would permit.

Immediately after they had concluded this contract, your Directors took steps to prepare for letting another, and on the 18th of last month, they assembled to receive tenders for No. 3, or the Malahide contract, which had been previously advertised. On this occasion eleven proposals were received, and your Directors accepted the offer of Mr. William M'Cormick (recently an extensive contractor on the Manchester and Leeds Railway,) for a sum of 43,000*l*. This contract extends from the termination of Messrs. Jeffs and Sons' portion of the works at Raheny, to a point near Donebate, a considerable distance beyond and over the estuary at Malahide, and being about six and half miles in length.

One-third, therefore, of your line, as to distance, is now under contract, and fully one-half of the entire works. This difference between the quantity of the works and the length of road, arises from the comparative lightness of the works from Donebate to Drogheda.

It is a source of great confidence to your Directors to be able to state that the completion of so large a portion of the Railway is now under actual agreement with most responsible and experienced contractors, upon terms a little lower than the estimate of Mr. Macneill, your Engineer. That a great amount of traffic must necessarily be carried over your line, your Directors are in possession of the most satisfactory evidence, such indeed, must be obvious to any one who considers its character as an arterial line from the metropolis to the thriving and commercial district of the north, following the stream where the greatest traffic, for a distance of thirty miles from Dublin at present flows. But while many parties have admitted the extensive nature of the traffic, they have objected to the estimate as being insufficient for the construction of the road. This objection having been so frequently made, the contracts which have now been concluded, cannot fail to be highly satisfactory to the shareholders, and the statement which your Directors made on a former occasion, that the line would be completed for 14,000*l*. a mile, they can now repeat with the fullest confidence.

Pursuing the course which your Directors have adopted during the last six months of pressing forward the works with activity, it is their intention immediately to prepare for letting another important contract, and when next they meet you they hope to be able to report equally favourable results. From what has already taken place, they have now become fully satisfied that the various delays to which your undertaking has been subject, instead of being a loss to the proprietors, will ultimately prove a great gain, independently of the advantages which will be derived from the experience of the last few years in the improved method of constructing railways, and the great superiority of the mechanism applied to railway uses. Your undertaking will now reap the advantage of all these improvements, at a cost of only about two-thirds of the outlay which would have been required four years ago for a line of inferior construction.

In calling your attention to the statement of the half-yearly accounts, you will be gratified to perceive that the calls have been paid up much better than heretofore, although during that period great commercial and monetary difficulties have existed.

At the last meeting of the shareholders a resolution was passed, recommending the forfeiture of certain shares, and your Directors have only been prevented from carrying this resolution into effect, from the time required to obtain a thorough knowledge of the proprietary; and the result of the information thus procured has been, the payment of calls from several parties whose shares were at first intended for forfeiture. The attention of the Directors will, however, be devoted to this subject at the earliest moment that circumstances will permit.

With a view of avoiding pecuniary pressure upon the shareholders during a season of considerable monetar difficulty, your Directors have made their calls for small amounts. Notice of a fresh call of only 2*l*. 10*s*. per share has just been given, and it is the intention of your Directors in future to make the calls as light as possible; and seeing the successful prosecution of the works, and the necessity for a supply of adequate means, they feel assured that the proprietors will respond to them cheerfully.

In consequence of several of the shareholders having expressed a wish to pay sums in advance of calls, in order to receive 6 per cent. interest, which the Act of last session authorises your Directors to allow, a form of receipt as settled by the Solicitor-General has been prepared, in conformity with the Act in that case provided, and your Directors are now ready to issue said receipts to any of the proprietors who may desire to pay in advance of calls, to the extent of 30*l*. per share over and above the call just made; and it is proposed to pay the interest accruing on such advances half yearly, on the 30th June and the 31st December.

The proprietors wishing to exchange their old certificates, as granted under the original Act of Parliament for shares of 100*l*. each, for the new certificates of shares for 75*l*. each, as authorised by the Company's last Act, are hereby informed, that in England the shareholders may obtain said certificates from S. D. Darbishire, Esq., Marsden street, Manchester; and in Ireland, from the Company's Secretary, at the office, 19, Marlborough-street, Dublin.

A list of the present shareholders has just been printed by the Directors and any shareholder may procure the same on application at the Company's office or at the office of S. D. Darbishire, Esq., Manchester.

The following Directors vacate their office this year under the provisions of the Act of Parliament; the proprietors have the power of re-electing all or any of them, and of substituting others:—George A. Hamilton, Lord Talbot de Malahide, William Henry, Richard Wright, Peter Eckersley, and Richard Collins.

GEORGE A. HAMILTON, Chairman.

The Directors in Account for Cash, during Half-year ended 31st December, 1840.

* Trains to which Third Class Carriages are attached.

FARES.

London to Derby.	Sheffield.	Leeds.	York.	Hull.
1st Class. £1 14 0	£2 5 0	£2 12 0	£2 16 0	£2 18 0
2nd Class..... 1 3 0	1 10 0	1 15 0	1 17 6	1 19 6
3rd Class..... 0 15 0	0 18 6	1 0		

Third Class Passengers are not booked through to or from London.

First and Second Class Carriages are attached to all the Trains.

Third Class Passengers may be conveyed from London to Leeds in the day, by a Train leaving London at Seven a. m., and Derby at Six p. m.; and from Leeds to London in the same time, by the Fifteen minutes past Seven, a. m., from Leeds. Gentlemen's Carriages and Horses conveyed over the London and Birmingham Railway by these Trains are taken at a cheaper rate.

Parcels, &c., are conveyed by all the Trains, and are received at all the principal coach offices in the kingdom.

Carriage Trucks and Horse Boxes are kept at all the principal Stations; but to prevent disappointment, it is desirable that notice be given the day previous to their being required.

Post Horses are always in readiness on the arrival of the Trains at the Derby and Leeds Stations.

Time is allowed at Derby for refreshment.

By Order,

H. PATTESON, Secretary.

Office, Warnford-court, Throgmorton-street.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.....	55s.
Beer, Hides, Soap, Sugar, &c.....	60s.

Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.....	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.....	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

Just published, price 2s., with Engravings,

CRAIG'S ROTATORY STEAM-ENGINE, Explained and Illustrated, with a concise Review of the Invention of the Piston Engine, and a comparative estimate of their relative power and advantages.

"Est quodam prodire tenus, si non datur ultra."

London: Houlston and Stoneman, 65, Paternoster-row.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43 Piccadilly; or at the office of Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841. 43, Piccadilly.

TO RAILWAY CONTRACTORS.—To be Sold, 140 2¼ yard capital Earth Waggons, 30 inch Wheels; 3¼ inch Axles of the best construction. Also, about 60 tons 36 lb. per yard of flange bottomed Rails, as good as new.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to M. C. S. Medley, Farringdon.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841.

BRISTOL AND EXETER RAILWAY.—Seven Contracts to be Let on March 19.—TO CONTRACTORS, &c.—For Sale, at the port of Gloucester, about 300 tons of iron rail, T pattern, 42 to 44lb. per yard, as good as when it first came from the foundry.

120 2¼ earth waggons 2 feet 6, wheels 3 feet 6 gauge, strongly made, and nearly as good as new, having worked only one small contract.

The whole will be sold at half the cost price. May be seen on the line near the depot of the Birmingham and Gloucester Railway, Gloucester, and particulars obtained at Mr. Church's, near the Cattle Market.

BRISTOL AND GLOUCESTER RAILWAY COMPANY—EXTENSION LINE.—NOTICE is hereby given, That the Annual General Meeting of the Shareholders in this undertaking will be held at the White Lion Inn, situate in Broad-street, in the city of Bristol, on Tuesday, the 30th day of March instant, at 1 o'clock in the afternoon.

By order of the Commitee of Management,
GEORGE JONES, Chairman.
ROBERT FLETCHER, Sec.

Bristol, 15th March, 1841.

The chair to be taken at 1 o'clock precisely.

The Transfer Books will be closed on Thursday, the 25th day of March, and not re-opened until after the said General Meeting on the 30th of the said month.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

WEST LONDON RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the West London Railway Company will be held at the Company's office, No. 11, Abchurch-lane, in the city of London, on Monday, the 29th of March, instant, at one o'clock precisely, to determine upon rescinding the Resolution passed at the General and Special General Meeting of the Company, held at the Company's office, on Wednesday, the 7th of October, 1840, for raising an additional capital of £60,000 by the creation of 6,000 preferred shares; and also to determine upon raising the said further capital of £60,000, or such portion thereof as the Meeting shall direct, by the creation and issuing of such and so many new shares at reduced prices, and upon such terms as the Proprietors at such Meeting shall think proper; and also to fix the prices at which such shares shall be issued, the amount of calls upon such shares, and the time or times when the same shall be paid; and to give certain orders and authorities to the Directors of the Company in that respect; and for other purposes.

WILLIAM MORGAN, Deputy Chairman.

Office, 11, Abchurch-lane, March 18, 1841.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of salt and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 169. Vol. IV.—No. 13.] SATURDAY, MARCH 27, 1841. [Price, 6d.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS.—Contract, No. 4.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before Twelve o'Clock, on Monday, the 26th April next, Tenders for the excavation and formation of the earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying the permanent rails, of that portion of the railway commencing from a point in field No. 53, in the parish of Charfield, and terminating at a point near the road, marked No. 15, in the parish of Berkeley, being a distance of about 2 miles 16 chains.

Contract No 8.—Also Tenders for the execution of similar works on that portion of the line commencing from a brook, the boundary between the parishes of Frocester and Leonard Stanley, and terminating at or near the junction with the Cheltenham and Great Western Union Railway, in field No. 8, in the parish of Moreton Valence, being a distance of about 2 miles and 17 chains.

Drawings and Specifications of the above works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Friday next the 2nd April.

The Directors will not consider themselves bound to accept the lowest Tender; and they expect the several parties to attend at the Office on the 26th of April, at One o'clock.

ROBERT FLETCHER, Secretary.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of six per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1844.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Hallifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

TO ENGINEERS AND RAILWAY COMPANIES. A Practical Engineer, who has by a most assiduous attention acquired a thorough knowledge of the following branches, viz., Forging, Tempering, Turning, Fitting, and Erecting, is well acquainted with the details of Stationary, Locomotive, and Marine Steam Engines, also the effective application of Mechanical Tools in their manufacture. He has invented the following improvements —a motion to supersede Eccentrics, Valves to give the Steam to Engines which are applicable to other purposes; and a method of making and turning wrought iron Railway Wheels; also, he will satisfy the strictest inquiry as to character, &c.

N.B.—He will undertake their execution as leading operative, under an arrangement.

Address, post paid, to A. Z., Mr. T. Hunt's, Salisbury-square, Fleet-street, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price, and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

OPENING OF THE GREAT NORTH OF ENGLAND RAILWAY.—The Public are informed that the Great North of England Railway will be opened from York to Darlington, for Public Traffic, on Wednesday, the 31st March, 1841.

The Trains will depart at the following hours:—

FROM DARLINGTON TO YORK.

5 45 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, and Manchester.
8 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, Manchester, Leeds, Selby and Hull.
12 30 p. m.—taking Passengers for Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
3 p. m.—Mail, taking Passengers for London, Derby, Leicester, Birmingham, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—taking Passengers to York.

FROM YORK TO DARLINGTON.

6 a. m.—bringing Passengers from York.
7 20 a. m.—Mail, bringing Passengers from London, Leicester, Derby, and Sheffield.
9 35 a. m.—bringing Passengers from Manchester, Leeds, Selby, and Hull.
2 30 p. m.—bringing Passengers from Birmingham, Nottingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—bringing Passengers from London, Birmingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.

On Sundays only, the Mail Trains will run.

Until further notice, Passengers will only be booked as far as York, where the carriages are changed.

Until the 6th of April, 1841, the London Mail Trains will leave York at 8 15 a. m., instead of the hours stated in the Time Table.

FARES BETWEEN YORK AND DARLINGTON.

PASSENGERS.		CARRIAGES.		HORSES.		
1st Class.	2d Class.	On 2 Wheels.	On 4 Wheels.	One.	Two.	Three.
12s.	9s.	20s.	30s.	20s.	30s.	36s.

Parties riding in their own Carriages, and Children under 7 years of age, at lower rates.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the trains; and, to prevent disappointment, previous notice should be given to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their name and address fully marked thereon, and to satisfy themselves that it is deposited on the Carriages.

ROSS-SHIRE, SCOTLAND. FIR WOOD FOR SALE.—There is for Sale, at Cambuscurrie, near Tain, about 150 Acres of Fir Wood, of superior Quality; also at Tarlogie, adjoining the above Wood of Cambuscurrie, about 136 Acres.

The timber is principally of large growth, a considerable number of the trees measuring from 20 to 28 solid feet, and admirably adapted for Railway Sleepers.

These Woods lie within a mile and a half of Tain or Dornoch Frith, and there is a Saw Mill at Morangie, close to the shore, where a purchaser can be accommodated.

These Woods will be sold in whole, or in lots of from 40 to 50 acres.

For further particulars apply to the proprietor, Hugh Ross, Esq., of Cromarty, Carossie, by Tain; to Messrs. Sang and Adam, W.S., Edinburgh; or to Mr. Gair, Bank Agent, Tain; by either of whom offers will be received between this and the 1st May next.

Tain, 3rd March, 1841.

LOCOMOTIVE ENGINES.—TO BE SOLD, Two Locomotive Engines, with 10 inch Cylinders, 4 feet 6 inch Wheels coupled, and 18 inch stroke; in good working order, with Tenders complete.

Make application to Mr. Thomas Dobson, North Midland Railway Works, Derby.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

CROYDON RAILWAY.—SUMMER TRAINS.—REDUCTION of all FARES between New Cross and Croydon.

On and after Thursday, the 1st April, the morning trains will start from Croydon at 5 minutes past 8 and 5 minutes past each hour until 5 minutes past 12 o'clock. Afternoon trains at 20 minutes after 2 and 20 minutes after each succeeding hour (excepting 7) until 20 minutes after each succeeding hour (excepting 7) until 20 minutes after 9 o'clock and from London at the same hours with the exception of 5 minutes past 8 in the morning. A quick first-class train from Croydon at ¼ past 9 in the morning, stopping at Sydenham only.

Sunday Trains.—From Croydon, in the morning, 5 minutes past 8, 9, and 10 o'clock; in the afternoon, 20 minutes past 1, and 20 minutes past every succeeding hour (except 7) until 20 minutes past 9 o'clock.

From London the same, with the exception of 5 minutes past 8 in the morning.

The reduced fares between New-cross and Croydon will be as follow:—

FROM	1st class. s.	d.	2d class d.	3d class. d.
New Cross to Dartmouth Arms..	0	8	6	4
Sydenham	0	9	6	4
Anerley (Jolly Sailor)	1	0	8	6
Croydon	1	0	9	6
Croydon to Jolly Sailor (Anerley)	0	6	4	3
Sydenham (Dartmouth Arms)	0	9	6	4
New cross	1	0	9	6

The third class carriages convey passengers with the trains between New Cross and Croydon only.

The fares from London to Croydon, or any of the intermediate stations, or from any of the stations to London, remain unaltered.

Annual Tickets may be obtained upon application to the Secretary from London to the Jolly Sailor, or Croydon, for £30, and to any other station at £27, entitling the holder to a passage in any carriage.

Day Tickets are also issued, by which, on payment of the fare to Croydon and back, passengers are allowed to stop at any or all the intermediate stations.

No alterations in the times of starting will in future be made but on the 1st day of the month.

By order,
R. S. YOUNG, Secretary.

205, Tooley-street, March, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued; in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 9th Feb., 1841

RAILWAY RETURNS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 3 and 4, Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

I. Reports relative to Accidents.

(*Continued from page 337.*)

Report of Lieut.-Colonel Sir F. Smith on the Hull and Selby and North Midland Railways.

[A very complete abstract of this Report, so far as regards the Hull and Selby line, was given at the time in the *Railway Times*. We insert, therefore, that part only which relates to the North Midland Railway accident of the 13th September.—Ed. R. T.]

During my investigation of the causes of this accident I was accompanied by Mr. Robert Stephenson, the Chief Engineer and Manager of this line, and by other gentlemen connected with it, all of whom afforded me every facility in their power for making such an examination and inquiry as might enable me to arrive at a right conclusion on this important matter.

The injury done to the railway by the accident having been repaired long antecedent to the period of my inspection, I am under the necessity of relying, in a great degree, as to the appearance of the road and the position of the carriages, on the statements of those persons who were present at the time, or arrived shortly after on the scene of the fatal occurrence; but it is satisfactory to be able to say, that in my opinion the assertions of the gentlemen to whom I allude, and whose respectability and intelligence may be considered as guarantees for their accuracy, are corroborated by all the probabilities of the case.

It appears that the morning up-train of the 13th of September last, when travelling between the South Wingfield and the Ambergate stations, met with a serious accident, by which several of the carriages were overturned, one passenger was killed, and several others severely injured, one of whom has since died. The train was drawn by No. 9 locomotive engine, and consisted of 14 carriages, of which the undermentioned six were thrown off the line by the accident:

1st. There was a second class of the North Midland Company.
2nd. A second class of the London and Birmingham Company.
3rd. Ditto.
4th. A first class coupee of the London and Birmingham.
5th. A first class of the London and Birmingham, and
6th. A third class of the North Midland Company.

The second and fifth carriages are said to have had breaks.

In order to make the following description more intelligible, I enclose a drawing, which will serve to explain better than any verbal description can do the relative positions of the several carriages, after the accident, and to show the tracks of some of them from the spot where they are supposed to have quitted the rails up to the bridge where they were overturned.

The train was running towards the south, on a gradient falling at the rate of 16 feet in the mile; and at about 240 yards to the northward of the bridge, there was a temporary siding to a spoil bank, which had been used by the contractor for that part of the line, with points connecting it with the permanent rail.

It is here proper to remark, that some part of the line had not been ballasted up to the proper level when this railway was opened to the public, and this being the case in the neighbourhood of the bridge, the contractor was engaged on the morning of the 13th ult. in carrying ballast thither from Lodge Hill tunnel, which is situated to the northward of the bridge in question.

The waggons used for this purpose had been lying on the spoil bank to the eastward of the line of railway, and points were set from the sidings to the permanent rails to admit of the waggons being drawn on them to proceed to the tunnel.

A flagman, of the name of Benjamin Smith, informed me, that after the ballast waggons had passed on to the permanent rails from the spoil bank, he threw the points on one side so as to be quite clear of the line.

I shall now endeavour to account for this accident; but in the first place I will state what was represented to me to have been the relative position of the several carriages immediately after some of them were overturned, and the consequent stoppage of the train.

Firstly. The engine and tender received no injury, and remained on the line. The leading passenger carriage was off the line, with both its axles broken, and the wheels were found under the sixth carriage; but the leading carriage remained coupled to the tender, the body having sustained but slight damage, and the passengers being unhurt.

The second carriage, which was a second class of the London and Birmingham, is supposed to have remained on the rails until the stoppage of the train, when, by the breaking of the couplings, it was thrown out upon the opposite line, injuring the axle guards and frame, and displacing the front axle.

The third carriage, which was a London and Birmingham second class, was twisted round and overturned across the rails, the upper part being knocked to pieces. One passenger, Monsieur Deneux, was thrown into the middle of the road, and killed on the spot by the carriage overturning upon him.

Another gentleman, of the name of Wright, was thrown out upon the opposite line, and only survived the accident a few days; some other passengers in the same carriage were also much injured.

The fourth carriage was a first class of the London and Birmingham. It was thrown outwards, probably by running over the end of the third carriage. It grazed the parapet of the bridge, and was overturned on the south side of it.

The fifth carriage, which was also a London and Birmingham first class (having a break), was thrown outwards, and overturned upon the parapet of the bridge, but it was supported in that position by its remaining connected by its coupling chains with the fourth and sixth carriages.

J. Shaw, the guard, who was seated on the front of the fifth carriage, was thrown over the bridge, and fell into the road, by which he was very severely injured, but the passengers were not hurt, nor was the carriage much damaged.

The sixth, which was a third class North Midland carriage, had only its front wheels dragged off the line by the fifth carriage.

After a full consideration of all the bearings of this case, I am led to conclude that the accident was produced either by the wheels of the first carriage having, from some cause, run off the line, or by the previous fracture of the axletrees, when the wheels were on the line.

I do not believe that when a line is in tolerable order, with the rails true to the gauge, and while the train is moving at a proper velocity in a straight direction, the axletrees of a carriage of the dimensions in general use would break, unless formed of bad iron or with very imperfect workmanship.

Now the North Midland Railway, at the point where the accident happened, is represented to me to have been at the time in good order, with the single exception of being insufficiently ballasted; and I was informed by Mr. Swanwick, the Engineer of the line, that on being measured, immediately after the accident, the gauge of the rails was found to be perfectly accurate. This assertion is corroborated in a very great degree by the statement made for your Lordship's information by a gentleman who was a passenger by the train to which the accident happened, and who, being entirely unconnected with any railway, states that he had looked at the question free from all bias.

Mason, the engineman of the train, assured me that the speed at which it was moving at the time the accident occurred, did not exceed 20 miles an hour.

I have reason for believing that the speed was much greater, and it would otherwise be difficult to account for the train having proceeded upwards of a furlong, without being stopped by the application of the breaks (which, I presume, was not neglected), and by the resistance caused by the carriages that were off the line.

The best witness as to the rate at which the train was running would have been the guard, Shaw, but the precarious state in which he was lying at the time of my inspection of the North Midland Railway was such as to render it improper to disturb him, by making any inquiries respecting the accident; and, for the same reason, I have no evidence as to whether he applied the break of the carriage on which he was riding. However, had the speed been even 38 or 40 miles an hour, I should not consider such a velocity likely to cause the fracture of a properly formed axletree.

I have now to state that I carefully examined the fractured axletrees of the first carriage; and although I do not consider the iron of which they were made to be of the best quality, yet in my opinion it is not so inferior, nor did I discover any reason for concluding that the manufacture of the axletrees was so imperfect as to cause their fracture, without some extraordinary violence. I therefore see no sufficient ground for supposing that the breaking of the axletrees was the primary cause of the accident.

It remains then to consider how the leading carriage could have been thrown off the line.

In the first place, I have to observe, that on that part of the line where this happened the rails are fixed upon stone blocks. Now seeing that the gauge of the North Midland Railway is four feet nine inches, and that the carriages of the London and Birmingham have their wheels set for a four feet eight-and-a-half inch gauge, it might have been concluded, if the leading carriage had belonged to the last-mentioned Company, that owing to some slight irregularity or instability in the blocks, the carriage had slipped between the rails; but I am assured that the leading carriage belonged to the North Midland Company, and had its wheels set for the four feet nine inch gauge.

I have already stated that the ballasting was incomplete, and therefore the stone blocks might not have been so firm as they ought to have been; but I am told that it was only within the rails that there was a deficiency of ballast, and consequently there is a probability of there having been a pressure on the outside of the rails, tending rather to diminish than to increase the space between them, so that there would would be the less likelihood for the carriages to drop between the rails; and I have already observed that the gauge is said to have been tried immediately after the accident, and found to be correct.

Again, that part of the line where the accident happened having been on an embankment, such a subsidence of the ground might have taken place as to produce a partial difference of level between the opposite rails of the same portion of the line, from which an irregular and rocking motion of the carriage would result, so as to throw it off the rails; but I am informed that no subsidence of this nature had taken place.

Had there been a want of parallelism in the axles of the leading carriage, such a defect might have accounted for the wheel getting off the rails; but the North Midland carriages have straight rods of iron, extending from axle to axle, and connecting them in such a manner as in a great degree to prevent a loss of paralleism.

I understand that at the principal station of the Noth Midland, the custom is followed, which I believe prevails in some other companies, of submitting all the carriages to an examination by a mechanic, at the close of each journey. A defect in the coupling rods, or other parts connected with the axles, would, therefore, in all probability, have been discovered before the departure of the train; but had such a defect escaped the vigilance of the inspector, it is scarcely possible that it would not have produced some mischief before if reached the spot where the accident occurred, which is upwards of 60 miles from Leeds to the place from whence the train started.

On inquiry I was assured that the flanges of the wheels were perfect.

Being thus unable to discover any cause sufficient to account for the breaking of the axletrees, while on the rails, or for the wheels being turned off by a defect either in the railway or in the carriage, I directed my attention to the investigation of the only other cause which presented itself to my mind as being likely to to have thrown the wheels of the leading carriage off the line; that is, an obstruction on the rails.

Here we have a train consisting of 14 carriages, which, having travelled a distance of 60 miles without accident or irregularity in its course, arrives at a spot where temporary points had been used by a contractor, and the leading carriage immediately runs off the line, and is followed by five others, all of which were more or less injured.

The consideration of this fact naturally suggested the probability that the temporary points in question were in some degree the cause of the accident, and I therefore closely inquired into this part of the subject.

I am informed by all the gentlemen connected with the North Midland Railway who were on the ground on the day on which the accident happened, that the tracks of the wheels of the first carriage were very distinctly marked on the embankment, near the spot where the points had been used. The track of the near side wheels being between the left-hand rail and the side of the embankment, and that of the off-side wheels between the two rails of the "up-line" of way.

On the accompanying drawing I have marked the position where it is stated, apparently on satisfactory grounds, that the fore axle was broken.

The uncovered angles of the right-hand blocks were broken off by the right-hand wheel in its course up the line for about 20 yards from the point where it is supposed to have gone off the rails; and where this injury

Digitized by Google

to the blocks ceased, the track of the left wheel appears to have turned towards the left rail.

It is inferred, from marks on the road, that the hind axle broke at about 20 yards further on, and both fractures took place within about six inches of the inner side of the right-hand wheels.

The circumstance of the carriage turning towards the rails, at the spot where the fore axletree is supposed to have broken, is in my opinion strongly corroborative of the conclusion I have come to—namely, that the axletrees broke after the leading carriage was off the rails; for had they broken while the carriage remained on the rails they would, from being fractured close to the right wheels, have taken a direction to the right, instead of to the left-hand rail. Now, supposing (notwithstanding the evidence to the contrary given by Benjamin Smith, that the points were not removed after being used for the ballast waggons, they would alone have been admitted, on all hands, to have been sufficient to throw the train off the line; and I must therefore reject the evidence of Smith, as being that of a party deeply interested in its being received; and I am led to ascribe the accident to this cause, as I can discover no other in which the probabilities are equally strong. I believe indeed that this would have been the general opinion, but for the testimony given by a very respectable and disinterested witness at the coroner's inquest on the body of Monsieur Doneux.

The witness to whom I allude stated, that he had walked along the line, shortly before the arrival of the train at the spot where the accident occurred, and did not perceive any points near the rails; but still I do not regard such negative evidence, in this case, as sufficient to establish the truth of Benjamin Smith's statement, the more especially as another witness, Jesse Thompson, asserted that he saw a bar across the rails.

It may appear, on the first consideration of the subject, that if the points had been in such a position as to throw the first carriage off the rails, the engine and tender which preceded it would have shared the same fate; but I can conceive that the flag man, whose duty it was to move the points, may have merely turned them off the rails, so as to leave the butt end converging towards the line. In such a case the wheels of the engine and tender might brush against the butt end, and in so doing cant the point over the left-hand rail in such a manner as to place it in the way of the left-hand wheel of the first carriage.

However, it is useless to pursue further this inquiry, involved as it will ever be in doubt, and I will now proceed, pursuant to your lordships' orders, to offer some observations as to the best mode of preventing the recurrence of such accidents as that under consideration.

Having arrived at the conclusion that the points which had been used by the contractor were the primary causes of the accident, I need scarcely observe, that the assisting causes were doubtless—

1st. The incomplete state of the ballasting.

2nd. The circumstance of the rails being laid upon stone blocks.

3d. The imperfection of the axletrees; and

4th. Probably, in a certain degree, the velocity of the train.

I have already stated, that the contractor was engaged on the day in question in completing the ballasting of the line. This is a work which, in my opinion, should have been in a perfect state *before* the opening of the railway to the public; for I think that no line should be used for passenger trains until it is entirely ballasted, nor until the slopes of the cuttings are properly finished, and the superfluous earth removed. In short, the principle which for the safety of travelling should, as far as possible, be adopted, is to leave no work to be performed upon the line *after* it is open, excepting such ordinary repairs as will from time to time become necessary. It should be a general rule also that after the opening of the line no temporary switch should, on any account be allowed, and that such switches as may be requisite should be in charge of a policeman, and be of a permanent character, and under no circumstance should they be placed against the direction of the train.

Some days before the accident the Directors of the North Midland Railway Company issued printed regulations, containing, amongst other useful rules, a clause bearing on this subject, and had this not been improperly disobeyed, I conceive that the accident of the 13th would not have occurred.

Engineers are still much divided in opinion as to the best mode of fixing the rails, that is, whether on blocks or on sleepers.

In embankments that are not perfectly settled, I have no doubt that the transverse sleeper is more suitable than the block, inasmuch as the former gives greater certainty than the latter of retaining the gauge, and I think this security is increased by the use of longitudinal sleepers, with a sufficient number of cross ties; for the longitudinal sleepers have the effect of diminishing the pitching motion, which more or less is inevitable with the transverse sleeper or block.

The next point upon which I have to offer some observations, is on the wheels and axletrees of the carriages, and there is, perhaps, no part of the railway system which demands more attention. The fracture of either, when travelling at high velocities, can scarcely fail to be attended by fearful results; and as there can be no question that by a careful selection of the best iron, and by its judicious application the fracture of either a wheel or axletrees can be rendered almost impossible, no pains should be spared to effect that object.

In the first place, the axletrees should be made of the best quality of iron suited for such a purpose, and should be faggotted and forged in the best manner.

I have no doubt that all the Companies adopt, in their specifications for axletrees and wheels, conditions which, if faithfully adhered to, would attain for them the best quality of iron and superior workmanship; this, at least, I am aware was the case in the North Midland contract; but the mere insertion of such conditions in an agreement is not sufficient in so important a matter.

Not only should there be a stipulation that the engineers of the Companies and their subordinates should have the right to enter the premises of the contractors at all times, for the purpose of examining the quality of the iron, and observing the workmanship applied in manufacturing the axletrees and wheels, but in my opinion this condition should be acted up to in the fullest extent; and I would recommend that during the operation of making both articles, a competent judge of iron and workmanship, in whom the utmost reliance can be placed, should be constantly present.

The dimensions of the axletrees of the North Midland Company appear to me to be sufficient for the stress they are required to sustain under ordinary cases, and I see no objection to their shape; but I have observed that scarcely any two Companies adopt the same form or dimension, and, as both are matters of moment, the attention of scientific men might be drawn to them, by a Government premium being offered for the best wheel and axletree for railway purposes.

It would, I conceive, be presumptuous in me to offer any opinion upon these points; but I feel called upon to state that, after long reflection on the subject, I am impressed with the conviction that the safety of passengers would be much increased by the general adoption of six-wheel carriages, for it is evident that when the axletree of a four-wheel carriage breaks it can hardly fail to be thrown off the line it moving with much velocity. The breaking of a wheel or axle of a six-wheel carriage, on the contrary, is not likely to be attended with the same results; and after making diligent inquiries, I have not been able to arrive at one well substantiated case of a six-wheel carriage or engine, when provided with flanges to all the wheels, having run off the line by the breaking of a wheel or axle.

Under these circumstances I shall be glad to see the ultimate adoption of six wheels for every description of carriage to be used for passenger trains. I am aware that this may entail expense upon the Companies, but it is an expense which I am sure will be cheerfully met by the proprietors of railways as circumstances permit.

By the advocates of four-wheel engines and carriages not only is the increased expense dwelt upon, but they also advance objections against the six wheels on account of the difficulty of working them round curves of small radius; but I am of opinion that any curve which is proper to be used in a railway will allow of the working of six-wheel engines and carriages, provided a proper width of wheel be used.

Here I would remark that it would be desirable to give to all wheels to be used for passenger carriages or in connection with passenger trains a bearing upon the rail of at least five inches, allowing one inch out of the five for the flange. The whole of the passenger carriages of the North Midland Railway are, I believe, of this dimension.

I shall now consider by what means over-driving may be prevented. The system which at present is generally adopted is to fix the time to be occupied between one station and another; but this gives an opportunity to the enginemen of those trains which stop only at first class stations to use very high velocities on falling gradients of great inclination, as the train is only limited between station and station. It is very essential to the public safety that an efficient check should be established on this point, and the following plan appears to me to be one which might effect this desirable object.

The maximum speed to be used should be fixed, and no circumstance of loss of time on any other part of the line should ever upon any pretence be admitted as an excuse for using a higher velocity than that specified.

In order to prevent the possibility of any misunderstanding on this subject, the rate of speed, on various gradients, should be printed in a tabular form, and placed conspicuously on some part of the engine, near the position where the engineman generally stands. Another copy should be attached to the break carriage on which the guard is stationed.

As a means of testing and regulating the speed, each engineman and guard should be provided with a watch, having a seconds hand, and the distances should be marked on the road at intervals of a quarter of a mile.

A report should be given in by the guard at the end of each journey, stating whether in any part of it the maximum speed had been exceeded, and any case of disobedience of orders on this point should be severely visited.

I find that in one of the principal lines the head guard gives a detailed report at the end of each journey of every occurrence on the road; the time of arriving at and starting from each station; and he is held responsible for having two break carriages with each train. Another Company gives a reward of 5s. at the end of every week to the engineman who has kept the best time, and a third Company gives a reward of 5*l*. per quarter to the man who has kept his engine in the best order. These systems are all good and deserving of imitation.

It might be invidious were I to specify the Companies to which I allude, because those which I might omit have probably other systems equally commendable, though different; and I have no doubt that by degrees the several Companies will follow each other in those regulations which appear to be the most conducive to an end which I believe they are all striving to attain; namely, to give the greatest degree of comfort, accommodation and security to the passengers. Indeed, I believe that the recommendation of your lordships on all these points will be most readily adopted, and that legislative measures will be unnecessary.

I have to add, that the permanent way of the North Midland Railway appeared to me to be in fair working order, and that at the road stations, as well as at the Derby terminus, no expense has been spared that can tend to promote the convenience of the passengers.

The carriages of this Company appear to be substantial in their construction, and commodious in their form. It would be well if the same height could be preserved in the inside by lowering the floors, and proportionally reducing the total height of railway carriages in general, as they would then have less tendency to rock when moving at high velocities.

I have, &c.

FREDERIC SMITH, Lieut.-Col. Roy. Engs.

(To be continued.)

RAILWAY TO SALISBURY.—We beg to call the attention of our readers to the importance of connecting Salisbury with our railway at this town, with the view of ultimately extending the line along the coast of Dorset, so as to make Southampton the great centre for all the South Western traffic. A few years back a prospectus was issued for making a railway between Southampton and Salisbury, through Romsey, and we believe the necessary surveys were made. If some influential parties would revive the subject, we have no doubt as to a successful result. All the shareholders in the South Western Railway are vitally interested in the matter, and must give such an undertaking their support, not only with a view to its ultimate extension along the coast, but from the certainty of its alone becoming a valuable source of profit to the South Western line.—*Hampshire Independent.*

NORTH MIDLAND RAILWAY.—It is a remarkable fact, that the subsidence of the embankments on this line, and the influence of the severe weather, have been less than any other line of equal age. This is owing to the excellence of the materials, and will, no doubt, be the means of keeping that heavy item of expenditure, the maintenance of way, unusually low upon the North Midland Railway.—*Leeds Mercury.*

JOHN JELLICORSE, Secretary.

BRISTOL AND EXETER RAILWAY COMPANY—GENERAL MEETING.

THE following are the documents which we were obliged to omit in our report of the last general meeting:—

MR. BRUNEL'S REPORT.

Bristol, March 3, 1841.

Gentlemen,—It is with a sense of great relief from the anxiety which I have felt since the last general meeting, that I can now report to you, that the state of the works is such as to justify the anticipations you had formed as to the period of the opening to Bridgewater, when the limit was fixed in the lease granted to the Great Western Railway Company.

In September last a great improvement had taken place in the rate of progress of those works upon which the final completion must depend, such as to afford good grounds to hope that the line might have been opened by about the present time; but shortly after this, notwithstanding every exertion on my part, these works again fell into arrear. We have gradually and with much labour arrived at that state however in which an early completion may be rendered certain; and the means necessary to ensure this and to enforce proper exertions on the part of those executing the works have been taken and will be kept in operation until this result is obtained.

The tunnel at Cambridge Batch and the bulk of the excavation at the Ashton cutting are at last completed, and the bottoming and forming of the slopes of this cutting are the only earthwork of any amount remaining unfinished. The Uphill and Puriton cuttings are completed, and the embankment across the river Axe is formed, and raised to more than its full height to allow for settlement. At the Bedminster road bridge a small quantity of excavation remains, as well as at one or two other points where temporary bridges have stood. These are being removed, and in no case, except the Ashton cutting, is there more than a fortnight's work; and with these exceptions the line is formed throughout to Bridgewater, and nearly the whole is ballasted.

As regards the masonry, some of which had been delayed by the long continued and severe frosts, nothing remains to be done which can interfere with the opening of the line. The bridge over the new cut has long since been keyed in, and will

Digitized by Google

shortly be ready to receive the rails. The aqueduct at Ashton is sufficiently completed to allow of the removal of the temporary bridge and water-course. The bridge at Uphill is nearly finished. There are several road-bridges which are incomplete, or which have to be rebuilt; but as I before stated, the work is such as cannot delay the opening of the line.

The laying of the permanent way is rapidly advancing. From Pyle Hill to the Bedminster-bridge, and thence for about one mile with a short interval at the bridge, the principal part of the timber is framed and the rails are being laid.

From Backwell-lane to Chelvey, nearly the whole of the timber of a single line is laid with a portion of the rails. From Chelvey to the Axe, the single line of timber and rails is complete, with the exception of five or six chains in the Uphill cutting; and the second line is far advanced for the whole of this distance, more than half of the timber being laid, and also some length of rails.

At the river Axe the materials are being landed to be laid towards Highbridge, and at Highbridge the timber is being landed and laid towards Puriton. At Puriton timber is also delivered, and is being laid both towards Bristol and Bridgewater; while at Bridgewater the materials are also landed, and in process of being conveyed to the line.

The total extent of timber framed by the end of this week will be about thirty miles of single line, with about eighteen miles of rails.

Upon the whole, the progress making in this department of the work is very satisfactory.

In conclusion, I beg to say that I see every reason to anticipate that we shall be enabled to open the line before the middle of May.

I am, gentlemen, your obedient servant,

I. K. BRUNEL.

To the Directors of the Bristol and Exeter Railway Company.

MARYPORT AND CARLISLE RAILWAY COMPANY—GENERAL MEETING.

(From the *Whitehaven Herald.*)

THE half-yearly meeting of the proprietors of the above railway was held at Aspatria a few days ago, Sir W. Lawson, Bart., in the chair, at which the proceedings were of the most cheering and spirited character. Some excellent resolutions were adopted, and the tone and feeling of the meeting afforded every guarantee that the undertaking will be carried forward with promptitude and despatch to its completion. The following reports were agreed to at this meeting:—

DIRECTORS' REPORT.

The Directors have to lay before this meeting a statement of the accounts to the 31st December, 1840, and the result of the working of the line through the coal district, from the 15th July to the 31st December last.

The amount received for coal traffic is	£1,566	12	5
For passengers, parcels, and goods	81	4	7
Making a total of	1,647	17	0

This gives a clear profit of 2¼ per cent. per annum on the total expenditure and cost of this part of the line, after deducting the expenses attendant on the working thereof, and maintaining the way.

The coal traffic is now steadily increasing, and from the new coal works now in progress, the preparations for the carriage of lime from Arkleby and Gilcrux, and the completion of the line to Aspatria for passengers and general

Digitized by Google

traffic, there is no doubt but that the result of the next six months will be highly satisfactory, as the accession of additional traffic will not materially increase the present expenses of the carrying department.

Few undertakings, even those whose receipts now stand high, have shown more favourable results from the immediate opening of so short a portion of their works.

In the last Report which the Directors had the honour of submitting to the proprietors, they took the liberty of animadverting on the insufficiency of Maryport Harbour as compared with the requirements created by the Railway traffic. The Trustees of the Harbour have since that time erected a breakwater, which has effectually rendered the harbour internally secure and satisfactory for the berthing of vessels, and further improvements are still anticipated.

The Directors hope, in the course of the present spring, to be in a position to proceed with the formation of the line from Carlisle to Wigton.

The traffic now existing between these places, independent of the sources which the opening of railways always developes, is sufficient to assure a highly remunerating return for the outlay of the capital.

ENGINEERS' REPORT.

To the Directors of the Maryport and Carlisle Railway.

Gentlemen,—Since your General Meeting in February last, the unfinished works of cutting and embanking necessary to complete the single line of railway from the Harbour at Maryport to Arkleby, near the Coal Pits, have been done. The remainder of the rails then unlaid (about three miles) have been put down; the long embankments for, and the roads over the Workington Road bridge have been completed. The bridge under the railway, for the Ellenborough Road, has been built. The road approaches to the Dearham Bridge are finished, and to the Birkby Occupation Bridge nearly. The Allerby or Bull Gill Bridge is built, and the wing walls or approaches to it are progressing. The roadway is completed over the Crosby Mill Bridge, and the slips in the cutting near to it have been attended to, and have, to all appearance, stopped moving.

The consent of the magistrates has been obtained to the diversion of the road from Oughterside and Allerby to Gilcrux, to cross the railway and river at Ellen Hall; and the building of the bridge and making of the roads will be proceeded with immediately.

Various sidings and branches, and other necessary machinery, have been put in, principally at the station and the harbour and dock; and one coal drop, and one permanent and one temporary staith, have been erected at the dock and harbour, and another coal drop is in preparation. Sidings and branches for the use of the collieries and lime works, have been laid in at the Arkleby pits, and some other places. The bridge over the Oughterside and Arkleby-road, and the roads leading to the bridge, are in a forward state.

On the 15th July last, the line was opened for traffic, from the Arkleby coal pits to the harbour at Maryport. On this portion of the railway the traffic will consist principally of coal, until the railway is opened throughout. Considering that much time always elapses, after the opening a railway, before parties interested in using it are fully prepared to avail themselves of the facilities offered to them, or can complete those alterations attendant on making an entire change in the mode of conveyance of their articles, I think the receipts for traffic up to the 31st December last (five and a-half months), are encouraging; but they still afford little criterion of what may be expected in future, from the increase which will take place in the quantities now sent, and from the arrangements now making by different parties to bring coal to the line.

The expenses also upon the five and a-half months' trade have been greater in proportion to the receipts than will be the case in future, from the circumstance that most of the stock (as was unavoidably necessary) was prepared for a greater trade, and also from the fact that some items in the expenses of the maintenance of the way, and station expenses, would not be increased by a larger trade.

Since February last year, I have had plans made of the lands through which the railway passes between Aspatria and Carlisle, to enable agreements for purchases to be completed before the 17th July, in accordance with the terms of the Act of Parliament. Having thus been over the whole of the ground, I can speak with confidence as to the easy nature of the work remaining to be executed, as compared with the works upon other railways; and I beg leave to recommend, as the next step in your promising undertaking, the proceeding with the line between Carlisle and Wigton, as being the portion most easy of execution, and that which will produce the greatest revenue.

I have the honour to remain, Gentlemen,
Your obliged and obedient servant,
February 12th, 1841. JOHN BLACKMORE.

We are informed that the additional part of the Maryport and Carlisle Railway leading from the present terminus in the Oughterside coal-field to Aspatria, will be opened on Easter Monday. This will afford many additional advantages and facilities to travellers and to the people of the district; and the Company intend shortly afterwards, we learn, to start an omnibus from the railway at Aspatria to Wigton and Carlisle, for the speedy conveyance of passengers and goods. These things show that the genuine spirit of enterprize now animates the promoters of this undertaking, which we expect to see go forward to completion with a rapidity and success that will surprise its opponents, but afford the highest delight and gratification to its numerous friends and the public at large.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—SPECIAL MEETING.

SUNDAY TRAVELLING.

On Tuesday last, a special general meeting of the proprietors of this Company was held at Dee's Royal Hotel, "for the purpose of deciding whether any, or what trains should run on Sundays, over and above the four now carrying the mails under the orders of the Post-master General." There was a numerous body of proprietors in attendance. Captain C. R. Moorsom, R. N., the Chairman of the board of Directors, presided. After reading the advertisement convening the meeting, the Chairman said that according to the terms of the notice the particular question before them was, whether such accommodation as the public might fairly and reasonably require, and as the Company ought to give, was afforded by the existing mail trains now running on Sundays. On this question, the Directors, as a body, had not authorised him to propose any specific measure, and it was open to any proprietor to move a resolution. It was, however, desirable to refer to the position of this question as stated in the Directors' reports. The first was a resolution of the board of 2nd June, 1840.—"That no other trains do travel on the Sabbath-day than are required by the government for the conveyance of the mails;" which was announced to the proprietors by a paragraph in the August report, as follows:—"The subject of Sunday travelling having occupied the attention of the Directors, they decided that no trains, excepting such mail trains as might be ordered by the post-office, should, for the present, run on the Sunday; and, in the present state of the undertaking, it would be attended with injury to the company were this resolution rescinded. As, however, this is a question of importance, and upon which great difference of opinion exists, they would recommend its consideration being left to the decision of a special meeting of proprietors, which the Directors will convene for that purpose when the works are more advanced." This was followed up by a paragraph in the last report of the Directors, suggesting that a special meeting should be held at Birmingham, on a convenient day, "for the purpose of deciding whether any or what trains should run on Sundays, over and above the four now carrying the mails, under the orders of the Post-master General." Further than this the Directors had no information to give. There were, however, some memorials on the table, which might indicate the wishes of the public, and he was disposed to read them, if the meeting did not object. The Chairman then, in compliance with the call of the meeting, read two memorials, from Twekesbury and Ashchurch, against any increase of the Sunday trains, observing in continuation, that, as this subject opened a wide field of discussion, he would suggest that speakers should confine their observations to the particular question before the meeting, which he had already stated, and this course was the more desirable, as, sometimes, considerable acrimony had been evinced in such discussions elsewhere. He had several proxies sent him, which he was pledged to use in the way the parties sending them might point out; they were both for and against Sunday travelling; and of many left to his discretion, some involved points of casuistry, which he should be happy to refer to the scrutineers, his object being to use the proxies as the principals themselves would do, if present. The Chairman concluded by stating the arrangements made for taking the votes.

Mr. Tymms read a memorial from Worcester, to which the Bishop had added his approval.

E. T. Moore, Esq., moved the following resolution:—"That one morning and one evening passenger train (in addition to the mail trains now running) be dispatched from Birmingham and Gloucester every Sunday; the morning train to start at such hour after 7 a. m., that it may arrive at the terminus previous to the commencement of morning service, and the evening train at such convenient hour after the afternoon service as the Directors may order, thus affording to the servants of the Company opportunities of attending public worship." Mr. Moore contended that the Company were bound by the terms of their Act to afford the public an "additional, cheap, certain and expeditious" mode of communication: at all events, they should not deprive them of those advantages which they had enjoyed before the passing of their Act. He reminded the meeting that the Birmingham and Gloucester Railway was only a link in an important line of communication through the kingdom, and that they had no right to close it in order to meet the views of a small section of society.

R. Canning Esq., seconded the resolution.

The Rev. F. D. Gilby, of Eckington, opposed the resolution on moral and religious grounds, and pointed out the evil consequences which would ensue from opening and encouraging on the Lord's Day sources of traffic, which it appeared, by the coach accommodation on the road, had not hitherto been called for by the wants of the public.

The Rev. W. C. Fowle, of Bredon, had opposed the resolution on similar grounds.

A. W. Daniel, Esq., of Gloucester, supported the resolution, contending that the mail trains afforded in effect no accommodation to the public, inasmuch as they started at most inconvenient hours.

John Homer, Esq., moved the following amendment:—"That no other trains are required on the Sabbath than those now running for the conveyance of the mails."

S. Bowley, Esq., seconded the amendment. He said that the chain of communication, of which their line formed a link, must be broken somewhere, else they would be compelled to work certain portions of the line during the hours of Divine Service; and with regard to the accommodation of the public, that he conceived must be limited to some point. Before the opening of the line, there was only one coach running throughout each way between Birmingham and Gloucester, therefore, the Company could not be charged with depriving the public of this mode of conveyance without supplying them with ample accommodation in return. The result of the running additional trains on the Sabbath would, he believed, be to compel many valuable servants to leave their employment.

The Rev. S. F. Morgan, Captain William Moorsom, and John Greene, Esq., also supported the amendment.

Charles Shaw, Esq., George Ellins, Esq., and Mr. J. Rodway, spoke in favour of the original motion, and on a division, there appeared—

For the amendment.....	41
Against it.....	30
Majority in favour of the amendment	11

Mr. Moore here said that it was unnecessary to put his resolution, or trouble the meeting by going into a scrutiny of the votes, as he felt satisfied the proxies were against him.

Some explanations were given by the Chairman and Mr. Daniel, in reference to certain objectionable clauses in the Bill for the regulation of railways, now before Parliament, which the Directors of the Birmingham and Gloucester, in common with the managers of other railway Companies, had felt it their duty to oppose; after which a vote of thanks was passed to the chairman, and the meeting separated.—*Midland Counties' Herald.*

That part of the Carlisle and Maryport Railway between Oughterside Colliery and Aspatria, is progressing rapidly, and is expected to be opened on Easter Monday. The traffic in coals in that part already opened is at present immense, the "Ellen" making six trips every day.—*Carlisle Journal.*

Mr. E. Bowman, of Newcastle-on-Tyne, has, we understand, after many years of experiments, succeeded in rendering telescopes (such as those upon the best levels,) applicable to measuring distances, with a degree of accuracy equal to the chain.

RAILWAY REFORM—THE BIRMINGHAM AND GLOUCESTER SYSTEM OF DIRECTION.

To "A Railway Shareholder."

SIR,—At length I have the satisfaction of being enabled to congratulate you on the practical combination of a portion of the railway reforms you have so long and perseveringly advocated. The Birmingham and Gloucester proprietors have taken the course you have pointed out, by their election of Captain C. R. Moorsom for their Chairman of Directors, whose expressed object was to limit the number of Directors to three or five—*all responsible working Directors*, each one responsible for his own department and no more—the Chairman being supervisor of the whole. It is proposed to pay these efficient Directors a very small allowance, and so far I dissent from the plan, not thinking the effect will be so good as if the pecuniary advantage of the Directors went on proportionally with that of the proprietors; but this is a question which can only be decided by experience. The main point, the first question of all—whether railways shall be conducted for the benefit of the proprietary and the public, or to further the sinister purposes of interested cliques- has been fairly and manfully answered by the Birmingham and Gloucester proprietary. Their election of a high-minded gentleman, whose printed documents afford conclusive evidence both of legislatorial capacity and executive ability, is the first act of a revolution in railway management which will ultimately overthrow corruption and jobbing; and although the exertions of Mr. Tartt to obtain the election of Auditors was unsuccessful, still there is no doubt that at no distant period this point also will be accomplished. In most of the meetings where the subject has hitherto been proposed, Directors have talked heroically of "honour and confidence"—but these clap-traps will not do; the proprietors will gather strength against the next meetings, by organised purpose.

In the particular instance of the Birmingham and Gloucester, the very fact of the reform of the Directors operated against the demand for Auditors, but it is more than probable that the Chairman himself will lend his influence to obtain their appointment. Open and plain in all his objects, he seems precisely the man who would willingly have "a window in his breast," that all the railway matters therein contained might be plain to beholders as his "script." Again I congratulate you on so valuable an ally in railway reform. I will make a few remarks on Captain Moorsom's communications to the Board.

"I might have hesitated to take office in a Company in which a near relation holds so important a situation as that of Engineer-in-Chief, if the approaching completion of the works in his charge did not remove the objection."

This is a definite acknowledgment that the very chance of the imputation of collusion should be avoided. With Auditors fully empowered to examine into all transactions, nearness of relationship would cease to be an objection. Though a man possess the repute of being "trustable with uncounted gold," he would be unwise to place himself in a position which malice might turn to an imputation. Captain Moorsom is equally just to himself and to others in his observation.

"I hold that railways should be managed on a system which shall make every man responsible for his acts, which is by no means the case at present."

Undoubtedly sound doctrine this, insuring two results if followed up—fear of individual punishment for individual misconduct in the one case, —and certainty of individual reputation for individual skill and good conduct in the other. In the absence of pecuniary advantage, no other incentive could be so efficient.

"Supposing a Board of five Directors, I would divide the business into four branches, viz.:—coaching and carrying; locomotive power; maintenance of way and works; and finance; and assign to each Director the duty of making himself so far acquainted with the details of one branch as to be able to furnish the Board with all necessary information on the various subjects that arise. To the Chairman I would give a general superintendence, not with executory powers, but to know all that is going on."

Excellent all this; and we will take it for granted that the Directors, Messrs. Daniels, Sturge, Gibbins, and Tymbs, possess the qualities fitting them for these different branches. Of the Chairman's efficiency there can be no doubt. And what follows will be the result.

"Under such a system no highly-paid officers can find place. The Directors will be masters of their own business, and will only require ordinary and steady men as heads of departments, who will work contentedly for moderate remuneration."

Under this system no jobbing Secretaries—no per-centage Engineers can exist; the hateful and iniquitous system of patronage must disappear; lawyers and bankers will hide their diminished heads, and proprietors' profits will begin to look up.

"The spending of money, and the accounting for it, should never be confided to the same persons. In the supply and expenditure of stores a very wide door is open to extravagance and waste, to say nothing of fraud; and it is obvious that the payments should not be entrusted to the same parties who order the articles."

No resident engineer can be a contractor and supervisor of his own work under these rules. Fair play must be awarded, or if not, the denial must be a result of ignorance, and not wilful injustice. The railway race, analogous to the "Thieves, Supercargoes, Sharpers, and Directors" of Pope, will be utterly abased and cast down, and no man will pity them.

"The auditing of accounts should also be in hands independent of every authority but the Board."

There requires an amendment here. For "Board" read "general body of proprietors."

"The management of the locomotive engines, and the arrangement of their loads, is a subject requiring the greatest attention, in order to produce economical results. I am led to the conclusion that on the principal passenger lines a saving of from 30 to 40 per cent., might be effected in the cost of locomotive power as applied to passenger trains."

This is, in other words, saying that "more cats are kept than catch mice," four horses are kept to do the work of two. Even when this is remedied, there is still a further question to discuss. Are the horses of the best quality—the best fitted for the work to be performed? If it turns out that cart horses are harnessed to post coaches, and are driven to death, it is probable that a due attention to the proper distribution of bone, and muscle, united to blood, will produce effects as widely apart as the stage-coach turn-out, A. D. 1700, compared with the *Shrewsbury Wonder*, A. D. 1835. If it should also turn out that the railway drags are analogous to coal-waggons in their powers of resistance to draught, there are things yet to be accomplished which will reduce the cost of railway transport far below the anticipations even of Captain Moorsom. On this subject, the railway world is in a state of the most lamentable ignorance. Resistance, analysed into its elements, is a question to which railway authorities have not yet turned their attention. Captain Moorsom, however, recommends the true mode of verification, the method of Lord Bacon—to gather together the masses of facts, and then subject them to the inductive process.

Call every engine, carriage and waggon by it name, and enter that name in a book, under which head may appear from time to time the sum and substance of all appertaining to (in the doggrel of the dying speech brawlers) "its birth, parentage, and education—life, character, and behaviour—last dying speech, and confession!" Comparisons may then be fairly instituted, provided due care be taken that each back bears its own burthen; for instance, that no liberal-minded locomotive lends its workmen and servants to one of its infirm brethren, and takes all the expenses on its own shoulders, to save its companion from odium. Such things have occurred with locomotives in the hands of bad counsellors. Factory dogs have sometimes been known to figure in wages' lists as fellows of most voracious appetites—judging by their expenditure,—the truth being, that they were all the time most self-denying creatures, bestowing upon the mere excitements of some biped friend, the larger part of their weekly income. There is some probability that the phrase "generous steed" has arisen from a very common practice in horses to give up a portion of their corn out of pure friendship to a favourite groom. Be this as it may, the railway locomotives will require careful watching to ascertain the exact expenditure of each. The Edinburgh and Glasgow Directors have, it seems by the Report, taken much pains to ascertain the habits, customs, and expenses of two different breeds of locomotives—the "Bury" and the "Stephenson;" but conflicting evidence was so strong, that they have determined to take ten of each, and pit them against each other. This will be the "crucial instance." But, as the friends and keepers of fire steeds are as unscrupulous as Arab horse-dealers, or Yorkshire itself, in testifying to the first-rate qualities of their own pets, and the vices of their opponents, it is to be hoped that our long-headed northern neighbours, will take all the precautions usual in a horse race, to prevent "playing booty." Let a certain number of the Bury clan keep watch over the doings of the Stephenson clique, and let the same number of Stephensonians watch closely the manœuvres of the Bury clan. It would not be amiss also if auditors were appointed to supervise both parties.

Seriously, there is so much fairness and good sense in this proceeding of the Edinburgh and Glasgow Directors, that it is to be regretted they have not carried the principle of verification into trains as well as engines. Above all let them watch narrowly to ensure fair play.

Captain Moorsom goes on to say,

"To the system of contracts I look as that under which railways will ultimately and most economically be worked, and then the duties of Directors will not be very burthensome."

Quite true and sound this. But beware of all contracts till accurate knowledge be gained of what is the best thing to contract for. For example, bad engines and bad trains at present cause a costly expenditure in "maintenance of way." A seven years' contract based upon present wear, would be an admirable thing for a contractor, if in a year or two improved mechanism diminishes the wear one half. This would be like the tithe process—where the clergyman shares the fruits of the farmer's surplus toil without exertion on his own part. The truth is, that when the same skill and energy is brought to bear on railways that exists in private establishments, *i. e.* when improvers have "fair play" and inducements to exertion, the cost of transport by land on railways will probably not be higher than that of shipping.

It is to be hoped that Captain Moorsom will favour the columns of the *Railway Times* with tables of his plans and also of his reports and their results so soon as they are matured. His plan seems to a certain extent to comprehend experimental comparisons in all things not involving radical changes, and therefore his gleanings in this field will be most valuable. The further experiments involving radical changes will probably be made by the Government Commissioners, who should be empowered to levy a small per centage on the Companies, to pay the expenses of doing that for them which the public expects and has a right to, but which, it is likely they will not have the energy to do for themselves. At a future time I shall return to this subject. Again, congratulating you on these first-fruits of your labour,

I remain, Sir, yours, &c.,

EXAMINER.

March 8, 1841.

RAILWAY REFORM—THE BIRMINGHAM AND GLOUCESTER SYSTEM OF DIRECTION.

To the Editor of the Railway Times.

SIR,—The construction of railway Boards is of such consequence to the due administration of fifty millions of money, that any proposition for—much more any attempt in practice at—its alteration, commands attention, and I shall proceed to comment upon the change introduced by Captain Moorsom upon the Birmingham and Gloucester; I do so with the less hesitation that my opinions cost the railway world nothing.

To discuss and arrange details before the principle upon which they are grounded is admitted to be sound, would be premature;—a good builder first proves his foundation;—"When the rubbish is cleared away, it is time enough to commence the superstructure." I shall therefore confine myself in this letter, to the constitution of Boards.

In entering upon the subject I am oppressed by a difficulty which has occurred to Captain Moorsom—the saying of that which is essential, without running to too great length, and it is a difficulty not easily surmounted.

Captain Moorsom, as a concession—for he would rather the Board were three—consents to preside over the Birmingham and Gloucester with four colleagues; amongst these he divides the business of the line, making each man a committee, and reserving to himself general superintendance.

This plan is in fact that which is now acted upon, except that the numbers engaged at present are greater, and I think beneficially so, for I am strongly of opinion, that one man as a Committee (it is only done in Chancery in cases of *lunacy*,) is not enough; it brings to his branch the advantage of only one mind, one view, one direction of consideration; it probably will lead to fraud, to collusion between the Committee, the Manager, and the seller or contractor to the Company; it is keeping matters too close; it is open in a less degree to the objection of having one only Manager, which we know has failed; and I am sure that each Committee should consist of two persons.

Captain Moorsom's next paragraph relates to auditors,—he would have them "independent of every authority but the Board." Now if I understand the position they should be placed in to be of any earthly use, the Board are, of all persons under heaven, precisely those of whom they should be independent,—and I put it to Captain Moorsom to show that auditors, appointed by Boards, or nominated for election by them, or getting appointed under their auspices, or elected *permanently*, can ever afford, while human nature remains as we see it, the slightest guarantee to shareholders, for the integrity of Directors' conduct or accounts. I pronounce auditors, dependent on Boards, to be nothing better than Directors 'scape goats,—a delusion to the proprietary.

Captain Moorsom may perhaps be right in splitting the business into four divisions (though if he be, I do not see why he prefers three to five Directors, for in that case—the Chairman not included—he would have but two committee-men for four heads of service), and I would therefore assign the whole duty to eight Directors, the Chairman of course included, thus making four Committees, each of two persons. With an efficient Secretary, whom I would have, I see no reason for the Chairman standing aloof and declining Committee duty—for what, besides, would he have to do? Captain Moorsom appears to ground his plan on being himself a chief, a commander, to whom all others are to be subordinate, and so taking from the Direction the advantage of collective decision; one sole voice, opinion, and judgment, are to determine all points of expediency; a great mistake, I think, as far as railways are concerned. If we pay five, or five hundred, Directors, let us have the benefit of the aggregate of common sense we hire, and not rely for success on the single opinion of a Chairman, the rest being his lieutenants; nor can I conceive that men will be found (being placed by shareholders to perform the duty of Director equally with the Chairman, who owes that office only to selection by his brethren) to submit to any distinction of rank, or assumption of control, or preference for opinion, or choice of duty; and I apprehend a desire for any of these manifesting itself, will mar, if not break up, the use of any Board in which they are attempted; because surely, under the circumstances, any Director who submits to such arrangement must degrade himself in his own estimation.

The general superintendence will be best performed by the Board generally.

The only doubt I have as to the number of Directors, rests upon whether, with the duty of Committees, time would permit the members of them to bestow attention on the state of the line, to visit the inferior terminus and the intermediate stations, and observe the conduct of clerks and labourers, to inspect the way in which Managers conduct their business, to be present frequently at the starting and arrival of trains, and unexpectedly to present themselves at all points and at all times. If, with the business of four Committees upon their hands, eight Directors would be insufficient, I will not squabble about 150*l.* a year for a ninth; this, however, after trial.

Captain Moorsom's expectation, that the business of his Directors will "interest them as a mental operation," is not likely to be attended with much advantage in cases where their minds are distracted by the mixture of various, perhaps opposing, duties. I hold that no man should be allowed to be a Director of two Companies, and I would not give much for the service of him, taking men generally, who occupies more than one Board-room seat. There is a trading in railway appointments, which upholds "clique" or oligarchy, or call it what you may, and which must be done away with, before we can make any advance in reform. It would be idle to contend that a man can be fully effective in either, who is a Director of two Companies.

I cannot admit that any Board can be safe from falling into corruption, that is practically permanent—they form friendships—they support each other's private views—they cater for each other's interests, that individually they may be served in turn—in one expressive word, for which I am indebted to Captain Moorsom, they "clique," and against the effects of that word, what chance have the pockets of the shareholders?

A Direction eligible for immediate re-election upon superannuation, is engendered in error, and must grow into vice. I protest against any man's re-election in less than three years.

Captain Moorsom proposes that his five Directors shall not cost the Company more than is now paid for direction—what that is, I do not know; but if he intends giving any Director more than *one hundred and fifty pounds* a year, I raise my voice, upon the general principle, against his proposition. We want diminution of railway expense, and it is doing us no favour, and giving us reform only in words, to debit us with the same figures. We want more work with less charge for it, and not out of a thousand tolerably paid Directors, to give colossal incomes to a hundred. Such sums as 1,500*l.*, 1,200*l.*, 1,000*l.*, per annum, are extravagant, absurd, preposterous—they are a perfect exemplification of the effects of the word clique.

There is no chance, I aver it, of securing the best management—of effecting reasonable economy—while Directors are nominated by Directors, or even elected by popular vote, or petitioned to assume the office; nor until they are chosen, without favour, for some sort of share-list qualification, all other methods are open to class and clique interests, and the corruption introduced by Provisional Committees will continue while they prevail; the mercantile oligarchy, the aristocracy of wealth, are sufficiently strong to command votes and proxies to keep salaried places in their families, and amongst their friends, and to use the railways for their private interests, *to all eternity*, if the present plan of election be permitted.

I have mentioned it before, I will repeat it—there is no greater hoax (forgive me the word, I cannot find another that so well conveys my meaning) upon shareholders than that of having persuaded them—for they *are* persuaded—that particular knowledge, or talent, or ability, or information is required to make a good Director. There is not an approach to truth in the assertion—the retired man, the club man, the half-pay man, the literary man, the shopkeeper, the merchant, the country gentleman, the nobleman—are all fully up to the place, and the keeper of a country shop who combines in his person the trades of cheesemonger, grocer, tallow chandler, and "dealer in marine stores," I would rather have for the office than one half of the clique now acting. What have they to do?—to receive money brought to their counters, to spend part of it in wages, and the purchase, to any extent, of about half a dozen articles, coke the principal, and to divide the remainder. Let no man chosen from the share-list be deterred from accepting office under the apprehension that anything will come before him, which a mind of the smallest calibre cannot successfully grapple with. But it gratifies vanity, and suits the interests of possessors of office, to vaunt their railway experience—precious fudge!

That Captain Moorsom will work his road cheaply in comparison with some other roads I believe, for he must be actuated by some of the strongest inducements which can be brought to bear upon man; he has "a fair stake in it," he has pledged his reputation upon doing it—he is a volunteer in the duty, he works "with a will;" he has made his own conditions, and has it all his own way—he is supreme. But his saving will be made by attention and vigilance not given upon other lines, and not by any alteration for the better, of *principle*; possessing energy and undisputed power he has secured such advantages as result from undivided authority; but the day will come when the desire of retirement, or infirmity, or death, will deprive the Company of Captain Moorsom's services, and he will leave it without the fame that would have emblazoned his name in railway history, had he written out and worked a constitution that would have perpetuated itself by its own merits—not have been dependent on his individual prowess—but of a character to be taken up and used by less habituated people, whose blunders could not impair its efficiency. Captain Moorsom's *principle* seems to be no other than that of Louis XIV., Nicholas, Metternich, Bonaparte—a pure despotism, in some instances modified *in form* by the shadow of a constitution, as in the cases of Bonaparte's senate and Captain Moorsom's Board, so admirably described by Le Grand Monarque in three short words, "*L'Etat c'est Moi.*"

But this, though it should succeed in Captain Moorsom's instance, will not satisfy me. I want something worthier of permanent reliance than individual exertion; personal effort is narrow security for continued success. An active man may invade, subdue, and throw prosperity over a country—but three score years and ten soon come, and if he have not the genius to plan and reduce to practice a form of government requiring less talent than that brought into action in making his conquest—(and the great art of framing such a one is to found it in substantial justice) at his death, his acquisition first falls into confusion, and then reverts to its original possessor. When Mehemet Ali dies, the Porte will take quiet and full possession of Egypt.

On share-list Directors, taken as their names stand, and share-list auditors too—the first for the period prescribed by the Acts—the latter for a year—depends our hope—our only rational hope—of fair dividends. Take up a share-list, and whether the first name is Higgins or Wiggins, I will take long odds that he turns out to be a better sample than our present bulk—at all events he will break in upon, and break up the clique—and *that* by the means I propose, or by some other means, *you must do*—else there is no "balm in Gilead."

Your obedient servant,

A RAILWAY SHAREHOLDER.

GREAT WESTERN RAILWAY—APPROPRIATION OF DIVIDENDS.

To the Editor of the Railway Times.

SIR,—The courtesy which you manifest to all your readers in allowing your paper to be a vehicle of their discussions and complaints, induces me to reply to the discontent of "Aristides." I felt the more concerned at reading his letter, inasmuch as the very conduct which he has taken upon himself to stigmatise, I had considered deserving of the highest eulogy.

In these days of such universal financial tergiversation, it is refreshing to the mind to observe any act dictated by a principle of right, uninfluenced by any selfish consideration, and such I take the act to be, whereby the dividend on the Great Western Railway shares was appropriated in proportion to the actual money paid up by the shareholders.

This, however, seems to have given great offence to the quicksighted one-eyed views of "Aristides," who might have had the modesty to assume a name less renowned in the annals of justice, when denouncing the principles on which it is based; but to the point of dispute—How complacently he views the arrangement whilst the dividend share be under 5 per cent., but as soon as it reaches 6 or 8, oh, then his ire will be awakened to his wrongs! I would suggest to him that so long as the dividend is under 5 per cent., the holders of half-shares are suffering for the benefit of the holders of whole shares, and therefore, if the next dividend should even be 7 per cent., they will only be on equal grounds; but the most important thing of all he has entirely overlooked in his eagerness to assert his supposed rights, (for I take him to be a holder of whole shares only) so blind self-interest makes a man, and that is, that for four or five years, we have him paying interest at the rate of 5 per cent. on 35*l.* of his unpaid capital, so that in reality he has been receiving all that time 5 per cent. on one-third of his capital, whilst the holders of half-shares have just had 3 per cent. declared on the paid capital for the first time! Viewed in all its bearings it seems so fair an arrangement that I can only wonder how any one could be found to dissent from it; it has raised the Directors in my estimation so high, that from entertaining some suspicions before, I now place the most implicit confidence in them, feeling assured that justice is their governing principle.

I think he need be under no apprehension respecting his property, for men who prove themselves capable of acting honestly in one instance, unbiassed by selfish views, will also act in the same way in other instances.

Your obedient servant,

A HOLDER OF TWICE AS MANY WHOLE AS HALF-SHARES.

March 8th, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The confident announcement at the last General Meeting of the Great Western Railway Company that the ultimate cost of the whole line now on the eve of completion, including the plant, would not exceed 5¾ millions; the decision as to the mode of distributing the profits to the three distinct classes of shares respectively, and the explanation of the dates at which calls might be made for redeeming parts of the borrowed capital now enable a better calculation to be formed of the probable future dividends on these shares than was before practicable whilst those points remained in doubt.

Assuming, for reasons under stated, that the expenses of working this entire line will not exceed 33.33 per cent., and reckoning the interest on borrowed capital at 5 per cent. it will be found on calculation as annexed, that supposing the gross revenue to become equal to that of the Liverpool and Manchester, taken for six months ending 31st December, 1840, viz. 172*l.* per mile per week, it will yield half-yearly dividends on the capital called of 9.22 per cent. (*a*).

Or, supposing it to become only equal per mile to that of the London and Birmingham, taken also for six months ending 31st December, 1840, viz., 138*l.* per mile per week it will yield 7.03 per cent. per half year.

The assumption of one-third as the maximum of working expenses is founded on the fact of those by the London and Birmingham being already reduced to 35.44 per cent. (*c*) by the York and North Midland to 31.59 per cent. (*d*), and by the North Union to 32.76 per cent. (*e*), and although the Great Western still shows 47.69 per cent., it is known that a large saving is about to be effected in the cost of their supplies of coke, and obviously as the traffic increases the per centages of expenses will diminish since the traffic may be greatly enlarged without a proportionate increase of expense; in addition to this the peculiarly advantageous gradients of this line have always been declared to be favourable to economy in working; and, moreover, much good may be expected generally to result from the constant improvements and savings taking place in locomotive power and other appurtenances of railways.

With respect to the probability of the revenue per mile on this railway when entirely opened being equal to that of the Liverpool and Manchester, it is all important that the fact of one terminus being in the metropolis gives it an advantage far surpassing any possessed by the latter, and another forcible argument is, that before either railway was in existence the coach traffic proved before Parliament of the range of country embraced by the Great Western and its auxiliaries exceeded by 50 per cent. that of the Liverpool and Manchester, and if it be doubted whether the traffic in goods will be so great as respects *quantity*, it must be considered that higher rates will be obtainable from being less exposed to competition by various and speedy channels of water conveyance contending against each other at rates especially low.

With respect to a comparison with the London and Birmingham traffic, it is only necessary to refer on this point to the very superior traffic per mile which this railway has enjoyed on comparing what has been realised on each during their respective partial openings for corresponding distances; and, indeed, adverting to the daily average of passengers travelling the *whole distance*, the number is nearly as large by the Great Western, though only partially opened, as it is by the London and Birmingham, though so long since opened its entire length.

Several letters have lately appeared in your paper from various writers on the subject of future dividends of the Great Western, and some were founded on the erroneous principle of estimating, according to the result of partial openings, the probable amount to ensue on the line being completed.

The result for six months ending 31st December, 1840, for this line, averaging 71 miles opened, was 83*l.* per mile per week, arising principally from passengers, it is submitted that it is not too much to anticipate that this will be speedily doubled on an entire line. The journey from London to Bath and Bristol, as yet only reduced to seven and seven and a half hours, will three months hence be performed in three and a half and four hours, and simultaneously by the opening of the Bristol and Exeter line to Bridgewater, when there will be 152½ miles continuously in operation, the time will be reduced to that town from eleven and a half to five and a half hours, and to Exeter from fifteen hours (mail time) *via* Basingstoke, to ten and a half hours *via* Reading and Bristol, to be followed by additional reductions as the Bristol and Exeter Railway effects its further successive openings—these advantages will of course apply to the whole of West Somerset, Devonshire, and Cornwall, as well as to South Wales. At a date rather earlier the opening from London to Cirencester, forming a continuous line of 93 miles from London, will abbreviate the journey into Gloucestershire and the adjacent counties, reducing the time from London to Cheltenham, to Glo'ster, or to Stroud, respectively, to less than five hours each.

The sums stated do not include the profits on the leases obtained from the Bristol and Exeter and the Cheltenham Union Companies, which [illegible] excessively low terms on which they [illegible] granted in comparison to their proved esti[illegible] may be expected to afford very i[illegible] to the dividends. Yours respec[illegible]

Bath, 9th March, 1841.

To enable a ready examinati[illegible] tions, the details are annexed, viz[illegible]

Note (a.)

Gross Traffic	£172	per mile per week.
On 117¼ miles	20210	per week.
26 weeks.....	525,460	per half year.
Deduct expenses, 1-3rd..	175,153	
Net Traffic.....	350,307	
Deduct interest—		
On £833,333

SOUTH-WESTERN RAILWAY.

To the Shareholders.

GENTLEMEN,—The mismanagement of your line is not confined to circumstances, as between you and the Directors, but pervades all the relations of your concerns. Every element of disaster is at work against you—internal dissention and distrust, ignorance, apathy, party interests and neglect, paralise the success of your railway. You have great and unexpected traffic within your reach, which you are doing your best, by tolerating mismanagement, to lose; and lose it you will to a certainty, if you long permit the present state of things to continue. You are raising and encouraging the efforts of the promoters of a line from Portsmouth into the Brighton—a line which, if you, have the moral courage to see yours conducted tolerably, it will be madness in them to make. You *must* lose a portion of the western traffic when the Bristol and Exeter opens to Bridgewater, the extent of which will be determined by your own conduct, and will be fatal to good dividends, unless you secure better management.

The character of your line, as I will presently prove to you, now stands at zero, and nothing but resolution in effecting—through a change of men—a change of measures and of conduct—can ever raise your barometer to fair weather. This is the case: your receipts for the three months, from 1st January to 31st March, will probably be 39,000*l.*—40 per cent. off leaves 23,400*l.*; from this take 15,000*l.* for interest, and 8,400*l.* remains, ex. any reserve, for dividend—just 4s. 8d. per share for the quarter. It will be said that the other quarters will produce more. I know it, and so they had need. But is this to be endured, when it is chiefly caused by "the worst management in England?"

Facts are better than assertions, and I will proceed to prove that I am right in condemning your Directors. I have lately travelled three times by this railway. The first day I sat by a gentleman who had ridden his hackney to Kingston, to dine with a party in town at six o'clock. The time-table stated the arrival to be 46 min. past 5: we arrived at 3 min. to 6. I tried to appease my fellow traveller; but it would not do. He denounced the railway with an energy which told of the loss of society of more consequence to him than his dinner, and surely he had reason to grumble. In the second journey I was the *vis a vis* of a staid gentleman, who, after contrasting the management of the Birmingham and the South-Western, by both of which he said he often travelled, finished the expression of his displeasure by asserting the latter to be "the worst managed railway in England." We arrived about 12 minutes behind time. The third time, I got to a country station half an hour before time. The orders are, I understand, that the clerk shall appear half an hour before time-table time, to book passengers. Within three minutes of the expected arrival in came this official, in a fluster, with "who wants tickets?" and at once, every one amidst unnecessary confusion, endeavoured to get first supplied; the fear of being left behind only showed that the passengers did not understand the Company, for as usual the train was late, and we cooled ourselves in the shed ten minutes. There was not room, and one of two second-class carriages was put on. 'Why don't you put on both?' said I.—'No, (said a functionary,) one is enough.' Well, we got on to Kingston; again there was not room, and, there being no spare carriage, what was to be done? 'Jump in here!' (said the guard); and instantly there was a rush, and ladies with children, and gentlemen in the gout, were invaded and tumbled over by artizans with their tool baskets, licensed hawkers, livery servants and servant maids. A passenger told me 40 persons were left behind, but of this I know nothing myself. To say nothing of the wear and tear of first-class carriages for second-class fares, do Directors imagine the public will put up with such irregularities? Do they think that persons paying first-class price will long submit to be at the mercy of a South-Western guard as to the company that is to be thrust in amongst them? We arrived 17 minutes behind time. I never saw a line where so little attendance was given by the higher officers and Directors; the traffic is left entirely to the government of the station clerks, guards, and porters; a Director is never seen at the country stations, or at the arrival of trains in town, or he surely would prevent the omnibuses from loitering 12 or 15 minutes to catch the last passenger before starting—a thing universally complained of. In 15 minutes I can get from Nine Elms to Charing Cross. So irregular are the arrivals, that no man can calculate on keeping an engagement or on being in time to continue his journey by other conveyances he reckoned on going by. One reason for all this may be, that the management of the locomotive business has never been even tolerably conducted. A merit was made of having engaged Mr. Locke to undertake this branch, but that is a mistake—a huge blunder instead of wisdom. Mr. Locke has too much to do—he has business at each of the two-and-thirty points of the compass—from Scotland to Normandy; and it may be seen without the benefit of "railway experience," that his supervision of the repair and daily working of engines at any given point, must result in that constant want of punctuality of which we have too convincing a proof upon the South-Western. Do the Company keep returns of the times of starting and of arrival of trains? and do Directors read them? If they do, then how comes it that this crying evil has been allowed to continue since last August, when twice the writer in a second-class train was overtaken by a first-class starting an hour later?

I come now to the matter of the late fire. A labourer goes with an open light into a warehouse filled with stores of a highly inflammable nature, and, as might be expected, the place is burnt down. Did it never occur to the locomotive superintendent or the storekeeper that there are such things as lanterns—that in all other establishments there is some system, or order, or precaution, or safeguard—that labourers are not left, in such cases, to their own discretion or judgment—that there is some control, or inspection, or *surveillance*—that things are not left to go entirely *à la dirive*; no; the booking clerk, the guard, the labourer, does as to him seems meet with the public and with the Company, and there is no one to gainsay it; the authorities "*are gone to tea.*"

"It is too bad." The opinion from the Land's End to Lambeth, from London to Liverpool, rings through the country that the South-Western is one of "the very worst managed lines in England." It does not keep time as to one train in twenty. There is the grossest neglect in all parties—the lower emulating the bad eminence attained by the Board. And how can it be otherwise when new Directors are lugged in by threes and fours to repay, in this line, favours conferred in others. We are the victims of class interests; and until you have that regard for your pockets that will move you to take and seat Directors from the share-lists in alphabetical rotation, for residence near the lines, and for largest holding, you will never extricate yourselves from the system which works your road "for the benefit of the few at the cost of the many." The diminution of the *number* of Directors with which on other lines Directors are now blinding your eyes, is scarcely worth your notice while the principle of election—I beg pardon, I mean *appointment*—remains corrupt.

A RAILWAY SHAREHOLDER.

LONDON AND BIRMINGHAM, GRAND JUNCTION, AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—I would ask your correspondent who made the calculation of traffic on these lines, and gave it in favour of the two first on account of the population, how he reconciles his statement with the following facts.

In the *six months* ending the 31st December last the Great Western, although on the average *not one half opened*, carried 645,481 passengers. The London and Birmingham in the *whole year* 1839, open throughout, 112¼ miles, carried 608,564 passengers; in the year 1840, 722,618 passengers, the six months of which 394,688; where it appears that 34,000 passengers more were carried on 50 miles of the Great Western in six months than on 112¼ miles of the London and Birmingham in a whole year.

The total receipts of the Grand Junction, 114 miles, in the first six months, *open throughout*, were 140,000*l.*; expenses 80,000*l.* The receipts on the Great Western, last six months, average about 50 miles open, were 154,000*l.*; expenses 73,000*l.* On the London and Birmingham when open, with the exception of 35 miles (*including*, I believe, the coach receipts), were in the month of April 1838, 4,300 per week.

The receipts on the Great Western the last week in February, exclusive of the coach receipts, are	£5,688	0	0
To which add for coach receipts, say	612	0	0
And difference in traffic between February and April	1,500	0	0
Total	7,800	0	0

makes the Great Western traffic under similar circumstances, nearly double that of the London and Birmingham.

Yours,
AN OLD SUBSCRIBER.

March 4, 1841.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Can you spare me a corner to inquire whether it is true, as reported, that our Directors have put their veto on the plan of carrying passengers to Manchester, from London, *via* Rugby, Derby and Leeds, which plan was calculated so essentially to serve the interests of the public as well as those of the shareholders in the Midland Counties' and North Midland Companies. I and my brother proprietors are sighing for some small return for the large sums we have embarked in the former line, and I very much fear that "hope deferred" will long continue to be our portion if the course of conduct attributed to the Directors be founded in fact.

I am, Sir, your obedient servant,
A MIDLAND COUNTIES' SHAREHOLDER.

CHEAP AND QUICK TRAVELLING.—Now-a-days in crossing the Atlantic, which is 3,000 miles broad at one place, and 2,500 at another, we can eat a dinner in New York, on the ocean, and in London or Paris, on three consecutive Sundays, and have a day or two to spare here and there with perfect ease. No less than seven steam ships and forty-seven packets now run between New York and Boston, and England and France. They depart hither and thither every week, and in a few years perhaps they will dot the Atlantic as thickly as the Tabernacle is dotted with whites and blacks at an abolition meeting. But this *en passant*. Travelling never was so cheap as now. In the packet ships a passenger can go in the cabin for 100 dollars, even in Collins' famous ships, "the prettiest models and fastest sailers in the world." To go in the steam ships, however, he must pay 20 dollars more. Some prefer one—some the other. There is no want of accommodation now. Those who like to steam it have an opportunity to satisfy their propensity in that line; and those who like to blow it can satisfy their's too by going in one of "the prettiest models and fastest sailers in the world."—*New York Herald.*

HERTFORD AND WARE BRANCH RAILWAY.—We understand a petition is in course of signature to the House of Commons from the inhabitants of Ware, complaining that danger is likely to ensue, if the proposed Branch Railway crosses the High-road at Amwell-end upon the same level. It has been asserted that the object of this petition is to prevent the railway coming beyond Ware, in which case the more ancient town of Hertford would be "left in the lurch;" but we are assured, from highly respectable authority, that such is not the wish of many of the most influential inhabitants of Ware.—*Essex Mercury.*

MECHANICAL ARRANGEMENTS OF RAILWAYS.

REPLY OF MR. ADAMS TO MESSRS. BELL, BADDELEY, &c.

To the Editor of the Railway Times.

SIR,—I am well pleased to see the remarks of your correspondents Messrs. Baddeley and Bell, on portions of my communications respecting railway mechanism. In so large a field inaccuracies of description must necessarily occur at times, and while seeking to communicate the results of my own studies I shall be glad to be benefitted in return, by the results of the studies and experience of others—the attainment of truth being equally the object of all.

Mr. Baddeley quotes as follows from my remarks on the railway break of Mr. Davies:—

"The defect seems to be that there is no provision for forcing back the trucks from the wheels when not required to be in use."

Mr. Baddeley hereon remarks,—"This is completely a mistake, and I beg to call attention to the circumstance that the correctness of the break lever and screw are such as to work equally well in either direction, backwards and forwards. On reversing the motion of the screw, therefore, the breaks are forced back from off the wheels with as much force as is in the other case employed to hold them on to the wheels."

The remarks of Mr. Baddeley appear perfectly correct. My only knowledge of the break was from the engraving in this periodical. My copy, being very indistinct, caused me to overlook the double ratchetts, or rather mortices, indicated by the dotted lines *h h*.

The mechanical action is therefore correct both ways as to principle, the connecting rods *g g pulling* in the direction of the greatest strain when the breaks are in action, and *thrusting* in the opposite direction, when only a slight force is required to remove their contact from the wheels.

The length of the levers will involve a considerable weight in the machinery, but this will be no disadvantage, inasmuch as every kind of break acting on the peripheries of the wheels, must depend for its efficacy in retarding the train on the weight of the vehicle to which it is attached. To apply this break to passenger carriages on springs, would require arrangement of framework at the level of the axles in order that, without cranking down, the lever nippers might fairly gripe the wheels without slipping their hold, and also, some arrangement would be necessary to provide for the play of the springs. But these considerations are wholly apart from the mechanical action of the breaks on the wheels. It was as the most perfect illustration of the principle of wheel retardation, that I criticised this hint of Mr. Davies, and I shall be glad if an inaccuracy of description in detail produce the effect of still further drawing public attention to it.

In the course of the very pertinent remarks made by Mr. Lowthian Bell on the subject of Losh's wheels occurs the following:—"The true figure of the wheel as it is now usually manufactured is shown in the following figure."

This, p. 323, No. 167, is clearly a very essential improvement on the form given in my diagram, p. 132, No. 162, as regards the construction of the spokes. In my diagram, lengths of flat bar, of parallel width and thickness, are supposed to be all bent round the same mandril, so that the greatest nicety and accuracy are insured without much manual skill. It was upon this principle that I inferred its great cheapness and simplicity of manufacture. But the spoke shown by Mr. Bell's diagram not being formed of parallel bars, must involve considerable skill in workmanship to insure accuracy. The foot of the spoke where it abuts on the tyre is apparently twice the depth of the other part, or leg, an unquestionable advantage, in tending to maintain the periphery in an unyielding form. On examining Mr. Bell's diagram it will be seen that every spoke presents at its abutment on the tyre the form of the keystone of an arch. Therefore, supposing the spokes to be elastic—*i. e.* lengthening and shortening—the true circular form of the wheel will depend on the accuracy of the fitting of the spokes, one against the other. If the faces of contact be not true radial lines to the centre of the wheel, either the wheel will not be firm, or it will assume an oval or some other form. Accuracy of the faces of the spokes must therefore be an essential preliminary, and this must involve expense in fitting.

This point being taken for granted, we will assume for argument's sake the periphery to be a true unyielding circle, in order to analyse the elastic resilience of the wheel. This must depend on the curvilinear form of the spokes. If the spokes were quite straight like fig. 3, p. 132, though they might shorten, they could not lengthen; consequently there could be no elastic action without the periphery varying its form. Looking now at Mr. Bell's diagram, we will suppose the axle loaded with such a weight as would draw the limbs of the upper vertical spokes to straight lines by a tensile action, and double the curvature of the limbs of the lower vertical spokes by a compressing action. In this case the limbs of the lower horizontal spokes would be lengthened by tension, or strained in the nave, while the limbs of the upper horizontal spokes would be shortened by compression, or strained in the nave. And, the spokes which are diagonal to the horizontal and vertical lines, would partake more or less of these conditions—the upper ones being exposed most to the tensile strain, the lower ones to the compression strain. Now, supposing the wheel thus loaded to be put into rapid action, the result would be that all the spokes in quick succession would be exposed to the alternate actions of extension and compression. This would eventually produce breakage of the spokes at their weakest parts, or loosening in the nave.

This argument goes upon the supposition, that in making the wheels the spoke segments are laid close together in the mould while the centre is cast upon them, the arch being so perfect that after the tyre is shrunk on, the spokes are neither in a state of compression or extension, but in a state of rest. I have no doubt whatever that experiment would indicate a considerable power of divergence in the nave, to and from the centre, by the application of force; but if in actual practice the spokes are never found to break or work loose, while the tyres occasionally burst, it seems to me an argument that the diverging power is not in constant action.

But if the segments are laid in the mould with open spaces between each, whilst the centre is cast on them, and the shrinking of the tyre, while it brings the joints into close contact, compresses and shortens the spokes. As, for instance, if the spokes were made nearly straight and forced by pressure into curves, then this wheel will possess a certain amount of elastic action proportioned to the quality of the metal of which the spokes are composed, without being exposed to alternate tension and compression. But if the compression of the tyre on the spokes be in excess, they will be apt to cripple, as the softness of iron renders it very subject to a permanent alteration of form.

To ensure that amount of shrinkage which will serve to tighten the tyre without exposing it to mischievous tension is a nice process. If the process of stretching hot on a mandril be resorted to, even that will not ensure accuracy. Supposing the metal to be all alike, if there be a variation of length in the shutting up, the tyres will be of differing degrees of tenacity after stretching; and if tyres of different tenacities are exposed to an equal amount of resistance in compressing the spokes, the result must be that some will burst, while others will be too loose. To accomplish the three points—of exact tension of the tyre, accurate radial lines of the spoke facings, and accurate compression of the whole of the spokes, so that the nave may be in the exact centre with equal support on all sides—is the thing to aim at, and if accomplished, the result will be as good a wheel as the exclusive use of iron can produce. It will possess elasticity as regards vertical pressure, but none whatever as regards the striking of the flange against the rails.

But as regards the torsion strain on the nave, the very existence of the elastic quality in the spokes is opposed to the truss principle of firm support, as exemplified in Hague's wheel. If a torsion strain were applied to the wheel, the theoretical result ought to be, the compression or shortening of one spoke, and the extension of the next, alternately, all round the wheel, till they become loose in the nave. It would be worth while to ascertain this experimentally, and perhaps Mr. Bell, who is evidently a truth-seeker, will favour your readers with the result. It is only on account of the principle of *fixing* on the axle that the question of strength is worth considering. As a loose wheel, the strength of the centre would be ample. Practical utility may exist independently of exact geometrical proportion.

I remain, Sir, yours obediently,
WILLIAM B. ADAMS.

March 15, 1841.

To the Editor of the Railway Times.

SIR,—In the number of March the 20th are some critical remarks on the subject of Adams and Buchanan's Railway Breaks, by "W. G."

These remarks would be in fact correct supposing the jaws of the breaks so formed that they could not escape from the rails under any circumstances whatever.

On re-examining the diagram, "W. G." will find that the whole of the power applied to the breaks is applied through the agency of a pair of curved springs which are capable of elongation and contraction. Therefore, the elastic resilience is provided for, either in the case of a sudden increase or diminution of the width of the rails, or of any roughness arising from lamination. Were the jaws of the break very short, jarring might be produced; but as there is no reason why they should not be two, three, or four feet long, they might run perfectly smoothly over salient points.

If the jaws of the breaks were made with square ends, shocks and breakage might ensue; but it is obvious that the ends should be of a skate form, so that in case of running over the notch of the rail following the main line, they would gradually give and take through the agency of the springs partially equalising the force. Supposing the breaks on, with the switches closed for a siding, so that two lines of rail met in a wedge form, the result would be, with a properly formed jaws, that the breaks would be thrown upwards, as the front part of the jaws would have no lip to clip the rails, but on the contrary would be slanted off for the very purpose of preventing an accident such as "W. G." foresees. Of course no train ought to go on a siding at such speed as to require a break in use.

His *erratum* for *points* read *crossings* is perfectly correct. It was a technical error.

As regards the expense of preparing an existing line of railway for such breaks, it is simply a question whether the contingent saving of rails and wheels would or would not counter-balance it. But apart from the question of crossings and sidings, there are a large number of inclines where no other kind of break can develope so much power, and where safety is dependent on having the trains under perfect control, such as the Lickey incline on the Birmingham and Gloucester, and which inclines will increase in number as railways increase, for the very obvious purpose of saving the outlay of capital.

The value of your journal for thus discussing, explaining, and correcting any misapprehension on subjects so important to the public as railway mechanism, cannot be too highly appreciated. Nothing of quackery can long exist, either from ignorance or design, where so many searching eyes are bent upon it.

I remain, Sir, yours obediently,
WILLIAM B. ADAMS.

1. Toll to London and Birmingham 116*l.* 5*s.* 0*d.*, to be deducted from gross receipts.

2. The receipts are exclusive of those from the Post-office.

5. Receipts include the Northern and Eastern toll, &c.

6. The capital expended includes 132,371*l.* 14*s.* 11*d.* laid out on the Glasgow and Paisley Joint Line No. 7.

7. Made jointly by the Ayr and Greenock Companies.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*

10. The 5,331,527*l.* 9*s.* 10*d.* is the amount actually raised according to latest balance-sheet.

13. Ten per cent. is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1*s.* 6*d.* for weekly rent of Aylesbury line.

17. The capital of 741,000*l.* includes the new capital for London and Brighton station.

18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. are guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 677,936*l.* 3*s.* 0*d.*

23. The receipts for goods, &c. include, carriages, 37*l.* 14*s.*; horses, 431*l.* 2*s.* 6*s.*; parcels, 171*l.* 12*s.* 7*d.*; dogs, 6*s.* 6*d.*; cattle, 12*l.* 16*s.* 6*d.*; corn, 36*l.* 3*s.* 11*d.*; heavy goods, 322*l.* 5*d.* Total, 624*l.* 1*s.*

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. Out of the receipts stated, the Company have to pay toll, &c. to the Eastern Counties' Company—about 150*l.* weekly.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Edinburgh and Glasgow Railway.—*Early in the week the "Glasgow Directors" intimated to us that a Reply to the Statement of the Edinburgh Directors announced by us to be in hand would be sent us in time for its simultaneous insertion in our present number, and that as they thought it "of importance that the reply should go forth along with the statement, they trusted it would suit our arrangements to accomplish that object." Yesterday, however, we received a letter stating that the Reply could not be forwarded sooner than next week. We regret this delay, but under the circumstances we think the Edinburgh Directors will approve of our postponing the appearance of their Statement for another week, in order that their Glasgow friends may not be deprived of any advantage which they may anticipate from having their counter statement placed by the side of it.*

Mr. Wilkinson and Mr. Burchell.—*We wish to reconsider our views of the "favorite dogma" which forms the main subject of their communications; but in the meanwhile it is proper to state, that we were mistaken in representing the Croydon Company as being favourable to "a graduation scheme of taxation." What they really pray for is, "a per centage one and the same, or a uniform per centage on all fares."*

Mr. C. R. Edmonds.—*The object for which the Greenwich Company are now before Parliament is to obtain the necessary powers for carrying into effect their arrangements with the Croydon and Brighton Companies.*

A Subscriber (*Bolton*) *has our thanks. His information he will perceive has been partly made use of; the rest by and bye.*

We will give "Honestus" twenty pounds to furnish us with satisfactory evidence of what he asserts.

H. H. *shall have an early place.*

Mr. —— *will find a letter addressed to him at "the Parthenon."*

Weekly Traffic Returns.—"A Manchester Reader" *will find the errors kindly pointed out by him corrected in our present number, and the Table on the whole much improved in point of distinctness and clearness.*

Communications received from C. E.—A Subscriber (Croft)—A Holder of Ten Greenwich Shares. Mr. Dent.—G. E. A.—Fairplay.—T. P. A Kentish Landowner.

Several letters and other articles are again unavoidably postponed.

THE RAILWAY TIMES.

SATURDAY, MARCH 27, 1841.

We think it is impossible for any impartial person to read the Reports and Returns which have been made to the Board of Trade, under Lord SEYMOUR'S Act, and printed by order of the House of Commons, without deriving from them a thorough conviction that, *so far*, Government supervision has worked well, both for the public and for the Railway Companies themselves. Every page bears incontestible evidence of the fact, and among the foremost to acknowledge it, we see with pleasure those very Directors to whom the interference of Government might be supposed to be most annoying—including however, we are bound to say, more than one or two who *elsewhere* (not much to their credit) hold rather different language on the subject. Thus, the *South Western* close a correspondence about the memorable accident on their line of the 17th October last in these words—"I am further desired to request that you will convey to their Lordships an assurance that it will be the earnest endeavour of the Directors to enforce the proper discipline of their servants, and to secure the safety and comfort of those using the Railway. The unfortunate accident which has led to this correspondence *has occasioned many suggestions for the improved conduct of the undertaking, the whole of which have received proper consideration, and several of them have been adopted, and are now in course of practical operation.*" And following this letter there is the following note, though from what source it emanates—whether the Company or the Board of Trade—does not clearly appear. "The new code of Regulations of the London and South-Western Company is framed with much care, and *embodies all the principal recommendations contained in* Sir FREDERIC SMITH'S *Report.*" Again, Sir FREDERIC SMITH having in his Report on the *York and North Midland* accident of the 11th November found great fault with the general management of that line, and pointed out various particulars in which amendment was particularly called for, the Directors cause their Secretary to write to the Board of Trade as follows:—"I am instructed by the Board to assure you that they are most anxious to adopt any regulations which may be desirable for ensuring punctuality and preventing the possibility of collisions, and that they will readily carry into effect the several recommendations contained in Sir FREDERIC SMITH'S Report. Indeed, *they have already adopted many of the arrangements suggested by these recommendations,*"—including among these adopted recommendations, as appears from a specification which is subjoined, time-tables for the starting and travelling of trains—station and carriage signal lamps—buffer springs to every carriage—breaks in sufficient number to every train—all things of first rate necessity, but which had never apparently been thought of till suggested by the Government Commissioner. Not many Companies appear to have had so much to be grateful for, as the York and North Midland, but there is scarcely one reported upon, which has not more or less of good advice to acknowledge. The *Eastern Counties'* Directors—albeit a very thankless set, as all our readers know—having been requested to state whether they were prepared to adopt certain suggestions which Sir FREDERIC SMITH had offered for the proper working of their double line of rails between Romford and Brentwood, reply in these terms:—"In replying to the several suggestions of Sir FREDERIC SMITH, the Directors beg to state that "the plan suggested for the regulation of the switches at the turn out for the intended spoil bank at Brentwood *is so evidently a desirable one, that the Directors, without any hesitation, agree to adopt the whole of* Sir FREDERIC SMITH'S *suggestions relative thereto*;" and with respect to certain other suggestions which they do not think so well of, they express a hope that Sir FREDERIC SMITH will re-consider them; and add, that "from his *great experience and acknowledged ability in such matters*, the Directors feel assured a satisfactory conclusion on the subject will be arrived at." The opening of the *Birmingham and Gloucester* had also been objected to by Sir FRED. SMITH, until several things which he considered requisite were done; and though it *was* opened in a sort of defiance of that objection, and without the sanction of the Board of Trade, the Secretary, nevertheless, writes under date of the 15th December, thus—"You will perceive that *several* of the points alluded to as objectionable in Sir FRED. SMITH'S Report *have already been obviated.*" Even the *Birmingham*, which Sir FRED. SMITH justly compliments for the "great foresight and attention" which distinguish its arrangements, appear to have taken a leaf out of that officer's book, in adopting, subsequent to the luggage train accident of the 17th November, the plan "of working the luggage trains by time tables." And to close our list of testimonials with one taken from the other side of the Tweed—where people of all classes, railway as well as others, pride themselves on being greatly a-head of all the rest of the world, in knowledge and intelligence—we find the worthy Directors of the Monkland and Kirkintilloch, thus joining in the general applause of Government intervention. "*It is exceedingly satisfactory to us to have the benefit of the able suggestions of* Sir FREDERIC SMITH." "A copy has been transmitted to the Resident Engineer in order that he may turn his attention to the *valuable* suggestions of Sir FREDERIC SMITH with a view to the adoption of the most decisive measures *for better regulating* the trains upon the inclinations of the railway." And the result, we are further told, was, that the whole of the suggestions alluded to were adopted, not only on the Monkland and Kirkintilloch, but on the neighbouring lines, the Glasgow and Garnkirk, the Wishaw and Coltness, and the Slamannan.

A superintending power, which has been productive in so short a space, of so much useful reform, as these cases exemplify, cannot have been otherwise than wisely created, and well administered. The only question with us, after an attentive perusal of the documents before us, relates to the extent to which that power should now be strengthened and fortified by suitable pains and penalties. As it is, it is simply one of inquiry and recommendation; the Board of Trade have no power to enforce the carrying of a single thing into effect for the benefit or even safety of the public—however strong or obvious the necessity for its adoption may be. One Company may comply with a recommendation—another treat it with contempt; there is but hearty commendation for the one case, and silent wonder for the other. Companies may offend against public policy as they please, and so far as the Board's authority extends, with perfect impunity. Returns, which if made by all Companies alike, might lead to an accumulation of statistical information of the utmost importance to the public, may through the wilfulness or neglect of a few—of a small combination of small clerks even—be rendered wholly useless; and yet the Board can but observe and lament that such things are. We cannot bring ourselves to believe that any person, free from Company trammels, would desire to see such a state of things continued. We would have the Board of Trade armed with all authority needful, for enforcing whatever may be needful for the protection of the public interests; but with neither less nor more. We would have all Companies treated by the Government alike, and all equally bound to comply with the requisitions of the Government, when made in the interest of the public. We can see no good reason why such a latitude of compliance should be tolerated as the returns before us exhibit. Of 77 railway Companies, 43 have made no return of their bye-laws at all; and of 47 (at least) opened

Digitized by Google

wholly or partially to the public, 32 only have made returns of their aggregate traffic. Either complete returns, on all points respecting which the Government are entitled on the part of the public to information should be enforced, or the existing power of supervision, beneficial as it has already proved, should be abandoned. For, however well that power may have worked during the first half year of its existence—before the Companies were fully aware how far they might safely venture to disregard the requisitions of the Board, or by how many, opposition to the Board's interference was likely to be countenanced—it would be idle to expect that the efficiency of the Board, *quoad hæc*, could long survive a general conviction of its inability to enforce the least of its views. Every succeeding batch of defaulters would be sure to increase that which followed, till at last default would become the rule and compliance the exemption, and the superintending power of the Board would resolve itself into an empty name.

The Bill for increasing the railway power of the Board of Trade still continues under the consideration of the Select Committee of the House of Commons, to whom it was referred. The principal witness examined during last week's sittings was Sir F. SMITH; during the present, Mr. BRUNEL. The Committee appointed by the Birmingham Conference, and by whom the opposition to the Bill is conducted, do not expect to close their case before Wednesday next; and as there will probably be several witnesses to be afterwards examined on the part of the public, it is not likely that the Committee will be able to make their Report in time for any discussion of it in the whole House, before Easter.

MR. BOOTH'S pamphlet on the carrying of goods by railway has already been repeatedly referred to in this journal, but the subject is one of such great and growing importance as well to the public as to the Companies, that no apology is necessary for once more reverting to it. Our own opinion was long since declared in favour of throwing open the trade to the carriers as a body, and certainly a second perusal of Mr. BOOTH's pamphlet has not in the smallest degree tended to alter our views, but rather the contrary.

Mr. BOOTH's arguments, although applicable enough to the Liverpool and Manchester Railway, with which he has been so long and so usefully connected, do not bear upon the general question or upon those broad principles by which alone the merits of a measure affecting interests so vast and complicated can be truly judged of. That the Liverpool and Manchester line cannot be regarded as a fair specimen of railways, so far as this question is concerned, will be evident from a moment's consideration of the peculiar circumstances in which it is placed. Its principal goods' traffic does not extend beyond the termini, the raw material being first conveyed to Manchester and then returned in a manufactured shape for export; and prior to the opening of the railway the business of the district was conducted by public Companies, such as the Old River Company, the New Quay Company, the Grocers' Company, the Duke of Bridgewater (owner of the canal) and others. There were no private carriers established upon the route, so that had the Railway Company been desirous of opening their line to the competition of such parties, they must first have called them into existence — a matter which it may fairly be said would have been impossible, taking into consideration the competition of the public Companies already referred to, and the uncertainty of success which at that period enveloped this, the only important speculation of the kind. The circumstance of the Liverpool and Manchester Company becoming carriers in place of toll-receivers was, therefore, a matter of necessity rather than of choice; and Parliament seeing their peculiar position placed a limit not only on their tolls, *but also on their charge to the public* —a limitation, which, as far as we know, has not been imposed in the instance of any other line, there not being, perhaps, in the whole kingdom a similar case, or one where (under a limitation of tolls) the legislature did not anticipate ample protection to the public from the competition of carriers. There are other peculiarities in the case of the Liverpool and Manchester line, but enough has, we think, been adduced to prove, that what may be a very proper and beneficial arrangement upon that line might have a very different issue upon railways generally. Dismissing, therefore, a more detailed reference to Mr. BOOTH's arguments as applicable only to one particular case, we shall briefly reiterate our own views on this most important question, and leave the public and Parliament to decide between us.

First, as to the *right* of the carriers to the use of railways on the payment of tolls. There can be no doubt whatever that it was the intention of the legislature to secure this right to the fullest extent, as witness the clause in every original Railway Act, authorising any parties to run their own engines upon the payment of certain fixed charges. It is true that subsequent experience showed very clearly that this right could not be exercised without great danger to the public, from the admission on a railway of steam power not under the immediate control of the Company, and so far the *legal* claims of the carriers may be neutralised; but is there no *moral* claim? That the Legislature think so, is manifest from many circumstances, not the least significant of which is, that in one of the more recent Acts of the London and Birmingham Company, an obligation was imposed of furnishing to all carriers on payment of the established tolls, both power and waggons *at a fair and reasonable charge*, or of admitting the waggons and engines of the carriers themselves upon the line. Let those Companies, therefore, who resist the *moral* claims of the carriers, take care that those claims are not legalised.

Secondly, as to the *policy* of admitting the private competition of the carriers. We are satisfied that it is to the benefit of ALL parties—the public and the Railway Companies as well as the carriers—that such competition should be encouraged, instead of being repressed, or altogether destroyed. It is contrary to all experience to assert, as Mr. BOOTH has done, that public Companies can carry on the *details* of any business within the compass of private enterprise, more economically than individuals. There is, moreover, the competition of attention and civility, in which the public are scarcely less interested than in economy of money; and who is there will venture to maintain that in this respect the comparison is not infinitely to the disadvantage of public bodies, in which, although there may be a good money responsibility, there is generally but a slight moral one?

The policy of promoting competition is still more evident from the fact that the private carriers are also collectors of goods, with branch establishments or agents already fixed in almost every manufacturing and populous town in the kingdom, and that if not encouraged as allies by the Railway Companies, they have it in their power to become most formidable foes, by forwarding per railway such goods only as are imperatively ordered to be sent by that mode of conveyance, and keeping the great bulk of their business upon the highways and canals—more especially as in the great majority of cases where time is of little importance, the old mode of conveyance is more profitable, both to the carriers and their customers, than the new. We can perceive no means whereby Railway Companies can get possession of a large traffic in goods, except through the co-operation of the carriers, unless indeed the Companies were themselves to become public and common carriers, to places beyond the termini of their respective lines—to establish agents in all the large towns—to incur the whole of the carriers' risks by giving lengthened credit—and to embark a large capital in that branch of business—all which would be contrary both to the letter and spirit of the several Acts which called them into existence, and by conforming to which their rights and privileges are alone secure.

There is no ground for the identity which Mr. BOOTH assumes to exist in the cases of the carriage and delivery of goods, and the conveyance of passengers. Goods are at the risk and responsibility of the carrier from the moment he receives them in Friday-street until they are delivered to the consignee, be it in Birmingham or Edinburgh, and must be forwarded to their destination at the carrier's discretion; whereas the passenger walks into the Railway station, pays his fare, and again leaves the line at that point which best suits his convenience, without any control or responsibility on the part of the Company, save for his due conveyance to the station on their own railway for which he may have taken out his ticket. Horse coaches no longer exist, and the passenger has no choice but between the railway at 2d. or 3d. a mile, and post-horses at 1s. 6d.; but it is not so with the carriage of goods. Canals not only exist, but are in active competition with railways, in many instances at lower prices, and nothing but the superior speed of the latter, and the good will of the carriers, can enable the Companies to develope speedily and successfully this very important, but hitherto much neglected, branch of their traffic.

Nor is this a mere theoretical view of the question; daily experience points to precisely the same result. Thus it will be seen by a reference to our weekly Returns of Traffic, that the London and Birmingham receipts *from tolls only* exceed by nearly 50 per cent. those of the Grand Junction Company, as *carriers and deliverers of goods*. The charge for power, &c., upon the Birmingham line is, we are informed, scarcely *one-fourth* part of the gross receipts, leaving THREE-FOURTHS as net profit to the Company, whereas the expenses of the *carrying* Company (the Grand Junction) are, we understand, about *three-fourths* of the gross revenue, leaving only ONE-FOURTH to the proprietors. Now the amount of tonnage passing north of Birmingham is much greater by the canal and roads than that to the south, and yet the London and Birmingham *net* receipts from goods are at the least *threefold those of the Grand Junction Company*—thus showing most indisputably, as it appears to us, the superiority of the private exertions and good-will of the carriers, over the exclusive system adopted by

Digitized by Google

the Grand Junction Company, and advocated by Mr. Booth!

Let it not be supposed that we dispute the right of Railway Companies to become carriers on their own account—a right which has been fully sanctioned by Parliament. But it is only in extreme cases, as for example, should canal carriers combine against a particular line, or where the amount of business is too trifling to invite competition, that we think it will ever be their *interest* to undertake it; nay, we will venture an opinion, that those who are now carrying *beyond* their termini, will not long continue the practice, even should Parliament or the Board of Trade not interfere to prevent it.

After all, experience and time will do more to elucidate this question, and to place the carrying business upon a legitimate foundation, than all the pamphlets that may be written, or the reasonings that may be adduced, on either side, and to that test we now leave it with this concluding inquiry for Mr. Booth:—"Supposing all Railway Companies to adopt the Grand Junction system—the carriers to be driven from the field—and the canals reduced to the carrying of minerals, what security would the public have for economy of charge and management, attention to their wishes, or redress for their complaints?"

The result of the meeting of the Birmingham and Gloucester Railway Company, held this week, will doubtless be considered, and perhaps boasted of, by the opponents of all railway travelling on Sundays, as a great triumph; but it is, in truth, nothing of the kind. The amendment of Mr. Homer, which was that carried, was founded purely on the consideration that there was *no occasion* for more than the Government mail trains running on Sunday; and that were more started *they would not pay*. We have now before us a printed circular which Mr. Homer issued previous to the meeting, and see nothing in it which savours in the least of that fanaticism (as often, we suspect, *affected* as real) by which the more vociferous railers against Sunday travelling are actuated. It treats the question in a very business-like—pounds, shillings, and pence—sort of way, without once either misquoting or misapplying the scriptures to serve the author's purpose. As thus—"More than four-fifths of the stage coaches have ceased to run, which reduces the number to four on the road, neither of which work on the Sunday—*evidently because the requirements of the public are so small as not to be an inducement to either of the respective coach proprietors to run on that day, although unopposed by the railway, (except mail trains.)*" And again, where, after discussing "*to what amount the public would be likely to avail themselves* of a train leaving the Camp Hill or Gloucester stations, at a given time on the [Sunday] morning, in addition to the mail trains," Mr. Homer remarks—"An infinitely larger number of clerks, superintendents, guards, and engine-drivers, stokers, and other servants, must of necessity devote the required time to their several departments *than all the passengers to be conveyed*; consequently *without sufficient cause* a large number of the Company's servants would be precluded from attending their religious places of worship, and be compelled to work on the day appointed for rest." With a resolution founded on such considerations of mere pecuniary expediency we can have no fault to find; but just as little can the absolute abolitionists of Sunday travelling have any reason to regard it with feelings of exultation.

We make no doubt there were among the voters for the amendment not a few of our absolute abolition friends, and that they only assented to it, in the expectation that it will serve as a step towards the ultimate accomplishment of their extreme views; but we are content to think, that with all their puritanical endeavours, their influence in the decision of the matter has been so small, and rely with great confidence on the progress of rational piety, for its becoming every day smaller and smaller.

Meanwhile, it may not be out of place to remind Railway Companies, that resolve as they may, there is a power above their's in this matter. And on this head, we cannot do better than quote the following very pertinent admonition addressed by the Board of Trade to the Garnkirk and Glasgow Railway Company, who had proposed to enact by a bye-law, that "no person shall pass upon the railway with waggons or other carriages *at any time on Sundays*." "With respect to the bye-law," say their Lordships, "which declares that the railway shall not be used on Sundays, their Lordships do not wish to raise any question respecting the propriety of this regulation, or the right of the Company to prohibit Sunday travelling, *so far as their own carriages and servants are concerned*; but as the railway is declared to be free to the public on payment of rates, by the 65th section of the Company's Act, Geo. 4, c. 103, if the case should arise of any person claiming to use the railway upon a Sunday, a question would be raised which it would be for the court of law to determine as to the power of the Company, under their Act, to refuse the use of their railway upon Sundays. *The question is one which would not be affected by any bye-law which the Company had thought proper to make, and therefore the bye-law in question, as assuming to settle a point which exceeds the range of bye-law jurisdiction appears improper.*"

We hope also to be excused for reminding the advocates for the absolute prohibition of Sunday labour, that if they desire to have any respect paid them for sincerity and consistency, they must even, as regards themselves, their servants and immediate dependents, carry out their notions a vast deal further than they have yet shown any indications of doing. We protest against their fastening on Sunday Railway travelling alone. We require them to carry out their principles to the full extent *of their own power* at least, or to say nothing about them. We deny that they have any right to say—'this Sunday labour we shall make money by, and that we shall repudiate.' They must eschew all or none. Sunday sailing and Sunday steaming are not a whit less exceptionable (if exceptionable at all) than Sunday railway travelling; but when was any of these purists known to give back out of the freight of a vessel, or out of his share of its earnings, a single stiver of the Sunday freights and earnings? The *Great Western* and other trans-Atlantic steamers find it no doubt of great convenience to steam as well on Sundays as Saturdays, but there is *no necessity* they should do so; they may trust to their sails alone on the Sundays, and in some situations they may furl these also and lay to, till the Monday comes round; yet we do not hear of any great effort being made by any section of the proprietors of these concerns to have the use of steam on the Sundays interdicted—though doubtless there are some Sunday Railway Travelling abolitionists among them, and working huge furnaces on Sundays is as *black* work at sea as on land. Houses, lands, mortgages, all fall within the same rule; no person can be sure that his estate or money may not, in the hands of others, be turned to Sunday uses, other than those which come within the pale of his toleration, and, therefore, to keep his conscience easy, he ought to deduct from each year's rent, or interest, a portion corresponding to the 52 Sundays in the year; he may not be able to prevent the abomination which he abhors, but it rests entirely with himself whether he shall make rich "by the wages of sin," or not; yet though all this be most true and certain, we hear just as little of Sunday-deducting landlords and mortgagees (though there is scarce an opponent of Sunday railway travelling who is not one or other,) as of Sunday freight denying shipowners. When we do, we shall be prepared to hold in more respect than we do at present the exclusive horror with which the extension of the *benefits* of the railway system to the Sabbath day, is regarded or affected to be regarded by some of its friends, who, provided they can but make a sort of *religious preserve* of this corner of the vineyard, seem to care but little how open they leave the remainder to wayfarers and tresspassers.

We give a further portion of the Railway Returns lately printed by order of the House of Commons; and shall continue our extracts from time to time till we have placed the whole either literally or in an abridged state before our readers. It may be useful to our readers to give in the meanwhile a list of the contents of the book. The papers are classed under five heads.

I. Reports relative to accidents; comprising those of Colonel Thompson, Captain Melhuish, and Sir Frederick Smith, on the Eastern Counties'—and of Sir Frederic Smith, on the Hull and Selby, North Midland, South Western, York and North Midland, Lancaster and Preston, Monkland and Kirkintilloch, Midland Counties', and London and Birmingham.

II. Reports relative to the opening of new railways—of Sir Frederic Smith and Captain Melhuish on the Birmingham and Gloucester, and of Sir Frederic Smith on the Great Western, Eastern Counties', Leeds and Manchester, Bolton and Preston, Glasgow and Greenock—with a correspondence relating to the Great North of England.

III. Returns relating to Bye-laws disallowed—from the Arbroath and Forfar, Birmingham and Gloucester, Hartlepool, Ardrossan, Garnkirk and Glasgow.

IV. Returns of aggregate traffic from the following railways:—Ulster, Arbroath and Forfar, Newcastle-upon-Tyne and Carlisle, Dunfermline and Charlestown, Glasgow Paisley Kilmarnock and Ayr, Manchester and Birmingham, Northern and Eastern, Manchester and Leeds, St. Helen's and Runcorn Gap, Grand Junction, Liverpool and Manchester, London and Croydon, Paisley and Renfrew, Dublin and Kingstown, London and Birmingham, Llanelly and Llandilo, Leicester and Swannington, Brandling Junction, London and South Western, Bolton and Leigh including Kenyon and Leigh Junction, North Union, Manchester and Bolton, Lancaster and Preston Junction, Edinburgh and Dalkeith, Maryport and Carlisle, Great Western, Whitby and Pickering, Eastern Counties', Durham and Sunderland, Leith Branch of the Edinburgh and Dalkeith, Ardrossan, Midland Counties'.

V. Returns relative to accidents attended with personal injury, from all the railways included under

Digitized by Google

the preceding head (excepting the Dumferline and Charlestown, Paisley and Renfrew, London and Birmingham, Llanelly and Llandillo, Leicester and Swannington, and the Ardrossan), with the addition of the following :—the Monkland and Kirkintilloch *Dundee and Arbroath, *Dundee and Newtyle, *North of England, Clarence, *Leeds and Selby, *Hull and Selby, *Canterbury and Whitstable, *Birmingham and Derby, *Greenwich, *North Midland, Wishaw and Coltness, *Stockton and Darlington, Glasgow and Greenock, Cheltenham and Great Western, *Birmingham and Gloucester, Ballochney, Whitby and Pickering, Slamannan, *Preston and Wire, *York and North Midland, *London and Brighton, *London and Blackwall.

The Companies marked with a (*) have made no Returns of their traffic, and some of them are understood to have definitively determined not to make any.

—o—

The Magistrates and Town Council of Inverness have addressed a memorial to the Government, earnestly pressing on its attention the importance of extending the Railway System of internal communication to the Northern Highlands of Scotland, of which that borough is the capital, and praying that means may be at least provided out of the public purse for defraying the expenses of an engineering survey, to ascertain the railway capabilities of that district of country. We trust the prayer of the memorialists will be granted.

—o—

The Report of the Government Engineers on the different competing lines between London and Edinburgh, presented to the House of Common, but not yet printed, states that the preferable line is a continuation of the London and Birmingham, Grand Junction, and Lancaster and Preston Railways, by Carlisle, Gretna, Lockerby, Beatock and Crawford, to Symington, in Lanarkshire ; and from this point by two diverging lines to Edinburgh and Glasgow, —Symington being about thirty miles distant from each city. From Symington to Edinburgh two alternative routes are proposed, — one by Biggar, Linton, and Penicuik ; the other by Thankerton, Wilsontown, and Mid-Calder. The route by Linton is the shortest by a mile ; but, from the nature of the ground, that by Wilsontown is considered preferable. The line by the north of the Pentland range, besides being a much easier line, runs through a more productive mineral district than the one by Linton, on the south of the Pentlands ; but the point of divergence commands both sides of that range, as well as both sides of the Clyde. The *Edinburgh Observer*, in noticing the Report of the Commissioners, observes—"it is a curious fact, that it appears to have been by this line, and also from a similar point in divergence, that the Roman armies marched from England to both the east and west of Scotland ; and from near the same Roman station diverges the great Parliamentary road, executed by the late Mr. Telford, under the Government Commissioners for improving the communication between England and Stirling, and the north of Scotland."

—o—

We are glad to observe, from a Report which we publish eslewhere of a Committee of Inspection, appointed by the Brighton Railway Directors, that the whole of the works of that line are in so satisfactory a state of forwardness, that there is every prospect of the railway being opened within the time anticipated at last general meeting, that is to say—partially in May next, and throughout the whole length in August.

—o—

Among the petitions presented to the House of Commons in the course of the week, was one from the Rev. John William Butt, praying that in the case of all future railways footpaths shall be carried under them, and that every railway be formed at a certain specified distance from the public highway. The petition was ordered to lie on the table.

—o—

Humbug turned Saint.—We extract the following precious specimen of time-serving hypocrisy from a *revised* edition of the Prospectus of that much called for, most *bona fide*, and wonderfully promising speculation, the Direct London and Manchester (never-to-be) Railway :—

"It is the determination of this Company to carry on all its operations with a strict regard to the due observance of the Lord's day ; no work will be permitted to be done on its railway or other property, on any part of the 20 hours of that day, except so far as the Company may be obliged by law to allow its railway, or other property, or servants, to be otherwise used on that day, for purposes of the government of the country. The shares, or scrip, of the Company will be so worded as to pledge the holder to maintain the foregoing as a standing rule —a rule which it is proposed to enforce, so as to leave neither necessity nor temptation, upon any person engaged in the service of this Company, to neglect the proper day of rest."

RAILWAY OFFENCES AND OFFENDERS.

Our readers will recollect the case of Holroyd, the surveyor, who was held to bail under Lord Seymour's Act for causing an obstruction upon the Manchester and Leeds Railway, to the imminent danger of the public. The affair arose out of a disputed right of way across the line, and was decided last week at the Yorkshire Spring Assizes. We give a short sketch of the proceedings in another column, from which it will be seen that Holroyd has virtually been acquitted, the jury, *after seven hours' consultation*, being unable to agree upon a verdict ! The evidence would appear to have been somewhat conflicting ; but enough is admitted to show that the defendant took most objectionable and dangerous means of asserting the alleged rights of the parties for whom he acted, and we trust that what has transpired will have, at least, this effect—that it will convince the parties referred to that they will not be allowed with impunity to take the law into their own hands.

Last week Richard Baker, a guard in the service of the Grand Junction Company, was charged before the magistrates of Warrington with being drunk while on duty. It was clearly proved, that on the arrival of a luggage train at its destination, Baker was found to be asleep, and having been aroused it turned out that "he was *so* drunk that he could not walk steady." The conclusion of the case is thus given in the *Manchester Chronicle* of Saturday last :—

"Mr. Norris [one of the resident engineers] said that as the *sole management of the train* rested upon the defendant, and as he was too drunk to attend to the breaks, or perform any other duty required of him, the Company *hoped the magistrates would not fail to make an example of him*, as they were aware that the majority of railway accidents happened through the carelessness or neglect of those sent in charge of the train. *The defendant was well able to pay a fine, having been a long time in the Company's service.* They had had no previous occasion to complain of his conduct, and he had been dismissed their service. *The Bench ordered the defendant to pay a fine of* 40*s. and costs*, and in default to be committed to the House of Correction for two months."

It is satisfactory to know that even for this *first* offence a person who could so grossly neglect his duty has been dismissed from the Company's service, but how are we to account for the extraordinary leniency displayed by their worships on the Bench ? Here is a man upon whose attention "the *sole mananagement of the train* rested" found to be totally unfit for duty, and yet he is let off with a 40s. fine ; and, as if to make the mockery of justice still worse, the magistrates had been previously informed that the culprit "was well able to pay a fine, having been a long time in the Company's service !" The gentleman who brought the case forward seems to have suspected before-hand that their worships would not deal very stringently with the case, and truly he was right. Would a half-starving labourer who had snared a hare upon the grounds of one of these same Justices have escaped so easily as this well-paid guard, through whose vicious indulgence property to a large amount, and even life, might have fallen a sacrifice ? Not he !

Manchester and Birmingham Railway.—The line to Crewe is in active preparation. The Edgeley contract is rapidly drawing towards completion. The heaviest work is at Castle-street archway, 297 yards long, of which about 200 yards are finished. All the arches of the Mecker Brook Viaduct are turned ; all the other bridges, but one, together with the culverts, are finished or in an advanced state. One mile and a half of road is ready to receive the ballasting for the permanent way. The Viaduct over the Dane Valley, in the Cheadle Hulme Contract, has its foundations laid, and all the bridges are nearly finished. Three-tenths of the whole of the excavation are finished. One mile is ready to receive the ballasting for the permanent way. The heaviest work of the Wilmslow contract is the viaduct over the Bollin, with an adjacent excavation of 109,800 cubic yards on the north side of the valley. The foundations of the viaduct are just commenced. The heaviest excavation contain 122,000 cubic yards, of which two-fifths are executed. The foundations of ten piers of the Dane Viaduct at Holmes Chapel are laid ; four are erected to the height of the imposts of the arches, and six have an average height of six feet above the surface of the ground. But both abutments will be commenced this month. The centerings are in readiness, and the arrangements of the contractors are such that they do not entertain any doubt as to its completion within the specified time—*Macclesfield Courier.*

Manchester to London for a Guinea.—There is now a competing line of railway from Manchester to London. The Directors of the Grand Junction have had their own way for a long time, but the tables are now turned. At the very time that they were paying a dividend of 12½ per cent., they actually raised the fares about 6 per cent. above what they had been. The Directors will soon find out their mistake. The Leeds and Manchester line is now open throughout, and to the credit of the Directors, they have made such arrangements with the Directors of the North Midland and the Midland Counties', as enable them to take third class passengers the whole distance from Manchester to London for 21s., and second class passengers for 32s., being from 20 to 30 per cent. lower than the fares paid hitherto.—*Preston Chronicle.*

Since the opening of the Hartlepool and Stockton Railway, and the recent opening of the Great North of England Railway, for goods and merchandize, great quantities of fish are now daily sent from Hartlepool to Darlington, and forwarded by the latter railway for Sheffield, Derby, and Birmingham. —*Northern Times.*

THE EASTERN COUNTIES' AND THE NORTHERN AND EASTERN TRAFFIC RETURNS.

To the Editor of the Railway Times.

SIR,—The official returns of traffic made by these two Companies, exhibit such extraordinary discrepancies, that it is absolutely necessary for the satisfaction of all who are disposed to invest money in them, (the Eastern Counties' at least) either by way of loan or of share subscription, that they should be cleared up. As they stand, there must be gross error somewhere—*if not something worse.*

From your last week's table of railway traffic returns it appears that the gross receipts of the

E. C. from 10,816 passengers were only £566 19 0
N. and E. from only 6,962 „ „ „ 505 12 1

The Eastern Counties' Company add (and properly enough) all the Northern and Eastern passengers to theirs, except the very few which are taken up and let down at the stations between Stratford and Broxbourne, so that in point of fact, they carried only between 3,000 and 4,000 by their own engines. The Eastern Company also add to their gross money return, the sum which they receive weekly from the Northern and Eastern, which is about 150*l.* Deducting, therefore, this 150*l.* from their gross return of 566*l.* 19s., the sum received from their own proper traffic was only 416*l.* 19s. Now, as the fares of the Eastern Counties' and Northern and Eastern Companies, and the distances carried by each, are as near as may be the same, I should like to know how it could possibly happen, that—

The Eastern Counties' should get out of (say) 1,000 passengers £416 19 0
And the Northern and Eastern, out of 6,962 passengers, only 505 12 1

The same singular discrepancies between the working results of the two Companies have been observable for many weeks past; so that there must be some general cause at bottom, (which does not yet appear) to account for them.

So much for the contrast between the two Companies. Let us now see how each Company stands as contrasted with itself.

From the Railway Returns to the Board of Trade, just printed by order of the House of Commons, it appears that the Northern and Eastern, from the 15th of September (when it was opened) to 31st December, 1840, carried 73,660 passengers, who produced a gross receipt of 5,157*l.* 8s. 4d., being on an average somewhat less than 1s. 6d. each. In the last week which I have just cited they carried 6,962 passengers, and that number at the general average of 1s. 6d. each gives a total of 522*l.* 3s. The actual receipts were 505*l.* 12s. 1d., and the difference between the two sums is just about equal to the excess of 1s. 6d. over and above the real and net average. As far, therefore, as the Northern and Eastern is concerned, its general Return to the Board of Trade, and its weekly Returns published in your journal, tally very exactly.

But from the same returns to the Board of Trade it appears that the Eastern Counties' Company during the six months from 1st July to 31st December, 1840, carried 160,526 passengers, and received 12,856*l.* 1s. 2d., being at the rate of a fraction more than 1s. 7d. per passenger. Now, according to this average, they should have received for the 10,616 passengers carried by them in the week last cited 840*l.*; but they give credit for only 566*l.* 19s.!!! No tallying here, but a gross and astounding difference, which imperatively calls for explanation.

Nor will the force of this call be lessened when I state further, that on referring to the Eastern Counties' Returns previous to the memorable accident of the 19th of August (previous to which time there was no falling off in this Company's traffic, and *no inducement therefore for any misrepresentation on the subject,*) I find that—

For the week ending 2nd August, 10,731 passengers yielded 852*l.* 7s. 1d.
And for the week ending 9th August, 10,628 passengers yielded 852*l.* 7s. 2d.
(agreeing very closely with the general average,)

While for the week ending 14th March, 10,616 passengers yielded only 566*l.* 19s.!!!

This, however, is not all. The Returns of the Eastern Counties' Company to the Board of Trade give for the *six* months ending 31st December last, a total of only 160,526 passengers carried, while their weekly returns to the public (shareholders, *debenture buyers,* &c.) through the medium of your journal, represent the total number of passengers during the *five* months of that period, from 2nd August (when you first commenced giving the Returns of this Company) to 29th December, to have been 169,926. If we add to this one-sixth more for the month short, say 28,000, then *if these weekly returns are correct,* there must have been carried during the six months 197,926 passengers. Difference between this and the Return to the Board of Trade 37,400.

But as both of two contradictory results cannot be true, will the Eastern Counties' Directors be pleased to tell us which is the false? Whether that furnished by their weekly returns to the public, or their general return to the Board of Trade?

Such things have been heard of as the effective force of armies being increased *on paper,* by mustering with the rank and file *all the ragtag and bobtail of the baggage train.* Can it be that it is in this way the passengers conveyed by the Eastern Counties' Railway make so much greater a show in point of numbers, than of money returns? Are the Directors, and officers, and servants of the Company, when travelling on the railway on the Company's business, or for the show sake, and TRAVELLING FREE, numbered in with the *bona fide* paying passengers? Or, as the lawyers say, if not so, how else?

I am, Sir, your constant reader,
ENQUIRER.

The Forest, March 24, 1841.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

March 19.—Petition for Bill reported, and Bill ordered to be brought in by Mr. O'Connell and Colonel Verner.

Bill "to amend and enlarge the powers and provisions of the Acts relating to the railway from the Cavehill to the harbour of Belfast, in the county of Antrim," presented and read a first time.

DURHAM AND SUNDERLAND RAILWAY.

March 23.—Bill reported; to be ingrossed.
March 24.—Bill read a third time and passed.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

March 19.—Bill "for making and maintaining a railway to be called the Glasgow and Dundyvan Junction Railway," presented and read a first time.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

March 19.—Printed breviate of amended Bill laid on the table.
March 22.—Bill reported; to be ingrossed.
March 23.—Bill read a third time and passed.

GREAT LEINSTER AND MUNSTER RAILWAY.

March 19.—Resolution of Standing Orders' Committee reported "that in the case of the Great Leinster and Munster Railway petition, the Standing Orders ought not to be dispensed with."

March 23.—Petition for leave to proceed with the Bill; to lie on the table.

March 24.—Petition of George Lewis Smyth for leave to proceed with the Bill (presented 23rd March); to be taken into consideration to-morrow, and to be printed.

March 25.—Order for consideration of the petition of George Lewis Smyth (presented 23d March) read. Motion made, and question, "That leave be given to bring in a Bill for extending, enlarging, and amending some of the provisions of the Act relating to the Great Leinster and Munster Railway," put and negatived.

LONDON AND BLACKWALL RAILWAY.

March 19.—Bill read a second time and committed, and referred to the Committee of Selection.

March 24.—Committee on Bill fixed for Thursday, April 4.

LONDON AND GREENWICH RAILWAY.

March 19.—Bill "for enabling the London and Greenwich Railway Company to purchase property for altering certain streets and places contiguous to their railway, and for amending the Acts relating to such railway," presented and read a first time.

MANCHESTER AND LEEDS RAILWAY.

March 22.—Bill read a second time and committed, and referred to the Committee of Selection.
March 24.—Committee on Bill fixed for Thursday, April 4.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

March 23.—Printed Breviate of Bill laid on the table.

NORTHERN AND EASTERN RAILWAY.

March 22.—Petitions against the Bill:—from George Frere, Esq.; and Mary Booth; referred to the Committee on the Bill; counsel ordered.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

March 19.—Petition of Trustees of the River Dee Navigation, against; referred to the Committee on the Bill; counsel ordered.

March 25.—Petition of Visiting Justices of the House of Correction at Hertford, against; referred to the Committee on the Bill; counsel ordered.

NORTH MIDLAND RAILWAY.

March 22.—Committee on Bill fixed for Tuesday, 30th March.

POLLOC AND GOVAN RAILWAY.

March 19.—Petition of James Oswald, Esq., one of the Trustees of the Three-mile-house Road, against; referred to the Committee on the Bill; counsel ordered.

March 22.—Petition of Trustees for improving the River Clyde and enlarging the harbour of Glasgow, against the Bill; referred to the Committee on the Bill; counsel ordered.

March 23.—Ordered, that the minutes of evidence taken before the Committee on the Polloc and Govan Railway Bill in session 1837, be referred to the Committee on the Polloc and Govan Railway Bill.

Ordered, That leave be given to print such evidence at the expense of the parties, if they think fit.

March 24.—Petition of the provost, magistrates, and town council of Renfrew, against the Bill; referred to the Committee on the Bill.

PRESTON AND LONGRIDGE RAILWAY.

March 19.—Bill reported; to be ingrossed.
March 22.—Bill read a third time and passed.

SHOTTS AND WILSONTOWN RAILWAY.

March 20.—Bill "for making a railway to be called 'the Wilsontown, Morningside, and Coltness Railway,' in the counties of Lanark and Linlithgow," presented and read a first time.

SOUTH-WESTERN RAILWAY (No. 2.)

March 19.—Bill "to amend the Acts relating to the London and South-Western Railway Company," presented and read a first time.

STAFFORD AND RUGBY (LATE MANCHESTER AND BIRMINGHAM EXTENSION) RAILWAY.

March 19.—Petition from Lancaster in favour; to lie on the table.

Petition of landowners and others of Lincoln, against; to lie on the table.

THAMES HAVEN DOCK AND RAILWAY.

March 19.—Resolution of Standing Orders' Committee reported, "that in the case of the Thames Haven Dock and Railway petition, the Standing Orders ought not to be dispensed with."

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

March 23.—Report further considered; amendments agreed to; amendments made; Bill to be ingrossed.
March 25.—Bill read a third time and passed.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I will not attempt to obtain insertion for my letter in your paper, under the guise of being a constant reader or a great admirer; but I respectfully think, from the manner in which you have taken up the subject—very momentous in itself, and most important to railway proprietors—you will not deny a place to the remonstrances of a plain man, much interested in the subject to which he adverts.

I allude to your animadversions on the resolutions of the last general meeting of the Edinburgh and Glasgow Railway Company. I entirely agree with you in the scope and bearing of your remarks; but allow me to say, I disapprove of their tone. I am sure you have no wish to create dissension; I have not a doubt but you would rather heal differences. Indeed your observations, in substance, all tend that way; but the manner I fear will be offensive to the shareholders in this quarter. I am certain you will give me credit for the most perfect sincerity, when I say, that, for my own part, I completely subscribe to your views.

It has been to me a source of pain to know, for the last twelve months, that matters have evidently been progressing to their present position. I am not a large shareholder, but I am interested to a serious extent; and the course of management has been such, as to give me, and many others, the greatest disgust. Nothing has met my ears so frequently or so loudly, as the obstinacy and the self-willedness of the Edinburgh Committee. Sir, I was perfectly ready to listen to this complaint, till I heard the actual grounds on which the Edinburgh Committee were blamed. I can understand that there may be a jealousy between the two cities. If the Edinburgh people have fostered the nonsense I completely condemn them; but in all soberness I have no proof of it. I had no distinct notion of the real grounds of difference till matters were brought to close quarters, and then I found what I had for some time suspected, that the Edinburgh Committee had taken their stand on points, on which I declare most honestly, that I do not think one honourable man in this quarter will differ from them. You, Sir, may imagine from the apparent unanimity at general meetings, that there is no difference of opinion upon any matter. We are so much engrossed in our affairs in this busy place, that, till the last, there never were a dozen partners, besides the Directors, at any general meeting of the Company. I may be wrong as to one or two: in the main I am confident I am right.

But, Sir, there has been a deep under-current of complaint. Our Chairman is a man of ability and merit. He is well-fitted for public affairs—he is not concerned in any considerable mercantile company, and holds no prominent place as a merchant, though well to live in the world. He is an efficient town councillor, and, I am quite convinced, the Company owe a good deal to him as a useful hand in some of their negotiations. It is no fault of his that some gentleman of high standing in the mercantile world, does not hold the place which has devolved on him. Excellent people will excuse their own remissness by saying, that there could not be a better man; and I have not the least doubt, that in the turmoil which has arisen this will be largely and most respectably averred; but quietly, it is downright absurdity, a thing which will only provoke a laugh at the tables of the men whose good-nature could sanction the *betise*.

Mr. Leadbetter acquired considerable notoriety about the Reform time, which will never be forgotten or forgiven by a very large class of the citizens. He was a bitter reformer in the palmy days of reform, but is now a bitter churchman and conservative. I thank him for forgetting his former course; but, like better men, he is subjected to much suspicion for his change. While many good men distrust him on this account, there is no denying that a most respectable constituency have, nevertheless, returned him to the Town Council, despite of what was prominently held forth as his political tergiversation.

Sir, I pass altogether from a topic which ought never to be mentioned in great discussions, but for the fact, that it meets one at every turning when you are talking of the qualifications of our Chairman.

It is truly sorrowful to think that there should remain so much to exasperate on the part of the Chairman of a great Company. The Edinburgh gentlemen have come forth with charges against Mr. Leadbetter, which were known to hundreds in this quarter, and have been the subject of much private complaint. More than twelve months ago I predicted that such charges would be made. I would despise the Edinburgh accusations if dictated by mere faction, and I only demand inquiry. What is said of them is the mere echo of what I have heard a hundred times. Why did you not go forward and denounce what you thought blameable? I am sure I ought to have done so; but I have scarcely the time—I am sure I have not the ability,—and I really have no wish for the notoriety of being a champion in a matter where others have a much larger personal interest; a consideration, by the way, which I fully admit, tells in favour of Mr. Leadbetter.

But I take leave to ask a few questions. I pass over altogether the canvassing business for proxies. If Mr. Leadbetter thought he was quite right, I do not think he was quite wrong, to ask shareholders to support him in his views—whether he stated the case fairly or not, I leave him and the Edinburgh people to battle among themselves. First. Is it true that Mr. Leadbetter became the proprietor of a valuable property at the *Terminus* of the Railroad, and that it had been reported that such property was indispensable for the purposes of the railway? Did Mr. Leadbetter, while possessed of that property engage in negociations for the purchase of property for the Railway in the vicinity to the extent of 50,000*l.* or upwards, the enhanced value of which must have directly encreased the value of the property acquired by him at the *Terminus?* If these things are true, (and if they are not true, let it be publically contradicted,) was it right in Mr. Leadbetter to continue in a situation which gave him the greatest influence and control over all the officials connected with the Company?

Secondly. Why in the name of common fairness did Mr. Leadbetter divert such a vast disproportion of the monies of the company, and for such a length of time, away from the other banks of the company into his own bank, at a time when money was worth 2 or 3 per cent more than the ordinary rate, and when every body believed, that in the execution of the concern, it would be necessary to apply to those banks for aid?

Thirdly. Is it true that Mr. Bannatyne wrote out a resolution in his own hand, that a sum of 500*l.* should be invested in a piece of plate to Mr. Leadbetter, before a single call was made, and got an Edinburgh Director to move that resolution? Is it true, that Mr. Leadbetter, has not insisted for the audit of a single account of Messrs Bannatyne, since 1836? The accounts of this firm have been called by the Edinburgh Committee altogether exorbitant. That Committee may be wrong,—I hope they are:—but I ask Mr. Leadbetter, on his honour, has a single Director, himself excepted, ever read these accounts from beginning to end before this date? If so, I demand his name. And this is no light matter when one thinks of the thousands upon thousands which have been paid to Messrs Bannatyne, without the semblance of an audit. The mere expense of obtaining the Bill has been upwards of one thousand pounds per mile, on a line of 46 miles. Surely this will make the shareholders think seriously of the charges which are made against them.—and for one I will stand up for any individual or body that has demurred to the management under which such charges have been incurred. Sir, if the Edinburgh Committee are struggling for power and patronage, they shall not have one particle of my sympathy. If the complaints against them have arisen because they have opened their voices against Mr. Leadbetter and Messrs. Bannatyne, I am ready to come to a public meeting, and vote for any check which they may impose on this conduct.

One word as to the affair of the two Committees. I feel much indifference on the subject. If the light of public opinion is let in upon the concerns of this great undertaking, I will defy any set of men to mismanage it. The road is made and the question is now one of management. With the experience that has been gained all over the empire,—the Directors will not be permitted to go wrong in the working of the line. It is another affair how the private interests of the shareholders are to be protected. I say dispassionately, by a local committee at each end, responsible, 1st to a general board,—2ndly to the shareholders, and 3rdly to the public. Such committees, while they can have but one end, if they do their duty aright will form a valuable check on the jobbery, to which there has been already so many tendencies.

As yet the complaint has only been *from* Edinburgh. For any thing I know there may be the like ground of complaint *against* Edinburgh. Give me an instance in that quarter, and I promise you our hard-headed Glasgow merchants, will neither be slow nor feeble in crushing it in the bud.

I am, Sir, your obedient servant,

AN INDEPENDENT SHAREHOLDER.

Glasgow, 24th March, 1841.

P.S. Since commencing this letter I have received a printed communication from Edinburgh, on the strength of which I have made some additions, but it does not materially affect the views I had previously entertained. I have also seen Mr. Leadbetter's letter in your paper of the 20th. He appears to misrepresent the agreement of 1836, and seems disposed to evade the discussion of the real question, by directing attention chiefly to the personal differences betwixt him and his Edinburgh Colleagues. This wont do.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I have been for some time past a reader of the *Railway Times*, and am quite ready to admit the general fairness of your statements and arguments. But there is an assertion in your paper of last Saturday which I am disposed and prepared to dispute, and which I hope you may be induced to qualify a little.

You have said, in allusion to Mr. Richard Dawson of Liverpool, that "no person *out of Scotland* exerted himself more in behalf of this undertaking in the earlier stages of its history, and no person is better entitled to be heard," &c.

Now, I have not the most distant purpose of detracting from the merit of Mr. Dawson, but altogether the contrary. Neither do I seek to impugn anybody whatsoever, but only to assert my own right, which can be attested by the most unexceptionable evidence.

If, in 1836, Mr. Dawson introduced the shares into the *lesser* market (that of Liverpool) I did the like into the *greater* (that of London.) It was I who first "made the market" in the Stock Exchange of London, and bought and sold the first shares in it that were ever heard of there; and I maintained it by the application of my time and means, and by the utmost exertion of my humble talents and influence down to the latest moment, when my exertions in its favour were interrupted by a sudden and almost fatal sickness. I used every fair means of explaining and bringing into notice the merits and prospects of the undertaking, and of recommending it on every occasion, not only to my own clients, but to those of others; and this I did (not as affecting to despise pecuniary emolument) without fee or reward, or expectation of fee or reward, past, present or to come, but because I was ambitious, as a Scotchman, of being connected with the greatest undertaking of my country, and because I thought it then, and still think it, as fair and eligible and promising an investment of capital as any one of the undertakings then, or now, in vogue, whatsoever.

Digitized by Google

And not the least important result of my exertions in 1836, was the settlement of a question, or dispute, which arose about the distinction between the old and the new shares, and the original deposit receipts. That question I brought before the Committee of the Stock Exchange, which adopted exactly my view of it, and so decided it, and that decision governed every bargain which had been made in the shares for many weeks previously, to the amount of probably some thousands of shares—and, moreover, that decision was in favour of the shareholders who had sold and not of the dealers who had bought.

I am, Sir, your most obedient servant,

CHARLES MACRAE.

[We candidly own that we overlooked Mr. Mac Rae's exertions in this matter, owing, no doubt, to those of Mr. Dawson having continued uninterruptedly down to the present time, while Mr. Mac Rae's had suffered a long intermission in consequence of that illness, on his recovery from which, we have now very sincerely to congratulate him. We are obliged to Mr. MacRae for the opportunity he has given us of doing him justice; for now that we call up the past to mind, we can personally bear testimony to his efforts in 1836-7 in favour of the Edinburgh and Glasgow Railway having been at least quite as conspicuous and successful as those of Mr. Dawson—a fact which we are sure Mr. Dawson himself will not be the last to acknowledge.—ED. R. T.]

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—The late meeting of the Manchester and Leeds Company was looked forward to with great interest by myself in common I doubt not with the majority of the shareholders. For six months previous the Directors had refused to publish the traffic returns, and during that period our stock had steadily declined in value from 45 premium on 90*l.* paid to par! although at the September meeting our Chairman led us to expect a dividend of 9½ per cent. Under these circumstances we naturally expected that the March Report would contain the fullest information on the state and prospects of the undertaking.

The Report however contains little more than might have been comprised in a single sentence. It informs us, that, the traffic has been a failure hitherto, and that the entire cost of the line has risen in the interval from 56,000*l.* per mile to 62,000*l.*!! Though how this has come about is not very plain,—indeed the Directors seem rather puzzled themselves to account for it, and our Chairman, (who by the way has a habit of coming out with some aukward truths,) candidly owned in reply to a question put by Mr. Kay, that, "as respected the Estimates it was a matter over which the Directors had *no* control"!!! It may be so, but it is a fact, the Leeds shareholders will learn with surprise. To whom Sir are we to look but to the Directors to control the expenditure? and what dependance can we place in the assurances now given us that 3,172,000*l.* will complete the line and branches, although that amount exceeds by 372,000*l.* the sum which Mr. Holdsworth informed us (in September last) would be required.

The traffic on the Leeds line since the opening throughout on the first of March, has only averaged about 2900*l.* of which 1800*l.* is from passengers. This is miserably small and is in fact a complete failure considering the enormous cost of our line, and the immense population of the district. We drew 900*l.* per week from passengers twelve months ago on the 13½ miles then open,—we have now 50 miles in operation and our weekly receipts from passengers ought to average 3600*l.*

If our working expences should absorb 50 per cent of our gross receipts it would require 6000*l.* per week to pay 5 per cent on the cost of our line. And even supposing the working expences should only amount to 42 per cent as our Directors anticipate, we must draw 5000*l.* per week to pay interest on loans, and make a dividend of 5 per cent.

But, Mr. Editor, the trifling amount of our weekly receipts is not surprising if as I believe it is derived almost entirely from goods, and what may be called local traffic, viz. passengers going from 5 to 20 miles. If I am not misinformed nearly all the coaches running between Manchester and Leeds are still on the road. The fact is our line is very circuitous, and our fares are in my opinion *much too high*. For first class passengers we charge 15s. and 10s. for second class; the distance by railway is 60 miles, and one half of our trains perform it in 3 hours—the other half being slow trains take 4 hours.

By coach the distance is 40 miles, the time, 5 to 5½ hours, and the fares inside 15s. outside 11s.

Our fares in my opinion ought to be 6s. for third class, 8s. 6d. for second, and 11s. 6d. for first class passengers—if we are to command the immense increase in passenger traffic usually consequent on opening a railway. To show the absurdity of our fares, it is only necessary to remark that the distance by the turnpike road from Manchester to Liverpool is about 35 miles, and the fare in first class carriages on that line of railway is only 6s. whereas we charge 15s. to Leeds, the distance by turnpike road being only 5 miles more than to Liverpool, or 40 miles!! From the circuitous nature of our line, we ought certainly to charge nothing for the ten miles we pass over the North Midland, but to consider our line as 50 miles in length to Leeds. In this way too we should evade the clause in our act, compelling us to charge a like fare for all distances, *but* for which in my opinion our fares ought to be 3d. per mile on 40 miles, or 10s. for first class passengers throughout.

Our Directors ought to start fast trains, making only two stoppages, and performing the distance in two hours or two and a-half hours at reduced fares, say at 12s. 6d., or 3d. per mile for 50 miles. We ought never to rest satisfied while a single horse coach is on the road; from the nature of our population, *poor but dense*, and *migratory*, and the low price of fuel, it is evident our dividends must be drawn from an immense number of passengers carried at low fares—added to what we must always command, viz., a large revenue from goods.

I am a large holder in the Manchester and Leeds line on investment, and if our line is properly managed, Mr. Editor, I doubt not the shareholders will ere long, receive a handsome dividend; meantime, it cannot be denied that we have cause for much anxiety. I regret that our Directors did not see fit to give us more information as to our prospects in their late Report. Our Chairman, Mr. Holdsworth, boasts that one-fifth of the entire shares are held by the Directors—if he will condescend to return an answer to the following queries, it would be conferring an obligation, I am convinced, on the remaining four-fifths of the proprietary:—

1st. How has the excess of 372,000*l.* arisen? The items named in the Report only amount to 40,000*l.*, caused by the severity of the winter, &c., viz., Healy Mill Bridge, 3,000*l.*; Slack's Valley, 4,000*l.*; Summit Tunnel, 3,000*l.*; and Winterhut Lee contract, 30,000*l.*

2nd. How many coaches are still running between Manchester and Leeds, and how many have been removed by the opening of our line, and what is *now* the fare by coach inside and out?

3rd. What is the daily average of passengers booked throughout from Manchester to Leeds by railway?—And *vice versa?*

4th. What is the charge on our line for 3rd class throughout?

5th. In what way are we to derive a profit from booking passengers to Rugby on the London and Birmingham line at reduced fares?

6th. What arrangement has been made with the North Midland as to the tolls on the ten miles into Leeds? Do we pay a fixed sum per annum as the Grand Junction does to the Liverpool Company, and if so, how much is it?

7th. When are the Oldham and Halifax branches to be commenced—how soon will they be completed, and at what cost?

8th. In what state is the negociation with the Liverpool line *now* for a junction in Manchester at Hunt's Bank?

9th. What dividend do the Directors hope to declare in September next?

These questions, Mr. Editor, ought to have been asked at the late meeting had the shareholders present done their duty—from residing at a distance I was unable to attend. But it is not yet too late, if you will oblige me by giving this letter a place in your columns. In a late number of your paper you remarked it was in vain for you to advocate railway reform unless shareholders would do their duty fearlessly at the meetings. Now, Mr. Editor, you in this undervalne your exertions in my opinion. There are so many causes in operation to prevent shareholders speaking out—such as friendship to the Directors—the fear of damaging their property in the share market, &c. &c., that I feel inclined to trust much more to the wholesome influence of *a free railway press*, than to any exertions of the shareholders for the reformation of abuses.

If success in your past efforts is any stimulus to further exertion you have cause to persevere. No one will suspect me of flattery when I say it is to you we owe the establishment of third class fares on the Birmingham and several other lines—the circulation of printed reports previous to or at the half-yearly meetings—the reduction in the number of Directors now being carried into effect on various lines—and though last, not least, the *quietus* just given to that absurd scheme the "Stafford and Rugby line." It is you, too, that the shareholders in the Liverpool and Grand Junction lines have to thank for the great reduction recently effected in their working expenses—a reduction forced upon them by the comparison instituted in several of your leading articles in 1839, contrasting their accounts with those of the London and Birmingham Company.

I remain yours respectfully,

A LEEDS SHAREHOLDER.

London, March 23, 1841.

STAFFORD AND RUGBY RAILWAY.—The second reading of this Bill has been negatived by a majority of 60 in a House of 252 Members, after a very spirited debate.—This decision, under all the circumstances, must be considered, we imagine, *a final disposal of this undertaking*. It would be affectation in us to lament this, for we have never been able to look upon it as a project likely to be productive of the advantages to the public commensurate with the interference with private property, and the large outlay of money consequent upon it; and, further, it was impossible not to see that it would materially retard, if not wholly prevent, the adoption of another plan, fraught with much greater and more general public benefit. We allude, of course, to the proposed railway connecting the Manchester and Birmingham with the Midland Counties' and the Derby Junction, at Derby, and generally known as the Churnet Valley Railway, the required notices of which have been given, and plans and sections deposited. We believe that the great bulk of shareholders in the Stafford and Rugby, are also proprietors of the Manchester and Birmingham Railway, and we earnestly advise them to turn their attention to the line to which we have referred. They would then have the means of employing their capital in forming a communication through a country abounding in population, manufactures, and mineral products, and establishing an actual and useful competition with other great undertakings, not in parallel lines, but through a different district; and one which, whether we look to the map or the census, appears to require such a communication. In conclusion, we must add our gratification that the question has been set at rest by the House of Commons, rather than by the slow and doubtful process of a Committee, which would have only thrown away many thousands in expenses, and presented prejudices and angry feeling.—*Macclesfield Courier.*

RAILWAY ADJUDICATIONS.

MUCHAMP V. PRESTON AND LANCASTER RAILWAY COMPANY.

(Reported exclusively for the Railway Times.)

Lancaster Assizes, Thursday, before Mr. Baron Rolfe.—This was an action brought by a stonemason named Joseph Muchamp, against the above defendants, to recover the value of a box, which had been sent from Lancaster by one of the trains on the 17th November last, directed to him at Baslow, near Bakewell, Derbyshire. The sum sought to be recovered was 16*l.* 1s.

Mr. Cresswell was retained for the defendants.

Mr. Martin, on behalf of the plaintiff, said, that the present action was brought in consequence of a box which had been sent by the father of the plaintiff to him, directed as above, by one of the trains on the Preston and Lancaster line. He did not dispute but that the box was safely delivered at Preston to the next branch of railway—the North Union—but as from that period no tidings were to be had of it, he contended that the Lancaster and Preston Railway Company were bound, either to find it or to make good the loss. It was given originally into their custody for transit; and it was for them to have seen it safely delivered at the place of its destination. If it were not so delivered, then they, both in reason, law, and justice, were responsible. When railways were first proposed, the legislature had looked at them as being only intended for the conveyance of passengers at a rapid rate, and not of heavy goods. He contended that, as carriers, the Lancaster and Preston Company could not set up a plea that they were not liable for the loss, as they only worked their line from Lancaster to Preston; if that were allowed, the public would be put to the greatest inconvenience instead of being benefitted by railways. If a Company took in a parcel, common sense showed that it was liable for its safety to the far end.

John Worthing sworn—Remembered assisting to take up a box containing clothes and mason's tools, on the 17th November, to the railway station at Lancaster. It was for Joseph Muchamp, at Baslow. Saw a man there named Threlfall; he delivered it to him; afterwards he went down, by direction of one of the clerks, and told Mrs. Muchamp to go up to see it weighed. The clerk said nothing to witness about only booking to Preston.

Cross-examined by Mr. Cresswell—Will you undertake to swear that the clerk never said to you that "we only booked to Preston?"—(After a pause), No, I will not.

Hannah Muchamp, the mother of plaintiff—On the 17th of August last sent a box up to the station at Lancaster with a young man. Afterwards she went up herself, when she saw a young man, a clerk; it was directed to Joseph Muchamp, Baslow, near Bakewell, Derbyshire. The clerk came and looked at direction; he and porter tried to lift it, and they said, "It is a greater weight than we can lift." Witness asked how long it would be in going—the clerk said, two or three days. Witness asked if it was paid for would it go any sooner, as the man it was going to was out of work, and he wanted his tools and his clothes as soon as possible. The clerk asked if anybody was going with it—Witness said, the person who owned it was at the far end. The clerk then answered, that he might pay the carriage for it when he got it. In consequence of hearing from her son she went to the railway office, and there saw William Kendal, one of the clerks; she asked if the box had gone forward, as her son had never received it; Kendal did not read the letter; she held it in her hand; he looked in his book to see if it was booked according witness's directions; he said it went on the 17th. Nothing more passed between them. Witness went up again about a week or ten days afterwards, and saw the clerks standing at a desk; she asked them if they had heard anything of the box; they said no; she said it was a very great loss, as her son wanted his tools and his clothes, he was out of work, and it was a very bad job that it had not gone forward. Witness rather got hasty, and one of the clerks said it must be paid for; he did not say who by.

Cross-examined by Mr. Cresswell.—The clerk did not say it had been duly forwarded to Preston, it had gone forward by the North Union.

Did not the clerk show you a book, and say that it had gone forward?—No; he did not: he looked in a book, and he said it had gone forward.

To Preston?—No; he never mentioned Preston.

Where then?—Why, I suppose he meant to the far end.

Joseph Brixton, ostler at the Wheat-Sheaf, Baslow, said, boxes came there from different parts for people; frequently saw the witness's son come to enquire for a box. It never arrived at all. Chesterfield was about eight miles from Baslow.

Cross examined.—Chesterfield is on the North Midland Railway.

This was plaintiff's case.

Mr. Cresswell, for the defendants, then said, that the amount in this case was but small, 16*l.* 1s.; yet from the smallness of the sum, might be induced to impute negligence to servants of the defendants. But as this was the first attempt to establish a principle by which they did not think themselves bound, it was their duty in self-defence to resist it, equally as much as if the sum to be recovered was 1,000*l.* The box had been lost by the negligence of others, who were the persons liable. Mr. Martin had contended, that if a man a carrier from the town A. to B. took a parcel which might be addressed to Devonshire, London, John o'Groats, or the Land's End, he was liable for its safe delivery, though he himself only went from Lancaster to Garstang, or from Lancaster to Hornby. In that case no man on a limited line would become a carrier without a considerable sum being given him to enter into a contract for the safe delivery of the goods. Such was not the law, and he hoped it never would be the law. If a man received payment for a parcel to a certain place, he was bound to find other carriers at the end of his own line, and he was liable for its loss. But if he only received payment only for his own line of road, at the same time undertaking to have it forwarded, he was then bound to find carriers for that purpose, but he was not responsible for its safe delivery. It was known to all the world, that the Lancaster and Preston Railway, by Act of Parliament, was only worked between those two towns. His friend had said, they were not carriers at all, yet that action was brought against them as carriers. The box had been delivered safely to the North Union Company, and they, and not the defendants, were liable for it, if they could not account for it. Chesterfield was the nearest station of Baslow; it was on the North Midland Railway—how was it to be supposed that the defendants would take upon themselves to be responsible for a box going such a distance: the very fact negatived the proposition. The old woman had said, she was willing to pay the carriage; but she was answered, that as nobody was going with it, the person to whom it was directed might pay at the far end. The young man's refusing to take the money, repudiated all notions of the defendants liability. The clerk of the North Union would acknowledge to having received it—and beyond that, he argued his clients had nothing to do with it. In support of his argument, he quoted Simms and Chaplin, 5 Adolphus and Ellis. The responsibility could not be thrown on the earliest agent. The defendants might carry 500 parcels in day along their line; they were in no connection with any other, he therefore left it to the jury to say, if they were to be liable for the whole distance they were going after it left their own office at the Preston or Lancaster end.

Mr. Miles Ellithorne, sworn—Was one of the booking-clerks; remembered a box being brought on the 17th November, directed to one Muchamp; the man inquired when it would go, and told him that it would go at 10 minutes past 3; looked at the direction, and seeing that it was to go to Derbyshire, witness told the man that they could only book to Preston; at that time London, Liverpool, Manchester, Preston, and Lancaster, were the only places that they booked for; they had just began to do so; no part of the carriage was paid.

Cross-examined by Mr. Martin—The young man said nothing about payment; saw Mrs. Muchamp, and she did.

Mention any one party, to whom in all your life you told you only booked for Preston, but this?—All parcels.

That won't do; all is a very general term. (After a pause.) I can't call to mind any particular name.

Re-examined—When did you first hear of the box talked of?—Perhaps two or three months ago, but no one ever said anything to me about it.

Mr. Cresswell—I don't mean they did. Was it the general rule to explain to persons bringing parcels you only booked to Preston?—It was.

George Knipe Kendal sworn—Was booking-clerk at the railway office; was not in the office when the box was brought, but entered it afterwards in a book; the Company then did not book to Derbyshire; the bill of parcels made out was the one copied by witness out of the book, to the North Union Company. The North Union Company on receiving parcels from the Preston and Lancaster Company gave no acknowledgments for them; remembered Mrs. Muchamp's enquiring after the box, about some ten days afterwards; enquired about it; found it was duly forwarded to Preston, and told her husband so.

Mr. Wright, parcel clerk to the North Union line at Preston—Remembered a box arriving on the 17th November; parcels coming from Lancaster, booked to Preston, are brought into the office, examined by the Lancaster and Preston bill, and are ticked off, if found correct; that was the usual mode. [The bill as ticked off as correct with regard to the box being received by the North Union was produced.] The parcel then remained until called for. If they had to go forward, they were booked in the North Union book, and were then in the charge of their servants; should think that when a parcel was delivered from the Preston line to the North Union, it was no longer in charge of the servants of the Preston and Lancaster Company.

Cross-examined—The Lancaster carriages go forward, but not the men.

Re-examined—The different Companies contract for the use of their carriages; the Preston and Lancaster Company have nothing to do with the profits beyond Preston; the going on of the carriages was that the passengers might not be disturbed.

Henry Threlfall, at the desire of Mr. Martin, was called—He said he knew nothing about the box; he might have been in the office when it was taken in, but he was book-keeper to one of the contractors. The first witness had mistaken him for Ellthorne.

Mr. Martin, in reply, said that when the question came to be considered, it would be an undefended cause. Mrs. Muchamp was sent for to complete the contract; the statement made by her was the true statement, and she was entitled to a verdict. His friend had misunderstood him when he said that Railway Companies were not intended in the first instance by the legislature to be carriers of parcels, but merely of passengers; but if they took upon themselves to be carriers, they were then liable to the same benefits, and were also liable to the same laws. His learned friend's argument about a carrier over a limited distance only being liable for his own distance, and not for the whole distance which a parcel had to go, if it were to Land's-end, or to Scotland, when he only went some ten or twelve miles, was an extreme case, and one very much likely to mislead. If the receiving carrier was not to be liable for the whole distance, only look in what a position the public would be in with regard to Railway Companies. Why, if a box were sent from Manchester or Liverpool to London, as there were five different lines, and the box was lost, how could the owner know where it was lost, or to whom could he look for compensation. If he went to the Liverpool station from whence it had gone, he would be told it had been regularly forwarded to such a line; if he went there the same answer, and

to on throughout the whole distance, might be given. The safest plan would be to bring an action against the whole five Companies. But of course he could but recover against one, and most probably he might lose the whole five. Consequently, if a Company receiving a parcel was not responsible for its safe delivery at the place to which it was directed, the owners in case of its loss, would, in nine cases out of ten, be without any redress. The box, it was true, had been duly delivered at the North Union station, and no blame whatever was attachable to them as to negligence on the part of the clerks and servants on the Lancaster and Preston line. But it had been lost through the negligence of some one in connection with that line, and therefore he argued that they were beyond all doubt liable for its safe delivery at its place of destination.

His LORDSHIP in summing up, said that the present case involved an important question as to the liability of Companies beyond their respective lines. It might be a great hardship for the plaintiff to lose his box, but the case was to be dealt with, not because the plaintiff was a poor man and the defendants a rich Company, but as if the Bank of England were the plaintiffs and the defendant a poor carrier. Allowing cases of hardship to warp the judgment might show a good feeling, but it was too often the means of producing very bad law. In his Lordship's opinion if a carrier traversing a limited line of road took a parcel without saying that he only went a certain distance, but took it in a general sense, leaving the impression on the mind of the sender that he was going with it, or would forward it to its destination, he was without doubt liable to its safe delivery. It was the same with coaches. The argument of Mr. Cresswell was certainly entitled to consideration. It had been said that the evidence of Mr. Ellthorne was unimportant, but in his Lordship's opinion it was the most important of all. Upon the conversation between him and Worthing hinged the case; if nothing was said about the Company booking to Preston, then the defendants were bound to carry the box through to where it was directed. But if Ellthorne told him that they only booked to Preston, then they were only liable for its delivery at Preston, so that all that is material is what passed between the first witness. The witness, Mrs. Muchamp, went up afterwards; she asked how long the box would be on the road, and Ellthorne answered, two or three days. Perhaps that might be something in favour of the plaintiff, as it was leading her to presume the Company would forward the box through. Perhaps it might not be mentioned to her that it could only be booked to Preston; but if it had been mentioned to the man by whom she had sent the box, it might not be deemed necessary to mention it to her again, as she was only sent for to see it weighed. It would not only be an unwise, but an unjust and dangerous doctrine if the defendants had stated themselves to be carriers only to Preston, to saddle them with the remuneration of a loss caused by the negligence of others; for no blame was imputed to the defendants for not delivering the box in safety to the North Union Company. It was therefore for the jury to say how far the plaintiff had been given to understand that the defendants only booked to Preston; and again his lordship desired them to banish from their minds all ideas of the hardship of the case, and to decide upon it without any reference to rich or poor, but give in their verdict as if the parties in circumstances were reversed.

The jury retired for about half an hour, and then returned a verdict for the plaintiff, damages 1*l.* 1*s.*

The trial, as may be supposed, created very great interest amongst those connected with railways.

THE QUEEN *v.* SCOTT AND OTHERS.

York Assizes, Special Jury; Nisi Prius Court, before Mr. Justice Maule, 15th March. — Mr. Sergeant Atcherley, Mr. Addison, and Mr. Watson were the counsel for the plaintiff; Mr. Cresswell, Mr. Alexander, Mr. Tomlinson, and Mr. Baines were for the defendants.

This was an indictment preferred by the inhabitants of the township of Rastrick, in the parish of Halifax, against certain parties acting under the direction of the Manchester and Leeds Railway Company; and they complained of obstruction caused by this company to a road called Wooder-lane. The township of Rastrick was a very populous one, and its trade had greatly increased of late years; it adjoined Wooder-lane, which led to a stone-quarry,—and to Woodhouse, through which there was a great deal of traffic in stone. By this road stone was passed down to the river Calder, from whence they were shipped for Selby, and thence to London. The railway company, when they formed their line, proposed that the old road, called Wooder-lane, should cross the railway at Rastrick on a level, and that they would have a gate at each side of the line, with a person to attend them, and to warn any one who might have to cross the line of the approach of the railway trains. Afterwards, however, the company changed their minds; they built a stone-wall on the Rastrick side of the railway, and formed a large embankment on the opposite side, near to the Quakers' Meeting-house, which rendered it impossible for persons coming from Huddersfield to go round the point with anything like safety. Upon this, a public meeting of the rate-payers of the township of Rastrick was convened, for the purpose of considering what was best to be done under the circumstances. At this meeting there was not the slightest feeling of hostility manifested to the railway company; the only object was to induce the company not to obstruct a road which was necessary for the conveyance of the traffic of the people of Rastrick. A complaint was made to the railway company, and amongst others who complained were those parties who attended the Quakers' Meeting-house. After the present indictment was prepared, the company removed the embankment, thereby conceding that it was quite impossible to retain this part of the obstruction without subjecting themselves to an indictment for a nuisance. But this was not the material, nor any thing like the material, part of the obstruction. The company afterwards intimated that they would not allow the road to cross the railway, nor would they build a bridge to carry it over the line; in fact, they would not do that which they were commanded by their Act of Parliament: but they said we will make a new road—we will make a diversion of the road, by which you will be able to get upon the highway from Bradford to Huddersfield without having to pass across the railway. Mr. Sergeant Atcherley then exhibited drawings and models of the roads in question. In the first place, by the road constructed by the railway company, carriages having to pass Wooder-lane had to travel a distance of about 100 yards additional to what they had by the old road. In the second place, they would have to travel up an ascent which rose at about the rate of one in 22. Thirdly, they would have to pass down, when going to Huddersfield, a descent which fell at about the rate of one in 13½. And fourthly, there was a sharp turn on going down the road leading to the Quaker's house. He had already told them that there had been a great traffic carried on upon this road before it was obstructed by the railway company. A one-horse cart was then able to take a load of stone or coal down to the wharf of the river Calder, but it was impossible for one horse to pull a loaded cart up the steep ascent which had been formed by this alteration. The learned Sergeant then proceeded to state that the inhabitants of Rastrick had no hostility against the railway company. If the railway company would construct a bridge so that the road might pass over the railway, or if they would allow the road to pass over the line in the manner originally proposed, they would be perfectly satisfied; but they could not consent that the railway company should say, we are a large and powerful company; you may go to law, and we will put you to as much expense as possible.

Witnesses were then called, who deposed that the road, as at present altered by the railway company, was very inconvenient and dangerous on account of the very great ascents and descents.

Mr. CRESSWELL, in addressing the jury for the defendant, said that railway companies had great difficulties to contend with. When they went before Parliament to procure the necessary Acts, they were opposed by the trustees of this turnpike road and that turnpike road—the trustees of one canal and another canal—in short the opposition assumed so many different shapes that it was sometimes difficult to trace its source. Although his learned friend had learned from one of the last witnesses that this railway company had had many legal contests, still he (Mr. Cresswell) was happy to say that up to the present moment they had not lost a single case, and he trusted that in the present one they would be equally fortunate. What was the reasonable request made by the inhabitants of Rastrick? Why, that the company should construct a bridge at an expense of 1500*l.*, which by their Act of Parliament would have rendered them liable to have been indicted, and had they done so, he had no doubt but that the plaintiffs in this case would have been the first to have instituted proceedings against the company. The learned gentleman then read the 94th section of the company's Act to show that they possessed the power of diverting or altering the course of any river, stream, or water course, road, or footpath whatever. And they had the power of diverting them so as to run either over, under, or by the side of the railway.

Witnesses were examined for the defendants for the purpose of showing that the present road was sufficient for all necessary purposes; and as convenient as it was before.

Mr. Sergeant ATCHERLEY replied at considerable length.

The learned judge summed up in a very elaborate manner; after which the jury gave a verdict substantially for the plaintiffs.

THE QUEEN *v.* HOLROYD.

Special Jury Cause; Yorkshire Spring Assizes, March 15.—Mr. Cresswell, Mr. Baines, and the Hon. J. S. Wortley were for the prosecutor; Mr. Sergeant Atcherley, Mr. Addison, and Mr. Watson for the plaintiff.

The Hon J. S. Wortley opened the pleadings.

Mr. CRESSWELL then said this was a prosecution instituted by the Leeds and Manchester Railway Company, against a Mr. Holroyde, who is a surveyor of the highways in the parish of Raskelf; and it was for the purpose of convincing him and the public that he was not justified in doing such a thing as he had done—that no man was justified in endangering the lives of any of her Majesty's subjects. It was impossible for any man possessed of his right senses to obstruct the railway in the manner that the defendant had done, because it was directly contrary to an Act of Parliament passed by the legislature for the purpose of regulating railways. By this act which was brought on by the government, it was enacted that from and after the passing of the act, every person who should wilfully do, or cause to be done, anything calculated to obstruct an engine or a carriage on a railway, should be guilty of a misdemeanour. There was a clause at the end of the act which explained what was meant by a railway. It did not mean any railway made by a private individual, or by individual bodies, but only such railways as were constructed under the authority of an act of parliament. This action, as in the last case, arose out of the dispute between the railway company and the inhabitants of the township of Rastrick. It appears that the railway company, for the accommodation of the public, although they had constructed a road in another direction, continued to allow persons on foot to pass over the railway, along Wooder-lane, to the Bradford and Huddersfield-road. This practice was continued without interruption up to the 5th of October, when the railway being about to be opened, the servants of the company built a stone wall on one side of the railway and a deep trench on the other. They did this in order that the life of no person might be endangered. On the

Digitized by Google

8th of October, the defendant Holroyd, taking up the sentiments of the inhabitants of Rastrick, determined he would open the road across the railway, and he proceeded with a body of men and pulled down the wall and filled up the trenches. The company then found it necessary to build up the wall a second time; upon which Holroyde and his party came again and attacked the men who were walling, and scattered the materials across the rails in a manner that must have endangered the safety of any train that might have been passing. Had it not been for a policeman who saw what had taken place, and who perceived a train, which passed by Rastrick about this period, approaching, and who was enabled to give warning in time, there was no saying what might have been the consequence. But the defendant might say he did it to try the right of the railway company to stop up this road. He had no right, however, (nor any one else,) to endanger the lives of the public for the purpose of trying any right; for if this were to be allowed, any man might take a loaded gun and fire it into the Market-place, and then say, "Oh, I did it for the purpose of trying whether I had a right to do so."

Witnesses were then called, who deposed to the facts advanced by the learned counsel in his address.

Mr. Sergeant Atcherley, in defence, contended that Mr. Holroyde and his party wished to fill the ditch up, and that the servants of the railway were endeavouring to empty it, and that in the scuffle which ensued, the dirt was scattered upon the railway.

At the conclusion of the learned sergeant's address, the court adjourned till the next morning.

March 16.—A number of witnesses were then called, some of whom deposed that the obstruction was caused by the scuffle which took place between the contending parties.

Mr. Cresswell having replied, the learned Judge, in summing up, observed that a person, according to the act of parliament, had no right to throw something across a railway that was likely to obstruct it and endanger the lives of her Majesty's subjects. No person had a right to do so for the purpose of trying a right, and the legislature will not make any allowance to a party doing so. If a person was carrying a piece of wood across a railway, and he was to lay it down for a short time, and an engine was to come up before he could remove it, the legislature would make no allowance although the person might say he had no intention to cause an accident; but, if a person in crossing a railway with a piece of wood and were to let it fall and had not time to pick it up before a railway train came up, then, although he might be guilty of great carelessness in carrying a piece of wood more than equal to his strength, he would not be guilty of the charge imputed to the defendant in this case. It was for the jury to consider whether the obstruction was caused accidentally or designedly.

The jury retired to consider of their verdict; and, after they had been locked up nearly six hours, a conversation took place between Mr. Cresswell, M. Sergeant Atcherley, and the learned judge. At the conclusion, his lordship directed the bailiff to request the attendance of the jury in court. Upon their arrival, he said he understood they were not likely to come to an agreement as to the verdict, and as it had been proposed by the learned counsel for the prosecution, who considered they had already been locked up long enough, that there appeared to be some doubts as to the result,—an opinion which the learned counsel for the defendant fully acquiesced in,—it was agreed that they should be discharged. But as the obstructing of a railway train, and consequently endangering the lives of her Majesty's subjects, was a serious matter, he trusted the present proceedings would have the effect of preventing Mr. Holroyde from throwing rubbish upon a railway again. The jury was then discharged.

JOHN WILSON OF DUNDYVAN, PURSUER, *v.* JAMES WATSON, ACCOUNTANT IN GLASGOW, DEFENDER.

(Abridged from the *Jurist.*)

Court of Session, March 9.—In the early part of December, 1838, the defender purchased from the pursuer 36 shares of the Edinburgh and Glasgow Railway stock, at 10*l.* per share, and on the 10th of December he handed the stamped transfers to the pursuer to be subscribed. Mr. Wilson stated that he wished to get other 20 shares he had purchased from Mr. Buckley transferred to him in the Company's books, and that it would be better to get both transactions settled at the same time. The defender was secretary to the Company, and did business also as a broker.

This communication took place about two o'clock in the afternoon, and in about an hour thereafter the following correspondence commenced:—

Glasgow, 10th December, 1838.

Dear Sir,—As you have refused to deliver the shares purchased from you in the Edinburgh and Glasgow Railway, the settlement of which I requested to-day, I beg to intimate that I hold the transaction cancelled. I am, &c.,

(Signed) James Watson.

Mr. Wilson returned the following answer:—

Glasgow, 10th December, 1838.

Dear Sir,—I have not refused to transfer any shares of the Edinburgh and Glasgow Railway, and therefore will not allow you to cancel the transaction. I told your clerk that I had bought other twenty shares, and that I was going to speak to you to get them transferred at the same time. I have therefore to request that you transfer twenty shares of Mr. Edmund Buckley's to me, at 4*l.* 10*s.* per share, and I am ready to settle both transactions at this moment. I hold Mr. Buckley's letter authorising the transfer. I am, &c., (Signed) John Wilson.

Mr. Watson replied—

Glasgow, 10th December, 1838.

Dear Sir,—I have received your note of to-day. When my clerk called on you to-day, in order to get the Edinburgh and Glasgow Railway shares settled, you declined signing the transfers, and stated that you would not do so until you got other shares transferred to your name; I was therefore prevented, by your own act, from receiving these shares, and cannot now agree to accept them. I have nothing to do with transactions between you and Mr. Buckley, &c. I am, &c.,

(Signed) James Watson.

John Wilson, Esq.

Mr. Wilson, on the 11th December, returned the following answer:—

Dear Sir,—I have just received your letter of yesterday's date. I will not consent to your drawing back from your bargain with me, but will insist on its being fulfilled. The transfers are here signed by me, and I am ready to receive the money before I leave town. Had the money been offered me yesterday by your clerk, he would have got the transfers with him.

Since you will not do my business, in writing the transfer from Mr. Buckley to me, I can get others who will, and therefore be under no obligation to you. I am, &c.,

(Signed) John Wilson.

In consequence of the refusal of Mr. Watson to fulfil the bargain, an action was brought against him by Mr. Wilson, before the Magistrates of Glasgow, concluding for payment of the price of the shares.

The Magistrates decided in favour of Mr. Watson, with expenses.

The pursuer advocated (appealed to the Court of Session), and the Lord Ordinary pronounced the following interlocutor:—

"The Lord Ordinary having heard counsel in this advocation, and thereafter considered the whole process, advocates the cause, and finds it proved and admitted that the defender purchased from the pursuer thirty-six shares of the stock of the Edinburgh and Glasgow Railway Company, on or about the date, and at the price libelled on: Finds that the defender has failed to prove that the pursuer refused to implement the bargain, or that the defender ever tendered the price to the pursuer before he announced the transaction to be cancelled: Finds that the pursuer specially offered to implement to the defender, on payment of the price, within twenty-four hours of the transmission of the transfers for execution without any tender or promise of payment, which the defender refused: Finds on the whole, that the defender was not entitled, under the circumstances, to resile from the bargain in the manner which he intimated to the pursuer on the 10th December 1838; therefore, alters the interlocutor of the Magistrates complained of; repels the defences, and decerns in terms of the libel: Finds the defender liable in expenses, both in this Court and in the Inferior Court, as the same may be taxed by the auditor, and decerns; the defender, on payment, being entitled to delivery of the transfers of the said shares by the pursuer as accords.

"Note.—The Lord Ordinary (Cunningham) issued a long note, in which he *inter alia*, stated: 'The Lord Ordinary differs from the learned assessor in the Court below, not so much on the principle of law on which he proceeded in the judgment under review, as on its application to the present case.'

"The Lord Ordinary has no idea that a party could get quit, at his own hand, of what he thought a disadvantageous bargain by this very alert, if not sharp mode of proceeding. If the defender had any such urgent occasion for the transfers, as he afterwards alleged, but the reason for which is not conceivable, and is not explained on record, he was bound to give the seller proper intimation and *warning* that he would hold the transaction as *annulled*, if the transferences were not instantly delivered upon payment of the price. The evidence of the defender's clerk, James Alexander, is conclusive to show that there was neither any *intimation*, nor any *tender* of that sort made to the pursuer. On the whole, the defender's conduct does not appear to be consistent either with law or *bona fides*, and, therefore, his defence is repelled."

The defender reclaimed.

Lord Moncreiff said, "I am entirely of the opinion of the Lord Ordinary, and think it a very clear case both in law and *bona fides*. Watson lets out the secret in his second letter of the 10th December. He offered a high price for the shares in order to get Wilson out of the committee, and he purchased them originally for himself, although it is of little consequence whether he bought them as a broker or principal. Wilson bought other shares, which it was necessary to get transferred by the secretary in the books of the company. On the 10th December, Watson sent his clerk with the transfers to be signed, and Wilson said, as he wanted twenty shares transferred in the books, it would be better to settle both at the same time. The clerk comes back with this proposal, and so Watson becomes acquainted for the first time that Wilson was buying other shares. He makes a catch, by assuming that Wilson had refused to sign the transfers, and intimates that the transaction was cancelled, but Wilson answers, I have not refused to sign the transfers; and perhaps it had been better had he then signed and sent them. The practice among brokers is of no consequence. What was incumbent upon Watson, if he meant to say that the transaction was voided? Instead of writing the first and second letter, he ought to have sent back his clerk with the money, and required delivery of the transfers. There is nothing clearer than that Wilson was not bound to deliver the transfers without receiving the price. Watson did not tender it, and in law he cannot be relieved of the transaction. Acting sharply himself, he must submit to the application of the law with equal sharpness. Therefore, both upon the law and the *bona fides* of parties, I agree with the interlocutor of the Lord Ordinary."

The Court *adhered*, with additional expenses.

Liability of Railways to Poor Rates.—The magistrates of Croydon were called upon a few days since to decide as to the liability of the Brighton Railway Company to pay poor-rate on their property in that parish. In support of the rate it was contended that they were liable, although the line was not in use, because rails were laid down and used for the conveyance of earth and other purposes constituting a beneficial occupation, which was all that was required. In reply it was stated, that though profit was not necessary to create the liability, yet that it was requisite that some business or occupation should be carried on from which profit might be expected to accrue; that though the parish might suffer a temporary loss, that would be more than counterbalanced by the advantages it would ultimately receive, and that the point had already been raised and decided in favour of the Company. One of the magistrates thought a railway analogous to the case of a house while being built, and which while in progress of erection was not liable to assessment to the poor-rate; another

Digitized by Google

said he differed from his coadjutors on the point, and considered that the Company had a beneficial occupation of the land; if it was considered they had not, he could not see where the line was to be drawn. Finally, the majority of the magistrates decided that the Company was not liable.—*County Herald.*

GREAT NORTH OF ENGLAND RAILWAY.—At the Tenth Half-yearly General Meeting of the Shareholders of this Company, held pursuant to their Acts of Incorporation, at the Company's offices, in Darlington, on Friday the 5th of March, 1841.

HENRY STOBART, Esq., of Etherley, in the Chair:

It was moved by Edward Oxley, Esq., seconded by —— Metcalfe, Esq., and resolved unanimously—

That the Report of the Directors, and the accounts, and the Report of the Engineer-in-Chief, be received and adopted, and that the same be printed for circulation among the shareholders.

It was moved, seconded, and resolved unanimously—

That in the place of William Rutson, Esq., J. C. Backhouse, Esq., Thomas Backhouse, Esq., N. Plews, Esq., William Shields, Esq., and R. A. D. Gresley, Esq., the six Directors retiring by rotation pursuant to the Act of Incorporation, that William Rutson, Esq., J. C. Backhouse, Esq., Thomas Backhouse, Esq., and R. A. D. Gresley, Esq., be re-elected Directors of the Company, and that Thomas Smith, Esq., be elected a Director of the Company, in the place of William Shields, Esq.

It was moved, seconded, and resolved unanimously—

That Robert Stephenson, Esq., be elected Engineer in-Chief to this Company.

It was moved by Edward Oxley, Esq., seconded by Thos. Meynell, jun., Esq., and resolved unanimously.

That in order to avoid the necessity of making more than one other call of £10 upon the Shareholders in this Company during the present year, it is expedient that the sum of £50,000 be borrowed on the security of this undertaking. Resolved further, and it is hereby ordered, that this Company do borrow and take up at interest £50,000 on the credit of this undertaking, and that the last call to be made upon the Shareholders, which shall not be less than £10 per Share, shall be expressly appropriated to the discharge of the said sum, or such part thereof as shall not have been previously paid.

It was moved by Edward Oxley, Esq., seconded by J. Sams, Esq., and resolved unanimously—

That the cordial thanks of the meeting be returned to the chairman for his conduct in the chair.

It was moved by R. Rayson, Esq., seconded by Richard Cundell, Esq., and resolved unanimously—

That the cordial thanks of the meeting be given to the Directors for their services.

HENRY STOBART, Chairman.
W. O'BRIEN, Secretary.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 920, price 3d., published this day, contains Abstracts of the following Recent Specifications:—Parker's for improvements in apparatus for preserving and purifying oils, and in apparatus for burning oils, tallow, and gas; Patterson's, for improvements in the manufacture of white lead; Dent's, for improvements in clocks and other time keepers; Delbruck's, for improvements in apparatus for applying combustible gas to the purposes of heat; Goodacre's, for an apparatus for raising heavy loads, in carts, &c., when it is required that the unloading should take place at any considerable elevation above the ground; Fourdrinier's, for certain improvements in steam-engines for actuating machinery, and in apparatus for propelling ships and other vessels on water; Richardson and Braithwaite's, for improvements in tinning vessels; Poole's, for improvements in preparing materials to facilitate the teaching of writing; Williams's, for improvements in the manufacture of woollen fabrics, or fabrics of which wool, furs, or hairs, are the principal components, as well as for the machinery used therein; Maughan's, for improvements in the construction of wheel carriages; Goodman's, for improvement in the manufacture of mourning and other dress pins.

Also a description of Field's improved carpenters' bench, with 16 engravings; Improved method of cutting archways in walls; Improvement in furnaces; Solution of a geometrical theorem; Remarks on Urwin's system of working steam expansively; Lists of Designs registered, and of English and Scotch patents granted in March; Bennet's Filter; new Pistol; Steel Ore; The Prince Albert Plough, &c. &c. &c.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

LONDON AND BRIGHTON RAILWAY COMPANY.—Extract from the Minutes of a Committee of Inspection of the Line on Saturday, 20th March, 1841.

"Your Committee started from London Bridge with an engine and carriage belonging to the Company, and went as far as the deep cutting at Hooley-lane, a distance of 16 miles, and after walking to the end of the cutting, and through the Merstham Tunnel, were met by another engine, which conveyed them to the great embankment at Earlswood Common, 4¼ miles. They then walked about a mile, and were met by another carriage, which took them to the mouth of Balcombe Tunnel, a distance of 9 miles, from whence they walked through the Tumel to Kemp's Farm, and by the Ouse Viaduct on to Hayward's Heath. The works at the deep cutting on the north end of Merstham Tunnel are going on with great activity, and the slopes stand remarkably well. The brickwork through the Merstham Tunnel is complete; the culvert nearly finished, and the rails ready to be laid. The great embankment at Earlswood Common is in a very forward condition; and the earthwork, which now stands well, will soon be ready to receive the rails. The brickwork through the Balcombe Tunnel, with the exception of a trifling portion of the last length, is finished; the culvert in rapid progress, and the rails ready to be laid. From this point to Kemp's Farm, the permanent way is laid. From Kemp's Farm to the viaduct, some few yards of embankment remain to be done, and one cutting to be finished; and the permanent rails are nearly all laid. The viaduct is finished with the exception of the parapet walls, the stone work for which is prepared. From the viaduct to Hayward's Heath, the works will be finished very shortly, there being no important work to do, and the most of the permanent way laid.

Thus your Committee feel the strongest assurance that the prospects held out with regard to opening the line at the last General Meeting of Shareholders will be fulfilled.

By Order,
THOMAS WOOD, Secretary.

London and Brighton Railway Office,
10, Angel-court, Throgmorton-street, 26th March, 1841.

ANTI-DRY ROT COMPANY, KYAN'S PATENT, Office 2, Lime-street Square.—The Public is respectfully informed that Timber of every description is prepared by the process at the Company's stations, at the South Dock, West India Dock, and at the City Basin, City Road. The use of the Hydraulic Press ensures the greatest expedition in the preparation, and the most perfect saturation of the wood.

There are the greatest facilities for landing and shipping at both stations, and the charges on the same are at a remarkable low rate.

For terms and further particulars apply at the Office of the Company.

TASWELL THOMPSON, Secretary.

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the RAILWAY TIMES Office, 122, Fleet-street; and sold by Groombridge, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

TO RAILWAY CONTRACTORS, IRON-FOUNDERS, AND OTHERS.—WOODLESFORD, NEAR LEEDS.—Mr. Thos. Hardwick begs to announce to the Public, that he has received instructions from Mr. John R. Chapman to sell by Public Auction, on Wednesday the 14 Day of April next, at the Station, at Woodlesford, on the North Midland Railway, the whole of his Temporary Materials employed on the Woodlesford Contract, including

120 Tons of Malleable Iron Rails, T Pattern, Weighing 36lbs. per Lineal Yard; a Quantity of Cast Iron Chairs;

80 Two Yard Earth Waggons, with 30 Inch Wheels and 3¼ Inch Axles, nearly New; 36 sets Wheels and Axles; Quantity Cast and Scrap Iron; Timber and Scantlings; Blacksmith's Shop:

One Locomotive Steam Engine and Tender, in good Repair with six Wheels; Two Pair Five Feet Coupled, and Sixteen Inch Stroke, Tubes, and Fire Box, New.

One Self Acting Slide Lathe, with Head Stocks, Foot 10 Inch Centre, Surface and Cutting Motion, Bed 16 Feet long, Head Stocks, detached Bed Cylinders, &c.; One self-acting Planing Machine, 6 Feet long, 2 Feet 8 Inches wide, and 3 Feet high, with Compound Rack; Motion, One self acting Drilling Machine, speed from 5 to 500 revolutions per minute, 2 feet Centres, Rotary Table, with Elevating Racks; one ditto, same speed, 15 inch Centre, Rotary Table, with Cross Slide and Elevating Rack; one Renching and Clipping Machine, either by power or hand, with Fly Wheel, Bolts and Punches; a quantity of New Waggon Iron Work and other valuable and important property.

The Rails will be Sold in Lots of Ten Tons each, the Waggons in Lots of Five each and the Wheels and Axles in Lots of Five Sets each.

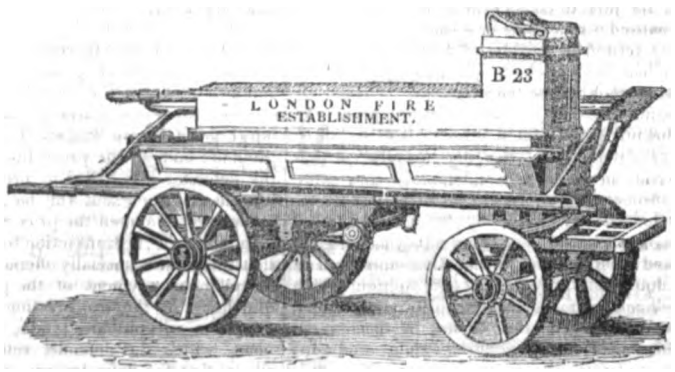
The Sale to commence at Eleven o'Clock in the forenoon.

THE HULL ADVERTISER.—Established for a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England, while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	73,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.



The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information; besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers, 5s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street; and sold by all Booksellers and Newsmen.

MERRYWEATHER, (Successor to Messrs. Hadley, Simkin and Lott,) Patentee and Manufacturer of the Improved Fire Engines, to the Government Offices; to the London Fire Establishment; the Liverpool and Belfast Fire Police; to the London and Birmingham, Great Western, and other Railways; and to various Provincial and Continental Establishments; No. 63, Long Acre, London.

Improved Floating Engines for Docks, &c.; Carriage Engines of Great Power, for Towns, &c.

Compact and Portable Engines for Mansions, Manufactories, Shipping, &c.

Superior Copper Rivetted Leather-hose, Branch-pipes, Buckets, Portable Cisterns, &c, with all the latest improvements.

Every Description of Fire-Extinguishing, or Hydraulic Machinery Supplied or Repaired on Reasonable Terms at the Shortest Notice.

*** Manufacturer of the Portable Fire Escape Ladders adopted by the Metropolitan and other Parishes, and by the City Police.

* Trains to which Third Class Carriages are attached.

FARES.

	London to Derby.	Sheffield.	Leeds.	York.	Hull.
1st Class	£1 14 0	£2 5 0	£2 12 0	£2 16 0	£2 18 0
2nd Class	1 3 0	1 10 0	1 15 0	1 17 6	1 19 6
3rd Class	0 15 0	0 18 6	1 0		

Third Class Passengers are not booked through to or from London.

First and Second Class Carriages are attached to all the Trains.

Third Class Passengers may be conveyed from London to Leeds in the day, by a Train leaving London at Seven a. m., and Derby at Six p. m.; and from Leeds to London in the same time, by the Fifteen minutes past Seven, a. m., from Leeds. Gentlemen's Carriages and Horses conveyed over the London and Birmingham Railway by these Trains are taken at a cheaper rate.

Parcels, &c., are conveyed by all the Trains, and are received at all the principal coach offices in the kingdom.

Carriage Trucks and Horse Boxes are kept at all the principal Stations; but to prevent disappointment, it is desirable that notice be given the day previous to their being required.

Post Horses are always in readiness on the arrival of the Trains at the Derby and Leeds Stations.

Time is allowed at Derby for refreshment.

By Order,

H. PATTESON, Secretary.

Office, Warnford-court, Throgmorton-street.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their **Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Lebmington, Warwick; Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—**

GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.

The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43 Piccadilly, Manchester; or at the office of Slater & Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.

PRACTICAL RULES for the MANAGEMENT of a LOCOMOTIVE ENGINE in the Station, on the Road, and in cases of Accident. By CHARLES HUTTON GREGORY, Civil Engineer. In extra cloth, bds.

John Weale, 59, High Holborn.

TAYLOR'S PATENT WOOD CUTTING COMPANY.

Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, I.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking,

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the pre-emption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

PATENT SPELTER PAINT.

This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of salt and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

NORTH KENT RAILWAY, Office, 42, Lombard-street.

Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, March 27, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 170. Vol. IV.—No. 14.] SATURDAY, APRIL 3, 1841. [Price, 6d.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS.—Contract, No. 4.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before Twelve o'Clock, on Monday, the 26th April next, Tenders for the excavation and formation of the earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying the permanent rails, of that portion of the railway commencing from a point in field No. 33, in the parish of Charfield, and terminating at a point near the road, marked No. 15, in the parish of Berkeley, being a distance of about 2 miles 16 chains.

Contract No. 8.—Also Tenders for the execution of similar works on that portion of the line commencing from a brook, the boundary between the parishes of Frocester and Leonard Stanley, and terminating at or near the junction with the Cheltenham and Great Western Union Railway, in field No. 8, in the parish of Moreton Valence, being a distance of about 2 miles and 17 chains.

Drawings and Specifications of the above works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Friday next the 2nd April.

The Directors will not consider themselves bound to accept the lowest Tender; and they expect the several parties to attend at the Office on the 26th of April, at One o'clock.

ROBERT FLETCHER, Secretary.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £500, upon the security of *loan notes*, to be issued under the Company's Seal, bearing interest at the rate of six per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1844.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Hallifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £250, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

OPENING OF THE GREAT NORTH OF ENGLAND RAILWAY.—The Public are informed that the Great North of England Railway will be opened from York to Darlington, for Public Traffic, on Wednesday, the 31st March, 1841.

The Trains will depart at the following hours:—

FROM DARLINGTON TO YORK.

5 45 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, and Manchester.
8 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, Manchester, Leeds, Selby and Hull.
12 30 p. m.—taking Passengers for Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
3 p. m.— Mail, taking Passengers for London, Derby, Leicester, Birmingham, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—taking Passengers to York.

FROM YORK TO DARLINGTON.

6 a. m.—bringing Passengers from York.
7 20 a. m.— Mail, bringing Passengers from London, Leicester, Derby, and Sheffield.
9 35 a. m.—bringing Passengers from Manchester, Leeds, Selby, and Hull.
2 30 p. m.—bringing Passengers from Birmingham, Nottingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—bringing Passengers from London, Birmingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.

On Sundays only, the Mail Trains will run.

Until further notice, Passengers will only be booked as far as York, where the carriages are changed.

Until the 6th of April, 1841, the London Mail Trains will leave York at 8 15 a. m., instead of the hours stated in the Time Table.

FARES BETWEEN YORK AND DARLINGTON.

PASSENGERS.		CARRIAGES.		HORSES.		
1st Class.	2d Class.	On 2 Wheels.	On 4 Wheels.	One.	Two.	Three.
12s.	9s.	20s.	30s.	20s.	30s.	36s.

Parties riding in their own Carriages, and Children under 7 years of age, at lower rates.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the trains; and, to prevent disappointment, previous notice should be given to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their name and address fully marked thereon, and to satisfy themselves that it is deposited on the Carriages.

ROSS-SHIRE, SCOTLAND. FIR WOOD FOR SALE.—There is for Sale, at Cambuscurrie, near Tain, about 150 Acres of Fir Wood, of superior Quality, also at Tarlogie, adjoining the above Wood of Cambuscurrie, about 136 Acres.

The timber is principally of large growth, a considerable number of the trees measuring from 20 to 28 solid feet, and admirably adapted for Railway Sleepers.

These Woods lie within a mile and a half of Tain or Dornoch Frith; and there is a Saw Mill at Morangie, close to the shore, where a purchaser can be accommodated.

These Woods will be sold in whole, or in lots of from 40 to 50 acres.

For further particulars apply to the proprietor, Hugh Ross, Esq., of Cromarty, Carossie, by Tain; to Messrs. Sang and Adam, W.S., Edinburgh; or to Mr. Gair, Bank Agent, Tain; by either of whom offers will be received between this and the 1st May next.

Tain, 3rd March, 1841.

LOCOMOTIVE ENGINES.—TO BE SOLD. Two Locomotive Engines, with 10 inch Cylinders, 4 feet 6 inch Wheels coupled, and 18 inch stroke; in good working order, with Tenders complete.

Make application to Mr. Thomas Dobson, North Midland Railway Works, Derby.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,

THOMAS WOOD, Secretary.

LONDON AND BRIGHTON RAILWAY COMPANY.—ENGINE-DRIVERS AND FIREMEN.—The Directors of this Company are prepared to receive applications *in writing* from experienced and well qualified persons, desirous of being engaged in the above mentioned situations. Testimonials stating where last employed to be forwarded to the undersigned, on or before Saturday, 17th inst.

By order,

(Signed) THOS. WOOD, Secretary.

London and Brighton Railway Offices,
10, Angel-court, Throgmorton-street,
2nd April, 1841.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS. The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages under the powers of their Act of Parliament of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater & Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

MANCHESTER AND LEEDS RAILWAY. WANTED, a FOREMAN in the Locomotive Department. He must be a person who has had extensive experience in the construction and repairs of locomotive engines, and well qualified to take the management of workmen.

Satisfactory testimonials as to character and ability will be required.

Wages from £2 10s. to £3 per week.

Applications in writing will be received at the Engineer's office, Palatine-buildings, Hunt's-bank, Manchester, until Monday, the 12th April next.

Published this day, price 1s.

PRACTICAL RULES for the MANAGEMENT of a LOCOMOTIVE ENGINE in the Station, on the Road, and in cases of Accident. By CHARLES HUTTON GREGORY, Civil Engineer. In extra cloth, bds.

John Weale, 59, High Holborn.

TO RAILWAY DIRECTORS, ENGINEERS, CONTRACTORS, &c.—A Young Man from Scotland, of respectable connections, who has been employed as Assistant Engineer in the construction of a Railway recently completed, is desirous of forming a new engagement as Assistant to an Engineer or Contractor, or as Superintendent of a Railway Station. References to Engineers of eminence.

Apply by letter, addressed to P., care of the publisher of the *Railway Time*.

WEST LONDON (LATE BIRMINGHAM BRISTOL, AND THAMES JUNCTION) RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL General Meeting of the proprietors of this Company was held on Monday, at the Company's offices, Abchurch-lane, City; WM. MORGAN, Esq., in the chair, "to determine upon rescinding the resolution passed at the general and special general meeting of the Company held at the Company's office on Wednesday, the 7th of October, 1840, for raising an additional capital of 60,000*l.* by the creation of 6,000 preferred shares, and also to determine upon raising the said further capital of 60,000*l.*, or such portion thereof as the meeting shall direct, by the creation and issuing of such and so many new shares at reduced prices, and upon such terms as the proprietors, at such meeting, shall think proper; and also to fix the prices at which such shares shall be issued, the amount of calls upon such shares, and the time or times when the same shall be paid, and to give certain orders and authorities to the Directors of the Company in that respect and for other purposes.

The advertisement calling the meeting having been read,

The CHAIRMAN briefly adverted to the condition tion in which the works of the railway had been placed for the last two years, and which had reduced the marketable value of the Company's stock to a mere nothing. The plan which the Directors had now to propose for raising a sufficient sum to bring into operation an important portion of the undertaking might certainly be looked upon as in one sense injurious to the interests of the original proprietors, but the Directors had no alternative. If a better plan could be brought forward they would be exceedingly glad to entertain it.

The SECRETARY (JOHN THOMPSON, Esq.) then read the following

REPORT.

Since the late general half-yearly meeting of the Company, the Directors have occupied themselves in considering the best mode of proceeding to raise the additional capital required to complete the line. Various plans have been submitted to them for this purpose, but in the present state of the undertaking they find it impossible to raise money except by offering great advantages to the parties who may subscribe to it.

The Directors consider it advisable under these circumstances that a part of the line only shall be brought into operation in the first instance, and by the advice of the Company's engineer, Mr. Robert Stephenson, they have determined forthwith to complete a single line of railway from the Grand Junction Canal to the Kensington Canal Basin.

The Directors are advised that for this purpose an additional outlay of 40,000*l.* will be required, and they propose that this sum shall be raised under the provisions of the amended Act, by the creation of 20,000 new shares of 20*l.* each, to be issued to the proprietors at the price of 2*l.* per share in rateable proportion to the number of shares they at present hold; and in case the whole number of new shares are not so taken, to offer the remainder to such proprietors as may be disposed to take more than their rateable proportion, and should any then remain, to offer them to the public, such shares to be on an equal footing as to dividends and other advantages with the present 20*l.* shares of the Company.

The above-named sum of 2*l.* per share to be paid by four instalments of ten shillings each; the first instalment to be payable on the allotment of the shares; the second instalment on the 1st of July next; the third instalment on the 1st of October next; and the last instalment on the 1st of January following.

In obtaining money at so great an increase to the nominal capital of the Company, the Directors feel that no more should be raised than is absolutely necessary to complete the portion of the line described, and to enable them to apply the whole of the 40,000*l.* now proposed to be raised to this purpose, they have made arrangements with the principal creditors of the Company to allow their claims to stand over for twelve months from the present time.

The Directors feel convinced that when the railway shall have been carried out to this extent, its value will be so far appreciated as to enable them to raise additional money to complete the remainder of the works, and to pay the creditors, on better terms than they are now compelled to offer.

It will be necessary, as before intimated to the proprietors, that the resolutions passed at the general and special general meeting of the Company held on the 7th of October last, in reference to raising 40,000*l.* additional capital by the creation and issue of 6,000 preferred shares should be rescinded.

WILLIAM MORGAN, Deputy Chairman.
Office, 11, Abchurch-lane; March 29th, 1841.

The discussion which ensued was of a character so extremely irregular and desultory, and at times marked by so much warmth and confusion, that to give a detailed account of what transpired is wholly out of the question. A brief descriptive sketch will suffice to show the position in which the Company is now placed.

In answer to a question, it was stated that the proprietors who had advanced the money on account of preferred shares under the resolution which it was now proposed to rescind, would have such money returned to them.

Mr. LOCKE wished to know the entire liabilities of the Company, as he was satisfied that after Solicitors' bills, Directors' allowances, and other debts, had been deducted from the 40,000*l.*, now proposed to be raised, there would not be 10,000*l.* left for carrying on the works. He described himself as a most unwilling proprietor, and said the issuing of so many new shares would inevitably swamp the whole concern. He thought it would be better to abandon it altogether, or sell it at once, for Mr. Stephenson had told them that it would require 100,000*l.* to finish it, exclusive of the cost of land. He complained that the proprietors had never yet had full information of all the circumstances of the case laid before them.

Mr. DUNCAN (Solicitor to the Company) entered at some length into an exposition of the financial state of the undertaking, having first read the following resolutions, which it was intended to propose:—

1. That the resolutions passed at the general and special general meeting of the Company held on the 7th of October last, creating 6,000 preferred shares of 20*l.* each, and directing the same to be issued at the price of 10*l.* per share rescinded.

2. That a further sum of 40,000*l.*, part of the 60,000*l.*, which the Company are authorised by the Act passed in the last session of Parliament, to raise in shares, be raised in 20,000*l.* new shares of 20*l.* each, which this meeting do create and direct to be issued at the price of 2*l.* per share; such shares to be on an equal footing as to dividends, and other advantages with the present 20*l.* shares of the Company. That the calls on such shares, are now made and fixed and declared to be

10s. per share, payable on the allotment of the shares, and the time to be fixed by circular letters from the Directors,
10s. on the 1st July, 1841,
10s. on the 1st October, 1841,
10s. on the 1st January, 1842,

Total £2 per share.

That the registered proprietors of the present shares of the Company, shall have the option of taking such shares at the price lastly mentioned, in relative proportion to the shares they now hold; and in case the whole number of new shares be not so taken, and the deposit paid thereon, that the remainder of such shares be thereupon offered to such registered proprietors as may be desirous to take more than their rateable proportion at the same price; and should any then remain, that the remainder be offered to the public; the Directors being hereby authorised to sell the same at such prices and at such times as they shall think fit.

The learned gentleman, who stated that he was a considerable shareholder, then urged with much force the necessity of acting with unanimity and decision at such a crisis of the Company's affairs, and expressed a hope that if the scheme of new shares now submitted were considered objectionable, a better course would be pointed out. The reason why it was proposed to rescind the resolutions of the last meeting, was simply because the plan of preferred shares had totally failed. The Directors were of opinion, that under the circumstances, no other feasible proposition than that now adduced could be devised. It was necessary that something should at once be done, for the line was at present totally useless, nay, the laughing stock of all who saw it. There were moreover a great number of creditors, and the land would speedily revert to the original owners. By laying down, as now proposed, a single line of rails from the Paddington Canal to the Kensington Canal, they would be enabled to bring into action two out of the three sources of revenue upon which they had calculated, namely, the Paddington Canal and the Great Western Railway, although the large expense would prevent them from at present carrying out the line to its intended junction with the London and Birmingham. The engineer's (Mr. Stephenson's) estimate for works between the two canals was 32,000*l.*, and it was intended to appropriate the balance of the 40,000*l.* to the completion of the purchase of the remainder of the land on their part of the line. There were thirty or forty small creditors whose claims amounted in the aggregate to about 1,000*l.*, whom it was a disgrace not to pay. Arrangements had been made with the principal creditors to allow their claims to stand over for the present. The claims of one class of these creditors, including the Solicitors, amounted to 6,764*l.*; those of another class, namely, the contractors, to 9,773*l.* The contractors, Mr. Cubitt, Mr. Bird, and others, had with one trifling exception very liberally consented to postpone the enforcement of their claims for a period of 12 months, and thereby he had no doubt taken at the same time the course best for themselves. The land creditors had likewise been substantially arranged with, so that the 40,000*l.* would not be trenched upon. It was clear that the line to be useful must be completed, and they had at present no money to proceedwith. They had failed to obtain it on bonds or by preferred shares, and must now try some other means. The learned gentleman then referred to the cases of the North Union, Eastern Counties', and other lines, where it had been necessary to issue shares at a large discount, and which shares had been taken up by the proprietors. Though called 20*l.* shares, these new shares were in reality only 2*l.* shares, and he had little doubt that in the course of a twelvemonth they would fetch 4*l.* or 6*l.* each. If any better plan could be adduced, let its merits be dispassionately canvassed.

In answer to questions it was stated, that the land debts amounted to 38,797*l.* 13s. 5d., and the whole of the other debts, to about 17,000*l.* more.

Mr. JOHN WHITE, who had previously offered interruptions, and who throughout the entire proceedings exhibited an extreme degree of warmth, passing repeatedly much beyond the limit usually observed at public meetings, opposed the plan of the Directors, and entered at great length into an exposition of one proposed by himself. As far as we could understand the honourable proprietor, he contended for the laying down of a single line of rails from the Paddington Canal to the north side of the Uxbridge road, which he thought could be accomplished for about 8,000*l.* or 10,000*l.*, the line to be worked by horse power. He would leave the remainder of the line to be executed afterwards. He entered into a comparison of the cost of working such a railway by steam and by horse power; but it did not appear that he had any scheme to propose for raising any portion of the further capital that might be required, although he strongly deprecated the issuing of shares at so great a discount He proposed as an amendment to the resolutions of the Directors, that the meeting be adjourned to the 5th of April, and afterwards from week to week, until full particulars of the precise condition of the undertaking should be laid before the proprietors. He said he would afterwards move another amendment, to the effect that no shares be issued at a discount, without the consent of two-thirds of the proprietors.

Mr. SHEPPARD, M.P., seconded the proposition for an adjournment, stating, that he knew nothing of the merits of Mr. White's scheme, but he thought the subject deserved investigation.

Mr. DUNCAN contended that it would be quite useless to go no further than the Uxbridge road, as that point was not within nearly a mile of the Kensington Canal, to render which productive had been the main object in projecting the railway. In fact, it would be a mere plaything without passenger or goods' traffic, and even if 10,000*l.* carried them to that point, which he did not believe it would, as the land alone would cost at least 4,000*l.*, it would be so much more money sunk uselessly, unless they went at once still further, namely, to the Kensington Canal.

Mr. WHITE reiterated his views, and expressed his confident belief that there would be a large traffic in coal brought from the Paddington Canal to the very improving neighbourhood of the Uxbridge road.

As an illustration of the increased value of property in that quarter, it was incidentally stated by

Digitized by Google

Dr. Carpue, that for some land of his which was recently let at 10*l.* an acre, he had been offered, and had refused, 25*l.*

Mr. H. Lʟᴀʀᴅ urged that by completing the line only up to the Uxbridge road, the Company's powers in respect to the other parts of the line would cease; and it was explained by Mr. Duncan, that if the railway were not speedily put in the way of being finished, an action of ejectment would be brought against the Company by Lord Holland to obtain re-possession of his lordship's land.

Sir John Scott Lillie would support an adjournment, provided Mr. White were prepared on the 5th of April to bring forward any better plan than the one now proposed by the Directors.

This point was subsequently pressed upon Mr. White, but that gentleman said it would be impossible for him without assistance to submit proper calculations in so short an interval, and complained loudly of the cost and trouble he had sustained on a previous occasion of the same kind.

Mr. Rɪɢʙʏ enquired if the estimate of 40,000*l.* now brought forward were sanctioned by so eminent an authority as Mr. Stephenson, and whether any calculation had been made as to the probable result of working that portion of the line?

Mr. Dᴜɴᴄᴀɴ replied that Mr. Stephenson, as had already been explained, estimated the works at 32,000*l.*, and the remainder of the 40,000*l.* was to be applied to the payment for the land with the exception of about 1,000*l.* It was clear that to be productive of any profit, the line must first be made. How it might be worked, or whether by the Company themselves or by other parties, must be the subject of future consideration. The learned gentleman then, in referring to a remark of Mr. Rigby's, dwelt upon the benefit which would result to the original line from the execution of the proposed extensions to Knightsbridge and the Thames.

Mr. Gᴀʀʟᴀɴᴅ energetically protested, both at this and subsequent stages of the proceedings, against the "swamping" effect of throwing so many shares on the market. The plan, he was convinced, would never answer, the more especially as even should the 40,000*l.* be raised and expended, there would then be the creditors to pay, and more shares must be issued at even a greater discount.

Mr. Sʜᴇᴘᴘᴀʀᴅ spoke to the same effect.

Mr. Gʟʏɴ (a Director), urged the necessity of taking some immediate steps to complete the works, as they would otherwise lose the most valuable portion of the land for which they had agreed, but for which they had not paid.

A lengthened conversation hereupon arose out of a question put by Mr. Macfarlane (a Manchester Director) as to a property called Eynham farm, held by the Company from the Bishop of London and others. It appears that the Company have secured this property upon terms so advantageous that but for the pressure of present difficulties they could re-sell the part of it which they do not require for much more than the *whole* of it cost them. They are unable, however, to complete the purchase, and the Bishop and his co-proprietors conceiving that they have not been well treated by the Company, the purchase money being unpaid, and the interest in arrear, are proceeding to regain possession. The Company are therefore endeavouring to dispose of the farm in order to secure the part required for the railway, and have been offered favourable terms, but not so much as they think they ought to receive. It was strongly urged by Mr. Macfarlane that the property should be sold by public competition; and Mr. Duncan stated that if any of the proprietors would purchase it at the price which the Directors were willing to accept, the party would gain more by the bargain than he could ever have lost by the railway, such was the increasing value of property in that locality. It was explained that the portion of land to be sold consisted of about 75 acres, mostly fronting Wood-lane, and that it abounded with excellent brick clay.

In answer to questions, Mr. White stated that his present plan differed in several respects from that which had been submitted to, and rejected by, a Committee of proprietors in January, 1838. The honourable gentleman insinuated that the Committee in question had not treated him fairly.

Mr. Bɪᴅᴅᴇʀ, C.E., being called upon by Lord Kensington, explained that 32,000*l.* was deemed by Mr. Stephenson a sufficient amount to complete the works specified. The mode of working the line was a question that was still open. Mr. White's plan if carried out would be wholly useless, for such would be the expense of unloading and re-loading the coals at the Uxbridge road, that the railway could not compete with the common road.

Mr. Rɪɢʙʏ, Mr. Sʜᴇᴘᴘᴀʀᴅ, and others, having again contended that the issue of 20,000 shares would inevitably swamp the original proprietors,

Mr. Cʀᴀᴜғᴜʀᴅ went into calculations to show that by taking up their quota of the new shares, the original proprietors would hold the whole of the stock at a very low rate per share, and that a small dividend upon the nominal capital would be in reality a very large one on the money actually invested.

It was stated by the Sᴇᴄʀᴇᴛᴀʀʏ, in answer to a question, that the number of "good" shares was about 5,000.

Mr. Lʟᴀʀᴅ followed on the same side as Mr. Crauford, and referred to the cases of the North Midland, Midland Counties', South-Western, Croydon, and Greenwich Companies, in addition to those brought forward by Mr. Duncan. He had been told that there was one wealthy proprietor in the room who was so satisfied that the arrangement would turn out well, that he was prepared to take up the proportion of the new shares which any other proprietor might refuse.

A good deal of difficulty here arose as to the putting of the motion and amendment. It appeared that, through inadvertence, the resolutions of the Directors, as proposed by Mr. Duncan, had not been formally seconded, so that Mr. White insisted upon his proposition for adjournment being put as a substantive motion. After a scene of great tumult, it was agreed that Mr. Duncan's scheme (having in the mean time been seconded by Mr. Alexander) should be put as an amendment to Mr. White's motion.

Mr. Gᴀʀʟᴀɴᴅ protested against both motion and amendment.

Mr. Rɪɢʙʏ said it would have been better to move that the whole undertaking be sold by auction.

Mr. Sʜᴇᴘᴘᴀʀᴅ said he would have seconded such a proposition rather than mix himself up with the issue of 20,000 new shares.

Lord Kᴇɴsɪɴɢᴛᴏɴ would say for himself and for Lady Holland, that if it were attempted to sell the line by auction, actions of ejectment would immediately be brought against the Company.

Sir John Scott Lillie was satisfied that no party would purchase a line encumbered with debts and law-suits. Besides, such sale would be illegal.

Mr. Wʜɪᴛᴇ, amid great confusion, strongly denounced what he called the threat held out by Lord Kensington.

Ultimately a show of hands was taken, when there appeared for Mr. Duncan's proposal, 12; against it, 13; majority against it, 1.

[The division was taken on Mr. Duncan's *second* resolution—the *first* namely for rescinding the resolution of last meeting as to the preferred shares having been passed without opposition].

Mr. White's motion was then about to be put, when

Sir J. S. Lillie objected to adjournment after adjournment, and proposed as an amendment that the meeting be adjourned for a week only.

Mr. Mᴀᴄғᴀʀʟᴀɴᴇ, after some conversation as to farther delay, seconded the amendment, and took occasion to explain that he had voted against Mr. Duncan's plan, not because he absolutely disapproved of it, but in order that farther time for consideration might be allowed to the Manchester proprietors whom he represented.

The amendment was carried *nem. con.*

Mr. Hoop, the well-known contractor, denounced in most indignant terms the conduct of the meeting, in virtually interfering with the plans proposed by so eminent an authority as Mr. Stephenson, in favour of those of other and inexperienced parties. He said, he had never witnessed behaviour so gross as had been displayed by certain parties that day.

It was asked what the Directors were to do in the interim, but no one seemed able to answer the question. It was understood, however, that Mr. Duncan's plan would again be brought forward on Monday next along with any other scheme which honourable proprietors might have to propose.

A vote of thanks was then unanimously passed to the Chairman, and briefly acknowledged, and the meeting broke up, the discussion having occupied three hours.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY COMPANY—GENERAL MEETING.

The Annual Meeting of the proprietors of this railway was held at the Assembly Rooms, Newcastle-upon-Tyne, on Friday, the 26th March; Mᴀᴛᴛʜᴇᴡ Pʟᴜᴍᴍᴇʀ, Esq., Chairman of the Board of Directors, in the chair.

The business commenced by the Chairman calling upon Mr. Adamson, the Secretary of the Directors, to read to the meeting the Report of the Managing Committee and of the Directors, and also the code of bye-laws intended to be submitted to the Board of Trade, for their sanction; which having been done, Mr. Plummer said, that any observations on the Report of the Directors would be heard, and any explanation would be readily given.

This called up Mr. G. T. Dunn, who put various questions with reference to the statement of the accounts which had been distributed to the shareholders, to which replies were given by the Chairman, reconciling the accounts with the Report, and particularly with reference to the increased expense of working the line beyond that of the last year.

The present application to Parliament was brought before the consideration of the meeting, and the powers sought to be obtained fully explained.

It was then moved and seconded, and unanimously carried—"That the Report of the Directors be received and adopted; and that the same, together with the Report of the Managing Committee, and the accounts, be printed and sent to the shareholders.

The bye-laws were also resolved to be adopted, and sent to the Board of Trade for their sanction.

The differences between the Company and the Scotswood Bridge Company were then discussed, and it was agreed that it was very desirable that some adjustment of them should take place, and which, from the remarks made by parties connected with both Companies, it was hoped would be effected, it having been shown that it had always been the wish of the Railway Company to meet fairly any claim which could be made upon the Company.

It was then moved, seconded, and carried unanimously—"That a dividend of 6*l.* per cent. on the capital of the Company should be declared, as recommended in the Report of the Directors.

The following is the Directors'

REPORT.

On meeting the shareholders at another anniversary, the Directors have to report that the works mentioned at the last annual meeting, as being in progress for doubling the line of railway from Hexham to Haydon Bridge, and from Haltwhistle to Greenhead, have been finished; and that a further portion of the line between Greenhead and Rosehill has also been doubled, affording increased facilities for the transit of coal and lime from Blenkinsopp. There yet remain to be doubled fifteen miles, viz., from Stocksfield to Hexham eight miles, and from Rosehill to Milton seven miles, to the completion of which the Directors, being aware of the great accommodation which would thus be given to the traffic upon the whole line, recommend an early application of the funds of the Company. The works between Blaydon and the station at the eastern terminus, near the Newcastle Infirmary, have occupied the attention of the Directors. These works have been attended with considerable expense, particularly in masonry, occasioned in some measure by raising the walls to a sufficient height, so as to form a screen between the railway and the Scotswood Road. A sufficient number of lime and coal cells, substantially constructed, have also been erected at this station, and are now in use.

The Directors, at the last annual meeting, informed the

Digitized by Google

shareholders what had been done up to that period, with reference to the terminus of the line at the eastern end, and gave their reasons why it had been determined for a time to have only a temporary station there. The arrangements then alluded to are not as yet completed, and they feel that it will still be advantageous and for the eventual interest of the Company only at present to complete at this terminus such parts of the works as are immediately required, and which may, at a subsequent period, when these arrangements are matured, form part of the contemplated establishment.

The probability of a bridge being constructed across the Tyne and communicating with the Newcastle station, has induced the Directors to secure an additional quantity of land, which they have been enabled to do upon reasonable terms.

The Directors, in their last Report, also stated that they had deemed it expedient to postpone until the next session the application to Parliament for the sanction of the legislature to the several improvements which had been made in the line, and to provide for its completion. As the works now approach completion, the Directors have been enabled the more satisfactorily to introduce into Parliament a Bill to effect these purposes, and, more particularly, to give sanction to the improvements which have been effected by them in following the instructions which they received at the annual general meeting of the subscribers, held on the 28th day of March, 1837, to proceed with all practicable dispatch to complete the line of railway into the town of Newcastle, selecting the line which, in their judgment, should be best and most eligible.

The Directors have given their attention to the effects likely to be produced by the extension of the line of railway from the south to Darlington, and feel assured that, upon the whole, not any diminution of receipts will take place from that circumstance. They contemplate that any falling off which may be occasioned by passengers to and from London going and returning by way of Darlington instead of Lancaster, will be amply made up by passengers from Glasgow, the western parts of England and Scotland, and the north of Ireland, going to and returning from London by way of Newcastle and Darlington, by which route there will be but 32 miles of turnpike road travelling between Carlisle and London. They have also given every information in their power to the Commissioners appointed by her Majesty to examine and report upon the various contemplated lines of railway communication with Scotland, and they are not without hope that in their Report the Commissioners will point out the advantages of an Inland line, as advocated by this Company, on account of the great saving of capital and time in its formation when compared with any other which has been projected, upwards of 20 miles being already made, and from which a beneficial traffic will be derived.

The mode of assessing the Government duty on passengers being one-eighth of a penny per head per mile on all classes having been found to operate unequally and unjustly, and the keeping and making out the accounts on the principle being attended with very considerable trouble and expense, the Directors have felt it their duty to petition the House of Commons for an alteration, and they have expressed their opinion that the duty should be estimated by a per centage on the gross receipts. By this mode of charge the rates would be equalized throughout the kingdom, the duty easily ascertained, and a heavy expense saved to the railway companies.

With a view to increase the traffic upon the railway, the Directors have also turned their most serious attention to the rates and charges; and they have also for the well conducting such traffic, and to ensure the comfort and accommodation of the passengers, deemed it right to prepare a code of bye-laws, which are now submitted to the shareholders.

The statement of the accounts for the year ending the 31st December, 1840, and which are appended to this report, have been, as directed at the last annual meeting, printed and sent to the shareholders.

The books of the Company show that in nearly every description of traffic a considerable increase has taken place, such increase being upon the whole amount of traffic, independent of other sources of revenue, about 5¼ per cent.

The amount received for passengers has exceeded that received in 1839, by	£2,645 18 9
Goods.....	2,085 13 1
Lime.....	96 6 1
Lead.....	765 3 9
Stone.....	561 13 9

A very considerable increase in the revenue, derivable from the conveyance of coal at the east end of the line, has also taken place from the opening out of collieries to the west of the town of Newcastle; and in consequence of the success which has attended the establishing of the Newcastle cattle market, another source of revenue, which there is every reason to suppose will be very materially added to, has arisen from the transport of cattle and sheep along the line.

Notwithstanding the depression of trade during the past winter, and the severity of the season, which have affected the revenue of all the railways in the kingdom, the Directors are glad to have it in their power to recommend that a dividend of 6*l.* per cent. on the capital of the Company shall be declared; and they recommend that for this year the same course shall be pursued as was taken last year, viz.—That the dividend shall be paid by two half-yearly payments, the one on the 30th day of April next, and the other on the 29th day of October following.

The Directors feel it their duty to inform the shareholders that two indictments have been preferred by the Committee of Management of the Scotswood Bridge Company against this Company for nuisances; one alleged to have been committed in the township of Winlaton, and the other in the township of Elswick; which indictments will be tried at the next summer assizes for Durham and Northumberland. In a mining district like this, where the highways are necessarily crossed in all directions by railways, and where the great interests of the country require a general toleration in that respect, it remains to be seen whether verdicts can be obtained against the Company on these indictments. If convictions follow, the consequences cannot be confined to this Company—the law must be put in force against other parties, and more than one of the prosecutors will be individually liable to indictment for operating on public roads with their private railways in a manner far more objectionable than any attempted by this Company. From experience of the past, the Directors feel confident that the shareholders will give them credit for a sincere desire to meet every claim fairly and liberally, and to avoid the waste of money in fruitless litigation—and will believe that it is not their fault that an adjustment with the Scotswood Bridge Company has not been effected without the legal proceedings above referred to, which it is quite clear can benefit no one.

In closing their Report the Directors cannot refrain from congratulating the shareholders on the infrequency of accidents of any sort on this railway, and expressing their hope that the public will feel sensible that every precaution is taken for their safety and comfort, and to ensure punctuality as to the time of the departure and arrival of the train. They beg also to repeat, that they entertain no doubt of the complete success of the undertaking, and of the ultimate advantages which will be derived therefrom, as well by the public at large, as by those who have embarked their capital in it.

[We must deter the balance-sheet till next week].

DUBLIN AND KINGSTOWN RAILWAY COMPANY—GENERAL MEETING.

DIRECTORS' REPORT.

In again meeting the proprietors, the Directors have much pleasure in stating that the results of last year's working have been highly satisfactory.

The Number of Passengers booked at all the Stations.

This year was	1,308,708	
Last year	1,156,363	
Increase.....	152,345	
Estimated trips by subscribers this year..	210,316	
Last year	124,398	
Increase	85,918	
Gross number of passengers this year ..	1,519,024	
Last year.....	1,280,761	
Increase	238,263	
Subscriptions received this year	£3,569 0 4	
Last year	2,359 11 8	
Increase	£1,209 8 8	
Gross income from all sources this year	38,962 7 10	
Last year	35,221 5 9	
Increase	£3,741 2 1	

Classification of Passengers for the last Three Years, including Subscribers.

	First Class.	Second Class.	Third Class.	Total.
1839	28,528	680,821	631,859	1,341,208
1840	30,242	550,414	700,105	1,280,761
1841	35,988	724,053	759,383	1,519,024

These results are the more satisfactory, when considered with reference to the late reduction in the fares of the second class carriages and in the rates of subscription; and when the circumstances connected with this immense traffic are considered, and that at the most busy and crowded periods the trains are obliged to follow at intervals of not more than fifteen minutes, the Board cannot but feel unaffectedly thankful to have it in their power to report, that no injury has been sustained by any passenger during the past year, except in three instances, by persons who leaped from the carriages while the trains were in motion, two of whom sustained slight injuries—the third had his leg fractured.

The average sum received from each passenger, including subscribers, has been as follows:—

1839	1,001	pence per mile.
1840	1,068	,,
1841	0,995	,,

The miles travelled by the trains during the year amounted to 136,728, and the cost of locomotive power was 1s. 3½d. per train per mile.

The plan of family tickets adopted at the last general meeting has given great satisfaction to the public; and as the advantages of this arrangement become better understood, there appears no doubt that it will be more generally adopted.

In pursuance of the resolutions adopted at the last general meeting, the Directors have anxiously considered the propriety of making some alterations in the fares in particular cases, and also of issuing subscription tickets to proprietors of shares at reduced rates; but, with the exception of adopting "Morning Tickets," for the convenience of artizans and bathers, &c., which are issued up to seven o'clock at reduced rates, the Board did not think it prudent to make any further alterations, and particularly as the proprietors had just then sanctioned the important reduction of the fares of the second class carriages.

Early in the last season a change was made in the time of starting from Kingstown, and since then the trains have been dispatched at the same time from both ends of the line, and the ordinary daily work of the road performed by three engines, instead of four, as formerly; and the Directors have the pleasure of reporting, that the entire of the road is now relaid on longitudinal wooden sleepers.

Notwithstanding the very considerable addition to the gross number of passengers carried this year, as compared with former years, the expenses of the locomotive and carriage departments are less this year than the preceding, by a sum of 772*l.* 12*s.* 7*d.*

This mere statement of figures is not, however, calculated to convey a just impression of the results in either of these departments. In the locomotive, for instance, five of the engines have received new sets of tubes during the year; one of them (the Vauxhall) has been almost entirely re-constructed, with some improvements, principally in the mode of working the valves, which has had the effect of considerably reducing her consumption of fuel. Two new engines are in progress, one of which (the first locomotive ever constructed in Ireland,) is very nearly completed, and the second is in a state of considerable forwardness.

In the carriage department, in addition to the ordinary repairs, which have been more extensive this year than usual, the whole of the carriages being now in better order than at the close of last year, one new first-class carriage, of a superior description, and two new third-class carriages, have been added to your stock. Two additional first-class carriages of a similar description are very nearly completed, and will be on the road in a few weeks, when the old ones will be converted into second-class.

The proprietors were informed, in the last Report, that legal proceedings had been commenced against the Company for injury sustained by the owners of property near the Dodder, in consequence of floods in the river. Two cases were brought to trial in the course of last summer; one by consent before three eminent barristers, and another before a special jury in the Court of Common Pleas in both of which verdicts were obtained against the Company. The Directors have acted throughout in these cases under the best professional advice they could obtain, and they confidently expected that the results would have been very different. Not feeling warranted in further litigating the matter, they have paid these verdicts, and compromised the several remaining claims, and have also constructed such an embankment as they are advised will effectually prevent the recurrence of future injuries.

The entire sum paid on this account for compensation and expenses, includingthe cost of the embankment, amounts to 4,482*l.* 17*s.* 9*d.*, in discharge of which about 2,300*l.* of the Parliamentary reserve fund will be applicable after the present meeting, and the Directors propose to liquidate the balance by the same means.

The results now laid before you forcibly illustrate the importance of endeavouring, by every legitimate means, to increase the number of passengers, as you still have the power of conveying a very large addition without increasing your expenditure, and thus of course adding largely to your profits. And as one means of accomplishing this most desirable object, the attention of the Directors has been turned to an extension of the Company's operations from Kingstown to Delkey, along the line of the Harbours Commissioners' tramroad; but there are considerable legal and other difficulties in the case, and the Directors have not yet been able to come to any decision upon it.

The profits of the past year amount to 17,182*l.* 14*s.* 9*d.* After payment thereout of the terminable annuity to the Board of works, and of interest on loans, a balance of 10,159*l.* 19*s.* 2*d.* remains at your disposal—from which one-eighth part is to be taken and added to the reserve fund, and from the balance the Directors recommend a dividend of 4*l.* per share—leaving a surplus of 819*l.* 18*s.* 4*d.* to be carried to the credit of the next account.

The vacancies at the Board, caused by the resignations of Mr. James Twigg and Mr. George M'Bride, have been filled by the unanimous election of Mr. George Roe and Mr. George Pim. These two gentlemen, together with Mr. Thomas Pim, now go out of office by rotation, but are eligible to be re-elected.

Dublin, 26th March, 1841.

AYLESBURY RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly Meeting was held at the White Hart Inn, on Thursday, the 18th instant, when the Directors made the following

REPORT.

No event of any importance having taken place in the affairs of the Company since the last general meeting, the Directors have merely to subjoin the usual abstract of the accounts, and to recommend that a dividend of 8s. per share for the third half year, ending 10th December, 1840, be declared, and made payable on the 25th instant.

The Directors have great pleasure in reporting to the proprietors that the trade is increasing; that there has been no accident occasioning injury to any individual upon this line, from the day of the opening to the present time, a period of nearly two years; and they have every reason to be satisfied with the judicious arrangements made by the London and Birmingham Company for working the line as well as with the steadiness and good conduct of the engine-drivers and other employed by them.

Since the last general meeting, the Directors ordered a shed to be erected at an expense of less than 100*l.*, which they intended at first to be temporary, but it has been found to answer the purpose so well, that the Directors recommend it to be continued in its present state.

Balance Sheet.—Capital, 8th March, 1841.

DEBTOR.

March 18, 1841—

—*Bucks Herald*, March 27.

THE PROPOSED BRANCH RAILWAY FROM THE SOUTH-EASTERN TO RYE AND HASTINGS.

Two or three months ago, we made some observations upon the subject of the proposed branch railroad from the Dover line to Rye and Hastings: we are now happy to inform our readers, upon what we think pretty good authority, that the Directors of the South-Eastern line intend shortly to bring this matter before a railway public. One of the plans which has been suggested (and we think it a most admirable plan) for raising the required capital, is by granting debentures upon the South-Eastern Railway, including the proposed new line, securing 5 per cent. to the debenture holders, with the option of converting their debentures into shares at par, after the railroad has been opened six months. This plan has been adopted for the purpose of making the new line from Southampton to Gosport, and the effect has been that these debentures are already selling at a premium in the market. We know that there are some wiseacres at Hastings who think that a railroad will injure the place; but this we are sure of, that when the public are more accustomed to railway travelling, they will be satisfied with nothing less, and that if there is not a railroad to Hastings, not one-tenth part of the persons who now go there will continue to go there, and the value of property in the town will accordingly fall 40 or 50 per cent. No doubt also that some of the ship owners would rather have their ships knocked to pieces upon the beach, for the sake of selling coals at their present high price, than have the trade more thrown open by having coals brought from Rye harbour, and sold in Hastings at one or two shillings a ton less than their present price. A single line of rails will be quite sufficient in this case for all necessary purposes, as no train would be suffered to pass down the line from Smarden till the train from Hastings has passed up the line; and with only this single line of rails it might be completed for less than 250,000*l.*, as the distance would not be twenty-five miles. Few persons can appreciate the advantage of a railroad to any place, till they have experienced the benefit of it. We will only mention one little thing, and that is, that towns which have a railroad running past them, though they may be distant a hundred miles from London, yet receive the morning newspapers which are printed in London in the morning by eleven o'clock; they are even delivered in Liverpool by four o'clock the same afternoon, which is 210 miles. There is another great advantage to Hastings which a line of railway would be from the South-Eastern, and that is, that it would become the watering-place of the whole Weald of Kent, as persons would be able to run through from Tunbridge in an hour and an half. When our readers have duly considered the points which we have put before them, we think they will be more inclined to use every exertion to further so desirable an undertaking, and let us express a hope that in half-a-dozen years from this time we shall see this railroad completed.—*Brighton Gazette.*

RAILWAYS IN IRELAND.

THE *Cork Reporter* publishes the following:—

"We feel ourselves fully in a position to state—indeed we may say authorised to announce—that the formation of a line of railway, southwards from Dublin, will be soon undertaken, and that, from the arrangements and agreements which have been made, the delays attendant upon Parliamentary notices, &c., will be obviated, so as to enable the work to be commenced long before it could be if these forms were to be observed. The funds are to be supplied by three great London capitalists, with whose names we are acquainted, and whose immense wealth is indisputable. The terms upon which they contribute them are also communicated to us, and all the difficulties which were interposed by Sir Robert Peel and his party in the year 1839, against the government making a grant or advance—they insisting that the work should be carried on by private enterprize—are met and conquered by the present arrangement, government being in the meanwhile so much mixed up with it that all its aid will be thrown in. It would give us great satisfaction if, in making this announcement, we were enabled to state that it was intended in the first instance to undertake the railroad all through to Cork; but at present the work is only contemplated to extend to Holy Cross, in the county of Tipperary—the extension to Cork and Limerick to be postponed till after the completion of the first work."

We *(Dublin Monitor)* have every reason to believe that the above announcement is correct. In a short time the project will be brought in all its details before the public.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—We understand that H. N. Trye, Esq., of Leckhampton Court, has resigned the office of Chairman to the Board of Directors of this Company, and Mr. Sage, of Gloucester, has been elected in his stead. Mr. Raymond Cripps, of Cirencester, has been chosen sub-Chairman. The station now in the course of erection at Cirencester is rapidly progressing, and it is confidently stated that the line from thence to Hay-lane will be opened by the 1st of May.—*Cheltenham Free Press.*

FATAL ACCIDENT ON THE MANCHESTER AND LEEDS RAILWAY.

On Saturday last, an inquest was held at the sign of the Lamb, Oldham-road, before James Chapman, Esq., on the body of Charles Innes, aged 48 years, late of Rider's-lane, Manchester.

John Leedham, of Hunslet, near Leeds, a fireman in the employment of the Manchester and Leeds Railway Company, stated that on Friday he was proceeding along the railway on a tender attached to an assistant engine, to assist the trains up the incline from Manchester. The deceased was upon the carriage; and on their return from having assisted the outgoing four o'clock passenger train from Manchester, they came into collision at Newton with the outgoing luggage train from Manchester, about twenty minutes past four o'clock in the afternoon. The collision occurred at the curve of the railway. Immediately before it happened witness was on the engine carriage with the deceased, and perceiving the approach of the outgoing train he cried out "Good God, what is a coming." It was then about 200 yards off. Witness immediately jumped on the tender and put on the break, in order to stop the engine. The deceased reversed the engine in order to make her go back upon the line if possible, but the collision took place before this could be effected. Witness did not see the deceased on the engine after it was reversed. The engine carriage and tender were considerably injured by the concussion. Witness got off the tender as soon as possible, and saw deceased lying on the railway —on the down line—he seemed insensible, and was surrounded by several men who came up at the time. In about five minutes he became sensible, and being asked by witness where he was hurt, he said, "Ah man!" but did not speak further. He was then conveyed home. Deceased was a foreman of the engine shed, under Mr. Fenton, the superintendent of the locomotive department. The duty of deceased was merely to give orders to the engine drivers and the workmen. He took upon himself the direction of that particular engine, overtook the passenger train, and accompanied it about four miles. He had to go a mile and a half further in order to get to the crossing which would bring the engine on the down line. Witness asked him to proceed for that purpose, but deceased said, "Do'n't be frightened, man, you will see that all will be right." He then returned by the same line. Witness being only a fireman, had no power to cantrol him. There was no one else on the carriages but deceased and witness. Printed rules were issued by the Company for every man's government. One of these rules required each engineer to keep on the line to the left either in going, or returning, under a penalty of being discharged, and punished under Lord Seymour's Act. A copy of these regulations was hung up in the engine shed, and was known to all persons in the employment. On account of the shortness of the curve, the engineers could not perceive each other in time to reverse their respective trains. The engine directed by deceased was going at the rate of ten miles an hour. Witness could not speak to the velocity of the other train. Witness was in the employment of the Company from the 15th January last. The engineers were always required on approaching the curve to whistle. Witness did not hear this done by the engineers. He had caught a glimpse of the other train as it entered the curve. The deceased was the only person in fault for disobeying the rules. Witness never saw deceased on any carriage before, nor did he ever see any engineer, or other man getting the trains to return by the same line they had gone up. The tender, in which witness was, preceded the engine carriage in returning.

James Smith, of No. 5, Poplar-street, an engineer in the employment of the Company, said he left the station at Manchester for Leeds, in the luggage train, at twenty minutes past four o'clock on Friday afternoon. He had four waggons, filled with goods, besides the engine and tender, under his direction. The engine under witness's control was required to be ready for starting at four o'clock, or at any time after that if required. A general order in writing was issued on the 3rd instant, for the engineer to be ready to leave Manchester at four o'clock in the afternoon on and after the 8th inst. A copy of the order was hung up in the shed of which the deceased was superintendent. The deceased could read and write. Witness never started that train but once before, which was at half-past four o'clock on the previous Tuesday. He had been two years in the Company's service. He could not state exactly when the train started, but the deceased was aware that it should start at some time between four and half-past four. Witness had not gone more than 2½ miles when he perceived the other engine returning by the down line. The enginecman, on approaching, gave witness a signal to go back; but before he had time to do anything, he saw the tender attached to the returning engine on his line. He then blew his whistle, and shot off the steam of his engine in order to stop the train. He got hold of the reverse lever with one hand and the regulator with the other, and reversed the engine, the fireman having been sent to the tender to secure the break. Witness then put on the steam, and that instant the concussion took place. He had been going forward at the rate of thirteen miles per hour. The regular speed for luggage trains is twenty miles an hour. Did not hear the other engineer whistle. The returning engine was within 200 yards of witness when he first saw it, being prevented from seeing it sooner by a deep cut in the curve. Witness had been on the look out for this engine on the down line, to assist him in returning up the incline, and expected to meet it about a mile further on. Deceased should have returned by the down line, according to the Company's printed rules. Had witness started at half-past four o'clock, deceased might have returned with his engine in safety. Deceased knew that the engineers had orders to be ready for starting a quarter of an hour before the time. Witness never knew of any train starting before that time. Witness identified the body. Witness was thrown down by the collision, and on getting up he saw deceased lying on the ground on the down line. Witness did not know whether the deceased jumped off, or fell from the carriage, or whether the wheels of any of the carriages went over him. He could not see the marks of any of the wheels on the clothes of the deceased. Witness conjectured that deceased had come in contact with the tank, and, rebounding from it, fell off the carriage. He fell on one of the rails, and the injuries he received might have been occasioned by the suddenness and violence of the fall. It was the duty of deceased to give directions about the engines, and see that they were in readiness. He had no business on the engine after it had started. He saw the deceased get on the engine, and supposed he did so to supply the place of an engineer, there being only a fireman on the tender at the time. Witness never knew of any carriages returning by the same line. The exact time of the trains starting being uncertain, he thought enginemen ought to be cautious about returning by the same line. He had not known of any such collision on this line before. He could not proceed with his train, as it was incapacitated by the collision.

Albert Newton, a plate layer on the line, was present when the accident occurred, and deposed that no blame could be attached to the preceding witness.

Thomas Holmes, a clerk to the resident engineer, hearing of what had occurred, went to the house of deceased about 20 minutes to 5 o'clock on Friday afternoon. Deceased was then on a table in the kitchen, alive, and sensible. His right thigh was broken, and his left arm much injured. He died in about half an hour afterwards. A medical man had been sent for, but did not arrive until after the death of deceased. Everything was done in the meantime to relieve him.

Mr. George Hall, of Lee-street, the chief inspector of the trains, corroborated the statements of the other witnesses as to the regulations and times of starting. He thought there must have been some delay going up the incline, or the deceased would have been in before the luggage trains started. Verdict—"Death by injuries received from an accidental fall from the engine carriage by reason of the collision. No blame attributable to the Company, but solely to deceased for not returning by the down line pursuant to the rules."—*Manchester Chronicle*, March 31st.

THE SUNDAY TRAVELLING QUESTION.

(From the *Scotsman*.)

As the authority of Calvin is, in Scotland, deemed sufficient for the decision of almost every theological question, I am desirous to recommend both his example and his teachings to the consideration of those Judaizing Christians, who would snatch from us the liberty of the gospel, and bring us under the bondage of the ceremonial law.

The clever, but eccentric, Godfrey Higgins, F.S.A., mentions in one of the notes to his "Horæ Sabbaticæ," that when at Geneva, the place was pointed out to him whither Calvin was accustomed to repair on Sundays, in the presence of all the people, to play at ball with the children, and then to bear open testimony to his Christian liberty.

Calvin was a consistent man, and accordingly his precepts and his practice were in harmony. The following quotations are from the "Institutes of the Christian Religion; by John Calvin. Translated from the original Latin, and collated with the author's last edition in French; by John Allen. London. J. Walker. 1813." The Reformer does not contend, like his modern followers, for an alteration of the day, and a retention of the Mosaic commandment; he declares that the Sabbath is abolished:—"Though *the Sabbath is abrogated*, yet still it is customary among us to assemble on stated days for hearing the Word, for breaking the mystic bread, and for public prayers; and also to allow servants and labourers a remission from their labour." (v. 1. p. 421.) Again, in p. 423, he says —"The Lord's day is not observed by us upon the principles of Judaism; because in this respect the difference between us and the Jews is very great. For we celebrate it, not with scrupulous rigour, as a ceremony which we conceive to be a figure of some spiritual mystery, but only use it as a remedy necessary to the preservation of order in the Church." At the foot of the same page, he attributes the dedicating a new day to public worship, not to Divine appointment, but to the practice of the early Fathers. "However, the ancients have, not without sufficient reason, substituted what we call the Lord's day in the room of the Sabbath." He concludes the discussion thus:—"Thus vanish all the dreams of false prophets, who, in past ages, have infected the people with a Jewish notion, affirming that nothing but the ceremonial part of this commandment, which, according to them, is the appointment of the seventh day, has been abrogated, but that the moral part of it, that is, the observance of one day in seven, still remains. But this is only changing the day in contempt of the Jews, while they retain the same opinion of the holiness of a day; for, on this principle, the same mysterious signification would still be attributed to particular days, which they formerly obtained among the Jews, and, indeed, we see what advantages have arisen from such a sentiment. For those who adhere to it far exceed the Jews in a gross, carnal, and superstitious observance of the Sabbath; so that the reproofs which we find in Isaiah, are equally as applicable to them in the present age, as to those whom the Prophet reproved in his time. But the principal thing to be remembered is the general doctrine; that, lest religion decay or languish amongst us, sacred assemblies ought diligently to be held, and that we ought to use those external means which are adapted to support the worship of God.—Pp. 4245.

There spoke the true spirit of Paul, when he exhorted the Christians of Colosse to maintain their Gospel liberty against the Andrew Agnews of their generation:—"Let no man, therefore, judge you (rule you, call you to account) in meat, or in drink, or in respect of an holiday, or of the new moon, or of the Sabbath days.—Coloss. ii. 16.

THE EASTERN COUNTIES AND THE CHELTENHAM AND GREAT WESTERN RAILWAYS.

To the Proprietors of the Eastern Counties' Railway at Liverpool, who forwarded an Address to their Directors at the last Half-yearly General Meeting.

GENTLEMEN,—After reading the Report of the proceedings at your meeting, and the various items of cost, I was at a loss whether most to admire the great resources of the men at Liverpool—their liberal scale of expenditure—or their satisfaction with it. Common mortals meet and grumble over ordinary expenditure; but the lords of Liverpool pre-eminently distinguish themselves by sending their ambassador to testify their entire gratification at the magnificent outlay of their Oriental Directors.

I am interested in the success of a railway on the opposite side of the island, the Cheltenham and Great Western; one of great promise, as I think, to capitalists at the present moment, and which has languished, hitherto, for want of the patronage and support of such good men and true as have dropped their mantles over the shoulders of her Eastern sister.

There are various points of resemblance in these undertakings in the subject-matter of expenditure, but a striking variation in the amount of cost. I have no wish to diminish the satisfaction you feel with your investment in the Eastern line, but as you may not altogether disregard the ultimate result, as to profit or loss, I venture to recommend to you an investment in the western line, as a good "hedge," as they have it on the turf. My recommendation is founded on the following data. Those respecting the Eastern Counties' line are taken from the last Report, &c., those respecting the Cheltenham line, in part from similar documents, and in part from information which I have reason to believe is pretty accurate.

These undertakings are precisely of the same age, having been born in the same session of Parliament. Though the eastern line to Colchester is two and a half miles longer than the Cheltenham line, the quantity of land purchased is probably the same in each case, as more land per mile is requisite for the latter, the guage being seven feet or more.

	Cheltenham Railway.	*Eastern Counties'.*
Length of line	48¾ miles	51 miles.
Distance completed*	17¾ miles	17¼ miles.
Cost considerably under..	£300,000	£1,400,000.
Clear net income	£17,000	nil.
Cost of Land and compensation taken for the entire line in both cases.....	£150,000	£700,000.

The exact amount of the land and compensation, and of the cost of the 17¾ miles on the Cheltenham line, has not it seems been exactly ascertained. I have therefore given amounts in these cases far beyond what I have good reason for believing will be the actual cost.

On the subject of traffic, little reliance is to be placed on estimates. A general knowledge of localities, and their connections, and population, will enable any one to form a pretty accurate comparative estimate. As the Cheltenham line proceeds out of the Great Western, London may be called, for all practical calculations, the eastern terminus of both railways. The one passes by Cirencester, Chalford, Stroud, and Gloucester to Cheltenham; the other by Romford, Brentwood, Chelmsford, and Witham to Colchester.

The population of Cirencester is equal to that of Romford and Brentwood, Chalford to that of Chelmsford, and the borough of Stroud to that of Witham and Colchester, or nearly so. The city of Gloucester and the town of Cheltenham have no representatives on the Eastern line, and Cheltenham alone contains a larger population than all the towns on the eastern line put together, and, moreover, is essentially locomotive. You will say there are great sources of traffic round and beyond Colchester. I answer they are much greater round and beyond Stroud, Gloucester, and Cheltenham. Look to the map of England and Wales. Be it remembered, too, that the Cheltenham line for 17 miles, from Cheltenham to Stroud, forms the line of railway from Birmingham to Bristol, as well as from Cheltenham to London, and will have a double traffic. In truth this railway is happily situated with extraordinary traffic resources, as yet unappreciated, from being out of sight of the great marts of railway speculation.

There being only 7,500 shares in the Cheltenham line, and the present market price being about 28*l.*, that portion of the line between Swindon and Cirencester let on lease to the Great Western at 17,000*l.* per annum, which will commence in a few weeks, will alone pay a dividend of 8 per cent. before the close of the present year. If you are satisfied with the *silvery* tone of the East, you will be delighted with the *golden* tints of the west.

I am, Gentlemen, yours, &c.,

PLUTUS.

Bath, March 22.

* The Cheltenham Company has also made seven miles of railway from that town to Gloucester, which is at present worked by the Birmingham and Gloucester Company, in addition to these 17¾ miles.

RAILWAY TAXATION.—RATE OF FARES INDEPENDENT OF FIRST COST.

To the Editor of the Railway Times.

SIR,—As the framer of the petition of the Croydon Railway Company, for a modification of the passenger tax on railways, which was the subject of remark in your second leader of Saturday last, you will perhaps allow me to say that you have entirely mistaken the views of the petitioners, and to explain that they are not "favourable to a graduation scheme," but on the contrary their desire is, as suggested, that "instead of the said tax *a* per centage" (*a*, one and the same, or an uniform per centage) amount on the fare should be levied; and that the last paragraph in the petition was added solely with a view to preclude the supposition that they sought to impose "additional duties on the wealthier and more powerful Companies."

With respect to the position which you are pleased to term "a favourite dogma of the Chairman's"—that "first cost is no legitimate element in the consideration of the rate of such railway fares as will be most profitable"—I can only say that I am equally dogmatic, for common sense shows me that first cost can have nothing on earth to do with that consideration, the only question being what rate of fare will produce the greatest amount of net receipts, after paying the cost of working; the first cost must be taken into account before an accurate judgment can be performed on the rate of profit on the capital invested, but surely not in determining what rate of fare will be the most profitable. As well might the landlord of a tavern, offering *precisely* the same accommodation and dinner as the London Tavern, expect to obtain a higher price for his entertainment, because, forsooth, he has expended a larger sum of money in obtaining an equally good foundation for his house; or as well might the presiding genius of yonder gin-palace hope to obtain a higher price for a glass of his "real pine-apple rum," or "genuine cordial gin," than is paid for the same articles at the little low beggarly-looking old pot-house which stands opposite, because he has expended thousands of pounds upon the accommodation of his house; those thousands have been laid out not in the vain expectation of deriving an adequate return from a high charge on the few, but on the sounder principle of a small profit from the many. What should we have said to the wisdom of the Directors of Waterloo Bridge if they had demanded a threepenny toll for foot passengers because the first cost had been three times as much as the first cost of Southwark Bridge, where a toll of one penny is paid by foot passengers—no, the Directors of the first-named bridge wiser in their generation, are seeking to indemnify themselves for the enormous "first cost" by reducing their charge below, aye, 50 per cent. below, their "poorer and more obscure" neighbour. I might refer you to a thousand such instances to prove to you how generally that old, but veritable maxim, is understood and acted upon "that the speedy sixpence is better than the slow shilling." But enough; you must feel that your attempt to maintain a high rate of fare to the inconvenience of the public and the loss of the Companies is hopeless, and I venture to flatter myself I shall derive additional pleasure from the weekly perusal of your able paper, by finding it on this, as on all other important subjects, the zealous advocate of the right.

I am your obedient servant,

W. BURCHELL.

CROYDON RAILWAY, LONDON BRIDGE.

To the Editor of the Railway Times.

SIR,—As you have done me the honour to notice a "favourite dogma" of mine, the soundness of which you dispute with me, I trust you will allow me the use of your columns to state precisely the nature of the "dogma" for the correctness of which I consider myself answerable.

I make this request the more earnestly, because the question is one of great moment, and affects particularly that department of railway management which is of most consequence to proprietors, namely, the profit and loss part of the undertaking; and any decidedly erroneous views which I might entertain upon such a subject, would render me unfit to preside over the Direction of a Company whose position with regard to fines and tolls is of a peculiar and complicated character.

What I have said upon this point is most accurately reported, in the account of the general meeting of the Croydon Company, in your paper of the 13th March, and I desire to take the opportunity to bear my testimony to the remarkable general fidelity of your reporter. The passage is as follows:—"The great cost of a line might be a sufficient reason, why it ought never to have been constructed, but having been once constructed, the original expenditure became no element in the calculation as to the charges which would be most remunerative."

To this opinion I am fully committed, and to this opinion you object in the following terms,—"but surely common sense shows that first cost is not not merely *one* of the elements which must be taken into account before an accurate judgment can be formed, but *the most essential element of all*. As well might it be expected to secure a good dinner at the London Tavern at the same cost as a *similar entertainment* could be got for, at a common eating house, as to expect that you can be carried over a railway which has cost 50,000*l.* per mile, at the same rate of charge as over a line, the expenditure upon which has not exceeded 25,000*l.*"* I am afraid that the proprietors of the London Tavern will not thank you for your assertion, that they cannot furnish a good dinner and good accommodation upon as cheap terms as a "common eating house" would be obliged to charge for the *same* dinner and the *same* accommodation; but let us suppose that the London Tavern had been built upon Dartmoor, where ground rent is *low*, and building materials *cheap*: is it to believed that the same dinner and the same accommodation could be afforded at a cheaper, or anything like so cheap a rate, to the two or three individuals who might chance to call there in the course of the year, as to the multitudes who throng the doors of the expensive building in Bishopsgate-street? Again, let us suppose that the Greenwich Railway had been carried over Salisbury Plain, instead of Bermondsey level, and constructed at an expense of 10,000*l.* per mile, instead of 200,000*l.*; does any body think that, under such circumstances, a fare of 1s. 4d. per mile, would be remunerative on account of the small cost of original outlay, or that a fare of 6d. per mile, or even 1s. per mile per passenger, for the half-dozen passengers that cross the said plain in the course of the day, could be remunerative in such a case? On the

* The additional cost of the railway, even if double, does not increase the accommodation to each individual passenger, and if there were more than twice as many passengers on the dearer line, such additional cost would be repaid to the proprietor, without any additional charge per passenger.

Digitized by Google

other hand, suppose the present number of passengers on the Greenwich Railway to be quadrupled or quintupled, and that in order to accommodate them it became necessary to double the Greenwich line, and to double the cost of construction;—is it contended that, *therefore*, it would be possible to *double* the present fare *per passenger?* Surely not. If indeed the terms "high rate of fare," and "large amount of income," were synonymous, then there might be some truth in the position; but if you once admit that, under any circumstances, your gross income may be increased by a lower rate of fare, you must, of necessity, allow that of two railways, one of which shall have cost a large sum per mile, and the other a small one, it may be requisite to charge a low rate of fare on the first for the purpose of obtaining a larger income, and a high rate of fare on the second for the same purpose; and this from causes wholly irrespective of the cost of either.

It follows, therefore, that "original expenditure is no element in the calculation as to the charges which would be most remunerative." In fact, cost of *conveyance* is almost the only element of such calculation, and as cost of conveyance depends very much upon the numbers to be conveyed; density or scantiness of travelling population is the chief rule for railway charges. It is true that there are other elements, and that the local circumstances affecting charge are in no two lines exactly similar, but generally speaking, length of line will enable a Company to get from the public, for obvious reasons, a larger rate per mile per passenger, which is only to be compensated on short lines by the greater profit of carrying larger numbers, even at lower fares. The rate of fare on the Birmingham railway, although *positively* higher, is relatively lower, than that on the Croydon, when compared with rates charged for other modes of conveyance for their respective distances.

The first ten miles of every railway starting from a metropolitan district, are, *ceteris paribus*, the most costly in construction, but the great additional numbers passing over these ten miles will generally more than compensate for this additional cost, and even besides for the lower rate of charge which greater competition of modes of conveyance renders necessary; and thus so far from larger cost of construction engendering a higher rate of fare, it will happen in most cases, that the lowest rate of fare will have place precisely on that part of the line which has cost the most, and *vice versa*. So little truth is there in the proposition that first cost is "*the most essential element of all*," "in the consideration of the rate of such railway fares as will be most profitable."

I must confess, Sir, that when I find myself at issue with so acute a writer as yourself, upon a proposition which appears to me to come so nearly under the definition of self-evident; I cannot help suspecting that we must be disputing about terms, and that after all we may mean the same thing. Nothing would give me greater pleasure than to find that such should be the case; at the same time the doctrine you *appear* to advocate is of so popular and taking a character to those who have not thought much upon the subject, and has led, in my opinion, to such grave errors in railway management as regards fares and tolls, that I am sure you will excuse my anxiety to place my views fairly before the public.

One word upon the subject of the petition of the Croydon Company against the railway tax. You quote the few last lines of this petition expressive of a confident belief "that it would not be necessary to fix the maximum per centage on the fare higher than that which the present duty bears to the highest fares now charged on any railway,"—and you presume from these words, why I cannot understand, "that the petitioners are favourable to a graduation scheme." Now, this is not the case, unless a per centage on the fares, which is the prayer of the petition, can be called a "graduation scheme." Now this is not the case, unless a per centage on the fares, which is the prayer of the petition, can be called a "graduation scheme." What the petitioners mean to express is this, that as they are complaining of the partial operation of the present mode of levying the tax as regards themselves, they do not see the justice of praying that it should be made partial to others, or that the Birmingham Company's high fares should be taxed more in proportion than the Croydon Company's low fares; and their belief that 4½ per cent. being about the charge of the tax upon the fare of the Birmingham Railway—a similar per centage on the low fares of other railways would, according to all established principles of taxation, lead to no diminution, but probably to an increase of revenue derivable therefrom.

Apologizing for the length at which I have been obliged to trouble you,

I am, Sir, your obedient servant,

W. A. WILKINSON.

March 22, 1841.

DIRECTORS AND THEIR DUTIES.—THE MANCHESTER AND SHEFFIELD COMPANY.

To the Editor of the Railway Times.

Sir,—In perusing the reports of the recent railway meetings, I am much surprised to find that so few questions have been put by the proprietors, respecting the management of railways and the appropriation of the fund voted to the Directors, especially after the able correspondence upon Railway Management recently submitted to the public through the medium of your excellent publication. We find shareholders it is true, complaining that they know not who their partners are, and Directors taunting shareholders for asking questions, because they hold so small a number of shares, but never a question do I find asked as to how the money is applied, which is voted by the shareholders for direction, nor do I perceive any anxiety, when holding up persons as small shareholders, on the part of Directors to inform their constituency, though refusing to allow an examination of the share-lists, whether they hold the same number of shares, as when appointed to the direction.

There was one peculiar feature, at one of these meetings, the Sheffield and Manchester, which coupled with the remarks made by the Director who introduced the subject, appears as if there was something in the background which the public ought to be made acquainted with. The Director to whom I allude, previous to his allowing himself to be put in nomination, brought before the meeting the subject of allowances to the Directors, and stated that a mere list of attendances was but a very poor and bad criterion of the efficiency of any Director. From his agitating the question of allowance and volunteering this statement, it is evident he courted inquiry, when I doubt not we should have had a pretty exposé. But here was exhibited the apathy of which you so justly complain; and the attendant consequences are, that this line owing to the Directors not fully and frankly unbosoming themselves to the proprietors, is struggling on with a depreciated stock and an exhausted exchequer. I ask what other reason can be given, why this Sheffield and Manchester Railway should now be at 10*l.* per share, 55*l.* paid up, when by the estimate of traffic, a return of 6*l.* 10*s.* per cent will be obtained by opening the line to Glossop, in the spring of 1842, upon the whole outlay up to that period, supposing the expenditure upon the tunnel works to be then at an end, and the outlay upon them sunk again? I ask how is it that so many Manchester merchants, with their proverbial aptitude for business have been so led on and gulled by the Manchester and Birmingham and Extension schemes, and been contented with the ministerial answer, "it would be dangerous to the public service to answer that question?" In the confident hope that you will persevere in endeavouring to rouse the proprietors of railway stock from their lethargy,

I remain, Sir, very obediently yours,

A HEAVY HOLDER IN RAILWAY SHARES.

March 2, 1841.

THE LONDON AND BIRMINGHAM RAILWAY AND SIR ROBERT PEEL.

To the Editor of the Railway Times.

Sir,—In the report in the *Railway Times*, of what passed in the House of Commons on the second reading of the Stafford and Rugby Railway Bill, Sir Robert Peel is stated to have made an assertion which ought not to be permitted to go forth to the public without its incorrectness and fallacy being exposed. The assertion made by Sir Robert was to the effect, that as the London and Birmingham Railway Company have derived a profit from the public of 3,725,000*l.*, the proprietors ought not to complain if Parliament should give its sanction to the Stafford and Rugby project.

Now, Sir, I am an original shareholder in the London and Birmingham Line, I have all the reports before me, and I am totally unable to find any ground for the assertion made by Sir Robert Peel, nor can I understand by what process of art or ingenuity he allowed such a delusion to obtain possession of his mind for a single moment.

The facts of the case are briefly these:

By various Acts of Parliament the Company have been authorised to raise 5,500,000*l.*, but up to the 31st December, 1840, they had expended on the undertaking 5,792,175*l.*; up to the 31st Dec., 1838, their net earnings amounted to 149,312*l.*, when they paid their shareholders a first dividend. In 1839, the Company's net earnings amounted to 38,031*l.*, and in 1840, they amounted to 437,723*l.* Supposing that the proprietors were foolish enough to set aside nothing for the depreciation and wear and tear of their works and machinery, this last sum would afford a dividend of a little more than 7½ per cent., per annum, but at the same time it must be borne in mind that each 100*l.* share stands in (with interest whilst the works were going forward) 115*l.*

Here then, we see that instead of this Company receiving from the public 3,725,000*l.*, as Sir Robert Peel is pleased to declare, the aggregate net revenue since it commenced working falls short of one million, and the largest annual net revenue is inadequate to pay a dividend of seven per cent., a rate of remuneration so very far from being excessive that it is not one half what the enterprising projectors calculated upon when they commenced the undertaking, and what the Legislature sanctioned their realising when they obtained their Bill. On going before Parliament the Company in effect said—"Grant us the powers we require, and we will convey passengers, &c., to Birmingham in half the time now required, at half the expense now charged, with much less personal inconvenience than is now experienced, and we expect to do all this, and at the same time realize a large annual return to ourselves on the necessary outlay." All these stipulations the Company have performed excepting the last, in which the proprietors are themselves most vitally interested, and yet Sir Robert Peel and some fifty or sixty others, are so indifferent to solemn compacts and vested interests, as to advocate a measure which would deprive them of the fair and well earned hope, that after having conferred such advantages on the public, their individual interests may yet benefit to the extent that was originally calculated upon.

When we reflect upon the immense number of individuals who have a pecuniary interest in railways, and consider not only the advantages they are daily conferring upon the community, but on the immense and incalculable advantages they will confer in a national point of view by the practical condensation to the empire which they are effecting, the hostility that has sprung up against them is somewhat unaccountable, but it is to be hoped that the signal discomfiture which has befallen the aiders and abettors of the Stafford and Rugby line will not be without a good effect; and that those parties who are struggling forward with the various lines now in progress, will persevere manfully under the conviction which they may now safely indulge in, that the reward of their labours will not be wantonly and recklessly snatched from them, but that both they and their children will long

Digitized by Google

continue to draw a revenue from those splendid and useful works which are without a parallel in the world.

In alluding to the London and Birmingham Railway, it will be observed that I take no notice either of the premium which the shares bear, or on the fact that the capital has been raised partly by loan and partly by shares; neither circumstances having in fact any thing to do with the argument in question. The amount expended, and the net revenue earned, is the sole question for consideration either by the public or by Parliament. The loan creditors accept from the shareholders a lesser proportion of the revenue, in consideration of that proportion being guaranteed to them by the shareholders, which, in the case of the London and Birmingham line, enables the shareholders to divide a larger per centage. The reverse, however, will be the case on various other lines now at work; and as to the premium on shares, if every original shareholder had sold out at 100 per cent. premium, the case would stand where it did, other parties would hold the stock, and they would have a right to expect protection, having purchased it on the faith of the understanding which existed towards the previous holders. There would speedily be an end to all those sacred rights of property which have hitherto happily prevailed in this country, and which have raised us to our proud pre-eminence, were once the doctrine admitted that purchasers of railway shares, or of any other stock, were to be otherwise dealt with or considered than if they had been the original holders.

Trusting you will spare room for these remarks in your valuable journal,

I am, Sir, your constant reader,

H. H.

SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last number, "A Railway Shareholder" assumes 39,000*l.* as the probable receipts for three months on the South-Western line, from January 1st to March 31st. I beg leave to send the weekly returns, extracted from your papers, omitting fractions of a pound. The dates are those of your days of publication:—

January	9	£3,379
	16	3,093
	23	2,871
	30	3,577
February	6	3,490
	13	3,321
	20	3,012
	27	3,294
March..	6	3,315
	13	3,311
	20	3,603
	27	3,389
April....	3	say 3,603
		43,578
40 per cent. on £43,600		17,440
		26,138
Interest		15,000
Total		£11,138

Thus leaving 11,138*l.*, instead of 8,400*l.*, for dividend—a difference equivalent to the addition of all but one-third. It may be added, that the South-Western is peculiarly a summer railway. I have taken 15,000*l.* as the sum due *this quarter* upon interest. In the last Half-Yearly Report the interest charged on debenture bonds is 14,596*l.* 0s. 5d. for the *half-year*. Whether the Directors, or "A Railway Shareholder," be the party mystifying us here, I do not know.

So much in defence of the prospects of the concern: for the other charges against the Management, I fear they are too just. The want of punctuality in the trains, in consequence of the inefficiency of the engines, is notorious, and just matter of complaint on the part of the public: and what shall be said of the wisdom of those officers who examine a leaky vessel of turpentine with an open candle?

I am, Sir, yours, &c.

A. Z.

SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The strictures of a correspondent in your last number, on the Directors of the South-Western Railway, will probably, whatever may have been the intention, do more good than harm, inasmuch as they invite inquiry, and will produce amendment, should any errors in the management be found.

I do not mean to do more than make a few slight remarks on some obvious mistakes of your correspondent, leaving a full exposition, if deemed necessary, to better hands.

1st. The traffic for the present quarter, although it might have been ascertained from your own columns, in a few moments, is considerably underrated.

2nd. Your correspondent deducts from the quarter, the interest (or more) that is due on the full half-year, and by such process he may well reduce the dividend, or leave it nothing at all.

3rd. The fear of a competing line from Portsmouth, to join the Brighton at Horsham, or anywhere else, can disturb no human being who is at all conversant with the subject; nor need the shareholders be alarmed by the supposed danger to arise from the extension of the Great Western line to Bridgewater, or even to Falmouth. The success of the South-Western Railway depends not on traffic peculiarly due to other lines. Under proper management it has sufficient of its own to make it equal to any at present existing in the kingdom, (inferior but to one—if inferior at all), so far as their respective capabilities can be ascertained.

Although the South-Western Railway is not yet finished, and has peculiarly suffered in its traffic, from the severity of the season, your correspondent will find no diminution of his dividend.

The surplus from the last half-year will render an average traffic of even 4,500 per week, ample for the purpose of paying 30s. per share, and there are qualities soon to be developed which, good as it is, will make this be considered a very insufficient return.

I do not come forward as an advocate of the Directors, but I may be allowed to say, from personal acquaintance and communication with several of them, that there is not the slightest disunion amongst them. The carelessness which occasioned the late fire is inexcusable. It is a timely, though expensive, warning, but the loss falls on the capital, not the traffic, and it should be gratifying to your angry, I shall not say unreasonable, correspondent, to learn that it will not exceed half-a-crown per share.

I am, &c.,

ANOTHER SHAREHOLDER.

Cheltenham, 29th March, 1841.

N.B. 4,500*l.* per week for 26 weeks £117,000

Surplus from last half-year, 8,250*l.*, being net, (suffering no diminution from charges) is equal to—gross 16,500 { and upwards, without interest

Traffic—gross..... £133,500

which will do more than pay 30s. per share—and this traffic will be exceeded.

SOUTH-WESTERN RAILWAY.

To the Shareholders.

GENTLEMEN,—I have just discovered that I have made an error in the statement of probable profits of your line, for the quarter from the 1st January to the 31st March, which I hasten to correct. In the hurry consequent upon getting my letters to the Editor in time for publication, (for they are generally written and posted between the issue of the Saturday's number and Monday's first delivery,) I deducted *half* a year's interest from a *quarter's* receipts, and stated the profit per share to be for the three months 4s 8d., while it ought to have been 8s. 10d. The magnitude of the error best proves that it was unintentional.

With this correction, the general force and scope of my argument remain in full effect. The line is badly—shockingly—conducted, and to that conduct it is owing, that the receipts have not been greater. It is not my opinion alone; the whole travelling public are agreed upon it: and no statement of figures, whether of expenditure or receipt, can alter it.

A RAILWAY SHAREHOLDER.

RAILWAY RETURNS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 3 and 4, Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

(Continued from page 355.)

The Report of Lieut.-Colonel Sir Frederic Smith, of the Royal Engineers, on the accident which occurred on the South-Western Railway, on the 17th October, 1840.

To the Lords of the Committee of Privy Council for Trade.

Royal Engineer's Office, London District,
Buckingham Gate, 21 October, 1840.

My Lords,—Your Lordships' instructions of the 19th instant direct me to proceed without delay to inquire into and report upon the causes of the fatal accident which happened upon the South-Western Railway, on Saturday the 17th instant, and at the same time to investigate very minutely the arrangements of that Company for starting trains, for ensuring punctuality, and providing against the occurrence of accidents of one train overtaking and running into another, which it would appear, from a return furnished to your Lordships, has frequently happened on this line, and which your Lordships are of opinion ought not to take place under a proper system of management.

Pursuant to your Lordships' directions, I proceeded to the South-Western terminus at Nine Elms, where I found the Chairman and several of the Directors engaged in investigating all the circumstances connected with the fatal accident of the 17th instant, and from these gentlemen, as well as from the Engineer and Secretary of the line, I received every facility for conducting my inquiry.

It appears that the train, which should leave Southampton at half-past one o'clock, P.M., quitted that terminus at 35 minutes past one on the 17th instant; that at Winchester it was four minutes before its time; at Andover 19 minutes after its time; and that from thence it lost time the greater part of the way to London, arriving at the Nine Elms terminus at 3 minutes after time.

This train, which should have arrived at 16 minutes past five, did not therefore reach the Nine Elms terminus until 49 minutes past five. The cause assigned for the loss of time is the extent of the train.

On leaving Southampton it consisted of the following carriages, viz.:—3 first class carriages, 5 second class carriages, 2 carriage trucks, 1 horse box, and 3 waggons.

At Andover the train was augmented by 1 first class carriage, 1 second class carriage, and 2 carriage trucks.

At Basingstoke, by 1 second class carriage; and

At Woking by 2 second class carriages; making a grand total of 21 carriages.

The whole of these proceeded to Kingston, where 2 private carriages, 1 horse box, and 1 second class carriage were left, and the remainder came on to Nine Elms.

I should now state, that at three o'clock, P.M., a fast train is appointed to leave Southampton; that it calls at all the stations between Southampton and Woking inclusive, and that it is due at Nine Elms at six o'clock, P.M.; that is, at 44 minutes after the train which precedes it, by an hour and a half from Southampton.

On the 17th instant, the fast train in question left the last-mentioned place at four minutes after time.

On arriving at Woking it was one minute after time, and from thence it gained upon the slow train so rapidly that it arrived at the terminus before the slow train had stopped. A collision in consequence took place, causing the death of a female who was seated in the last carriage of the train, and injuring some other passengers.

I have the honour to enclose a drawing, showing the position and extent of both trains, the point of collision, and the situation of the fixed signal lamp.

This lamp may be turned—1st, to show a white light, indicating that the terminus is clear, and that trains may approach it without danger; 2ndly, a green light, to denote that the terminus must be approached with caution; and 3rdly, a red light, giving notice that there is danger to be apprehended, and that any

Digitized by Google

train or engine running towards the station must be stopped.

On the evening of the accident there was a fog and mist, rendering the atmosphere unusually dark for this season of the year, at the time of the arrival of the two trains at Nine Elms, and in consequence the lamps of the station had been lighted.

A "pointsman," of the name of John Turner, has the care of the signal lamp and switches adjoining it; and another "pointsman," of the name of William Greenaway, had been placed in charge of the notice bell marked on the drawing, and of the switches near to it.

Now it was the duty of Turner to have arranged the switches near the signal lamp for the heavy train; and as its arrival had been deferred almost to the time when the quick train was due, he ought to have turned the red light so as to be visible to the engineman of the latter, by which means he would have been aware of the necessity of stopping his train. Instead, however, of doing this, it appears that he ran up to the notice bell, and to arrange the switches which were under the charge of William Greenaway, and during Turner's absence the quick train arrived, and caused the fatal accident.

On inquiry, it was discovered that Greenaway had been absent throughout the day, and that Turner had undertaken to perform both duties.

Thus it is to the misconduct of these two men that the recent calamity is mainly attributable. But I am of opinion, that by the adoption of such precautions as I am about to suggest, similar accidents may be prevented in future.

In the first place, it is clear that if either the green or the red light had been shown, the accident of the 17th instant would not have occurred. We have seen that it is not safe to rely alone on the zeal and care of the servants of the Company, however trustworthy they may be considered; for the "pointsman," Turner, bears an excellent character, and has been three years in the employ of the South-Western Railway Company; neither do I consider it safe to rely entirely upon machinery; but I think, by the combination of mechanism with the assistance of the hand, the desired safety may be produced.

I would recommend, therefore, under this view, that at the Nine Elms terminus, as well as at all other termini where the same caution is necessary, machinery should be so applied to the lamp as to turn the green light towards the approach as the first carriage of the train passes the lamp post; and I would also recommend that a trustworthy servant of the Company should still be charged with the duty of turning the red light towards the approach. Thus, whether this man should neglect his duty, or the machinery should cease to act from some sudden defect, a signal of the necessity of caution would be exhibited.

In my inquiry, I observed that each guard in charge of the train delivers, shortly after his arrival at Nine Elms, a Report of his journey, called the "Guard's Journal," on this are stated the hours at which the train was due, and at which it stopped at each station, and the cause of any unusual delay is specified; but I found that there is no efficient check on the accuracy of this Report, and as it is sometimes prepared from memory, and occasionally from memoranda in pencil, I do not think it can be relied upon. I would therefore suggest, that at each station the time of arrival and departure of the train should be marked upon the journal in ink, not by the guard himself, but by the station clerk, and that this clerk should aquaint the guard of the precise time at which the preceding trafn had quitted the station; and moreover, it is proper that the station clerk should be desired, in all cases, to stop a train until an interval of 15 minutes had elapsed between its departure and that of the previous train.

I have, however, to observe, that the slow trains from Southampton stop at every station between that place and Nine Elms; whereas the fast trains do not stop at any station after leaving Woking, and this gives them the opportunity of accelerating their speed and overtaking the slow trains. As a check upon this, I would suggest that the station clerks, at those places where the fast trains do not stop, should be responsible to be on the look-out for fifteen minutes after the passing of every slow train, and that it should be their duty to delay any fast train that may arrive before its time, so as to give the other a start of fifteen minutes.

This arrangement would prevent any of the up trains being overtaken, excepting at Wandsworth, where the slow trains deliver the passengers' tickets, and therefore great caution must be enjoined in the fast trains approaching that station. The same principle should prevail with respect to the down trains.

I observe, that it does not appear to be a rule that each engineman should be provided with a watch.

I think that this should never be dispensed with; it is a regulation that has been adopted and found extremely useful on the London and Birmingham line, as has been the practice of allowing an interval of 15 minutes between the trains at every station. A practice also prevails on that line, which has been introduced, I believe, by Mr. Bruyers, the superintendent, and which appears to me to be deserving of imitation, viv., that the head guard of a train informs the engineman at each station whether he is before or after his time, and thus a wholesome caution is given to the latter.

I find it by no means an unusual thing for enginemen to be ignorant of the time at which they ought to arrive at the several stations.

Some have no memoranda at all upon the subject, while others have the time table of the whole of the trains, which often perplexes them, especially (as is sometimes the case) when they are shifted from one train to another. I therefore would propose, that upon each engine there should be placed, printed in large figures, a placard of the time at which the train that the engine has to draw should arrive at each station; and I would also propose, in furtherance of this arrangement for establishing punctuality, that the clocks of the several stations should be placed in such a manner that they may be visible by the enginemen and guards of the trains.

This is the case on the Grand Junction line, and it is found very serviceable.

I have here to add, that in my opinion every train should have some person of greater authority with it than the ordinary guard or the engine-driver, and who would control and exercise proper authority over both.

In the London and Birmingham Railway there is a superior guard, and in the Grand Junction and Great Western there are conductors, who are out of livery, and who, like the superior guard of the Birmingham line, are wholly responsible for the train between station and station, and are looked up to with respect by the inferior servants of the Company.

The guard of the three-o'clock train states, that he applied the break when distant 800 yards for the Nine Elms station, on the 17th instant, and the engineman asserts that at the same point he turned off the steam.

How far this may be true I have no means of judging, but I think this station should always be approached by the fast trains, when before their time, with the greatest caution, and I cannot, therefore, entirely acquit the driver of the engine of the fast train.

It is remarkable that the hindmost carriage of the slow train, in which the female was killed, was not broken by the blow it received, and it may be taken as a proof of its substantial construction. I would, however, suggest that the partitions of all second class carriages should be carried up to the roof, not only as a means of strengthening them, but with a view to render the passengers less liable to be thrown out should collisions take place.

I have the honour to return the list of accidents on the South-Western Railway, received with your instructions of the 19th instant, and

I have, &c.,

FREDERIC SMITH,
Lieut.-Col. R. Eng.

NOTE.—*The subjoined Correspondence has taken place with the London and South Western Company in consequence of the preceding Report.*

Copy of Letter send to the Secretary of the South Western Railway Company, enclosing Copy of Sir F. Smith's Report relating to the Accident on the Line on the 17th instant.

23rd October, 1840.

I am directed by the Lords, &c., to transmit to you a copy of Sir F. Smith's Report on the late fatal accident on the South Western Railway, and to request that you will submit it to the Directors for their early and attentive consideration. My Lords earnestly hope that no time will be lost by the Company in making those arrangements which from Sir F. Smith's Report appear to be imperatively required to ensure punctuality in the passage of the trains, and to prevent the possibility of the recurrence of similar disasters.

I am, &c.,

S. LAING.

W. Reed, Esq., South Western Railway.

Acknowledging receipt of letter from this department of the 23d instant, together with copy of Sir F. Smith's Report of the accident of the 17th.

Nine Elms Station, 24th October, 1840.

SIR,—I beg to acknowledge the receipt of your letter of the 23d instant, together with a copy of Sir F Smith's on the late accident on this railway.

And I will lay the same before the Directors at their next meeting on the 30th instant.

I have, &c.

W. REED, Secretary.

S. Laing, Esq., Railway Department, Board of Trade.

Copy of letter sent to the Secretary of the South Western Railway, inquiring what steps have been taken with regard to John Turner and William Greenaway, by whose neglect of duty the late fatal accident was occasioned.

31st October, 1840.

With reference to the late fatal accident upon the South Western Railway, I am directed by the Lords, &c., to inquire what steps have been taken by the Company under the 3d and 4th Vict. c. 97, s. 13, or otherwise, with regard to the men, John Turner and William Greenaway, by whose neglect of duty the accident is stated to have been occasioned.

I am, &c.,

S. LAING.

W. Reed, Esq., South Western.

In reply to a letter from this department of the 31st ultimo, relative to Turner and Greenaway.

Nine Elms Station, 9th Nov., 1840.

SIR,—In reference to your letter of the 31st ultimo, relative to the late accident on this railway, I am instructed to inform you, that immediately after the accident the Directors instituted the most vigorous investigation as to the conduct of their servants, with a view to the punishment as well as discharge of the guilty parties; that the men Turner and Greenaway have been discharged, but that the question of prosecuting them (as the legal adviser of the Company had expressed his opinion that one could not be convicted, and that there was some doubt of the ability to convict the other,) would not be finally determined upon before the meeting of the Court of Directors on Friday next, after which a further communication will be made to you.—I have, &c.,

ALFRED MORGAN, Secretary.

S. Laing, Esq.

Transmitting Copy of the Solicitor's Opinion in the case of Greenaway and Turner.

Nine Elms Station, 14th Nov. 1840.

Sir,—In reference to your letter of the 10th instant, I am instructed to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, the annexed copy of a resolution which was entered into by the Court of Directors at their meeting of yesterday, in reference to the case of the men Turner and Greenaway, together with a copy of the Solicitor's Report thereon. I have, &c.

ALFRED MORGAN, Secretary.

S. Laing, Esq.

Read letter from Mr. Laing, and also the Report of the Solicitor of the Company on the case of John Turner and William Greenaway.

Resolved,—That a copy of the Solicitor's Report be transmitted to the Lords of the Committee of Privy Council for Trade, and it be intimated that it is the opinion of this Court (and more particularly since Henry Elsden, the foreman of the yard, who must be a principal witness in the case of any prosecution, has been since discharged from the service of the Company for drunkenness), that no prosecution should be instituted, but that the Solicitor of the Company be directed to furnish any further information which the Lords of the Committee of Privy Council for Trade may require, and proceed to a prosecution of either or both the men, if the Lords of the Committee of Privy Council for Trade should, under the circumstances, so direct.

Copy of Solicitor's Opinion in the case of Greenaway and Turner.

6th November, 1840.

Dear Sir,—In obedience to the recommendation of the Locomotive Engine Committee, that I should report "the best means of inflicting the greatest amount of punishment upon John Turner and William Greenaway, in consequence of the collision of the 17th October," I have anxiously considered the subject, and have come to the following conclusion.

It should be premised, that except under the provisions of the Company's own Acts of Parliament, or that for the regulation of railways, passed in the last session, the criminal law has not provided any punishment for such cases of "negligent omission" of duty as are now under consideration.

The 13th and 14th sections of the Act 3rd and 4th Vict. chap. 97, are those which it alone appears to me necessary to consider in this case; and the practical question will be, whether the "negligent omission" of

Digitized by Google

duty charged against Turner and Greenaway is punishable under these sections.

It appears from the statement of the superintendent of the locomotive department (Mr. Woods) and his subordinate officer (Henry Elsden), that the responsibility of keeping both the upper and lower points of the signal lamp and bell rests upon Greenaway, and that Turner's office is to assist Greenaway, and to act under his orders in the performance of those duties When both are in the yard (as it is their constant duty to be, except when either may be away to take his meal), Greenaway has always been at the lower points where the bell is, and Turner at the upper points by the signal lamp, but during the brief necessary absences of either (which have been in practice usually contrived to take place when no train is expected), the other has been left in charge of the duties of both.

On Saturday, the 17th October, Greenaway was in the station till about 9 A. M., and then, without permission from or communication with any superior officer, left his duty altogether, telling Turner (according to the statement of the latter) that he (Turner) must attend to the lower points during his (Greenaway's) absence, which would be till dinner time. Greenaway was not again in the yard until sent for after the accident had happened, and had in fact been employing himself on business of his own, which it may be fair to him to say was of an urgent character.

It is obvious that to Greenaway's absence, leading as it did to Turner's withdrawal from his usual post, the unhappy accident which ensued is to be attributed; and although doubts have suggested themselves to me whether the peril to life or limb (which the statute requires should or might be occasioned by the "negligent omission" which it renders punishable) was in this case in sufficiently direct connection with Greenaway's omission of duty, I am opinion, that the whole circumstances considered, he is an offender within the Act, and punishable as such. At the same time, I cannot consider the case free from doubt, and the Directors will not be unmindful that an unsuccessful prosecution under these sections might do as much harm as it can be hoped that a successful one would do good.

As to Turner's case, if he were a party to Greenaway's absence on his own business without leave, he would also be punishable, but there is no means of proving that he was so; and if he were not, then, although it was grossly inattentive of him not to bring Greenaway's continued absence to the attention of his superior officer, in order to the obtaining proper assistance, I do not think for that omission he is punishable under the Act; and for his attendance at the lower points instead of his own more usual post (the upper points and signal lamp), he had sufficient justification in the orders he had received from Greenaway.

It seems that Turner continued all day in attendance upon the duty Greenaway had committed to him, and did make every effort to get from thence to the signal-lamp at the instant before the accident happened, but was unhappily too late.

Under these circumstances, the propriety of prosecuting Greenaway, is a matter for the consideration of the Board, but I distinctly recommend that no prosecution should be instituted against Turner.

I am, &c.

(Signed) FRANCIS T. BIRCHAM,
15, Bedford Row.

To Alfred Morgan, Esq., &c. &c.

Copy of a Letter sent to the Secretary of the South Western Railway Company, relative to prosecuting the two Men who were the cause of the late fatal Accident on the line.

Board of Trade, 18th November, 1840.

Sir,—I am directed by the Lords, &c., to acknowledge the receipt of your letter of the 14th instant, enclosing a copy of a resolution of the Directors of the London and South-Western Company, on the subject of the prosecution of the two men by whose negligence the late fatal accident on that railway was occasioned. With reference to this resolution, I am directed to say, that the power of prosecuting servants for misconduct and neglect, is given by the 3rd and 4th Victoria, c. 97, to Railway Companies, and not to the Board of Trade; and this being the case, their Lordships cannot undertake the responsibility which properly belongs to the Directors, of deciding in what cases and to what extent it may be expedient to act upon this power.

At the same time, looking at the facts of the present case, in which loss of life was occasioned by the gross misconduct of two servants in the employment of the Company, they are of opinion that it is the clear and undoubted duty of the Directors, both with a view to the public satisfaction and to the prevention of similar accidents in future, to use every effort to bring the offenders to justice. Their lordships, therefore, did not hear without surprise, that the subsequent dismissal for drunkenness of one of the witnesses, whose testimony was most material, was assigned by the Directors as a reason for allowing men whose misconduct had occasioned such fatal consequences to escape with an impunity which cannot fail to produce the worst possible effect and example. If the witness in question was dismissed for drunkenness, while in the employment of the Company, their Lordships would be glad to learn why in this case no prosecution was instituted: and whether it is the systematic practice of Directors of the London and South-Western Company to allow the provisions of the 3rd and 4th Vict., c. 97, s. 13, which were so anxiously sought for last session by the Railway Companies themselves, to remain a dead letter. At any rate, their Lordships conceive that no trouble or expense which might be incurred in tracing the witness, and procuring his testimony, ought to weigh with the Company in a case like the present.

With regard to the doubts expressed by the Solicitor of the Company, their Lordships conceive that the words of the 13th section of the 3rd and 4th Victoria, c. 97, are most explicit in including "any servant who shall negligently omit to do any act" whereby the safety of passengers shall be endangered. The only doubt that suggests itself to their Lordships is, whether the remedy under that section being of a summary nature, it may be considered applicable after such a long neglect on the part of the Company to take any steps. Upon these points, however, their Lordships suggest that the Directors should consult some high legal authority, as they think that nothing short of a competent opinion to the effect that no conviction can be obtained either under the 3rd and 4th Victoria, c. 97, or the common criminal law, will exonerate the Directors from the responsibility which rests with them of doing their utmost to enforce that regularity and strict discipline among the servants which are indispensable to the safety of railway travelling.

I am, &c.,

S. LAING.

In reply to a letter from this department of the 18th instant.

Nine Elms Station, November 21, 1840.

Sir,—I am instructed by the Directors of this Railway Company to acknowledge the receipt of your letter of the 18th instant, and in doing so I am desired to call the attention of the Lords of the Committee of Privy Council for Trade to certain of the circumstances connected with the cases under consideration, and on which considerable misapprehension appears to prevail.

The Directors have but one desire with respect to this unfortunate occurrence, and it is this: that it should be made as useful as possible for all purposes of example and caution; and if they hesitated to call into force the powers of the Railway Regulation Act in the particular cases, they have done so, not because it is their "systematic practice to allow its provisions to remain a dead letter," but because in their judgment the policy of prosecution was at least questionable, and they had it in their power to inflict a severe punishment upon the men by dismissing them from the enjoyment of easy and well-paid situations; a power which they felt it right instantly to exercise. The Directors would have thought it quite irrelevant that I should have alluded to the questions of "trouble and expense" as influencing the determination of their Board; but as a suggestion of this kind transpires in your communication, I am to assure you that the Directors have never allowed any such question to bear in the remotest degree upon the subject; such considerations have never been mentioned or thought of.

With regard to the misapprehension which appears to prevail as to facts, I am directed to state, that after careful investigation it appears to the Directors that the statement of Mr. Bircham's letter to them of the 6th instant, to the effect that John Turner had, in obeying the instructions of William Greenaway, a sufficient justification for his absence from his post, is correct. It does not appear that he was in collusion with Greenaway, and if not, the Directors are of opinion that he was not guilty of any improper act of commission or omission, excepting that of neglecting to apply to his superior officer for assistance, and this omission the Directors have high legal authority for saying is not an omission punishable under the Railways Regulation Act, or any other provision of the criminal law. It has, however, caused the instant dismissal of the man from the Company's service.

With regard to Greenaway, the Directors regret that their determination not to institute a prosecution, made, as it was, upon a full consideration of all the facts, does not appear, in the opinion of the Lords of the Committee of Privy Council for Trade, upon sufficient grounds; but I am instructed to say that, with perfect respect for their Lordships' judgment, and for the motives which actuate their discussion of it, the Directors are still of opinion that it is not politic or necessary to the public security that a prosecution should be instituted. In order, however, that their decision, as expressed in their resolution, may not be misunderstood, I am to explain that at the time Mr. Bircham made his Report to the Directors there had never been any reason, on the part of the Company, to doubt the veracity, general attention, or sobriety of Henry Elsdon, the person who is alluded to in the resolution of the Directors as having been subsequently discharged for drunkenness. Upon his statement it was that Mr. Bircham reported Greenaway to have been absent, *without leave* from any superior officer. Greenaway, it is true, had all along stated that he had given notice of his intended absence to Elsdon, his immediate superintendent; but this, as the statement of an accused party, was, as against the statement of Elsdon, disbelieved. The subsequent conduct of Elsdon, who has within the last fortnight been also guilty of misappropriation of the monies of some of his fellow-servants, makes it much more than probable that Greenaway's statement was correct; and although a notice to Elsdon was not sufficient, under the regulations of the Company, to excuse Greenaway's absence from his post, yet the fact of having given such notice, coupled with the extreme urgency of the demand on him (Greenaway) so to absent himself,* must be received as circumstances of strong mitigation.

Their Lordships would be glad to learn why, in the case of Henry Elsdon (dismissed for drunkenness), no prosecution was instituted. It was, from the first, the opinion of the Directors and their Solicitor (and that opinion the Directors believe is sanctioned by well-recognised principles of law) that the 13th section of the Railway Regulation Act does not include such servants as Elsdon, whose office was one of superintendence and of higher grade than any of those enumerated in the section. He was not an engine-driver, guard, porter, or *other servant*; the latter words, as I am instructed, only including servants of the same, or certainly not of higher, order than those previously and specifically enumerated.

Had this construction of the Act been less clear, the Directors would have considered its application to Elsdon, not only in respect of his subsequent offence of drunkenness, but also of his omission to provide on the day of the accident for the more efficient discharge of Greenaway's duties during his absence.

I am further instructed to request that you will convey to their Lordships an assurance that it will be the earnest endeavour of the Directors to enforce the proper discipline of their servants, and to secure the safety and comfort of those using the railway. The unfortunate accident which has led to this correspondence has occasioned many suggestions for the improved conduct of the undertaking, the whole of which have received proper consideration, and several of them have been adopted and are now in course of practical operation. I have, &c.

(Signed) ALFRED MORGAN, Sec.

G. R. Porter, Esq.

The new code of Regulations of the London and South-Western Company is framed with much care, and embodies all the principal recommendations contained in Sir F. Smith's Report.

(To be continued.)

COAL IN THE TUNNEL OF THE SHEFFIELD AND MANCHESTER RAILWAY.—In one of the shafts now sinking, near to Dunford Bridge, for the formation of the extensive tunnel for the above line of way, a valuable bed of coal, twenty inches thick, has been gone through. The coal is the property of — Saville, Esq., Lord of the Manor of Thurlstone. John Hinchliff and Sons, of Barnside, near Holmfirth, who some years since contracted for all the coal there, belonging to that gentleman, are now working the same bed, at Crowedge, about four miles from Dunford Bridge. The tunnel will render an additional quantity of this valuable mineral available, and when the railway is complete, it will open a market for it into a district which has hitherto been disadvantageously situated for obtaining this necessary auxiliary in the economy of manufactures.—*Leeds Mercury.*

1. Toll to London and Birmingham 107*l.* 16s. 3d., to be deducted from gross receipts.
2. The receipts are exclusive of those from the Post-office.
5. Receipts include the Northern and Eastern toll, &c.
6. The capital expended includes 132,371*l.* 14s. 11d. laid out on the Glasgow and Paisley Joint Line No. 7.
7. Made jointly by the Ayr and Greenock Companies.
8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*
10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.
13. Ten per cent. is the maximum dividend allowed by the Company's Act.
14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line.
17. The capital of 741,000*l.* includes the new capital for London and Brighton station.
18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. are guaranteed.
19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.
21. Canal cost, 100,000*l.*; railway, 677,936*l.* 3s. 0d.
22. The 3,076*l.* 8s. 1d. are the net receipts.
23. The receipts for goods, &c. include, carriages, 39*l.* 2s. 6d.; horses, 50*l.* 17s. 6s.; parcels, 155*l.* 8s. 4d.; dogs, 15s. 6d.; cattle, 36*l.* 17s. 6d.; corn, 14*l.* 2d.; heavy goods, 299*l.* 12s. 8d. Total, 699*l.* 14s. 2d.
26. The receipts stated are after deduction of Liverpool and Manchester toll.
27. Out of the receipts stated, the Company have to pay toll, &c. to the Eastern Counties' Company—about 150*l.* weekly.
28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.
31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Edinburgh and Glasgow Railway.—*The statements both of the Edinburgh and Glasgow Directors are in type, but they extend to such a length that we have been obliged at the last moment, in order to make way for yesterday's Important Assize Intelligence, to resolve on postponing their insertion for another week. It is proper to state in the meanwhile, with respect to the letter of a Glasgow "Independent Shareholder" which appeared in our last, reflecting with considerable severity on Mr. Leadbetter, that that gentleman has written to us to say that if the writer will "give his name" he will reply to him—but not otherwise. We understand Mr. Leadbetter to mean that even a private disclosure of the name will do.*

We must request W. W. *to excuse us till our next, we could give him a most sufficient reason.*

Bristol and Gloucester Extension Line.—*The Report and Account shall appear in our next.*

Expositor—Xevius—W. H.—A Glasgow Citizen—T. F.—A Cheshire Farmer—*intended for insertion as soon as we can clear off our present arrears.*

No Mistake *must give us some means of verifying his statement.*

Received F. F. A.—Amicitus—P. L.—Will Watch—A Contractor—A Well Wisher but no Shareholder—M. Medley.

THE RAILWAY TIMES.

SATURDAY, APRIL 3, 1841.

We give in another part a report of the proceedings in action for libel, tried yesterday at the Kingston assizes, in which Mr. George Ross, the projector and late Secretary of that abortive undertaking, the Duke of Cornwall Harbour, and Launceston and Victoria Railway Company, was plaintiff, and the publisher of the *Railway Times* defendant; and presume respectfully to claim the congratulations of our readers, and of all friends to freedom of discussion, on the result. The libel complained of consisted of a Report published in this journal of a public meeting of the Company in question, which was admitted on all hands to be a perfectly correct representation of what passed on the occasion—subdued only a good deal in the tone and colouring—but which contained charges against Mr. Ross of a very grave character, and by the publication of which, if not true, he was undoubtedly most grievously damnified. We had reason from the first to believe that the charges in question were substantially true; and besides, therefore, pleading the corectness of our report, we entered a plea of justification of it, on all points, and on that plea the plaintiff joined issue. The question, therefore, tried yesterday was avowedly this—whether the plaintiff had been guilty or not of the charges brought against him? After a long examination of witnesses, and a remarkably eloquent and powerful address from Mr. Thesiger on behalf of the plaintiff, the jury, under the direction of the Lord Chief Justice (Denman), found a verdict for the defendant—thereby affirming the truth of all that the *Railway Times* had been the medium of making known to the public respecting Mr. Ross and his railway doings.

From this we may infer that the common saying that "the greater the truth the greater the libel" is not quite of so axiomatic a character as has been generally supposed. It is the greatness of the truth which has in this case happily saved us from being victimized for its sake.

It has been our good fortune to be spared for some time past the painful necessity of recording or commenting upon the recurrence of railway casualties, such as towards the close of last year excited so strong an interest throughout the kingdom. To-day, however, our columns contain the particulars of a case unfortunately attended with loss of life, but which is worthy of notice principally as enforcing the indispensable necessity of strict discipline and method in the practical management of railway traffic.

The case to which we allude is that in which a man named Innes lost his life upon the Manchester and Leeds Railway last week, in consequence of a collision between the engine upon which he was stationed, and a luggage train proceeding in an opposite direction upon the same line of rails. The evidence taken before the Coroner shows very clearly that the accident arose from the wilful neglect of orders by the deceased himself, inasmuch as to save the trouble of proceeding a mile and a half further down the railway in order to get to a crossing, he wantonly returned by the same line by which he had gone out, although this is most strictly forbidden by the Company's rules, which it was proved he had had an opportunity of knowing. There is probably no Railway Board in the kingdom who have displayed so much praiseworthy anxiety as have the Manchester and Leeds Directors to familiarise the minds of their servants with the duties which are expected of them, or to have the general law of the land, and the particular regulations of the establishment, clearly and plainly pointed out. It appears, however, that no care on the part of others is at times sufficient to deter some parties from acts of recklessness and disobedience which may affect their own lives and the lives of their fellow-creatures, and so it has proved in the present instance. Dearly has the man paid the forfeit of his disobedience; and so far we fully agree in the verdict of the jury, that no blame is attributable to the Company.

In two points, however, we cannot but think that the Company's arrangements admit of much improvement. In the first place, what business had the man Innes upon the engine at all, seeing that he was not a regular driver? It was proved that his province was merely to give orders to engine-drivers and workmen; and for anything that appears to the contrary, he may have been as incapable, from want of the requisite knowledge to conduct an engine, as from his obstinate and rash spirit it was shown he was unfit to have employment of any kind upon the line. The fireman of the assistant engine upon which deceased was stationed at the time of the accident says, "he [Innes] *took upon himself* the direction of that particular engine," although it subsequently appeared, that as far as witness was aware, he had never before driven any engine. Where was the regular driver at the time? We do not know whether the excellent practice which prevails upon some other lines, obtains upon the Manchester and Leeds, namely, of having a particular driver to each engine; but if not, surely there is some superior officer constantly on the spot to attend to the departure of trains, and who might have seen that this amateur driver had "taken upon himself" a very responsible duty. The deceased *may have been* a very competent driver, but this does not appear in evidence, as we think it ought to have done, considering that in undertaking to act upon the fatal occasion, the man had stepped out of his own sphere. If he did so without the knowledge of his superiors, they as well as he were to blame, for it was their duty to be on the spot; if with their sanction, they ought to have shown that the man was qualified for the office.

The other point in which the Company's regulations appear to be faulty, is in reference to the starting of trains. The luggage train with which the assistant engine came into collision, thereby causing the death of Innes, was to start, it seems, some time between four o'clock and half-past; and the driver of that train, in giving his opinion as to the degree of caution necessary to be observed, enforced it by reference to "the *exact* time of the trains starting being uncertain,"—as if uncertainty were a usual occurrence with at least the luggage trains. Surely if it be so, this arrangement, or rather want of arrangement, is much to be deprecated. All trains, whether passenger or luggage, should be strictly *timed*, as well in regard to departure and arrival, through the intermediate stages. A premature start of even a few minutes, or a delay to the same extent, may seriously interfere with a preceding or a following train. Unless the respective drivers have reason to know that the road is clear before them, and that it will be kept clear behind them, they can never do their duty comfortably, and will be liable, according as their fears incline them, to push forward too rapidly, or to loiter behind. One of the causes which led to the fatal accident on the York and North Midland line, was the want of a proper system of *timing* the luggage trains; and although in the present case the melancholy occurrence can scarcely be attributed to the same source, it it probable, from the answer made by Innes to the remonstrances of the fireman, that, had he been *certain* as to the time of starting the luggage train, he would not have ventured to return upon the down line. The train had started on a previous day at half-past four, and Innes was evidently speculating upon reaching the terminus prior to that time. We trust that, hereafter, the *exact* minute at which all trains upon this and every other line are to start, will be set down, and attended to. Any other course must lead to great irregularity, even were it not fraught with danger to the public.

We are happy to find, from the periodical Report of the Directors, which we publish in another column, that the Dublin and Kingstown Railway is gradually advancing towards that degree of success which its promoters have hitherto looked for in vain. During the last twelve months, the expenses of working the line have been somewhat reduced, while the number of passengers has been considerably increased. The expenditure is still very heavy—heavier, we cannot help thinking, than it ought to be, notwithstanding the numerous disadvantages under which a line so

Digitized by Google

short, and so peculiarly circumstanced, must be worked; but upon this point we have no wish to go again over the ground which we felt it our duty to take on a previous occasion. With respect to the increase in the number of passengers, it is a subject of unmixed gratification, the more especially as it has been consequent upon a reduction of fares, or rather perhaps we ought to say, upon a return to a scale of charges which unfortunately had been for a time departed om. The charges as now existing are certainly very low, but not lower probably, every thing considered, than those of some of the English Companies. This Company is freed from one very heavy drawback, namely, the payment of the Government tax, which presses so severely upon the low-fare lines on this side of the Channel.

We are much pleased at having to record the success, however partial, of any Irish Railway; because, although we are well aware that isolated lines, even if upon a much more extensive scale than the Kingstown Railway, could never adequately supply the wants of that country, the prosperity of existing Companies may tend so far to remove a prejudice which unfortunately prevails against the introduction of the railway system into Ireland, as to show that there need be no great dread of pecuniary loss in carrying out the comprehensive schemes which have already been so much canvassed. It is true that *picked* lines afford no fair specimen of the general capabilities of the country, but the bad must be taken with the good, and if the latter turn out to be better than the opponents of the system have hitherto had too much cause to represent them, the risk of failure is proportionately diminished.

Almost everything connected with Irish affairs is generally looked upon as being conducted after a strange fashion, and certainly Irish Railways do not always form an exception. It will have been seen, by reference to our weekly notices of the proceedings in Parliament, with how much seeming anxiety the representatives of the Great Leinster and Munster (better known as the Dublin and Kilkenny) Railway Company have been importuning the House of Commons to allow them to proceed with an amended Bill; and yet it will be recollected that this is the Company of which it has hitherto been all but impossible to get together a sufficient number of proprietors to constitute a legal meeting, and in regard to which the only subject of discussion for some time past has been, whether the concern should be abandoned at once or be allowed to die a natural death! We do not refer to this in the way of reproach, for we are unfeignedly sorry that an undertaking which promises so favourably—the best, perhaps, of any projected line in Ireland—should be suffered to languish from want of local or general support; but it *does* seem strange that so much trouble (and perhaps expense) should be incurred in an attempt to secure further powers from Parliament, which powers, if we may judge from what has already transpired, would be allowed to remain altogether unemployed.

THE proceedings at the special meeting of the West London Railway Company, held on Monday last, appear to have been of a somewhat stormy character. That the proprietors have not very sufficient grounds for dissatisfaction and discontent, we will not take upon ourselves to assert; but the question *now* to be considered ought to be—how they can best extricate themselves and their undertaking from the lamentable condition in which it has for so long a time been suffered to remain? It is not by internal dissensions that their half-finished railway—"the laughing stock," as it was appropriately described, of all who see it—can be completed and brought into operation; nor is it by the re-opening of questions long since settled, or the discussion of matters which had better far be left to the judgment of the professional officers of the Company, that the 20*l.* per share *now* hopelessly sunk in the concern can be retrieved; but by the vigorous and unanimous co-operation of all parties concerned. Is it worth while risking a little more to recover what has already been embarked?—this is the question for the consideration of the proprietors. If they *do* deem it worth while to make the experiment, they must not stop to wrangle about what *might have been*, but take the case as it stands, and make, in common phrase, "the best of their bad bargain." Enough was disclosed at the meeting to show, that in their case beyond most others, delays will prove ruinously dangerous.

The case of the West London line, if fully written, would "point a moral," in a narrative of railway events. To a project ill-digested at first, and most imperfectly carried out, so far as Parliamentary powers were concerned, there was added the curse of a vacillating and indecisive Executive, and one, moreover, not wholly above the suspicion of being actuated less by a regard for the interests of their constituents than for their own. It needed not the farther infliction of Directorial dissensions, nor the intermedling of non-resident dictators, to reduce the unfortunate shareholders to their present woful plight—although these and other causes and consequences of mismanagement flourished in abunddance. The retrospection cannot be a very pleasant one to any of the parties concerned, but it is useless, save in the way of warning to others, to dwell upon such matters now. If there should appear to be the slightest chance of saving even the wreck of their property, we would strongly recommend to the proprietors who may assemble on Monday next to set about it without delay.

A VERY sensible letter will be found in another column, in reference to certain strange statements made by Sir ROBERT PEEL on the occasion of the defeat of the notable Stafford and Rugby Railway project in the House of Commons a few weeks ago. As far as we, at the time, understood the Right Honourable Baronet's argument, it was this—that the shares of the London and Birmingham Railway Company being now at a considerable premium, the enterprising proprietors of that magnificent undertaking had small reason to complain, if with the means in their own hands of realising a profit, the legislature were to sanction a competing scheme, which it was admitted would inflict upon them a very serious and undeserved injury.

The fallacy of such an argument as this is too transparent to require any notice in detail. What is it, we ask, that has given so well-merited a character to the stock of this great Company, if not the belief that having expended so vast an amount of capital in conferring a national benefit, the promoters will be permitted to reap unmolested the fruits of their enterprise? Is it to be imagined for a moment that capitalists would be found foolish enough to risk the expenditure of millions (and in any case it *is* a fearful risk) upon the construction of a railway, if they had reason to believe that at the moment they were about to meet with the first instalment of an adequate return, other parties should be permitted to step forward to ruin them without benefitting themselves or contributing to the advantage of the public? It is not alone the welfare of this particular Railway Company or of that, which is involved in the recognition of the principle advocated by Sir ROBERT PEEL, but the progress of every kind of public improvement that is based upon the judicious and profitable outlay of private capital. If duplicate railways are to be encouraged without the smallest necessity on the part of the public, a blow is struck not only at this branch of enterprise, but at every other branch. If you tamper with the vested rights of railway proprietors, who knows but his own turn may come next?

To suppose, too, that because certain shares have hitherto stood at a premium on the faith of certain implied conditions being faithfully carried out, they would continue at the same, or at anything like the same figure, were these conditions most wantonly violated, is a sort of reasoning quite unworthy of the high reputation of Sir ROBERT PEEL. The Birmingham stock stands at present at a very large premium, but were any considerable number of holders to take the alarm which Sir ROBERT PEEL would sound, and in conformity with his recommendations to bring their shares into the market for the purpose of realising a profit, where would the premium be, before a single week had elapsed—always supposing that there was any good ground for alarm, which we do not think there would have been, even had the Extension project been as signally successful as it was the contrary? It is quite clear, that if all were sellers all would suffer, and whoever chanced to be more confident than his fellows, would in so far be a victim. It is absurd, therefore, to take the price of shares in the market at any particular period, as a criterion of the profit which the holders of such shares have realised, or might realise—much more so to estimate the value of a thing which has been wilfully and wantonly damaged at the high rate which it might reasonably have commanded, under other circumstances. Sir ROBERT, in his regard for the original holders, who, as *he* thinks, might *sell* at a premium, appears to forget the unfortunates who might *buy* upon similar terms; but as our correspondent remarks, we trust the doctrine will never be recognised in this country "that purchasers of railway shares, or of any other stock, are to be otherwise dealt with or considered than if they had been the original holders."

As for the "original holders" in the case of the London and Birmingham Railway, we do not see that there is much in their present position which should lead any person to begrudge them the measure of prosperity they are now enjoying. Putting aside all considerations of the risk which they incurred in carrying out so extensive a work, the long period during which their capital lay wholly unproductive, will reduce their present very moderate profits to an average, much lower than that which in any other species of speculation would be considered as far from extravagant. If such be true with respect to the Birmingham line, probably the most promising in the whole country, much more is it true with regard to the railway system generally. It is quite useless to blink the fact that, *as a whole*, railways will not prove profitable to those at whose cost they have been constructed, unless some very essential

Digitized by Google

improvement, at present unthought of, should be introduced into the practical working of the system. That they will turn out to be highly advantageous to the public at large, we have ample grounds, from past experience, to predict; but it is not just, it is not politic, that particular cases should be picked out, and inferences drawn from them to the disadvantage of less successful speculations, and to the discouragement of embryo undertakings of a like kind.

ELSEWHERE we present some details of the opening of the Glasgow, Paisley and Greenock Railway on Tuesday last—an event scarcely less interesting to the proprietors of that undertaking than to all who wish to see the Railway System extended throughout the length and breadth of the land. The opening of the Greenock Railway—followed, as we cannot doubt it will be, by most satisfactory and tangible results—will serve to heighten the interest which the people of Scotland generally are beginning, and only beginning, to take in the subject of Railway communication. That they have fallen so far into the rear of their fellow-subjects in the South in regard to a matter of so much importance, is perhaps scarcely to be wondered at; but we are glad to find that at last their attention is being seriously drawn to railway locomotion and its results. Of the issue we are in no way doubtful. If they have less wealth, they have quite as much enterprise *when fair cause is shown*, as their English friends, and that good cause *can be* shown in regard to more than one line of yet undeveloped railway in Scotland, we know enough of the country to be well assured. As respects the particular line now opened, we sincerely congratulate the Directors and shareholders on having advanced so far towards a realization of their hopes, and trust that in conjunction with the sister line to Ayr, the Glasgow, Paisley and Greenock Railway will prove as prosperous in its results as its best friends can desire.

THE Select Committee of the House of Commons on the new Railway Regulation Bill have continued during the week their examination of witnesses, with respect to the necessity of a more stringent Government control. The chief witnesses examined since our last have been Mr. George Stephenson, Mr. Bury, Mr. Baxendale, and Captain Lawes. The Committee are not expected to make their report till after Easter.

—o—

WE publish the letters of Mr. Wilkinson and Mr. Burchell, to which we referred last week in our Notices to Correspondents, in defence of the position that the first cost of railways has nothing to do with the amount of the fares which it may be right and prudent to charge the public for the use of them. We candidly confess that their arguments have greatly unsettled our previous impressions on the subject. Not having space or leisure this week to renew the discussion of it, we must leave what they have said to make its own way with our readers.

—o—

THE reports we receive of the progress of the Box Tunnel—the last great difficulty on the Great Western line—are extremely favourable. On Wednesday of this week the *last length* of excavation, of the portion contracted for by Mr. George Burge—being not less than 1¼ miles of the whole—was reported as finished; and it is confidently expected that before the 1st of May, the entire work, excavation as well as masonry, will be out of the hands of the contractors.

—o—

ON Tuesday a petition was presented to the House of Commons from Aberdeen, praying that the Railway Commissioners be instructed to extend their survey and investigation northward from Edinburgh to Aberdeen. The petition was ordered to lie on the table. After the answer which was made last year to a similar application, we have not much hope that the prayer of the petition will be granted—indeed we question whether under their present powers the Commissioners could properly undertake such a task—but it is gratifying to find that railway facilities are daily becoming better appreciated. We have little doubt that the enterprising town of Aberdeen will speedily devise means of bringing itself within the reach of these facilities, whatever may be the determination of Parliament with regard to this particular request.

—o—

THE House of Lords have appointed a Standing Order Committee, to whom should be referred all "Railway Bills and Opposed Bills." The following are named of the Committee:—The Duke of Richmond, Marquis of Salisbury, Earl of Devon, Earl of Winchelsea and Nottingham, Earl of Doncaster, Earl of Abingdon, Earl of Morton, Earl of Hardwicke, Earl of Ilchester, Earl of Radnor, Earl of Charlemont, Earl of Chichester, Earl of Verulam, Earl Beauchamp, Earl of Falmouth, Earl of Stradbroke, Earl of Burlington, Earl of Ripon, Earl of Effingham, Viscount Leinster, Viscount Hood, Lord Sondes, Lord Boston, Lord Foley, Lord Montague, Lord Kenyon, Lord Stafford, Lord Redesdale, Lord Sheffield, Lord Colchester, Lord Rayleigh, Lord Bexley, Lord Penshurst, Lord Somerhill, Lord Wharncliffe, Lord Roseberry, Lord Poltimore, Lord Hatherton, and Lord Bateman.

—o—

FOR the same reason that we have all along contended for a strict and indeed severe administration of the laws against railway offenders, we are always rejoiced to see superiority of conduct on the part of railway servants, honoured and rewarded. The wider and more marked the distinction which is made between good and bad service, the rarer will offences against steadiness and regularity become. Most Railway Companies have now their scales of rewards, and if these do not go far enough in all cases, it arises we are persuaded less from any indisposition to act liberally, than from a natural apprehension of erring on the side of prodigality. A very excellent system is that adopted by the Glasgow and Garnkirk Company, of allowing pensions to the men after certain lengths of meritorious service (somewhat after the plan followed in the army); but as the railway is as yet but a young service, their system is attended with the disadvantage of offering no *present* example of pensioned merit to excite emulation. It only wants, we think, to be combined with some such occasional marks of distinction as that recorded in the following gratifying notice, to be the very best that could be devised:—

REWARD OF MERIT.—On Saturday last, at a meeting of the Directors of the Hull and Selby Railway Company, at the depot, in this town, a silver medal was presented to Mr. Pears Naylor, locomotive engineer on that line, as a mark of their approbation of his conduct, particularly for the skill and promptitude he displayed on the 23rd December last, when the axle of one of the luggage-waggons broke, by which five carriages were thrown off the line, in bringing up the train without any injury to the passengers. The following is the inscription:—"To Pears Naylor, engine-driver, for skill and promptitude. December 23rd, 1840."—*Hull Advertiser.*

—o—

AMONG the Companies who in the course of the week have petitioned against the new Railways Regulation Bill, are the Birmingham and Gloucester Bolton and Leigh, Bolton and Preston, Bristol and Exeter, Cheltenham and Great Western, Eastern Counties', Glasgow, Paisley and Ayr, Glasgow, Paisley and Greenock, Great Western, Hull and Selby, London and Brighton, London and Croydon, London and Greenwich, Manchester Bolton and Bury, Midland Counties', North Union, Sheffield and Rotherham, South-Eastern, and Taff Vale.

—o—

Petitions were presented to the House of Commons on Wednesday evening from the Chamber of Commerce and Manufactures of Greenock, and from the Sheffield and Rotherham Railway Company, praying for a modification of the passenger tax on railways.

—o—

IT is likely that some light will at length be thrown upon what appears to be very strange conduct on the part of the Postmaster-General in reference to the proposed transference of the Sunday mails from the Ayr Railway to the common road. On Thursday, the House of Commons, on the motion of Mr. Hume, ordered a copy "of the correspondence which has taken place between the Earl of Lichfield, Postmaster-General, the Chancellor of the Exchequer, and all parties desiring the stoppage of the mails on the railroads on Sundays in Scotland; and copies of any orders by the Postmaster-General for the transmission of the mails in Scotland on Sundays by other conveyances than the railroads."

RAILWAY OFFENCES AND OFFENDERS.

WE call attention to the correspondence which appears elsewhere (extracted from official documents), between the Board of Trade and the Directors of the South-Western Railway Company, with reference to the gross neglect of duty displayed by two of the Company's servants on the occasion of the late melancholy and fatal accident at the Vauxhall terminus of the line. It gives us the greatest pleasure to find that the Board of Trade are properly alive to the necessity of enforcing the full penalties of the law in every case of railway delinquency, and can only express our regret that in the instance referred to, their efforts to bring the offenders to justice were not supported as they ought to have been, and as we had hoped they would have been, by the Executive of the Company. Difficulties there doubtless were in the way of a conviction, but the Directors should have done *their* duty in making the attempt, leaving the odium of failure to rest with those through whose neglect the law was unable to reach the principals in so scandalous a transaction. When will Railway Boards learn that they "must be cruel, only to be kind"?

The Directors of the London and Greenwich Company had a man named Thompson, a carver and gilder, of Bell-yard, Temple Bar, taken before the Magistrates of Union Hall Police court, on Tuesday, for grossly insulting a female fellow-passenger. The man pleaded drunkenness in extenuation, but the Magistrate very properly considered this an aggravation, and fined him 5*l*., which we regret to say, was (as usual) "immediately paid." A month's commitment in default would have done the fellow

Digitized by Google

good; nevertheless, the Directors of the Railway have acquitted themselves well.

We take the following notice of a whole batch of "offences" from the *Yorkshireman*. The *locus in quo* is Darlington:—

"John Sedgwick, of Shildon, waggon driver on the Stockton and Darlington Railway, *was fined 5s. and costs, by the magistrates at Bishop-Auckland, on Thursday week, for placing stones on the Darlington branch and obstructing the line.* Edward Burnsides, of Aycliffe, waggon driver, was fined 5s. and costs, for running his waggons on the railway at the rate of 13 miles per hour, contrary to the bye-law of the Company.—James Coultherd, of Shildon, waggon driver, fined 5s. and costs, for obstructing the passage of the first class train, by being on the line with waggons.—John Hodgson, of Spring Garden, near West Auckland, waggon driver, fined 10s. and costs, for running waggons at a greater rate than 10 miles per hour across the level of a public highway.—William Finlay, of West Auckland, waggon driver, fined 5s. and costs, for a similar offence.—James Miller, of Shildon, waggon driver, fined 5s. and costs, for running waggons above 12 miles per hour. —Thomas Lisle, of Aycliffe, fined 4s. 6d. for a similar offence.—Christopher Robinson, (who did not appear), of Spring Gardens, miller, fined 1*l.* and 7s. costs, under 'Lord Seymour's Act,' for trespassing across the fences of the Stockton and Darlington Railway."

We take it for granted that those who have done us the honour to peruse the articles which have appeared from week to week under this head, are pretty well prepared for the results of "justices' justice," but we must say that a fine of "five shillings and costs," for placing stones on a railway to the imminent peril of hundreds, perhaps, of passengers, outdoes all former doings of a similar kind. We wish we could hold up the "Magistrates at Bishop Auckland" *nominatim* to the admiration of the public!

The *Derby Mercury* says—

"On Wednesday, March 24, Israel Poyser, of Bull Bridge, was brought before Messrs. Radford, John and Jedediah Strutt, magistrates at Belper, for trying to defraud the North Midland Railway Company out of an excess fare of sixpence. He took out a ticket on the 17th inst., at Derby for Belper, but rode on to Amber Gate, where he gave the ticket to the collector there, in a crumpled state, and ran off; he refused to return to pay the difference, when called upon, and was summoned in consequence. He was fined 1*l.* with 11s. costs. *The magistrates expressed their determination to inflict the full penalty upon all similar offenders.*"

Upon this we have only to remark,—"man never is, but always to be, blessed." Magistrates are constantly expressing "their determination" to do justice in these cases, but we look in vain for the performance.

NORTHERN AND EASTERN RAILWAY—TERMINUS AT HERTFORD.

An adjourned Meeting of the Committee was held in the Council Chamber on Wednesday evening last, when a communication (in reply to a letter sent by the secretary) was read from the Hon. W. F. Cowper, stating his readiness to present the memorial agreed upon by the inhabitants to the Court of Quarter Sessions. It was also stated, that an arrangement had been made with the Lee river trustees, by which all opposition on their part had been overcome; and that no opposition had ever been contemplated by the Governors of Christ's Hospital, many of whom were decidedly in favour of a terminus as closely connected with the town as possible, on account of the facilities which would thus be afforded to the friends of children visiting the school. It was also stated, that the objections of the visiting justices solely extended to field 50. One gentleman informed the Committee, that a sort of equivocal opposition to the Hertford terminus had been got up at Ware, where a petition had been set on foot, praying that the railway might be stopped at that town, on the ground of the "danger to the lives and limbs of her Majesty's subjects," which would arise if the railway were continued on a level with the high-road; it was, however, understood, that most of the respectable inhabitants of Ware were decidedly opposed to this movement. The Committee resolved, that a petition should be presented to Parliament in favour of the Bill now before the House of Commons, for carrying on the railway to this town. The Committee then adjourned.—*Essex Mercury.*

NORTH MIDLAND RAILWAY.

The Directors of this Railway are making arrangements by which the public, and especially farmers and parties attending the corn and other markets of our large towns, will be materially benefited. On Monday last, two additional stopping trains were started, to run daily between Leeds and Derby; and the number of places at which they stop for passengers is not less than 20, or seven more than the number of regular stations. These new trains have no connexion with trains conveying passengers for London, nor is any detention experienced by such parties in consequence of these arrangements. In a few days, also, it is intended to start a train from Sheffield direct for Hull, to reach the latter town before market-hours, and to return after they are over: hitherto, the communication between these two large towns has been circuitous and liable to delays, which will no longer exist. It appears that for some time past, the trains from Leeds to York and Hull have left the station in Hunslet-lane together, and been drawn by the same power to the point where they take separate lines; there is an economy of locomotive power in this arrangement. The York and Hull trains do not, however, enter Leeds together; as stoppages on the part of one for the other at the junction might be frequent, and in consequence inconvenient. The goods traffic between both places and Leeds has already been greatly augmented beyond its former extent, and is constantly increasing. The improvement in York as to liveliness since the opening of the railways is remarkable; no doubt, many a visit will be paid to its scenes of interest which never would have been paid without such facilities of access. The quantity of minerals conveyed along the North Midland Railway is almost outstripping the accommodation at the disposal of the Company; but this inconvenience will easily be remedied. We understand that the Company's superintendent has been at Darlington this week, making arrangements with the Directors of the Great North of England Railway, for rendering the facilities for travelling from one line to the other as complete as possible. It may be mentioned as a matter of curiosity, that the number of trains running daily on the North Midland is 59, and will in a few days be 63. Between Leeds and Manchester there are 18 passenger trains; from Leeds and Manchester to Brighouse, 2; between Leeds and London, 10; Leeds and Derby, 2 (will be 4;) Leeds and York, 8; Leeds and Hull, 9; these, with the two between Sheffield and Hull, and about ten luggage trains on the line, make a total of sixty-three daily.—*Eastern Counties' Herald.*

NORTH MIDLAND RAILWAY.

By a new regulation, which came into operation last week, third class carriages are now attached to all the trains, with the exception of the mail trains. The quantity of minerals conveyed along this railway is almost outstripping the accommodation at the disposal of the Company; but this inconvenience will easily be remedied. Very considerable additions to the traffic may be expected from the Clay Cross collieries and coke works, which are on an extensive scale; the latter will moreover afford the Company the means of obtaining coke at a much lower cost than heretofore, and so be productive of a material saving in the annual expenditure. Mr. Stephenson's lime-kilns also, at Amber-gate, are likely to supply, to a great extent, the midland counties with an article of great value in agriculture; the lime which is found in those counties being inconsiderable, and of inferior quality. The North Midland Railway will also be used for conveying the produce of these kilns as far north as Barnsley. We understand that the Company's superintendent has been at Darlington, making arrangements with the Directors of the Great North of England Railway, for rendering the facilities for travelling from one line to the other as complete as possible.—*Derby Mercury.*

SAD AND TRUE ADVENTURE OF A FROLICSOME TAILOR.

[From Return by the Preston and Wyre Railway Company to the Board of Trade.]

"The only 'accident attended with personal injury' which has occurred since the opening of this line, 'on the 15th of July last, was on the day itself of opening, and it took place under the following circumstances:—About 200 gentlemen had been invited to spend the day here with the Directors and their friends, as usual on such occasions, and a special train was despatched to bring them from and take them back to Preston. Although the greatest care was taken, by issuing tickets and every other means, to prevent the intrusion of persons not invited, yet among the bustle and crowd occasioned by the congregation of the guests, and of their friends who accompanied them to the North Union station at Preston, some three or four persons without tickets, contrived to elude the vigilance of the guards and porters and to obtain seats in the train. Among these was an Irish tailor, named Dean, notorious for his impudence and dissipated habits. He was detected and removed from the carriages several times, but managed to get up unperceived at the moment of departure, and to be conveyed to Fleetwood. The same undaunted impudence and pertinacity of purpose enabled him, after several previous fruitless attempts, to obtain a seat at the dinner, during and after which he became completely intoxicated. I have since learned that he was in the habit of frequenting most festive meetings in this way. On the return of the party to Preston, he once more intruded himself into the carriages, and was rejected several times, both as being intoxicated and as not having been invited. But he unfortunately succeeded in climbing up on the roof of a carriage as the train was starting, and (from the great length of the train, and the crowd of persons assembled to witness a scene so novel to them) was not perceived until the train had proceeded some distance and was at full speed. He was, however, quietly seated in one of the seats (with back and side-rails, foot-board, &c.) made for the guards on the first class carriages, and would have been perfectly safe there had he only sat still. His hat, however, almost immediately blew off and away, and, on standing up to look after it, he overbalanced himself and fell between that and the next carriage, in such a position that his body was inside the rails, his neck across one of them, and his head outside. The dreadful consequence was the instantaneous and complete decapitation of the unfortunate man by the wheels of the following carriages, heavily laden as they were, within five minutes from the time when he had got on the carriage."

Railway to Hertford.—The opposition of the magistrates to the proposed terminus continues to engross the minds of the inhabitants, and very naturally so, as it seems to us, for it really appears that unless the Company are allowed to have the terminus where it is proposed, they will abandon the idea of coming to Hertford. Another meeting was held at the Shire Hall, on Wednesday evening, at which the Mayor kindly presided. There was a large number of the inhabitants present; and after some discussion a memorial was agreed upon. We believe it received the signatures of every person present, and since then has continued to receive a vast number of signatures.—*Essex Mercury.*

—o—

Accident on the Hull and Selby Railway.—On Wednesday morning, as the mail train was proceeding from Selby to Hull, when it had arrived within about ten miles of the latter place, the end of the cylinder gave way, in consequence of which the engine and train came to a dead stand. No assistance could be procured till the next train arrived from Selby, when the delayed train was pushed on to its destination. Fortunately, the only injury or inconvenience that occurred was the detention of the letters and passengers for about two hours.—*Derby Chronicle.*

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—You are, I have no doubt, almost wearied with communications respecting this grossly mismanaged Company. It is now a month since the Brentwood Hill contract was taken; the second instalment on the debentures has been paid; the finest spring for the formation of embankments is rapidly passing away; and yet the work at Brentwood Hill is scarcely begun, and the embankments at Springfield and Widford are proceeding so slowly that all shareholders in the vicinity, not employed by the Railway Company, are dissatisfied—inquiring the reason of all these delays—and asking what has become of the money drawn from the impoverished shareholders?

I have been informed on good authority that the contractors are anxious to proceed, but are held back by orders from Shoreditch. Why is this? Will the infatuated shareholders in Lancashire never have their eyes opened to their interests? Will they wait until their shares are still further lowered in price, before they investigate the mode in which their money has been and is being spent?

The statement of the Mr. Moseley at the last meeting (in answer to the motion for inquiry), that the Lancashire shareholders are satisfied, surely cannot be correct. They cannot rest satisfied with the ruinously low price of the shares—lower by 50 per cent. than during the much-abused management of times gone by.

If the leading shareholders *are* satisfied, would it be requisite for the Directors to employ their *paid* officers, as at the last and previous meetings, to move and second the adoption of their Reports? Why were not the questions asked by Mr. Knox, as to the traffic, at the last meeting, answered? Why are their weekly and half-yearly statements of the traffic so different? And why, if honest and plain dealing be their rule of conduct, was Mr. Wyllie so shamefully tricked out of his seat in the Direction, and Mr. Ewart so stealthily smuggled into it? I have heard them called the "Thimble-rig Board"; and none, I think, can now question their right to the name.

I am, Sir, your obedient servant,
AN UNFORTUNATE SHAREHOLDER.

EDINBURGH AND GLASGOW RAILWAY.

THE CHAIRMAN OF THE EDINBURGH DIRECTORS IN EXPLANATION.

To the Editor of the Railway Times.

SIR,—In the *Railway Times* of the 20th inst., there appears a letter addressed by Mr. Leadbetter, Chairman of the Edinburgh and Glasgow Railway, upon which you make the following remark,—that it has "brought to light some facts which call for explanation at the hands of the Edinburgh Directors, but it has not altered in the least the opinion you had expressed on the general question." Relying, therefore, on your courtesy and desire for explanation, I venture to encroach upon your valuable columns with a very short statement in reply to what I presume to be the facts requiring explanation alluded to by you.

Mr. Leadbetter states—1st. "That before the meeting, and before any public discussion of the question, the Edinburgh Committee strongly advocated a division of the line, and that the management of the two portions should be committed to two Executive Committees—one at each end." The answer to this is, that the Edinburgh Directors did not, according to their interpretation of a division of the line, either then or at any other time advocate anything but one concentrated Board, controlling both Committees in all things, in terms of the Act of Parliament.

2nd. "That in reply to a letter from Mr. Leadbetter to me, on behalf of the Edinburgh Directors, dated 8th February, suggesting the propriety of longer time being allowed to consider the whole subject than what was then to elapse before the general meeting, and requiring a pledge that nothing would be done in the mean time to influence the shareholders and procure mandates for the meeting, and that I declined giving any such pledge." My explanation on this point is, a reference to the two letters. No fault can be found with my answer. I stated that I exceedingly deprecated all appeals to the shareholders from a divided Board, but that as Mr. L. had it in his power to conciliate matters, we might, if driven to it, nevertheless adopt it; and I besought him not to take advantage of the difficulties in the way of the Edinburgh Directors attending a meeting next day, to force a measure which he knew to be in opposition to the unanimous opinion of the Edinburgh Directors. Mr. Leadbetter paid no attention to this my remonstrance, and thus compelled us to take the course we did.

3rd. "That it came indirectly to his knowledge, and was subsequently proved, that some of the Directors and their friends in Edinburgh, were at this very time procuring mandates for the general meeting, and that 300 circulars had been issued by these parties in Liverpool, requesting mandates to be sent to them." The reply of the Edinburgh Directors to this assertion is very short. It is true as I stated at the general meeting, that I wrote to five or six friends for their *own* mandates, and as on a previous occasion the Edinburgh shareholders had given theirs, and that one or two of the Edinburgh Directors had written also to a few of their own friends, but as to the issuing of circulars or employing an agent in Liverpool to do so, I beg to give it my positive denial, in so far as any one Director is either directly or indirectly concerned. No doubt I afterwards learned that Mr. Dawson had issued circulars, because he wrote to me boasting of his having done so. But what is the fact in regard to this? Is it that there is in this quarter a railway called the Edinburgh and Newhaven, with which neither I nor any one of our Board have any connection whatever; but Mr. Dawson, and the Directors of that railway are most anxious that they should be able to join our terminus; and as the elongation of the Edinburgh and Glasgow Railway to the North Bridge would afford that facility, and as this is a measure which might have been discussed at the general meeting, particularly as Mr. Richardson, a Glasgow Director, has set his face against it, these gentlemen it seems were anxious to strengthen my hands in carrying that point. I heard with surprise the length they had gone, and most assuredly, had such proxies ever come into my hands, I should have used them for no other purpose whatever. I would rather forfeit 20 times the interest I have in all the railways in the kingdom, than demean myself by such conduct. But, pray how and when did Mr. Leadbetter hear anything of these proxies?—Why, unfortunately for him, he has told us. He says, that he was a good deal surprised when *in Liverpool* to hear all this. Why, then, he confesses that he took the step of going off to Liverpool and Manchester to make his *ex parte* statement, and to procure by his influence, as the Chairman, all the proxies that he could, without making me or any Director aware of his intention. This, surely, was unfair, and he feels it now to be so. But, thinking that he can accuse us of playing foul, he wishes to screen himself by this alleged discovery. No, Sir, whatever colour may be given it, no charge of unfairness can stand against us.

4th. "Mr. Leadbetter states, that he was willing to yield to delay, provided we would agree to abide by the decision of an adjournment meeting, and that we refused to do so." My explanation is very short also—that we could not agree to abide by even a decision of a majority of shareholders, if that decision should be illegal, and not fairly obtained. And now, in conclusion, I beg to assure you, that the more investigation that is made into the conduct of the Edinburgh Directors, the more you, and the public, and the shareholders, will be confirmed in opinion, that they never have resorted to any crafty proceedings, or done anything which they are not ready to avow; and, most certainly, it greatly concerns the prosperity of the undertaking, that their existence and their surveillance should be continued.

I beg to remain, Sir, yours, most obediently,
JOHN LEARMONTH,
Deputy-Chairman.

Edinburgh, 29th March, 1841.

RAILWAY SHARE GAMBLING.

To the Editor of the Railway Times.

SIR,—From the very commencement of your deservedly most popular Journal, I have admired the straight forward and upright manner in which you have treated all subjects connected with railway property; and I have invariably observed that you exhibit the utmost readiness in exposing all illegitimate transactions, whether as emanating from bubble companies, or the more frequent occurrence of unfair speculation in the property of the real capitalist. I beg through the *Railway Times* to call public attention to the subject of transactions which continue most injuriously to affect all such parties as invest their money in the leading railways, and I trust that some steps will be taken by railway proprietors generally to remedy so great an evil. It is not known that at this present time sales of shares are effected to an extent vastly beyond the means of supply, and in many cases to an extent almost beyond belief. In the small fractional shares issued by the leading Companies this is most particularly the case, and I cannot better illustrate my meaning than by refering to the Great Western Railway. In this line it will be remembered an issue of "fifth" shares took place some short time since in the proportion of *one*-fifth to each original share—consequently the number of fifths cannot by any possibility exceed that of the original shares. I am well acquainted with a variety of transactions in such small shares, and am satisfied from the immense number bought and sold, there must be at least five times as many as there are actual shares. It is no unusual thing to hear of parties buying and selling 500 at a time, and I have reason to know that this gross system of gambling is carried on to an immense extent. But let me show the result, and which I can prove, not only from my own experience, but that of very many gentlemen of property who have made purchases in the leading lines.

If a man of substance purchases fifty or a hundred of these fifths with an intention of permanently holding them, he is harassed beyond measure in getting them delivered, and for the best of all reasons—the parties from whom they are purchased *do not actually possess them*, but effect the sale merely on the contract note of some individual from whom they may have purchased, and in this manner the transaction passes backwards through a legion of people, not one of whom has even so much as seen the shares. The party from whom the sale first emanated, made a sale without having so much as a single share in his possession, and in this manner men of property are gulled and deceived.

Three months since I purchased one hundred Great Western fifths, and have applied an hundred times to get them and pay my money. The party for whom I purchased is a gentleman of property, but he cannot get the shares from the broker, who in his turn is dependent on a multitude of others. By this plan of wearisome annoyance people are induced to abandon their purchases, and then the probability is, that the *pretended lots of shares* get again forth as food for the jobbing community.

If parties buying shares would insist on immediate delivery, the evil would soon be remedied.

It is not only in Great Western shares that these practices exist, but in all substantial lines. I have been assured to-day by an eminent capitalist, that no less than *one hundred thousand* of London and Southampton new tenth shares have been similarly sold, and yet not one half of these are in existence. The same occurs with London and Birmingham and other lines.

I have the honour to be, Sir,
Your most obedient servant,
A BONA FIDE HOLDER.

Liverpool, March 2, 1841.

MANCHESTER, BOLTON AND BURY RAILWAY.

To the Editor of the Railway Times.

SIR,—"When infamy bears sway, the post of honour is a private station." This, though a good old maxim, would still produce mischief were it not met by another which says that "When bad men conspire, good men ought to unite."

Your exposure of the doings of the Eastern Counties' Directors has benefitted the shareholding public generally. I, as a regular subscriber to your paper, rejoice to find you still firm. I could point out various ways in which the exposure in the *Railway Times* of the Eastern Counties' mismanagement, has benefitted the shareholders of other railways. However, as it appears that your communications are fully as numerous as your paper can accommodate or your time give attention to, I will not trespass at present further than to return thanks to you for the good which I know it has done in respect to a railway in which I am immediately interested—I mean the Manchester and Bury. Nevertheless, it is still far from what it should be. It is stated in your list of Railway shares, under the head of the "Manchester, Bolton and Bury Canal and Railway," that the amount of each share is 100*l.*; now the amount each shareholder is liable for is 125*l.* 9s. 8d.; and for proof of this I beg to refer to the Report of the Directors published in your paper of February. Again, there are 6,201 shares, which at 125*l.* 9s. 8d. gives an amount of 777,936*l.* 3s., which sum has been all spent in the canal and railway conjointly. The canal, however, only cost 100,000*l.* of that sum, and yields half-yearly 5,000*l.* profit. The railway cost the remainder, 677,936*l.* 3s., and until the last six months (which yielded a gross profit of 2,800*l.*, nothing being deducted for two years and seven months wear and tear or depreciation of stock), was carried on at a loss, which loss was made up by the canal, from which source too the small dividend was obtained. After all, the boasted railway surplus is no surplus at all.

For taking from the railway surplus of ..	£8,969 14 6
We must deduct interest of railway debt	6,117 12 11
Leaving only	£2,852 1 7

as a net surplus. Can any person, however, believe that the depreciation in a capital stock of 677,936*l.* will not amount to much more, nay, three times as much from the time, May 29, 1838, that the railway was opened, to December 31, 1840, the period when this surplus is made to appear?

The stated canal surplus is	5,100 19 9
Interest on canal debt	400 0 0
Real surplus, so far as the canal is concerned	4,700 19 9

I am, Sir, yours, respectfully,

A SUBSCRIBER.

Bolton, March 24, 1841.

GREAT NORTH OF ENGLAND RAILWAY.—CROFT BRANCH.

To the Editor of the Railway Times.

SIR,—On perusing your publication of the 20th instant, I observe a paragraph with the above heading, quoted from the *Northern Times*, in which it is stated that a considerable delay and outlay are likely to be occasioned at the bridge which crosses the Tees at Croft, in consequence of "an error in the elevation"—the level of the bridge having been taken upwards of seven feet lower than it ought to have been."

Being a resident in the neighbourhood, and having occasion very frequently to see the work referred to, with those connected therewith on each side, I am enabled from my personal knowledge to say that the writer in the *Northern Times* has either been misinformed, or has wilfully mis-stated the facts, I feel it to be a duty incumbent upon me to state thus publicly, that under all the circumstances of the case, I think the Engineer has used a wise discrimination both in the site and elevation of the bridge, in order to avoid high embankments of bad materials and foundations, expensive crossings of highway and turnpike roads, and costly purchases of land, &c., not comprised under the powers of the Company's Acts of Parliament. The bridge is erected at the right elevation, and there does not appear any intention on the part of the Company, up to this time, to alter either the bridge or the embankment. I am informed that if the Company had adopted the line originally selected by the Engineer for this railway, it would have avoided the excavating referred to, and obtained very superior inclinations.

I am, Sir, yours, &c.

A SUBSCRIBER.

March 22, 1841.

GLASGOW, PAISLEY AND GREENOCK RAILWAY—OPENING.

[From the *Glasgow Constitutional* of Wednesday.]

YESTERDAY, being the day appointed for opening the Railway from Greenock to Paisley to join the Ayr and Glasgow line, the occasion was looked forward to, and observed at Greenock, Paisley, Glasgow, and indeed along the whole line, as one of high jubilee and rejoicing. Early in the morning the hoisting of flags by the vessels in the harbour of Greenock, on the Custom House, the Steeples, and every house top and height where they could be seen, gave indication of the forthcoming event, and that the first start of the Railway carriages, with a gay throng of ladies and gentlemen, was to take place from thence, as had been previously announced. The forenoon being fine, every person seemed more pleased than another, at the gaiety of the scene. At six minutes past eleven a beautiful train of twelve new carriages, decorated with flags, and propelled by two fine engines, the Witch and the Eagle, started from the head-quarters, amidst the exquisite music of the band of the Dragoon Guards, the cheerings of the assembled multitude, and a royal salute of twenty-one guns. With all stoppages and a careful pace, this fine train made its appearance in the vicinity of Glasgow—distance 22 miles—in little more than an hour. This was again a moment of excitement. Two guns belonging to the Royal Artillery, placed near Port Eglinton, commenced firing another salute as they approached, which, with the assistance of the guns placed near the Station House in Tradeston, the waving of flags, and the cheering of the people, rendered the whole scene most imposing.—At Glasgow there was no lack of spirit on the occasion either. Many of the vessels in the harbour had their colours and flags displayed, while the union jack flaunted proudly from the summit of the noble Station House in Tradeston, which, with the sheds and other buildings, was finely decorated with laurel and flowers. Here the excellent band of the 58th regiment was stationed, and continued, at intervals, to cheer the company with its music. During the proceedings the most intense interest was manifested by the surrounding inhabitants in the proceedings, while the windows and house tops were crowded with anxious spectators. On West-street Bridge, adjoining the station, there was a triumphal arch, surmounted by flags, erected. Soon after the arrival of the principal train, another, with the remainder of the company from Greenock, made its appearance, and was received with similar demonstrations as the first. Some time was now taken up in arranging the carriages, and getting accommodation for the great increase for company from this city;—and here we cannot deny ourselves the pleasure of paying a tribute of applause to all connected with the arrangement of the ceremonial, for the calm and business-like manner in which every thing was transacted. There was no fury, no noise, no unseemly bustle, and the company appeared to enjoy a feeling of perfect security, in consequence. Where all did their duty, it would be invidious to mention names. It is just by such caution and anxious care on the part of those connected with the management of railways, that they must win the universal support of the public.—Everything being ready, about half-past one o'clock, a splendid train of nineteen carriages, with two engines and tender, started from this station on their way back to Greenock, amidst the roaring of cannon, and the cheerings of a delighted and excited crowd at the triumphs of steam, and the wonders produced by the skill and ability of man!—Another train of fifteen carriages followed.

The first train went along in fine style till it came to Bishopton. Here a temporary delay took place just as it had got into the tunnel, from the exhaustion of steam; it was not long, however, before it was got up, and on the immense train flew to its destination. It commenced to rain just at starting from the station at Glasgow, and continued during the day, with only a slight intermission, when hopes were speedily formed that it would still clear up, but they were not realized, for by the time we reached Greenock—twenty minutes past three—it came down in a complete thunder shower. This rather damped the enthusiasm, but still at every station the firing of cannon and the loud huzzas of the assembled multitudes, evinced the interest they took in the opening of this new line. In passing along, after we got through the tunnel and were on the pleasant banks of the noble Clyde, a gentleman pointed out the curious effect the steam-boats sailing in the same direction displayed, from the rapidity with which we were gliding through the air. The carriages seemed to be stationary, while the steamboats presented all that the fondest lover of romance ever imagined of the Flying Dutchman—indeed, they seemed to cut the air at the rate of a hundred miles an hour. When the train arrived, the splendid band of the Royal Dragoons was discoursing the most delightful music, and, in a pavillion got up with the greatest taste, and decorated in the chastest manner with evergreens, flags, and devices, were spread tables for the numerous assemblage, and on these tables excellent refreshments, with good champagne to wash them down. It was truly a satisfactory sight to see the comfort and good things provided for so many guests, and we hope every one did justice to the good cheer. After blessing was asked by the Rev. Mr. Smith, the company began to discuss what was before them, and when they had finished, Mr. Kerr, who acted as chairman, rose, and said he would not keep them long in the cold, but in every assembly it was our duty, as loyal subjects, to drink the health of our Queen Victoria, and wish her happiness and a long reign. This was responded to in the most rapturous manner. Mr. Russell then rose, and after stating the obligations of the guests to the managers of the Railway Company, and commending their desire to make all their guests as comfortable as possible, he concluded by giving success to the Greenock Railway Company, which was received with the greatest enthusiasm. The guests who were returning to Glasgow got into the carriages, and in an hour and twenty minutes were safely landed at the station here.—There was a splendid dinner to take place in the Tontine Inn, Greenock, in the evening, and there is no doubt that it would come off in capital style. Mr. Kerr, who is chairman of the Greenock Board of Directors was to preside. We cordially wish success to every additional facility given to our trade and commerce, and congratulate the Directors on the forward state in which their work now seems.

PARIS AND ROUEN RAILWAY.—A royal ordinance modifies as follows the first paragraph of the 21st article of the statutes of the Paris and Rouen Railway Company:—"During the execution of the works, and until the completion of the entire line between Paris and Rouen, the shareholders are to be paid four per cent. on the sums vested by them, and the Company is to apply to that purpose the proceeds of the sums placed out at interest, or the receipts of the different parts of the line which may be successively opened, or any other accessory revenues of the undertaking; or, in case of insufficiency, a portion of the 5,000,000f. comprised within the capital, in addition to the estimated costs of the works."

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

April 1.—Second reading of Bill fixed for Monday, 5th April.

BRISTOL AND EXETER RAILWAY.

March 31.—Committee on Bill postponed from Friday, 2nd April, till Tuesday, 6th April.

April 1.—Order for Committee meeting on Tuesday, 6th April, discharged.

EASTERN COUNTIES' RAILWAY.

April 1.—Committee on Bill appointed by the Committee of Selection:—Sir Adolphus Dalrymple (Brighton), Mr. Alderman Copeland (Stoke-upon-Trent), Mr. Ludlow Bruges (Bath), selected and added to the Committee; Lord Viscount Howick, Mr. James Power, and Mr. Fazakerley, discharged.

GREAT LEINSTER AND MUNSTER RAILWAY—(No. 2).

March 29.—Petition for leave to present a petition for a Bill; referred to the Select Committee on petitions for Private Bills.

April 1.—Petition for leave to present a petition for a Bill reported; leave given; petition presented accordingly; referred to the Select Committee on petitions for Private Bills.

NORTHERN AND EASTERN RAILWAY.

March 29.—Bill reported; Report to lie on the table and to be printed.

The following is the Report:—

Lord Mahon reported from the Committee on the Northern and Eastern Railway Bill, and to whom several petitions against the Bill were referred, that they had examined into the several matters required by the Standing Orders to be proved before Committees on Railway Bills, and had agreed to the following Report:—

That the object of the Bill being merely to make certain deviations in the line of that Railway as at present authorised by Parliament, and to make some provisions with respect to the internal management of the affairs of the Company, it did not appear to the Committee that the matters classed under Numbers from 1 to 11 inclusive, and Numbers 19 and 20, and required to be reported on by the Standing Orders relative to Railway Bills, were applicable in the present instance.

That it appeared to the Committee that there is not any inclined plane on the railway proposed to be worked by an assistant engine.

That there are not any engineering difficulties.

That there is no tunnel.

That in the proposed deviations the gradients and curves are favourable, the steepest inclination being 1 in 330, and the smallest radius of a curve 20 chains.

That the length of the deviations is six miles and a quarter.

That it is intended to pass on a level the highway at Roydon, the highway which leads from Eastwick to Netteswell, and the lane leading to Twyford Mill; but the Committee are of opinion that the restriction in this particular imposed by the Standing Order of the House ought not in this instance to be enforced, for the following reasons, viz.—

1st. That if the road at Roydon were carried under the railway, it would necessarily be below the level of the Stort Navigation, and be always under water.

2dly. That if the road were carried over the railway it would be very inconvenient from its height, and injure the neighbouring property of residents, and shut off all communication between the public road and the River Stort, whereas by crossing on a level, access to the station would be greatly facilitated, while from the immediate neighbourhood of the station no danger need be apprehended, as the spot would be continually watched by the police. The traffic on the road in question is very small. The same reasons apply to the crossing over the highway from Eastwick to Netteswell.

3dly. As to the lane to Twyford Mill, if the lane were carried over the railway it must be raised 30 feet, which would necessarily be very inconvenient; and it appears to the Committee, that by carrying the lane under the railway by an archway of ten feet high, as is proposed by the Company, the necessity for any traffic across the railway on a level will be superseded, except for hay carts during harvest, and thus no danger need be apprehended.

That the expense of the deviations to be incurred up to the time of their completion will amount to 75,000*l.*; but the expense of the original line, in lieu of which the deviations are proposed to be made, would have amounted to 130,000*l.*, thus effecting a saving of 55,000*l.* These estimates appear to be supported by evidence, and to be fully adequate for the purpose.

That the number of assents, dissents and neuters, and the length and amount of property belonging to each class traversed by the railway, distinguishing owners from occupiers, with reference to the parties who may be affected by the proposed deviation, are inserted in the Appendix.

That Mr. George Parker Bidder was the only engineer examined before the Committee in support of the Bill, and none were examined against it.

That the following petitions were referred to the Committee.

A petition from George Frere, Esq. alleging that the said Bill contained clauses which would be injurious to the interests of the petitioner, and inconsistent with certain articles of agreement entered into between the said Company and the said petitioner, and praying for protection. A provision was inserted in the Bill to protect the interests of the petitioner accordingly; but no one appeared in support of the said petition.

A petition from Mary Booth, alleging that it was intended to carry the said railway on an embankment within very few yards from the mansion-house of the petitioner, in the parish of Roydon, which would injure such premises as a residence, and throw back the flood water of the River Stort on the adjoining lands, and praying for protection. A provision was inserted in the Bill to protect the interests of the petitioner; but no one appeared in support of the said petition.

Lastly, the Committee report in favour of the fitness, in an engineering point of view, of the projected deviations; but that there are not any other circumstances which, in the opinion of the Committee, it is desirable the House should be informed of.

Lord Mahon further reported from the Committee, That they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereto.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

March 29.—Bill reported; Report to lie on the table and to be printed.

NORTH MIDLAND RAILWAY.

March 30.—Petition for additional provision; referred to the Select Committee on petitions for Private Bills.

POLLOC AND GOVAN RAILWAY.

April 1.—Printed Breviate of amended Bill laid on the table.

PRESTON AND LONGRIDGE RAILWAY.

March 30.—Message from the Lords that they have agreed to the Bill without amendments.

Mr. Speaker reported the Royal Assent to the Bill.

SOUTH-WESTERN RAILWAY (No. 1.)

March 30.—Message from the Lords that they have agreed to the Bill without amendments.

Mr. Speaker reported the Royal Assent to the Bill.

WEST DURHAM RAILWAY.

April 1.—Printed breviate of amended Bill laid on the table. Third Reading fixed for Monday, 5th April.

WISHAW AND COLTNESS RAILWAY.

March 29.—Bill read a third time and passed.

INSTRUCTIONS TO ENGINE-DRIVERS.

Practical Rules for the Management of a Locomotive Engine; in the Station, on the Road, and in cases of Accident: by CHARLES HUTTON GREGORY, C. E. [London: Weale.]

IN our Notices to Correspondents the week before last, we acknowledged the receipt of this little work, and promised a more detailed notice of its contents. We really, however, do not see what we can add to the opinion then expressed, that "it is a very clever, sensible, and business-like production," and that it ought to be placed in the hands of every engine-driver upon every railway in the kingdom. It is in truth a most valuable manual, the production of a thoroughly practical master of the subject, and when we have said this, we can award no higher praise.

To quote from the general body of such a work would be as uninteresting to general readers as we are satisfied it will be superfluous in the case of the parties concerned, (seeing that the work itself is within the means of the humblest of them,) but we cannot resist giving the following regulations, drawn by the author in reference to the London and Croydon Railway, with which he is professionally connected, and which regulations appear to us to be exceedingly to the purpose:—

"*Regulations for the first Appointment of an Engineman, adopted by the Directors of the London and Croydon Railway.* 1840.

"1. The candidate must not be under 21 years of age, and must produce a certificate of a sound constitution and steady habits.

"2. He must be able to read and write, and, if possible, understand the rudimental principles of mechanics.

"3. It will be a great recommendation if he has served his time to any mechanical art, especially as a fitter of locomotive engines; and, if possible, he should produce testimonials stating his qualifications as such.

"4. If the candidate has been a fitter or a stationary engineman, he must for several months at least, have been a stoker on a locomotive engine, under the direction of a steady and competent engineman; and before his appointment he should produce a testimonial from the Superintendent of Locomotives, or at least from the engineman under whom he has served, stating full confidence in his acquaintance with the construction of an engine and the principles of its management.

"5. If the candidate has not been a fitter or a stationary engineman, he must have served as a stoker for at least two years, and produce the testimonials named in the preceding rules.

"6. If required by the Board of Directors, for greater security, the candidate must undergo an examination from their Engineer, Superintendent of Locomotives, or other competent person, as to his knowledge of an engine and its management, and the general result of this examination must be committed to paper, signed by the examiner, and presented to the Board.

"7. The Engineer or Superintendent of Locomotives of the Railway to which the candidate is desirous of being appointed, shall sign a certificate stating that he has conversed with him, has seen him drive, and has confidence in his steadiness and ability.

"8. Before being allowed to take the entire charge of an engine and train, the candidate must drive for several days under the direction of an experienced engineman, who must be on his engine, and certify to his ability.

"9. All certificates and testimonials must be deposited with the Secretary of the Company, who will restore them to the owner on his leaving their service."

RAILWAY ACCIDENTS AND THE "RAILWAY TIMES."

A WRITER in *Fraser's Magazine* for April has attempted to amuse the readers of that popular periodical by giving what is intended for a burlesque of the mode and matter of the original writing in some of the metropolitan journals, after the manner of the well-known *Rejected Addresses*. The paper is entitled, "Specimen Leaders of a would-be Editor," and has reference to almost every journal of note, whether daily or weekly, including the *Times*, *Chronicle*, *Post*, *Standard*, *Spectator*, *Examiner*, *John Bull*, and the *Railway Times*. We should have deemed it an honour to be quizzed in such goodly company had the thing been cleverly done, but we are bound to say that it is *not*, either as regards the greater number of our contemporaries or ourselves. It is quite manifest indeed that the writer in *Fraser* can never have read one word of what has appeared in this journal on the subject of railway accidents, or he would never have gone upon so entirely false a tack in his "specimen" relative to us. Here it is, a specimen of the "specimen:"—

"FOR THE 'RAILWAY TIMES.'

"In accordance with our promise (see the *Railway Times* for the 31st of April last), we this day fulfil the gratifying duty of enlarging our sheet to three times its former dimensions. The object of this increase, unexampled in the annals of journalism, is to put our readers in possession of full reports of the numerous railway accidents which are so rapidly on the increase, both as to frequency and fatality, in every part of the country.

"We shall endeavour in as few words as need be, to describe a few of the arrangements and *modus operandi* for obtaining the earliest intelligence of what some journals (evidently in the pay of the defunct coach-proprietors,) denominate 'railway calamities,' or 'railway murders.'

"First, we have engaged two hundred gentlemen of the highest abilities, and of known talent in the art of penny-a-lining, amplification, and the profound science of making the most out of nothing. The sphere of usefulness of each of these gentlemen will be a district in no case exceeding twenty miles in length of railway; their duty to consist, each in his particular district, of being constantly on the alert, and of being ever ready to report with as much minuteness, accuracy, and truth, as we permit him, every occurrence on his part of the line that it will be of interest to the public to be made acquainted with.

"Second,—As accidents to passengers are of more frequent occurrence at *termini*, we have placed, in addition to the one per twenty miles special reporter, a gentleman at each end of every railway. Their duty will be, in addition to their record of accidents that have actually occurred, to take an account of all the old women of both sexes who are evidently frightened to death by the steam, the noise, the engineers' whistles, the 'Here you are, ma'am!' of the porters, and going through the tunnels. They are also to make a special note in a book provided for the purpose of all such persons as they may hear thanking Heaven that they have arrived at their journey's end without any disaster.

"Third,—In order to insure the exact degree of accuracy that we require, inspectors to the foregoing have been appointed. Their duty will be, as their name implies, to inspect and to collect the reports of the before-mentioned gentlemen penny-a-liners, and to hand them to the superintendant. The duty of the superintendant is to inspect the inspectors, and generally to keep a weather-eye upon their proceedings, and also those of the gentlemen who are placed under them. The superintendent is not permitted to report any accident, but he may add what are technically known as, 'latest particulars,' 'further accounts.' 'Death of 49 or 60 (as the case may be) of the 250 wounded persons.' Amongst the special instructions which have been issued to the corps are the following:—

"'The reports of all dreadful accidents are to be accompanied by a statement for publication of the names of the nearest undertakers, and of the most eminent surgeons in the vicinity; the former especially, so that the friends of the sufferers who are killed outright, may experience no difficulty in knowing whom to apply to for the funeral arrangements; and that those who have to linger for days, weeks, or months in agony, until death terminates their sufferings, may have the best medical assistance the neighbourhood affords. Where there are two undertakers living equi-distant from the place of the accident, the names of both may be given; and if they are of opposite politics, this may be stated, so that each victim may be buried by a man after his own heart.

"'In all cases in which engineers are killed, it will soothe the public irritation to call them reckless, heartless drunkards, unsafe drivers, or any other term of opprobrium that suggests itself to their imaginations, and that they amply deserved the fate they experienced, namely, being hurled into eternity without a moment's preparation. They may also add, they can positively announce it was in the contemplation of the Directors, who held a special Board to consider the man's conduct, to dismiss him as soon as he had completed the journey which had proved fatal to him. As an additional means of mollifying the public, they ought in such cases to designate the passengers unhappy, unfortunate, and such like.

"'When an engineer's life is spared, it will be more convenient (still with the view of calming public indignation) to assert that the accident occurred from circumstances which no human foresight or ingenuity could prevent or control; and in case a contrary opinion should be expressed by a journal inimical to railway interests, they are to produce, by way of answer, some fact well involved in technical language to prove the accuracy of their first assertion."

MIDLAND COUNTIES' RAILWAY.

LAST week, the receipt on the above line, amounted to the sum of 2048*l.* 0s. 3½d., making an increase on the week previous of 200*l.* From the extensive works now going along the line in this town and neighbourhood, in preparing wharfs and building warehouses, it will not be many months before the entire of the canal traffic will be worked on the rails. Already several of the large carriers have discontinued running their boats, and if the extra expense of keeping open an additional warehouse together with the expense of haulage and tonnage, be taken into the account, the low rate of fares proposed by the Directors, must command at no distant date, the whole of the traffic, from the south to the north of England. Let any person at leisure, visit the Station, and he will find daily, up train and down, between sixty and seventy waggons loaded with every kind of merchandise, and including an article, wool, invariably till lately sent by boat.

The careful and quick manner in which heavy goods are conveyed without the least risk, and no monkey sucking, must further enhance this mode of transit. For some time we certainly had our doubts relative to the success of this great and expensive undertaking, but from daily increasing experience, we have no doubt of its paying the shareholders, judging as we do from the increase of passengers, and merchandise, together with a large concern shortly to be opened in the traffic of coal. Already at the end of Fox's-street, a large and convenient weighing machine has been put down, and in a line to the engine-house, six wharfs are laid out and most of them taken. Near to the old plaister pits, and lower down the line, a large warehouse for corn, &c., will shortly be erected, together with a lime and coal wharf. At Loughborough, Syston, Wigston, Crow Mill, Ullesthorpe, and Rugby, wharfs are making near to the various stations, for the purpose of selling coal, and which will be found of great convenience to the farmers, many of whom now send their teams to Leicester. The shares have advanced from 77 to 80.—*Leicester Herald*, March 20.

CORNWALL AND DEVON RAILWAY.

THE Committee met at Truro on Saturday last, the Earl of Falmouth in the chair, when Capt. Moorsom laid before them the plans and sections of the entire line between Falmouth and Exeter, which have been, ere this, deposited with the county clerks in both counties. The Committee expressed themselves well satisfied with the exertions of Captain Moorsom and the ability he had displayed throughout his arduous undertaking in an unfavourable season of the year. He had so well acquainted himself with the localities, as to be enabled to assure the Committee that whenever the undertaking is commenced, he is so satisfied that he has adopted the best and most practicable line, that no greater deviation, in any instance will be needed than the Parliamentary regulations will fully admit of. The distance from Falmouth to Exeter by statute miles is 99, and the proposed line, extending to Cowley Bridge, two miles or more north of Exeter, will be but 104, a proof that with all the necessary curves, and a new route by St. Austell, no disadvantage of moment arises. By the middle of April, Captain Moorsom will be prepared to lay before the Committee a minute estimate of the expense of the undertaking, and in May or June another county meeting will be convened to receive the Committee's Report, and to decide on ulterior proceedings. The Captain is most favourably impressed as to the remunerative character of the undertaking, and is of opinion that it will have the support of Capitalists. It will bring Falmouth within 13 or 14 hours of London, even by way of Bristol, and the Directors of the Great Western are anxiously desirous of promoting its progress.

Captain Moorsom's survey we are informed, embraces the extension of the line from Truro to Penzance, and with that view the line from Falmouth to Truro has been marked so as to approach Chacewater.—*Falmouth Packet.*

EQUALIZATION OF RAILWAY CHARGES

THE following is the clause proposed by the Hull and Selby Railway Company, to be inserted in the Bill which the York and North Midland Company have laid before Parliament. Since the transfer of the Leeds and Selby line to the York and North Midland Company, that Company has made a difference of 25 per cent. in favour of bale goods delivered to their own steamers at Selby over those transferrred to the Hull and Selby Railway Company. The Committee having heard the statements on both sides, resolved that the clause do stand part of the Bill. Should the Bill, as thus amended, pass into a law, the York and North Midland Company will be compelled to deliver goods for Hull to the Hull and Selby Company at the same charges as are made upon those forwarded by their own vessels, or transferred to any other carriers whatever:—

"And be it enacted, that the charges to be made by the said York and North Midland and Leeds and Selby Railway Companies, or by either of them, for the carriage of any passengers, goods, animals or other matters or things to be conveyed by either of the said Companies, or for the use of any steam or other power or carriage to be supplied by the said Companies, or either of them, shall be at all times charged equally and after the same rate per mile, or per ton per mile, in respect of all passengers and of all goods, animals or carriages, matters or things of a like description propelled or conveyed by a like engine or carriage passing on the same portion of the line only and under the like circumstances, and no reduction or advance in any charge for conveyance by the said Companies, or either of them, or for the use of any locomotive power to be supplied by them, or either of them, shall be made either directly or indirectly in favour of or against any particular Company or person travelling upon or using the same portion of either of the said York and North Midland and Leeds and Selby Railways, and under the like circumstances as aforesaid: Provided always that the said Companies respectively shall and they and each of them shall and they are hereby required to receive and carry in and upon, and by or with all trains whatsoever travelling on or along any portion of either of the said railways all such carriages, passengers, goods, animals, articles, matters and things whatsoever which shall be offered for that purpose by any Company or person whomsoever and without reference or regard to the ulterior destination or mode of conveyance of such carriages, passengers, goods, animals, articles, matters or things: Provided also that nothing herein contained shall extend or be construed to extend to oblige or require the said Companies respectively to carry or convey any goods, animals, matters and things other than passengers, in and by any train used for the conveyance of the mail, or in and by any train expressly devoted to the conveyance of passengers."—*Eastern Counties' Herald.*

PRESENTATION OF PLATE TO MR. GOOCH.—On Monday last the engineers of the Manchester and Leeds Railway invited Mr. Gooch, the head of their department, to dine with them at the Albion Hotel, Manchester, for the purpose of presenting to him an elegant service of plate, as a testimonial to his professional abilities, and a grateful acknowledgment of the kindness and courtesy of his conduct. Some excellent and appropriate speeches were made on the occasion, illustrative of the difficulties, unprecedented in the annals of engineering, which have been encountered in the construction of this railway, and congratulatory to Mr. Gooch on his successful accomplishment of the same.—*Manchester Courier.*

MR. ROSS AND THE "RAILWAY TIMES."

KINGSTON ASSIZES, Friday, April 2.

Before Lord Denman and a Common Jury.

ROSS *v.* THE RAILWAY TIMES.

Mr. THESIGER (with whom was Mr. Gurney) stated that this was an action brought by the plaintiff, a gentleman rather advanced in years, to recover compensation for a very serious injury he had sustained from the defendant, the publisher of the *Railway Times*, through a libel published in that paper. In answer to the declaration the defendant had pleaded, besides the general issue, a justification of the truth of the statements he had published, containing the gravest imputations against the moral character of Mr. Ross. The importance of the result of the present trial to his client, the learned counsel said, rendered him exceedingly anxious as to the issue. Mr. Ross (unfortunately, as it had proved for himself) had been the projector of a scheme, which beyond all doubt would have been, could it have been accomplished, of the greatest benefit to the country—a scheme for establishing a harbour at Trevonthan, near Launceston, and connecting it by railway with the other parts of the kingdom. This scheme, like all others proposed now-a-days was to be carried into effect by means of a joint-stock company, which accordingly was formed under the title of the "Cornwall Harbour, and Victoria Railway Company." After having been actively engaged in the formation of this Company, the plaintiff became the secretary. From circumstances over which neither he nor the Company could have any controul—the scheme was found not to answer. And in 1837, the plaintiff having become embarrassed, and, in consequence of that, arrested—resigned the secretaryship. Some time after, there appeared to have existed disputes between him and the Company—he alleging upwards of 1,000*l.* to be due from them on account of his services. Shortly afterwards there was published in the *Railway Times*, a statement purporting to be a report of what had passed at a meeting of the shareholders and Directors, and this was the libel complained of, as most seriously affecting plaintiff's character. The report in question stated that the "affairs of the Company seemed to have come into a very unsatisfactory condition, principally, it was alleged, through the mismanagement and general misconduct of Mr. Ross, the late secretary:—the principal topic of conversation at this, as at previous meetings, was in reference to Mr. Ross; instances were detailed by various gentlemen present, of transactions on his part to which the terms "frauds" and "forgeries" were unsparingly applied in a manner which it would be unsafe for us to record. If one quarter of the charges brought against Mr. Ross can be substantiated, a grosser case of delinquency or breach of trust never could have occurred in the annals of public companies." And the report further went on to state, some person as having represented Mr. Ross as the "real delinquent, whose cunning representations were well calculated to impose on a body of gentlemen." Now, Mr. Ross has come into Court to afford the defendant an opportunity of substantiating the truth of these statements which, in his plea, the defendant had alleged:—the plaintiff was convinced, that the more his transactions with the Company were looked into the more clearly would his honour be vindicated; and it was only to be regretted that the defendant, or the Company, kept back the books which the plaintiff had left in the possession of the Company; an examination of which he boldly declared would substantiate his innocence, and the production of which he confidently looked for. The learned counsel said, that he should content himself with simply proving the publication of the libel; waiting to see in what way the defendant would attempt to support the justification he had pleaded.

Mr. Boxer, the plaintiff's attorney, was then called, and produced the certificate of proprietorship from Somerset House.

George Serle, a servant of the plaintiff, stated that he had bought a copy of the *Railway Times* containing the libel, 28th May, 1839, at the office in Fleet-street.

Mr. Platt—Is that all your evidence of publication in the county of Surrey?

Mr. Thesiger then called

W. Tucker, a news agent of Wandsworth, who stated that he had received a copy of the *Railway Times* of 25th May, 1839.

Mr. PLATT—That was not the same paper—the same copy—as that produced, and *non constat*, it might be another edition, without the paragraph in question.

His LORDSHIP held the evidence insufficient to establish the publication of the libel in Surrey, which the plaintiff was bound to prove.

Mr. PLATT called on his lordship to direct a nonsuit.

Mr. THESIGER (after a consultation with his colleague, Mr. Gurney) urged that, if the defendant called no witnesses in support of the justification plea, the plaintiff was entitled to a verdict on that plea.

Mr. PLATT—That is to carry costs!

Lord DENMAN expressed some doubt. He sent in a note to his learned colleague in the commission, Mr. Baron Parke—for an opinion on the question. We understood the learned Judge's opinion to be on the plaintiff's side; in which the noble lord was confirmed by a case cited (*as amicus curiæ*) by Mr. Chambers, in which it was laid down that the Judge could not discharge the jury from any material plea, upon which (though the verdict might be for the defendant from the general issue) the plaintiff was entitled to a verdict.

The noble and learned lord said this was decisive, and the trial went on.

The libel having been read,

Mr. THESIGER said, that was his case.

Mr. PLATT then addressed the jury. This was the first time in his professional experience he had known a plaintiff in a libel case conclude without putting a single person in the box who knew him, and could speak of his character as valuable, and susceptible of injury. It was important that such a witness should be produced, that there might be a chance of seeing something about the reputation of the plaintiff who sought damages for a supposed injury to it; and who in the present instance had been lauded by his counsel so as to lead to the idea that he was possessed of a fair fame that had never before been tarnished. Surely his learned friend had drawn too copiously on the instructions of his attorney, and had thrown about his client a degree of embellishment which would too soon be dissipated. The learned counsel proceeded to say, he had really not been indisposed to a nonsuit, for he was sincerely desirous of saving this plaintiff the disgrace of the exposure which he had now, by insisting on the case going on, brought upon himself. And the jury would be somewhat startled to find, (as they would upon the evidence) that this paragon of honour and virtue, had somehow or other (perhaps he would condescend to explain how,) had the misfortune to make serious mistakes in the administration of the finances of the Company, with which as Secretary he was entrusted, as in the payment of tradesmen, to whom he had often mysteriously forgotten to pay sundry cheques, which for certain specific purposes he had received from the Directors;—and more wonderful still, these cheques had found their way to his own banker's account. Moreover, this venerable gentleman had manifested a genius for invention particularly astonishing—if not equally creditable—and for the sake of making a favourable impression on the public in behalf of his favourite scheme of Trevonthan Harbour, had put forth prospectuses, containing seductive reports of imaginary declarations of most distinguished men, members of the House of Commons, and appending their names to resolutions passed at meetings at which they never were present! This was the man who came to claim damages for the loss of character he represented himself as having sustained: why surely it would be a good thing to such a man, that he should lose his character, and have then at least a chance of getting a better one. (A laugh.) In conclusion, the learned counsel observed, that this action had been commenced in 1839—three assizes had since elapsed—and it was not till compelled that the plaintiff tried it.

Sir C. Lemon, M.P., was then called and examined by Mr. Platt. He stated, that he was not present at the meeting of the 5th May, 1836, the proceedings of which were professed to be given in a prospectus (put into his hands) drawn up by the plaintiff, and the printed copy of which he had seen subsequently, representing him (Sir Charles) to have supported a certain resolution approving of the Trevonthan Harbour Company, and he added, that he had never authorised Mr. Ross to affix his name to the resolution.

Cross-examined by Mr. THESIGER.—Had seen Mr. Ross previously, and been shown by him a copy of the resolution. Had then expressed himself favourable to the formation of the proposed harbour. After the prospectus appeared, a meeting of the Members of Parliament whose names without their sanction had been used was held, and Mr. Ross desired to attend and explain the affair. There were present besides himself, Sir H. Hardinge, Sir W. Trelawney, Sir W. Molesworth, Sir E. Codrington, Mr. Pendarves, and Mr. Ramsbottom.

Re-examined by Mr. PLATT.—They expressed their displeasure, and signed a declaration, to be published in the newspapers, stating that though they approved of the plan of the harbour, they did not mean at all to sanction the scheme as an eligible investment of private capital.

Mr. COLE, attorney to the Company, was then called, and stated that the knew the plaintiff had acted as Secretary. In August 1837, was present at a public meeting of the Directors, &c., when Mr. Ross attended, and Mr. Ramsbottom being in the chair, that gentleman asked the plaintiff if he had not received from the Directors a cheque for 232*l.* odd, for the specific purpose of paying a Mr. Barker's account; to this he replied, that he had. Mr. Ramsbottom further asked, if he had not produced subsequently a receipt of Mr. Barker's for the money? The answer was, that he had. Mr. Ramsbottom then inquired if he could say, that he had ever paid Mr. Barker? to which he answered, that he could not. He was asked, how he could explain this, and he said that he had accounted for it: that he had given credit for it in an account with the Company; on which several proprietors declared that this was not till he had been discharged. Afterwards Mr. Ross brought an action to recover an alleged balance of upwards of 1000*l.* from the Company, but was nonsuited. The Company had to pay Mr. Barker the 232*l.*

Mr. THESIGER—How do you know that?

Witness—I paid it myself. (A laugh.) The Company subsequently brought an action against Mr. Ross for the recovery of the 232*l.* and costs, and they succeeded. The report of the meeting (being the libel complained of) was a correct report, very much moderated indeed.

Cross-examined by Mr. Thesiger.—Mr. Ross, in his action against the Company, suggested a reference of all matters in dispute. I refused, unless he brought 200*l.* into court. He did not do so, and consequently the verdict was entered for us in our action. At the trial of his action Mr. Ross's counsel repeatedly asked for his books, and they were not produced. Don't know if that was the cause of Mr. Ross failing. Believes he had not a case at all. When the Company was formed there were various expenses incurred, for clerks, servants, offices, &c., all of which Mr. Ross used to defray. Had no objection to produce the books of Mr. Ross, but had had no notice to produce them.

Mr. Dyson, who succeeded Mr. Ross in the secretaryship of the Company, was then called. Had been in the service of the Company as clerk before his present appointment. It was Mr. Ross, and he alone, whose duty it was to pay the Company's tradespeople. In 1837, at the end of the year, a meeting of Directors was held, in consequence of

Digitized by Google

discoveries made, they authorised me to communicate to Mr. Ross that he must resign.

Mr. THESIGER objected to that.

Witness then stated, in answer to the single question if Mr. Ross ever acted as Secretary after that, that he had not. Witness further was asked if he had, on examination, found irregularities in Mr. Ross's accounts?

Mr. THESIGER objected to that. Let the accounts be produced.

Witness stated he had made a communication to the Directors.

Mr. THESIGER—In writing?

Witness—No; merely a communication verbally at a meeting. Was present at the meeting of which the alleged libel is a report, and could state that the Report was correct. A receipt, purporting to be that of "A. White," for 4*l.* odd, was put into witnesses hands, and he declared the "A. White" to be in Ross's hand writing.

Witness on cross-examination admitted, that before the arbitrator, to whom certain of the disputed matters had been referred, he had been mistaken as to Ross's hand-writing.

Mr. Ponsford was next called, who stated that he had been one of the Directors of the Company, and had signed Ross four cheques for paying tradesmen, which were given to Ross. (Witness identified these as four which were produced—particularly two—one for the 232*l.* on Barker's account, and one for 31*l.* 6*s.* on a Mr. Silvester's account for engraving.)

Cross-examined by Mr. THESIGER—Had 20 shares in the Company as qualification for Directorship; had paid 40*l.* calls on them; had sold them for 5*s.* (Laughter.)

By Lord DENMAN—There are no calls now due on them. I have not yet received the five shillings. (Loud laughter.)

By Mr. THESIGER—Don't know to whom I sold them; it was to a person often in the Company's office. Recollects the prospectus which had been referred to, and was aware that it had been circulated by the Directors, though from the first they had known the distinguished gentlemen whose names were appended to it had never authorised such a use of their names.

A clerk of Mr. Silvester's proved that he had never received the cheque for 31*l.* 6*s.*, but had subsequently received the amount from the Company, never from Mr. Ross.

Mr. Barker, the advertising agent of Birchin-lane, stated that he had never seen the cheque for 232*l.*, that he had given the receipt at the request of Mr. Ross, who said that then the account would be settled; has never received the amount from Mr. Ross, but recovered it on action against the Company.

Mr. Steevens and Mr. Roberts, witnesses necessary to prove two similar charges, were called on their subpœnas, but did not appear.

A clerk to Ladbroke's, with whom plaintiff had banked, identified the two cheques for 232*l.* and 31*l.* 6*s.* as having been transferred to Mr. Ross's account at their house, and placed to his credit.

Sir W. Molesworth, M. P., being shown the prospectus before alluded to, with his name affixed as having proposed a resolution, stated that he had never been at the meeting nor authorised Mr. Ross to use his name.

Mr. THESIGER addressed the jury for the plaintiff in a very energetic manner. The result of this trial, he said, would decide whether the few remaining years of this much injured man should be spent in honour or disgrace. Surely in such an inquiry the defendant has not conducted the case in a fair way. Was it fair to withhold those books of the plaintiff which were in possession of the Company, whose solicitor really defended this case, ("No, no," from Mr. PLATT,)*—who at least showed a strong partisanship for the defendant, and who doubtless knew that the production of this book might clear the plaintiff effectually, from the charges which had been made against him.

Mr. PLATT.—Why did you not subpœna us to produce them then?

Mr. THESIGER.—Oh, does my learned friend think we should subpœna our enemies—for what? to prove our case?—no; but to disprove the defendant by anticipation. Were we bound to do that? was it not his duty to substantiate his case clearly? The learned counsel at considerable length argued that, there was every probability, that the books would show that Mr. Ross, though he might not have paid the specific sums alluded to to the particular parties mentioned, might nevertheless have appropriated them in some way to the use of the Company.

Lord DENMAN, in charging the jury said, their verdict must on the first issue, at all events, be for the defendant, seeing that the publication of the paper complained of had not been proved in Surrey, which was necessary to maintain this action. It was true that a person had been called who had purchased one copy in Surrey—but it was not placed beyond all doubt, that this was identically the same paper as that spoken of in the declaration—it might be one apparently the same—yet might, as regarded the paragraph in question, differ from the original, and therefore, the jury could not on such evidence find the defendant guilty of the publication in Surrey, which the plaintiff had undertaken, and was bound to show. But as to the second plea—alleging various matters in which the defendant offered to prove the plaintiff had been guilty of the charges imputed to him in the libel—he must take their opinion whether the defendant had or had not sustained that plea. The general facts of the case were perfectly clear. It was apparent that in 1836 the Company referred to had been formed to carry out a scheme which (as might have been anticipated) turned out an abortive one for the shareholders; the parties then seemed to have quarrelled among themselves, (as was generally the case in such transactions) and at the meeting in question imputations had been cast upon the plaintiff, undoubtedly of a calumnious nature, which the parties making them had no right to make unless they were true, and which the defendant had no right to publish, supposing they were false. The defendant, therefore, was unquestionably liable in respect of this charge so published by him; provided he could not make out his plea of justification. This it would be for the jury to determine, whether he did or not, upon all the facts of the case. Now he (Lord DENMAN) thought it would be found that the facts lay in a very small compass, though at first sight they might appear somewhat numerous. He would first read the charges made in the defendant's plea, and then notice the evidence respecting each. In the first place, then, the defendant charged that the plaintiff, having been Secretary to the Company, it became his duty to lay out the monies of the Company in a fair and honourable way; but that on a certain day the Directors entrusted him with a money draught, or order, for the amount of 232*l.* for the payment of a debt due from the Company to one Barker; that he had received such sum upon that draught, and appropriated the sum fraudulently to his own use. That was the foremost charge—it stood out distinct from the rest. The evidence ran thus: Mr. Barker was called, and stated that he had never had the cheque produced, that Ross had never paid him the amount, and that he had recovered the sum from the Company by action. Mr. Ponsford, one of the Directors, stated that he gave the cheque to plaintiff to pay Barker; then the clerk of Ladbroke proves that the cheque was placed to Ross's credit at their house. Further, it appeared that at a public meeting of the Directors, &c., plaintiff admitted this to have been the case. Now, nothing had been brought in opposition to this charge, except general declamation about the conduct of the Company in keeping back the books of Ross; and the learned counsel for plaintiff, in an ingenious and able speech, had energetically stated, that if these books were produced, the innocence of Ross would triumphantly be shown. Then if so, why had not the plaintiff compelled, as he might have done, the production of the books? instead of which he had not given notice to the defendant to produce them. The second charge referred to the cheque for 31*l.* 6*s.* due to Mr. Silvester; and this was proved by similar evidence to the other, and only met by a similar answer. The noble and learned lord having adverted to other parts of the evidence referring to minor charges, proceeded to allude to that part of the defendant's case which bore upon the fraudulent representations alleged to have been made by plaintiff in the prospectus he had issued. There could be no doubt that the plaintiff had caused to be circulated a statement that Sir C. Lemon and Sir W. Molesworth, with other Members of Parliament, had supported at a public meeting resolutions favourable to the Company's scheme. These gentlemen undoubtedly believed the plan of the harbour would be beneficial to the public, but did not think it would prove a prosperous private speculation, and therefore wisely abstained from connecting themselves with the proceedings of the Company, and were never at this meeting at all. Now, whether or no, this was a fraud upon the Company—that it was a fraud upon the public there could be no doubt. Nothing could be more dangerous than the use in such a way of distinguished names. Who could doubt their influence in inducing people to embark in schemes in which otherwise they perhaps would never think of joining? The jury would easily imagine what would probably have been the effect on their own minds, if being assured that a scheme of this sort was supported by all the leading men of the county it affected. On this it was for the jury to say whether the defendant had made out his second plea; if so, they must find for him upon it. If, on the other hand, they thought that there was any force in what had been urged about the Company's books being likely to afford completely satisfactory explanation of the transactions, they would find for the plaintiff.

The Jury, without a moment's hesitation, found for the defendant on both issues.

* Mr. Platt said so truly. The Company gave us every assistance in their power to establish the facts on which our justification rested; but the line of defence adopted was entirely our own choice, adopted at our own risk.—ED. R.T.

EDINBURGH AND GLASGOW RAILWAY.—The large span of the viaduct on the Edinburgh and Glasgow Railway that crosses the Union Canal at Tamfourhill, near Falkirk, had the keystone put into it on Thursday last, the 4th instant. This is supposed to be the largest stone arch in Great Britain, of so low an elevation; the length of the span is 130 feet, the height from the springers 24 feet six inches, the height from the ground underneath, 35 feet. The stones of which this great arch are composed were brought from Forfarshire; they are five feet deep in the bed, of a blueish colour, and peculiar strength. The weight of the arch stones alone of this stupendous piece of masonry is upwards of 1,900 tons. Immediately after the keystone was put into its place, which was in the evening, the people employed thereat gave three tremendous cheers. They then paraded, in masonic order, to Falkirk, accompanied by an instrumental band of music, where they received a repast from their employers.

JUMPING FROM A RAILWAY TRAIN.—When the five o'clock down train was proceeding, on Thursday evening, between Duffield and Belper, the hat of a man, dressed in a smock-frock, and riding in the third-class train, blew off; in spite of all that the other passengers could do to prevent it, the man jumped out of the carriage to recover his hat; and, it was thought, was killed on the spot, but such does not appear to be the case. He was able to walk a short distance, and, it is hoped, will recover from the shock, but this is very doubtful. It is a mercy that he was not dashed to atoms, as the train was at that time travelling at the rate of thirty miles an hour. No blame whatever attaches to the Company's servants. Several deaths have occurred from persons thoughtlessly jumping out of railway trains when going at a rapid rate. We *Derby Chronicle.*

LEIGHTON BUZZARD STATION.—No less than eighteen passenger trains stop here daily, and afford accommodation to the town and its vicinity, which formerly was dependent on a pair-horse coach, which in the winter season journeyed to London three times a week, and frequently occupied six hours in doing what the steam-engine effects in less than one-third of the time.—*Oxford Mercury.*

LEEDS AND MANCHESTER RAILWAY.—The Directors of this railway are making astonishing efforts to complete the carrying (goods) arrangements in Manchester. No fewer than twelve of the arches are now occupied by various carriers, and completely fitted up with every convenience to enable them to transmit goods on the line. The Directors have spared no expense, and to avoid the never-ending labour that must have occurred in hoisting up by hand-cranes the immense quantities of goods that are now despatched, a steam-engine has been erected for that purpose [but, instead of raising each single bale or cask, a waggon is loaded beneath, with its full complements of goods, packsheeted, &c., ready to start for its destination in a moment], by which the loaded waggon is raised, and placed in less than a minute on the railway. The passengers going or arriving by the railway will thus be saved from the bustle and annoyance that must have attended the incessant loading and unloading of trucks, and, it may be added, from great danger.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TENDERS FOR LOANS.—NOTICE is hereby given, that pursuant to the resolution of the General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than 300*l.*, on security of Loan Notes under the Common Seal of the Company, which will bear interest at the rate of 5 per cent. per annum, payable half-yearly.

Further particulars may be had on application to the Secretary, at the office, Waterloo-street, Birmingham; to whom also the Tenders, stating the amount offered and the period for which it is proposed to be lent, must be addressed. By order,

WILLIAM BURGESS,
Superintendent and Secretary.

Waterloo-street, Birmingham, March 16, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—CONVEYANCE OF GOODS, &c.—The public are respectfully informed that this Railway is NOW OPEN for the CONVEYANCE OF GOODS AND MERCHANDISE.

For particulars of charge, &c., applications may be made at the Railway Stations, or at the office, Waterloo street, Birmingham. By order,

WILLIAM BURGESS,
Superintendent and Secretary.

Waterloo-street, Birmingham, March 16, 1841.

STEAM TO GRAVESEND.—STAR STEAM-PACKETS will on and after Sunday next, April 4th, leave London Bridge Wharf—Mornings, 10, 12; Afternoons, 4, 5. The Royal Terrace Pier, Gravesend—Mornings, 7, ¼ past 9; Afternoons, 2, 6. Sundays, from London, Mornings, 10, 12; Afternoons, 6. Gravesend, Mornings, 7, Afternoons, 3, 6.

Fares—Fore Cabin 1s. 6d., Saloon 2s. Sundays 2s. each passenger.

The Public are respectfully informed that no charge for wharfage on personal baggage, or for small parcels carried on board by passengers, will in future be demanded.

Gravesend, April 2, 1841.

STATISTICS OF SULPHUR.—THE MINING JOURNAL of this Week contains a valuable Paper on the NATURE AND PROPERTIES OF SULPHUR:—On the uses to which Sulphur is employed—On the refining of Sulphur from earthy mixtures—On the extraction of Sulphur from pyrites—On the nature of the residuum after expelling part of the Sulphur—On the manufacture of Sulphuric Acid—Remarks on the useful employment of the residue of distillation. Besides the above, the Journal contains papers on the resources and application of coal—On the purification of gold—Application of dry and wet copper assaying—Colliery Instruction—On the question of poor rates chargeable on mines in Ireland—On dialling—On the successful application of cast iron subbing at Mardyke Colliery, with cuts—The compass needle for mines, &c.—Improvements in steam boiler furnaces—On the cangellation of rocks—Description of the great coal field, New Brunswick—Explosion of steam boilers, attributed to electricity—Anthracite coal trade of the United States—Improved plan for raising mine pumps, with cuts—Correspondence from the English and foreign mining districts—Proceedings of public companies and scientific bodies—together with the general miscellaneous and scientific intelligence—Prices of metals and materials, mine and railway shares, railway traffic returns, &c. &c.

The Mining Journal Railway and Commercial Gazette, is published, price Sixpence, every Saturday afternoon, at the Office, 37, New Broad-street, City, and may be had at all Booksellers and Newsmen, both in town and country.

WEST LONDON RAILWAY.—NOTICE is hereby given, That the adjourned Special General Meeting of the West London Railway Company, will be held at the offices of the said Company, No. 11, Abchurch-lane, in the City of London, on Monday next, the 5th of April, at 10 o'clock, precisely, "for the purpose of taking into consideration any resolution to be proposed for raising monies under the Company's Acts of Parliament."

WILLIAM MORGAN,
Deputy Chairman.

Offices, 11, Abchurch-lane, April 2, 1841.

NORTH MIDLAND RAILWAY.—ALTERATIONS in the DEPARTURE of SOME of the TRAINS will take place on and after the 6th April, according to the statement subjoined, the other Trains continuing to run as before. In consequence of the opening of the Great North of England Railway, Passengers may proceed by Railway from London to Darlington. Full particulars, and time tables, may be obtained at the offices of the Company, and at the London and Birmingham Station, Euston-square.

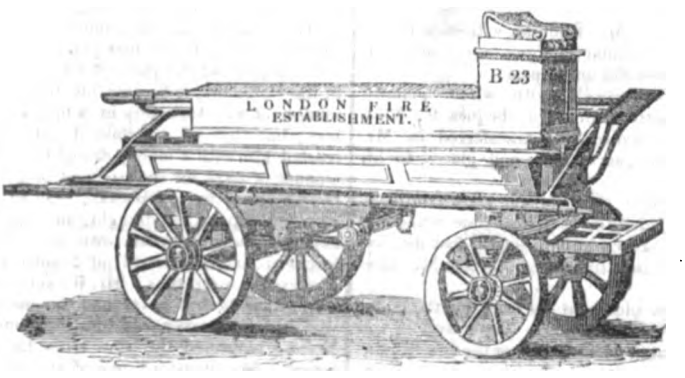
SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 921, (Double price 6d., contains Abstracts of the following recent specifications:—Bedford's, for improvements in machinery employed in manufacturing hosiery goods, or what is commonly called framework knitting; Cooper's, for an improved method of constructing threshing machines and other agricultural implements; Draper's, for improvements in the manufacture of ornamented twist lace and looped fabrics; Hannah's, for an improvement or improvements in fire-escapes: Erard's, for improvements in pianofortes; Dean and Evans', for improvements in mills for reducing grain and other substances to a pulverised state, and in the apparatus for dressing or bolting pulverised substances; Muir and Gibson's, for improvements in cleaning silk and other fibrous substances; Johnston's, for a new method (by means of machinery) of ascertaining the velocity of a space passed through by ships, vessels, carriages, and other means of locomotion; part of which is also applicable to the measurement of time; Hirst's, for improvements in the manufacture of woollen cloth, and cloth made from wool and other materials. Also, illustrated descriptions of Capt. Carpenter's patent sub-marine propellers; the shrapnel patent corkscrew and bottle; Improved method of wood paving; new theory of the universe; Firmamental and other fluids; the construction of Velocipedes; Rational philosophy—Letter 11, on space; Mechanical demonstration of loss of power in the crank; Speculations on the theory of heat; Method of calculating life annuities; On working steam expansively; Superiority of Cornish lifting engines; Manufacture of coke and gas; Scientific Obituary; On the action of light and air and the distribution of the atmosphere over the earth's surface; Enquiry respecting the expansion of steam; Immense expenditure of gunpowder in blasting; Hemp made from hop vine; Chinese weights; Holy Trinity Church clock, Hull, &c. &c.

Published at the Mechanics' Magazine and Patent Agency Office, 166, Fleet-street, and sold by all Booksellers and Newsmen throughout the kingdom.

PATENT AXLES FOR RAILWAY ENGINES AND CARRIAGES. The attention of Railway Engineers is invited to the superior safety of the Railway Axles manufactured by the Patent Shaft and Axle-tree Company, at the Brunswick Iron Works, Wednesbury, Staffordshire.

Great and constant attention is paid to the quality of the Iron used, to its admixture, and the whole process of its preparation, and the Axles have the following peculiar advantages, viz.:—



The Faggot is made in a cylindrical form by the External Bars being rolled of such a section as will fit accurately round a centre bar; thus:—

By the arrangement of the Bars in the Faggot the lamination of the iron becomes cylindrical, and, consequently the axle is equally strong to resist bending or breaking in any direction. The Axle is made of Bars of the full length of the Faggot, and whatever its size may be, it is perfectly welded throughout at one heat; after which it is never heated more than is sufficient to allow of its being drawn under the hammer to the required size. By these means all risk of breakage, through partial welding of Bars or scarified Slabs, is effectually guarded against.

The Finished Axles are separately tested before they leave the Works. They are finished in such a style as leaves less to be done at them in the smithy or lathe, than at those made by any other manufacturers. They have long been exclusively used on some of the great lines of railway, where their reputation is fully maintained, and upwards of 10,000 are now in use on the principal railways of Great Britain, the Continent, and America, without a complaint respecting quality.

To meet the increasing demand the Works have recently been extended, and there are now the means of exceeding any other house in the rapid execution of orders.

MERRYWEATHER, (Successor to Messrs. Hadley, Simkin and Lott,) Patentee and Manufacturer of the Improved Fire Engines, to the Government Offices; to the London Fire Establishment; the Liverpool and Belfast Fire Police; to the London and Birmingham, Great Western, and other Railways; and to various Provincial and Continental Establishments; No. 63, Long Acre, London.

Improved Floating Engines for Docks, &c.; Carriage Engines of Great Power, for Towns, &c.

Compact and Portable Engines for Mansions, Manufactories, Shipping, &c.

Superior Copper Rivetted Leather-hose, Branch-pipes, Buckets, Portable Cisterns, &c., with all the latest improvements.

Every Description of Fire-Extinguishing, or Hydraulic Machinery Supplied or Repaired on Reasonable Terms at the Shortest Notice.

*** Manufacturer of the Portable Fire Escape Ladders adopted by the Metropolitan and other Parishes, and by the City Police.

DUBLIN AND KINGSTOWN RAILWAY.—The Directors' Report will be found in another column. The following resolutions were passed:—

Moved by James Ferrier, Esq.; seconded by J. M. Chaytor, Esq.

Resolved—That the Reports and statement of accounts now read be received and entered on the minutes, and that the Directors have the same printed and circulated as usual.

Moved by John Vance, Esq.; seconded by George M'Bride, Esq.

Resolved—That in pursuance of the 83rd section of the Company's Act, the Directors be hereby authorised to invest the sum of 1,259*l.* 19*s.* 9*d.*, being one-eighth part of the clear profits for the past year, in Government 3½ per cent. stock, to be added to the reserved fund.

Moved by Alexander Boyle, Esq.; seconded by George Symes, Esq.

Resolved—That on the recommendation of the Directors, a dividend of 4*l.* per share of the capital stock of the Company be paid to the proprietors, on and after the 1st of May next; and that the transfer books be closed from the 15th of April until that day.

Moved by William Haughton, Esq.; seconded by H. Lanauze, Esq.

Resolved—That Thomas Pim, George Roe, and George Pim, Esqs. who go out of office by rotation, be hereby re-elected Directors of this Company.

Moved by James Ferrier, Esq.; seconded by John Vance, Esq.

Resolved—That the attention of the Directors be particularly requested to an extension of the railway to Dalkey.

(Signed) J. KINCAID, Chairman.

Mr. Kincaid having left the chair, Thomas M. Gresham, Esq. was called thereto.

Moved by George M'Bride, Esq.; seconded by John R. Hime, Esq.

Resolved—That the thanks of the meeting be given to Mr. Kincaid for his courteous and dignified conduct in the chair.

NOTE.—The dividend of 4*l.* per share, declared as above, will be paid by the Treasurer on and after Saturday, 1st of May next, at the Railway Office, 48, Westland-row, in the city of Dublin, and non-resident proprietors may have their dividends remitted by sending written directions to James Pim, Jun., the Treasurer of the Company.

BRISTOL AND GLOUCESTER RAILWAY—EXTENSION LINE.—At a General Meeting of the Proprietors of this Undertaking, held at the White Lion Inn, Bristol, on Tuesday, the 30th of March, 1841, pursuant to public advertisement,

GEORGE JONES, Esq., in the Chair.

The Secretary read the Report of the Directors, and their Audited Account; and the Seal of the Company having been affixed to the Registry of the Shares, by direction and authority of the Meeting, the following resolutions were unanimously passed, viz.:—

1. That the Report of the Directors, together with their Audited Account, as now read to this meeting, be adopted, printed, and circulated among the Proprietors.

2. It appearing that Messrs. William Ford Mogg, Richard Ricketts, Thomas Rankin, Christopher Shapland, and Robert Leonard, retire from the office of Directors, under the provisions of the Act of Parliament, obtained for the construction of this railway.—Resolved, that the said Wm. Ford Mogg, Richard Ricketts, Thomas Rankin, Christopher Shapland, and Robert Leonard, be and they are hereby re-elected Directors of this undertaking.

3. That the thanks of this meeting be given to the Directors for their services to this Company.

GEORGE JONES, Chairman.

The Chairman having left the Chair, the thanks of the meeting were voted to him for his able conduct therein.

PARIS AND ROUEN RAILWAY.—By the Seventh Article of the Statutes of the Company, the Fourth payment of one-tenth of the Capital becomes due and payable on the 12th April, 1841. The Shareholders are therefore requested to pay the Call of Two Pounds per Share on the Shares held by them respectively, on or before that day, to either of the undernamed Bankers, viz.—

London—Messrs. Stone, Martins, and Stones.
Liverpool—Messrs. Moss and Co.
Paris—Messrs. Jacques, Laffitte, and Co.; Messrs. Charles Laffitte, Blount, and Co.

By order of the Board of Directors,
ADOLPHE THIBAUDEAU, Sec.

N.B. Interest at the rate of 5 per cent. will be charged on all Calls not paid on the above day.

Office of the Company, Rue Basse du Rempart, 52.
Paris, 31st March, 1841.

ANTI-DRY ROT COMPANY, KYAN'S PATENT, Office 2, Lime-street Square.—The Public is respectfully informed that Timber of every description is prepared by the process at the Company's stations, at the South Dock, West India Dock, and at the City Basin, City Road. The use of the Hydraulic Press ensures the greatest expedition in the preparation, and the most perfect saturation of the wood.

There are the greatest facilities for landing and shipping at both stations, and the charges on the same are at a remarkable low rate.

For terms and further particulars apply at the Office of the Company,

TASWELL THOMPSON, Secretary.

FARES—QUICK TRAIN.
Close Carriages, 11s. Open do. 8s. 6d.

MIXED TRAIN.
Close Carriages, 10s. Open do. 7s. 6d.

The Doors will be closed 5 Minutes before the Time of starting.

Seven Coaches run daily between Carlisle and Lancaster (passing through Penrith, which is the direct route for the Lakes)—for Liverpool, Manchester, Birmingham, and London. Steam Boats ply regularly between Carlisle and Liverpool; also between Carlisle and Belfast. Coaches daily for Maryport, Whitehaven, &c.

Passengers leaving Newcastle by the Twelve o'Clock Trains will reach Carlisle in time for the Port Patrick Mail for Ireland, by way of Dumfries, &c.; and also for the Mails to Glasgow and Edinburgh, where they arrive at a quarter past One next morning. And Passengers leaving Edinburgh or Glasgow by the Mail at night for Carlisle will arrive there in time for the ten o'clock Train, and reach Newcastle at one o'clock p.m.; thus saving in either case nearly a day, as compared with travelling by the ordinary route.

Places may be secured by the morning and evening Mails, and by the North Briton coach for Lancaster, on application at the Railway Station, Newcastle.

By order,
JOHN ADAMSON, Clerk to the Company.
Newcastle-upon-Tyne, 24th March, 1841.

TO GENTLEMEN OF FIRST-RATE ENERGY AND RESPECTABILITY.—An opportunity presents itself for an individual to undertake the Secretaryship and Agency for introducing and conducting two patented inventions of great national importance. The engagement will be permanent, and the situation being one of great confidence and magnitude, none need apply unless they can furnish testimonials of their capabilities and respectability, and also give security.

Applications giving name, address, testimonials and references, to be sent under cover to

Mr. STEVENS, Solicitor,
Tamworth, Staffordshire.

TO RAILWAY COMPANIES.—Public Security, Efficiency, and Economy in FENCE for RAILWAYS.—J. PORTER begs to state, that he has within the last month introduced a new description of iron fence for railways, so strong as to resist the heaviest cattle, and prevent the possibility of sheep getting through. It is bold in appearance, and will bear the weight of men passing over or jumping upon it, without injury.

This Fence will be sound and good 50 years hence, and the cost of post and rail fence to last 10 years would purchase it.

Lighter Fence of the same description, also strained Wire Fence of the very best kind, fixed in a superior manner, by experienced workmen, at any part of the kingdom, at the lowest possible price.

This Fence is also suitable for the use of private gentlemen, Iron Bedsteads for families, public institutions and exportation.

82, Upper Thames-street, and the Grove Iron and Wire Fence Manufactory, Southwark.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.....	70*s.*
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.....	80*s.*
Feathers, Millinery, Furniture, Hats, and similar Articles	100*s.*

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, R.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two-horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act to Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

VAN BUTCHELL ON FISTULA, &c.

Fourth edition, just published, in 8vo., cloth boards, price 7*s.* 6*d.*, enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

Published by H. Renshaw, No. 356, Strand; sold also by the author, No. 16, Percy-street, Bedford-square.

"This volume presents to us a number of illustrations of his singular success under circumstances that would have induced despair in any professor of less mastery, or less accustomed to accomplish cures where cures seem impossible. The statements here made are most convincing, and place beyond doubt the superiority of the treatment to which he refers."—*Court Journal.*

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 171. Vol. IV.—No. 15.] SATURDAY, APRIL 10, 1841. [Price, 6d.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS.—Contract, No. 4.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before Twelve o'Clock, on Monday, the 26th April next, Tenders for the excavation and formation of the earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying the permanent rails, of that portion of the railway commencing from a point in field No. 33, in the parish of Charfield, and terminating at a point near the road, marked No. 15, in the parish of Berkeley, being a distance of about 2 miles 16 chains.

Contract No. 8.—Also Tenders for the execution of similar works on that portion of the line commencing from a brook, the boundary between the parishes of Frocester and Leonard Stanley, and terminating at or near the junction with the Cheltenham and Great Western Union Railway, in field No. 8, in the parish of Moreton Valence, being a distance of about 2 miles and 17 chains.

Drawings and Specifications of the above works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Friday next the 2nd April.

The Directors will not consider themselves bound to accept the lowest Tender; and they expect the several parties to attend at the Office on the 26th of April, at One o'clock.

ROBERT FLETCHER, Secretary.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200., upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of six per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1844.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Hallifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 200, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising thereirom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, 1m Pulteney's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Offices, 30, Broad-street, Bristol, 4th Feb., 1841

OPENING OF THE GREAT NORTH OF ENGLAND RAILWAY.—The Public are informed that the Great North of England Railway will be opened from York to Darlington, for Public Traffic, on Wednesday, the 31st March, 1841.

The Trains will depart at the following hours:—

FROM DARLINGTON TO YORK.

5 45 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, and Manchester.
8 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, Manchester, Leeds, Selby and Hull.
12 30 p. m.—taking Passengers for Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
3 p. m.—(Mail,) taking Passengers for London, Derby, Leicester, Birmingham, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—taking Passengers to York.

FROM YORK TO DARLINGTON.

6 a. m.—bringing Passengers from York.
7 20 a. m.—(Mail,) bringing Passengers from London, Leicester, Derby, and Sheffield.
9 35 a. m —bringing Passengers from Manchester, Leeds, Selby, and Hull.
2 30 p. m.—bringing Passengers from Birmingham, Nottingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—bringing Passengers from London, Birmingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.

On Sundays, only the Mail Trains will run.

Until further notice, Passengers will only be booked as far as York, where the carriages are changed.

Until the 6th of April, 1841, the London Mail Trains will leave York at 8 15 a. m., instead of the hours stated in the Time Table.

FARES BETWEEN YORK AND DARLINGTON.

PASSENGERS.		CARRIAGES.		HORSES.		
1st Class	2d Class.	On 2 Wheels.	On 4 Wheels.	One.	Two.	Three.
12s.	9s.	20s.	30s.	20s.	30s.	36s.

Parties riding in their own Carriages, and Children under 7 years of age, at lower rates.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the trains; and, to prevent disappointment, previous notice should be given to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their name and address fully marked thereon, and to satisfy themselves that it is deposited on the Carriages.

MANCHESTER AND LEEDS RAILWAY. WANTED, a FOREMAN in the Locomotive Department. He must be a person who has had extensive experience in the construction and repairs of locomotive engines, and well qualified to take the management of workmen.

Satisfactory testimonials as to character and ability will be required.

Wages—from £2 10s. to £3 per week.

Applications in writing will be received at the Engineer's office, Palatine-buildings, Hunt's-bank, Manchester, until Monday, the 12th April next.

ANTI-DRY ROT COMPANY, KYAN'S PATENT, Office 2, Lime-street Square.—The Public is respectfully informed that Timber of every description is prepared by the process at the Company's stations, at the South Dock, West India Dock, and at the City Basin, City Road. The use of the Hydraulic Press ensures the greatest expedition in the preparation, and the most perfect saturation of the wood.

There are the greatest facilities for landing and shipping at both stations, and the charges on the same are at a remarkable low rate.

For terms and further particulars apply at the Office of the Company.

TASWELL THOMPSON, Secretary.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,

THOMAS WOOD, Secretary.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater & Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

ROSS-SHIRE, SCOTLAND. FIR WOOD FOR SALE.—There is for Sale, at Cambuscurrie, near Tain, about 150 Acres of Fir Wood, of superior Quality; also at Tarlogie, adjoining the above Wood of Cambuscurrie, about 156 Acres.

The timber is principally of large growth, a considerable number of the trees measuring from 20 to 28 solid feet, and admirably adapted for Railway Sleepers.

These Woods lie within a mile and a half of Tain or Dornoch Frith; and there is a Saw Mill at Morangie, close to the shore, where a purchaser can be accommodated.

These Woods will be sold in whole, or in lots of from 40 to 50 acres.

For further particulars apply to the proprietor, Hugh Ross, Esq., of Cromarty, Cairossie, by Tain; to Messrs. Sang and Adam, W.S., Edinburgh; or to Mr. Gair, Bank Agent, Tain; by either of whom offers will be received between this and the 1st May next.

Tain, 3rd March, 1841.

LEIPSIC AND DRESDEN RAILWAY COMPANY. The Shareholders resident in England are informed that the half-yearly dividend on the Capital Stock of the Company, due the 1st April, may be received on and after that day at the exchange of 3s. per dollar. The coupons in numerical order must be left one day for examination.

WILLIAM LEAF CROFTS & Co.
Bankers to the Company.

1, Sambrook-court, Basinghall-street,
London, 31st March, 1841.

NORTH MIDLAND RAILWAY.—ALTERATION OF TRAINS.—In consequence of the recent opening of the Great North of England Railway, Passengers may now be conveyed by Railway the whole distance between London and Darlington.

Full particulars and time tables may be obtained at the Offices of the Company, the London and Birmingham Station, Euston Square, and the principal Coach Offices.

By order,

H. PATTESON, Secretary.

Offices, Warnford-court, Throgmorton-street.

WEST LONDON (LATE BIRMINGHAM, BRISTOL, AND THAMES JUNCTION) RAILWAY COMPANY—SPECIAL MEETING.

An Adjourned Special Meeting of the Proprietors of this Company was held on Monday, at the Company's Offices, Abchurch-lane, City; William Morgan, Esq., in the chair.

The circumstances under which the adjournment took place were described in the *Railway Times* of last week. On the present occasion, although the proceedings were conducted with more regularity and moderation than at the previous meeting, they were still very desultory and tedious. The material points may, therefore, be advantageously compressed into a very small compass.

The Chairman, in opening the business of the day, adverted to various proposals which had been put forth with respect to the undertaking. Some had recommended the total abandonment of the scheme—a measure which he contended could not be carried into effect if but one proprietor dissented from it, and which would, moreover, be injurious to themselves, and a fraud upon their creditors and the public. Others had advised that they should wait till some other parties came forward to assist them, but this would be a vain expectation, unless they first helped themselves. It had been said at the last meeting, that further time for consideration was necessary, and this, when committee after committee had investigated the subject, and general meeting after general meeting had been held. They had deliberated long enough, and now was the time for action. They were pressed on all sides by their creditors, and although the principal of them had liberally consented to postpone their claims for a twelvemonth, it was only on condition that the works should immediately be proceeded with, and there was therefore no time to be lost. The want of money had involved the Company in law suits, and their works were crumbling into ruins. After they had obtained by their amended Act the large powers which were necessary to carry out the undertaking in a proper manner, the Directors had hoped that no more time would be spent in deliberation, but that a vigorous effort would be made to complete the scheme. With that view they had advocated the proposals for the extensions of the line, as calculated to be in the highest degree beneficial to the proprietors; but as these plans had not met with the support which they deserved, they had been left to another Company, and this Company were now compelled to retreat to their former position. The learned gentleman then entered into an examination of the plan proposed by Mr. White for stopping at the Uxbridge road, which he thought was objectionable on many accounts, among others, because it would not contribute in any essential degree to the accommodation of the public, and from the shortness of the line, would involve a great expenditure in working. He then urged the necessity there existed for completing the line in justice to the landowners, whose property had been, as it were, forced from them; and to the public, in consideration of whose interests the legislature had sanctioned the project. He next alluded to the liberal spirit in which the Water-works Companies and the Trustees of the Metropolitan Roads had met the Company, on the understanding that the line was to be completed as soon as possible. With regard to the proposed extensions of the line, another Company was, he said, ready to proceed with them provided this Company would complete the original undertaking, but otherwise it would be useless for the Extension Company to go on, and in their case delays would be especially dangerous, if not fatal, seeing that buildings were rising about them in every direction. With respect to the probable traffic on the line, he saw it announced that the iron steam-boats plying on the Thames were about to proceed higher up the river than the point at which this line would join it, and in connexion with this arrangement, that a pier was to be erected at Chelsea. If a pier were in like manner erected near Battersea-bridge in connection with this line, there could not fail to be a very large amount of passenger traffic upon the railway. (Hear, hear). With regard to the money to be raised, it had been said that the plan proposed by the Directors would swamp the concern, whereas in reality they were already swamped, and had no chance of saving themselves but by the adoption of some such scheme as was now recommended. That scheme to be beneficial must be immediately carried into effect. (Hear, hear). He should be sorry to injure any of the original proprietors, but if they did not choose to take up their quota of the new shares, it was, if not their own fault, certainly not the fault of the Directors. He hoped that on the present occasion they would act with unanimity and cordiality. The question was, whether they were to put confidence in an engineer whom they had chosen, and whom all the world knew to be capable of carrying into effect works of a hundred-fold greater magnitude than this, or whether they should pin their faith upon parties who were comparatively unknown to them. Their engineer was a gentleman whose talents were universally admitted, and there was no doubt they could get a contractor of character and responsibility to carry into effect his views. He trusted that they would act with vigour, and he had no doubt that in that case they would soon see the line, instead of being as at present an eyesore and a nuisance to the district, become a benefit to the neighbourhood, and a source of emolument to the proprietors. (Hear, hear).

Dr. Carpue at some length described the state of the works from personal inspection, and enlarged upon the benefits which their execution thus far had conferred upon the neighbourhood of Shepherd's Bush, by effecting a more perfect drainage. He then alluded to the increasing value of land on the line, and spoke in high terms of the Pneumatic Railway system, as recently in operation upon a portion of the line.

Mr. White then entered at great length into a detail of the various schemes which from time to time he has brought before the proprietors, and handed in a variety of papers in which these schemes were more minutely developed. One of these schemes had for its object the extension of the Kensington Canal to the north of the Uxbridge road. The honourable proprietor then adverted to the large traffic in coal which would come upon the line if his latest scheme—namely, of a single line of rails to the Uxbridge road, to be worked by horse traction—were carried out. He strongly deprecated the issue of any shares at a discount, and recommended instead, that the sum of 20,000*l.* should be raised by mortgage, such amount to bear interest at 5 per cent., with a priority before other liabilities. Should it be found impossible to raise in this way the sum necessary for carrying out his scheme—which he estimated at 10,000*l.*—the money to be procured by the sale of the Company's land, wharfs, &c., and from other resources. He entered into a long history of the origin of the line, denounced the Great Western Company as hostile to them, and concluded by referring to a proposal which he said had been made by Messrs. Samuda, the patentees of the Pneumatic scheme, to complete the line on their principle for 20,000*l.*, and carry goods on it at a rate little exceeding one farthing per ton per mile.

Sir John Scott Lillie, after referring to the small bearing which the greater part of Mr. White's address had upon the business before the meeting, said he felt compelled to support the plan brought forward by the Directors for raising the further capital, as no better scheme had been devised by Mr. White or anybody else. It was necessary to come to some decision that day, and however much he might regret the hardship which would be inflicted upon such of the original proprietors as could not take up the new shares, it was the less of two evils and must be submitted to. It was much easier to find fault with a plan proposed than to devise a better, and until some better plan than that brought forward at the last meeting were discovered, he must support such plan. The gallant proprietor then entered into explanations as to the cause of his own retirement from the Direction, and alluded to the necessity which existed for a railway station at Chelsea. He next adverted to the necessity of taking prompt steps, so that the summer weather might not be suffered to pass unimproved, and concluded by proposing the following resolutions, which are in substance the same as those brought forward by Mr. Duncan last week:—

That a further sum of 40,000*l.*, part of the 60,000*l.* which the Company are authorised by the Act passed in the last session of Parliament to raise in shares, be raised in 20,000 new shares of 20*l.* each, which this meeting do create and direct to be issued at the price of 2*l.* per share, such shares to be on an equal footing as to dividends and other advantages with the present 20*l.* shares of the Company. That the calls on such shares are now made and fixed, and declared to be

£0 10 per share payable on the allotment of the shares, and the time and place of payment to be fixed by circular letter from the Directors.
0 10 per share payable on the 5th of August, 1841.
0 10 ditto 5th of November, 1841.
0 10 ditto 6th of February, 1842.

£2 0 per share.

That the registered proprietors of the present shares of the Company shall have the option of taking such shares at the price lastly mentioned, in rateable proportion to the shares they now hold; and in case the whole number of new shares be not so taken, and the deposit paid thereon, that the remainder of such shares be thereupon offered to such registered proprietors as may be desirous to take more than their rateable proportion at the same price; and should any then remain, that the remainder be offered to the public, the Directors being hereby authorized to sell the same at such prices and at such times as they shall think fit.

That the Directors do fix by circular letter or by advertisement in two London newspapers the time of payment of the first deposit, and also the place of payment for the same, and for the said further instalments, amounting in all to 2*l.* per share; and the Directors are also authorized to issue such certificates or scrip for the shares to be issued as aforesaid as they shall be advised.

That the Directors are also hereby further authorized to make such provisions and arrangements as they may be advised for the purpose of securing the application of the 40,000*l.* so to be raised as aforesaid exclusively to the completion of a single line of railway between the Paddington and Kensington canals, and the payment of small debts, the latter not to exceed 1,000*l.*

That in the event of any instalments on the certificates, or scrip, or shares issued not being paid on the days or times hereinbefore mentioned, then all such certificates, scrip, or shares on which such instalments shall be in arrear for fourteen days may be absolutely forfeited by the Directors, and after the forfeiture thereof the Directors shall have the power of selling such forfeited shares at such price or prices as they shall think fit.

Mr. H. Luard would second the resolutions on the distinct understanding that 32,000*l.* of the 40,000*l.* should be exclusively appropriated to the completion of the works, and the remaining 8,000*l.* to the purposes previously specified. He thought it was altogether premature to take into consideration Mr. White's plans for the working of the railway.

Mr. Sheppard, M.P. thought they ought to stop in the first instance at the Hammersmith-road. He understood that the line up to that point could be completed for 20,000*l.*, and he should therefore move as an amendment that 20,000*l.* be raised by the issue of shares at 5*l.* each, the nominal value being 20*l.*

Mr. White seconded the amendment.

Mr. Garland wished that a letter which he had addressed to the Directors should be received.

The Secretary (John Thompson, Esq.) accordingly read the letter. It recommended in substance that 60,000*l.* should be raised by the creation of 3,750 shares of 20*l.* per share, to be issued at 16*l.*, allowing interest at the rate of 5*l.* per cent. per annum upon the instalments as they were paid up.

Mr. Duncan (Solicitor) said, the two propositions before the meeting were, to a certain extent, the same, inasmuch as by one of them it was proposed to raise 40,000*l.* by the issue of shares at 2*l.* each, and by the other 20,000*l.* by the issue of 5*l.* shares. The principle was common to both plans, that the shares must be issued at a large discount. The plan of the Directors guaranteed on the authority of the Engineer, that for the 40,000*l.* one line of rails should be completed from the Paddington to the Kensington Canals; thus bringing into immediate operation two of the great sources of profit originally contemplated. With

respect to the other plan, it must be well known to Mr. White, who had seconded the amendment, that it could not be carried into effect for less than 30,000*l.*, and at the point where it was proposed to stop the Company had no land, so that they would be compelled to purchase room for a station at a high price, which would doubtless bring the whole cost up to nearly 40,000*l.* the sum for which it was now proposed to complete one line of rails to the Kensington Canal. The whole amount now proposed to be raised would, therefore, under Mr. Sheppard's plan, be expended without producing any benefit. As to the issue of 5*l.* shares, he (Mr. Duncan) could have wished that no shares should be issued at less than 20*l.*, but it would be useless to fix a price at which none of the proprietors would take them. (Hear, hear.) In the position in which the Company were placed, the shares must be issued below the market price, and, although this arrangement bore hard upon the poorer proprietors, who could not afford to take up their due proportion of the new shares, it was an evil which could not be avoided. As for Mr. White's proposal to raise money by bonds it was wholly impracticable, for it had already been tried to no purpose. Capitalists out of doors would not help them, and therefore they must help themselves. They were all agreed as to the necessity of carrying out the line to a profitable point—which point, he contended, could not be short of the Kensington Canal, and all were agreed that the money now to be raised should be exclusively appropriated to that purpose. All agreed, too, that the money must be raised among the proprietors themselves, so that the only real question was the price. He was quite satisfied that it would be wholly useless to issue new shares at 5*l.*, or 4*l.*, or even 3*l.*, but he had a confident belief that at 2*l.* they would effect their object. It might be a grievance to the poorer shareholders, but it was a grievance that could not be avoided, and every means should be used to persuade the original proprietors to take up, for their own sake, the new stock. Even to those who could not subscribe for the new shares, the old shares might become more profitable if the line were completed, whereas as matters now stood the old shares were totally valueless. (Hear, hear, hear.)

Mr. White thought it essential to know how the line was to be worked.

Mr. Duncan could only repeat what he had stated on a previous occasion, namely, that on this point no determination had yet been come to by the Directors. The line must be completed before it could be worked. He thought it more than possible, he thought it probable, that when the undertaking was finished they might be able to induce the Great Western Company to work it upon terms that would secure the proprietors a satisfactory interest. At present, however, they were not in a position to enter into any arrangement of the kind. He believed that the Great Western Company had every wish to extinguish them—("Hear, hear," from Mr. White)—but he knew of no means more likely to accomplish such a purpose than either to adjourn these meetings from time to time, or to reject the proposition now brought forward. (Hear, hear, hear.)

Mr. White inquired what plan of working would be adopted, and what would be the gauge?

Mr. Bidder, C. E., could only repeat that the plan of working had not been decided upon. The gauge would be that of the Great Western line, which it was believed could be made applicable to the traffic of the London and Birmingham Railway. It would be premature to settle upon any mode of working till it was decided whether or not the Extensions should be carried out, because upon the decision of that point would depend in a great measure what scheme should be adopted. Unless they crossed the Hammersmith Road, and carried out the line to the Kensington Canal, the extension of the line would be indefinitely postponed.

Mr. Garland inquired why, as they were raising money to go to the Great Western Railway, they should not raise enough to go to the Birmingham.

Mr. Duncan said, the reason why they did not do so, was because they did not wish to issue so many shares at a discount.

Mr. Macfarlane thought the plan of the Directors defective, inasmuch as they did not carry out the scheme to a connection with the London and Birmingham line. The compliance of himself and of those of the Manchester proprietors whom he had the honour to represent, was altogether compulsory, and they were induced thereto principally because the land would be lost if the Company did not carry out their works. They had consented to it, moreover, on the guarantee that of the 40,000*l.* now proposed to be raised, 32,000*l.* was to be appropriated exclusively to the construction of the works.

Mr. Sheppard said, the explanations which had been given had greatly altered his sentiments. On the full assurance that the 32,000*l.* would be appropriated exclusively to the construction of the works, he would withdraw his amendment. (Hear, hear, hear). If any plan could be devised for enabling such of the shareholders as from want of means were unable to take up the new shares, subsequently to place themselves in a favourable position, he should be happy to see it adopted.

Mr. H. Luard, in conformity with the suggestion thus thrown out, would recommend that after raising the 40,000*l.* now required, the amount of 10,000*l.* in shares should be set apart to be taken up in the course of six or three months by the old proprietors exclusively, who had not at first taken up new shares, at the price of 3*l.* per share.

Mr. Duncan entered at some length into various objections to this proposal. He thought it would be a very difficult and a very invidious task to say that a certain number of shareholders should be excused on the ground of poverty, and, moreover, many might plead the excuse of poverty, when nothing but obstinacy or an unwillingness to encounter any risk induced them to hold back. Besides, he very much doubted the legality of the plan proposed.

After a great deal of discussion on this point, it was deemed desirable that it should be left to the discretion of the Directors, it being understood that the claims of those who were unable to take up the shares now to be issued should be treated with the utmost liberality on the occasion of any fresh issue of stock.

In answer to a question by Mr. Latham, it was stated that although every original proprietor would be entitled to his quota of the new shares, whether he had paid up the full amount of his calls on the old shares or not, he would not be allowed to transfer his scrip until these calls were fully paid up.

Mr. Gunter (a Director) strongly insisted upon the necessity of having the hands of the Directors tied up so that they might not be able to appropriate any portion of the 32,000*l.* to any other purpose than the completion of the works.

In consequence of the conversation to which this gave rise the following resolution was added, with the consent of the mover and seconder, to those previously given.

That this meeting expressly forbids the application of the said sum of 32,000*l.* to any other purpose than the completion of the said single line of railway between the Paddington and Kensington canals, and to the payment of such small debts as aforesaid to an extent not exceeding 1,000*l.*

It was explained that neither the Directors nor solicitors would receive any portion of the 32,000*l.*

Sir John Scott Lillie expressed his utmost confidence in the capabilities of the line, provided full justice were done to it. It was a sufficient proof of its merits to know, that it was the line originally selected by the Great Western Company.

The resolutions as above given were then carried without opposition.

A conversation followed upon a proposal of Mr. Macfarlane, that Eynham farm should be sold by public auction. It was explained, that the whole cost of this property had been about 16,000*l.*, of which 4,000*l.* was to be paid to Mr. Marriot, and 12,000*l.* to the Bishop of London. Of this sum, 6,000*l.* had been paid on account of a portion of the property re-purchased from the Company, which, with the interest accruing, left about 11,000*l.* to be provided for. It was admitted on all hands, that if the Company could retain the property for some time longer, its value would be greatly enhanced, but as time was pressing, it was necessary to sell it to the best bidder.

Mr. Macfarlane was only anxious that no future imputations might rest on the Directors.

Ultimately it was resolved unanimously that the property should be disposed of by public auction, or by public tender, at the discretion of the Directors.

A good deal of conversation took place as to the time at which the shares should be issued, and it seemed to be the general opinion that they should be issued on or before the 5th of May next.

A vote of thanks was then unanimously passed to the Chairman (on the motion of Mr. Crawfurd, seconded by Mr. Luard,) and suitably acknowledged; after which the meeting separated.

DURHAM AND SUNDERLAND RAILWAY —GENERAL MEETING.

The General Half-yearly Meeting of the shareholders in this Company was held on the 31st of March.

Edward Backhouse, Esq. one of the Directors, being called to the chair, said he was glad that since the last meeting the condition and prospects of the Company had materially improved. He hoped the proceedings of the Directors, and of the Sub-Committee which was appointed at the last general meeting to report on the company's affairs, had met with the approval of the Subscribers.

Mr. Greggson, one of the clerks to the Company, read the Directors' Report for the six months ending Feb. 27, 1841, with a statement of the receipts and expenditure for the same period. The report stated that the revenue of the Company was continuing steadily to increase, the profit on the last six months being 935*l.* In accordance with a resolution of the last general meeting, the Directors, and the special committee had been engaged in inducing as many shareholders as possible to accede to the advance of 15*l.* per share at an interest of seven and a half per cent. The bill for creating additional shares was now before Parliament; and a loan of 25,000*l.* from a London Insurance Company had been effected upon the bonds of the Company, with the personal guarantee of twelve of the Directors. They looked forward to an increase in the number of passengers, in consequence of a direct line being formed between Sunderland and London, and by a communication which would be opened out with the Great North of England Railway, they would be enabled to have two trains per day between Sunderland and York. The Directors felt undiminished confidence in the ultimate prosperity of the undertaking, and urged upon the proprietors the necessity of acceding to the plan laid down by the special committee, for advancing 15*l.* per share, as the only thing required was to get the Company out of debt, and they should soon be able to pay a dividend. The income was increasing, and but for an accident at Shincliffe colliery, and the stoppage occasioned by the destruction of the shipping in the Wear in January last, the increase this half year would have been much greater than it was.

After the reading of the Report, the Chairman said he hoped it would give satisfaction to the meeting. It showed an increase of funds, and a decrease of outlay. It was calculated, he said, that 35,000*l.* would be obtained by the loan of 15*l.* per share on the "scrip" securities. If the proprietors would do that, they would soon find the concern in a flourishing condition. 24,000*l.* of that sum had been subscribed up to this date. He must say, that under all circumstances, the prospects of the company were most encouraging.

Mr. Jonassohn, one of the special committee, said, that when his colleague, Mr. J. J. Wright, and himself presented their report five months ago, it held out such flattering prospects of prosperity, and was so much unlike what the shareholders were ac-

Digitized by Google

customed to hear, that he did not wonder at their being deemed sanguine. Now, however, they began to see more clearly the correctness of that report: and he was certain that the hopes it held out would be realised, and that in twelve months. Every shareholder, who took a sincere interest in the undertaking, must be gratified at the present report, and use his exertions to carry out its suggestions. The landowners had done their part by reducing their way-leave rents; the coalowners had submitted to an advance upon the conveyance of coals; and various other sources of revenue were springing up, which before they never dreamed of. It was, however, necessary to have the dead weight of debt removed. £25,000 had been obtained on bond, by twelve of the Directors, and when the remainder of the 15*l.* advances were got in, they would be enabled to discharge the greater part of the bank debt, the remainder of which would be liquidated out of the profits by easy instalments; but the sooner it was done the better, for so long as it remained, the present rate of interest would have to be paid.

On the motion of Mr. G. W. Longridge, seconded by Mr. Thos. Taylor, the report was unanimously adopted.

Mr. CALEB WILSON then rose to move a series of resolutions for the regulation of the Board of Directors, for restricting the weight of coals per waggon to 53 cwt. and much other irrevelant matter, but they were all ultimately negatived and withdrawn.

Mr. JONASSOHN brought forward a motion to the effect that the resolution passed at the general meeting on the 10th of November last be rescinded, which provided for the raising of 15*l.* per share, from each shareholder, for the number of shares he held, and that the Directors be authorised to issue the scrip certificates for payment of the same to any shareholder, who might be willing to advance the money, provided the owner of such shares did not feel disposed to do so. Every shareholder, Mr. Jonassohn observed, could do as he liked about advancing this money, but they could not possibly have any objection to another doing it for them, if they did not do it themselves. It was in the nature of a loan. A scrip, or printed form, would be given when the advance was made, and the holder would be entitled to the sum named on the scrip, together with interest at 5 per cent. and a bonus of 2½ per cent. making the interest altogether 7½ per cent. which would be paid out of the profits, independent of the dividend.

The motion of Mr. Jonassohn was seconded and carried.

A vote of thanks was proposed by John Gregson, Esq. to the Directors, especially to J. J. Wright, and David Jonassohn, Esqrs. for their devotion to the interests of the Company, and to the Chairman for presiding at this meeting, which was carried by acclamation.—*Northern Times.*

RISTOL AND GLOUCESTER RAILWAY, (EXTENSION LINE.)—GENERAL MEETING.

THE Annual General Meeting of the Shareholders in this undertaking was held on the 30th March, at the White Lion Inn, Broad-street, GEORGE JONES, Esq., in the chair.

The notice convening the meeting having been read,

The SECRETARY (R. Fletcher, Esq.) proceeded to read the following

REPORT.

Your Directors informed you in their last report what preliminary arrangements had been made, and what subjects had been adjusted, under the powers then recently granted to you for the construction of this railway; the most prominent of those measures being, the setting out the line as intended for construction, and the adjustment of its exact course and gradients.

You were also apprised, that your Directors would shortly be in a situation to commence the purchase of land for the whole line—that a negociation was about being revived with the Directors of the Cheltenham and Great Western Union Railway Company for accommodation for your traffic, along their railway, between Stonehouse and Gloucester; and that the incomplete state of the capital of the Company would demand prompt and cordial assistance from all the shareholders, in order that the execution of the works might proceed with vigour and dispatch.

Your Directors commence their present Report by announcing, that the whole of the deficient capital has since been subscribed, and that they are endeavouring to apply to the execution of the works, all the energy which that pleasing fact is calculated to draw forth.

Since the completion of these arrangements, your Directors have succeeded in purchasing, or agreeing to the terms of purchase, of about one half of the distance of the whole line, and they are proceeding with considerable dispatch in the purchase of the remainder.

Contracts have been satisfactorily entered into for the construction of the tunnel at Wickwar, and the cuttings north and south of it: these works are proceeding; and your Directors have advertised for tenders for two other contracts, the one at Charfield and the other at Stonehouse, which together with the tunnel and cuttings above referred to, comprise the heaviest portions of the undertaking, and are consequently those which will occupy the longest time in execution.

The length of line contained in the contracts at Charfield and Stonehouse is four miles and thirty three chains.

The negociation with the Cheltenham and Great Western Union Railway Company for the accommodation of your traffic between Stonehouse and Gloucester is still pending.

It is the intention of your Directors to make a further call immediately of 2*l.* 10*s.* per share, to enable them to proceed with all the expedition practicable, in the execution of the works entrusted to their management, and after such call shall have been paid, the proprietors will be entitled to receive interest upon their paid up capital, conformably with the resolution passed at your special general meeting on the 13th August last.

Your Directors call your attention to a paper presented by one of the proprietors at your meeting of the 13th August last, containing a request that they would make a special report at this time "on the subject of the Bristol terminus, and on the adoption of a similar gauge to that adopted by the Great Western, and the Bristol and Exeter Companies, coupled with the formation of a terminus in immediate connexion with those lines.

The width of gauge for this railway was fully and maturely considered before the last general meeting of the proprietors, and in the Report presented to them on that occasion, your Directors repeated the most weighty of the considerations by which they were influenced in forming the decision therein mentioned: this decision received the unanimous confirmation of the shareholders at their general meeting of the 31st March, 1840, and your Directors see no reason whatever for altering the views they then entertained on that subject.

With regard to the "formation of a terminus at Bristol, in immediate connection with the Great Western and Bristol and Exeter lines," your Directors intend, when the works are in a more advanced state, to consider how they can best facilitate the transit of goods on the other railways, from the *north*, by your line, and *vice versa*, at the least possible expense to the Company and the public.

Mr. J. M. Shipton, of Gloucester, having retired from the Board of Directors, Mr. Robert Leonard, of Bristol, was appointed as his successor.

The Directors who have been chosen by lot amongst themselves to go out of office on the present occasion, according to the requirement of your Act of Parliament, are Messrs. William Ford Mogg, Richard Ricketts, Thomas Rankin, Robert Leonard, and Christopher Shapland, all of whom are eligible for re-election.

An account of the year's receipts and expenditure has been prepared and audited and accompanies this Report.

Abstract of the Receipts and Payments of the Bristol and Gloucester Railway Company, to the 31st December, 1840.

RECEIPTS.

Deposit on 6,152 shares, at £5 per share..	£30760	0	0
First call on 3,827 shares, at £2 10s. per share	9567	10	0
In anticipation of calls	765	11	0
Registration and transfer fees	5	15	0
Interests from bankers and shareholders	181	8	9
Rents of sundry property, less taxes	45	1	6
	£41,325	6	3

EXPENDITURE.

Expenses of 1st application to Parliament	£12042	16	9
Expenses of 2nd application to Parliament	9283	7	8
On account of contract for setting out the line and property plans	1150	0	0
Salary to the engineer	875	0	0
Directors' remuneration	1500	0	0
Office, salaries, and expenses	595	4	10
Office fixtures and furniture	188	19	3
Travelling expenses	255	7	10
Printing, advertising, stationery, and miscellaneous disbursements	264	13	2
Purchase of land, and compensation	9076	12	6
Ground rent, and interest on money advanced in anticipation of calls	128	13	3
Sinking trial shafts, including tools and implements	198	11	3
	£35,559	6	6
Balance in the hands of the bankers of the Company	5765	19	9
Total	£41,325	6	3

Audited this account, 24th March, 1841,
(Signed) HENRY FYSON,
THOS. RANKIN.

The usual resolutions, as advertised in our columns of last week, were then proposed and carried unanimously. In the course of the conversation which ensued, it was stated by the Chairman that 1,800 shares remained in arrear, held for the most part by Gloucester proprietors, and that proper measures would be taken to enforce the payment of the calls due upon them.

The CHAIRMAN, in acknowledging the vote of thanks to his brother Directors and himself, remarked that it would have given them much satisfaction to have been enabled to report that greater progress had been made, but all must be aware that at the commencement of undertakings like the present there were many difficulties, arising from the prejudices and feelings of landowners, which must be met in an amicable spirit, to avoid having recourse to legal measures. Those difficulties were now nearly surmounted, and at their next meeting the Directors entertained a confident hope that they should be in a condition to report that much more had been effected.

The proceedings appeared to afford much satisfaction to the shareholders present, who, as well as the public at large, are to be congratulated on the prospect of the only link now wanting to connect Bristol and the south of England more nearly with the north, being soon supplied.

DUKE OF CORNWALL HARBOUR AND LAUNCESTON AND VICTORIA RAILWAY COMPANY.—The adjourned half-yearly general meeting of the shareholders in this Company was held on Thursday, but the award in the case between the Company and Mr. Geo. Ross not having yet been made by the arbitrator, the meeting was again adjourned to Thursday, the 20th May.

ACCIDENT. — On Monday last, Daniel Holt, breaksman on the inclined plane leading from the pits of Messrs. Stephenson and Co., at Clay Cross, to the North Midland Railway, met with a very severe accident whilst in the act of conveying a quantity of ballast down the line for the purpose of repairing the road. By some means the break failed to restrain the waggon, which, in consequence, went off with such rapidity as to throw it off the rails. The poor fellow's head and face were mutilated in a shocking manner. Mr. Macarsa, surgeon, was immediately called in, from whom the sufferer received every attention.—*Derbyshire Reporter.*

EXTRAORDINARY TRAVELLING.— Some time since a gentleman in York undertook to perform a journey from York to the Metropolis, and arrive again in York within twenty-four hours. The attempt was made during the last week. The party alluded started from the railway station at York on Thursday morning week, at forty-five minutes past eight o'clock, and arrived in London precisely at half-past seven o'clock the same evening. He transacted business with one or two parties in London, and availed himself of an opportunity of visiting Covent Garden Theatre, where he remained upwards of a quarter of an hour; and after taking a stroll through the market, and purchasing sundry early productions, returned by the mail train to York, where he arrived, with comparatively no fatigue, the following morning, at ten minutes before eight o'clock—thus completing the whole journey in twenty-three hours and five minutes, a total distance of 450 miles.—*Hull Advertiser.*

CAUTION.—A person who calls himself "Bob Johnson," and sometimes "Sam Jackson," and who represents himself to be the conductor of the *Newcastle* engine on the Great North of England Railway, in going about the country engaging young men to act as his firemen. He prevailed upon a hawker at Boroughbridge to go to Darlington with him; and induced another poor man, with thirty shillings in his pocket, to leave Northallerton for the same puspose; and, of course, stuck to them as long as the money lasted, and then bolted. It is supposed he is now in the neighbourhood of Durham.

GREAT NORTH OF ENGLAND RAILWAY —PUBLIC OPENING OF THE LINE FOR PASSENGERS.

(From the *Leeds Mercury.*)

THE events of this week have afforded materials for completing one of the most interesting chapters in the history of our national advancement—that which relates to the construction of railway; the last link of the grand chain of communication which stretches from Southampton to almost the opposite extremity of the country having been finally attached to the rest by the opening to passengers of the Great North of England Railway on Tuesday last. The opening of so many railroads in our own neighbourhood has recently afforded us repeated opportunities to dwell upon the multifarious advantages which the country at large must derive from this mode of communication. These it will be unnecessary again to enumerate; but we cannot avoid expressing our lively pleasure at the completion of the Great North of England line, because it is certain to prove a great benefit to the district which it intersects, and is likely to have an important influence in promoting the prosperity of all the railways which have their course along the eastern side of the island. But for it, there is every reason to believe that the traffic from Scotland to the metropolis and all parts of southern England would in a few years have passed along the western coast, to the serious injury of the railways which traverse Yorkshire; now, they present a terminus considerably nearer Scotland than Lancaster (the furthest northern point on the western line); and though we do not think that the whole of the traffic from the north will ultimately be poured through our own county, we do believe that a large proportion of it will, and that even if rival lines should carry up the communication to Edinburgh and to Glasgow, those which shall be continued on this side the island will at all times enjoy an abundant share of patronage from our northern fellow-countrymen.

The Great North of England Railway was projected in 1835, and an Act of Parliament obtained for its construction between York and Darlington, in the spring of the following year. The works were shortly afterwards commenced—first at the Durham end, but afterwards throughout; and on the 4th of January last they were so far completed as to allow of its being opened for the transport of coals. About six weeks back we had the opportunity of stating that the effect of this had already been to cheapen the price of fuel in the agricultural district south of Darlington, nearly all the pits being north of that town, so that the expense of leading had until the present year been a serious addition to the original cost of this necessary of life at Thirsk, Easingwold, Northallerton, &c., and still more in the surrounding villages. The supply of coals will be drawn chiefly from the Stockton and Darlington Railway, and from the neighbourhoods of Bishop and West Auckland, and Shildon. The Company began to convey merchandise a month later, and we are glad to find that a considerable amount has passed along their line, which is likely to be extensively employed for conveying horses, cattle, and sheep from the pastures of the north to the markets of Yorkshire and the Midland Counties'. An important trade in fish also has already commenced, and Hartlepool, Staithes, and Redcar are reaping the benefit, as well as Leeds, Wakefield, Sheffield, and other large towns as far south even as Birmingham, at which place the fish arrives on the evening of the day on which it is sent off. We are informed that as much as 24 tons of fish have been carried by the Company in a single day.

Up to a very recent period, the engineer has been Mr. T. H. Storey, but on his resignation Mr. Robert Stephenson was appointed, and under his directions some of the *accessories* of the railroad are now in rapid course of completion. The works for solidity and neatness, wherever either quality is required, are considered equal to those on the best lines (all improvements elsewhere having been sedulously watched and adopted), and we have heard eminent engineers express an opinion that no railway has been in more perfect order on the opening day. The nature of the country through which it passes is peculiarly favourable, being almost level from York to Cowton, or more than three-fourths of the whole distance to Darlington; the rise is only 1 in 11,000 between the two former places, the ascent being most gradual all the way to Cowton, which is the highest point, and near which the worst gradient is to be found, which, however, is only one in 377, and is of the length of about two and a half miles. The sides of the cuttings in one or two parts of the line struck us as likely to be of rather doubtful consistency in case of heavy and long-continued rains, but this is a defect which in the course of the next few months can be remedied, if deemed necessary. Straightness is a striking characteristic of the line, there being only two or three curves of any consequence. The bridge over the Tees may be mentioned as having the greatest *skew* (at an angle of 51) of any bridge of the same size in England. The other principal bridge is over the Ouse at Poppleton. There are also 77 smaller bridges, but the line is remarkable for not having a single tunnel. The expense of working the railway is expected to be light, which may be accounted for by

Digitized by Google

the cheapness of fuel and other circumstances, some of which have been already named. The entire length of the line is 44¾ miles. There are 32 engines in the whole, chiefly made by Messrs. Hawthorn, R. Stephenson, C. Tayleur and Co., W. Fairburn, and Jones, Turner, and Evans.

The chief places of interest to the tourist and the invalid which will be rendered more accessible by the Great North of England Railway are Rokeby, Raby Castle, Wensleydale, and the charming district about Richmond, the bathing places of Redcar and Scaton, with Croft (inland), the remarkably thriving ports of Hartlepool and Middlesbro', and the romantic coast of the North-Riding of Yorkshire. From Darlington, a railway runs to Stockton, and it is hoped that a junction between this and the Great North of England line, which is only about a mile distant, may be effected ere long; there are also lines to Hartlepool, and (with a slight interval) to Sunderland; while further north is the Newcastle and Carlisle Railway, passing through a country of highly romantic character. Newcastle is 32 miles north of Darlington, and the great object should now be, to complete the chain up to that noble town. It is an object which was repeatedly referred to and dwelt on in the festive proceedings with which the opening-day of the Great North of England was closed.

We may mention, in closing these general observations, that the fares on this new railway are very moderate,—considerably cheaper than those by the coaches from York to Darlington; this deserves the more notice, as there is no water conveyance whatever to compete with the railway. There are, however, no third-class carriages, which are so generally adopted on other railways, and are there found to be not only beneficial to the poorer class of persons, but valuable for the revenue they bring in. As an illustration that they are likely to be very popular in many parts of the country, we may mention, that at the last harvest large numbers of Irish reapers were conveyed from Selby to Hull at 2s. 6d. each, and they thought the money well spent in saving a day's travelling, and, in many cases, probably, preventing the loss of a day's labour and wages.

There are to be eleven stations on the Great North of England Railway, exclusive of the termini.

THE CELEBRATION DINNER.

(Abridged from the *Northern Times*.)

In the evening the event was celebrated by a dinner at the King's Head, Darlington, when one hundred and seven gentlemen sat down to a substantial repast, G. H. WILKINSON, Esq., in the chair.

The CHAIRMAN, in proposing as a toast, "The Great North of England Railway," spoke to the following effect:—It was sweet to speak in the language of enjoyment after so much disappointment had been experienced. He was convinced that no person but a railway Director ever tasted the full relish of such enjoyment; who had not been called upon to announce that they would be enabled to open a certain part on such a given day; but when the blank day of blank arrives, nothing but blank awaits him. He was happy to say that they had now emerged from their difficulties, and were reaping the reward of their patience and their many disappointments, by having the cup of enjoyment presented to them. It would be invidious to institute a comparison between the expenditure upon this line, and that on the other lines in the neighbourhood, but they might say that they had that day opened 15 miles of railway which would stand a comparison with any other, whether for its cost, for the perfectness of its formation, or the utility of its purposes. (Applause.) Of the great utility of railways no rational being could now entertain any doubt; their importance to the mining, to the agricultural, and to the manufacturing interests now stood confessed, and they only wanted to be more fully developed to convince the public of their salutary influence on the moral, the social, and the political condition of the people. (Applause.) His toast on the present occasion was "Success to the Great North of England Railway." (Applause.) It had long since been discovered that to command success was not a mortal attribute, but all who had witnessed their exertions would feel convinced that they had done the best in their power to deserve success, and he was happy to say that there were circumstances which rendered the success of that undertaking as certain as that of any human device could be. It was in the neighbourhood of some of the most prolific districts for minerals in the world, and there were already established in its neighbourhood, a multitude of feeders which were all ready to pour their various resources into the trunk of the Great North of England Railway. Besides, favoured by a long establishment in the county of Durham, it could at all times secure a well-drilled force, who could carry on its operations without those defeats and accidents which occurred on other lines.

The CHAIRMAN said the next toast on his list was "the Proprietors of the Stockton and Darlington Railway Company," as the parent of the Great North of England Railway, and they might justly claim not only that but also to be the parent of all the public railways in the kingdom, from priority of date; he, therefore, gladly proposed this venerable progenitor of their's, and as he saw several amongst the Company who were connected with it, he would leave that patriarchal railway to them, and let them assert and vindicate the title. The Stockton and Darlington Railway Company was drunk with great applause.

THOMAS MEYNELL, Esq. returned thanks, on behalf of the Stockton and Darlington Company, for the honour which had been conferred upon them. It was true that they were the representatives of the first public Railway that ever was opened in Great Britain, and that was in the year 1825, the year, he believed, in which the London and Manchester Railway first obtained their act of parliament, when they called in the aid of Mr. George Stephenson, who had been engaged on the Stockton and Darlington Railway, and which was, he believed, his first railway (applause). He begged to return his sincere thanks in their names; they had a trade beneficial to the country and profitable to themselves, and he trusted that the railway which had been opened that day would be attended with the same beneficial results (applause).

The CHAIRMAN then proposed the Chairman and Directors of the York and North Midland Railway Company (great applause). That company formed their next neighbours on the south, and consequently the next link which joined us to the metropolis (applause). He believed that what mortals often termed "good luck" was good management, and he believed that it was owing to the management of the Chairman and Directors, that that Company had arrived at the good luck which they now enjoyed. He was sure that they deserved it, and he proposed the toast, not in a spirit of rivalry, but of congratulation, and he hailed their success as an omen of their own, and when their line should have been carried northward, he had no doubt that they should participate in the same success which the York and North Midland Company had already tasted. He would give success and prosperity to the York and North Midland Railway, and health and prosperity to the Chairman and Directors.

Mr. ALD. HUDSON returned thanks for the York and North Midland Company. He (Mr. H.) knew the great importance of railways, and he believed that there would be nothing wanting to render these as profitable as it was possible for two enterprizes to be. He was gratified to know that there would be no clashing of interests between them; that both companies would have but one common interest, and that they would all act as men of honour, business, and integrity (applause). The chairman had been so kind as to refer to their (the York and North Midland's) prosperity, and he (Mr. H.) had no doubt, ere long, of seeing the Great North of England as prosperous as its most sanguine friends could expect (great applause). There were times when some railways developed themselves quicker than others, but they were all yet in their infancy, and he doubted not that they would develop themselves more rapidly, and be more productive to those who established them. They (Mr. H. and his friends) would return to their ancient city with the best feelings for their success, and he trusted that the same unanimity which had been witnessed that day, would last as long as they were connected together (applause).

The CHAIRMAN said, they had amongst them the representatives of another railway, not quite so nearly connected with them as that he last mentioned, he alluded now to the North Midland Railway (applause). He dared to say that they had all travelled on that most picturesque of all lines, and been delighted with the great work called their trijunct station, the noblest in any part of the kingdom—the Derby Station. The importance of the line was equal to its beauty and picturesque qualities, and he had much pleasure in giving the Proprietors and Directors of the North Midland Railway.

Mr. HUBBARD, in the absence of the chairman, returned his sincere thanks for the honour done to the North Midland Railway. They felt the greatest gratification at the auspicious opening of this day, the Great North of England bringing them nearer to the metropolis of Scotland, and enabling them to prosecute their traffic to the north as well as to the south. The North Midland line stood second to none, and was equalled by few. In the amount of passengers they might be surpassed: but if manufactures, if minerals, if commerce, were the necessary constituent parts of railway traffic, they had these in abundance. They had coal and lime in abundance all along the line, and they had one of the most picturesque lines in the kingdom. In addition to that they formed one of the grand trunks of connection between London and the northern metropolis, and the only regret that he felt on this occasion was that they were not at Newcastle instead of Darlington (hear, hear); he hoped that it would not be long before they would be at Newcastle (applause). He believed that was always the great posting line which conveyed the nobility and gentry to London, and he trusted it would always be in their power to carry them. They would do all they could to convey the traffic of Scotland to the metropolis. If they could enter into an arrangement with the spirited coach proprietors of the north they might carry passengers to and from London in less time, by one or two hours, than any other party. If they made good arrangements to that effect, and worked their conveyances well, they would ensure success. He agreed with the remark which had been made that railways were, as yet, only in their infancy, and that there was no doubt, with judicious management, they would prove successful (applause).

The CHAIRMAN then gave the Proprietors and Directors of the Hull and Selby and the Sheffield and Rotherham Railways, and all the strangers who had honoured the Great North of England with their presence upon that important occasion.

Mr. G. COOKMAN (of Hull) returned thanks, as one of the representatives of the Hull and Selby Railway. Hull, as the third port in the kingdom, was a great outlet for manufactures, and a great inlet for the raw material, and other produce, and a quick and safe conveyance into the interior of the country, was of the utmost importance, and he rejoiced to think that the railway afforded that great facility to the commerce of the port. The interests of railway proprietors were one, and the more friendly the relations between them the greater would be the prosperity not only of the companies, but of the country.

The CHAIRMAN then gave the Newcastle and Carlisle Railway Company, and the health of Mr. Blackmore, their talented Engineer. In the picturesque, that railway need hardly yield the palm to the North Midland, and it was of the greatest importance as a communication with the west parts of Scotland, and with Ireland, through Whitehaven.

Mr. BLACKMORE, in returning thanks, said, he would be sorry to let the opportunity pass of expressing the great pleasure he felt in the events of to-day. He had had an experience of ten years,

Digitized by Google

and he thought he was competent to give his opinion of a work of that nature, and his opinion was that the Great North of England might vie with any which had been mentioned; its gradients were exceedingly favourable, and the mode in which it had been executed was admirable, and he felt quite satisfied that it would, when extended to Newcastle, be one of the most profitable lines in the kingdom. (Applause.)

Mr. G. HUDSON proposed the health of the Chairman, to whose zeal and ability he paid a high compliment, which was heartily seconded by the plaudits of the company.

The CHAIRMAN felt it difficult to return thanks in proper terms for so great an honour, and one so undeserved, for, though he yielded to no one in a desire to promote the interests of the undertaking, zeal to carry on its works, or honesty in the discharge of his duties when he could attend to them, —he knew that it had been impossible for him to attend to his duties as they ought to have been attended to. He had always, however, had the able assistance of his brother Directors, and it was with pleasure that he turned to their services, which had ever been most efficient. With permission he would propose the health of three members of the Direction who were present from the Finance Committee, Mr. Oxley, Mr. Plews, and Mr. Hopkins. (Great Applause.)

Mr. OXLEY returned thanks in a speech of considerable length, in which he referred to the time of Charles II., when the post was conveyed between England and Scotland on a horse, and there was no road farther north than Grantham. He then came down by degrees to the establishment of railways, which he maintained tended to increase the best qualities of the heart and the mind. He declared that he would never rest, day nor night, until efforts were made to complete the line as far as Newcastle, where he trusted they would be in a very few months. All the people on the eastern coast, including Edinburgh, would come that way on their approach to London, and he hoped the Company would give "a long pull, a strong pull, and a pull altogether," till they got to Newcastle. (Applause.)

EASTERN COUNTIES' AND NORTHERN AND EASTERN RAILWAY TRAFFIC.

To the Editor of the Railway Times.

SIR,—Will you allow me to inquire the source from whence your weekly returns of these railways are derived, as it seems to me they cannot be correct, and if not, will only be misleading the public?

The following are the returns as given for the last four weeks:—

	Eastern Counties.		Northern and Eastern.	
	Passengers.	Receipts.	Passengers.	Receipts.
		£ s. d.		£ s. d.
March 7	9,209	551 16 5	5,806	443 14 7
„ 14	10,616	596 19 0	6,362	505 12 1
„ 21	10,570	576 4 9	6,970	500 17 10
„ 28	11,319	579 4 4	7,362	533 6 8

From the above it will appear that during the four weeks the passengers on the Northern and Eastern have increased about 1,500, and the receipts 90*l.*, while on the Eastern Counties', though the passengers have increased upwards of 2,000 the receipts are only 48*l.* more!

In the last week an increase of upwards of 800 passengers is shown, but only 3*l.* in the receipts!!

Can it be true that the passengers by the Northern and Eastern Railway are *also* reckoned as passengers by the Eastern Counties'? If so, it would appear that during the last week the Northern and Eastern carried 7,362, and the Eastern Counties' only 3,957. It is very important that the real facts should be known.

Will you further allow me to call the attention of your correspondent "Enquirer" to the fact that in the *early* part of his letter he has deducted the Northern and Eastern passengers from the Eastern Counties' numbers, but not in the *latter* part, and this certainly must be the case if comparison is to be made between the present Returns and those of August last; *before* the Northern and Eastern line was opened.

When your correspondent has amended his calculations, I may perhaps have a word or two to say upon the subject.

I am, Sir, yours obediently,

EVANDER.

April 5, 1841.

P.S. The Northern and Eastern account used to be *exclusive* of the toll to the Eastern Counties'; it is now stated to be *inclusive*. When did the alteration take place? Much would depend on this in calculating averages.

SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In answer to the letters of "A Railway Shareholder" in your papers of 27th ult. and 3rd inst. relative to the South-Western Railway, I beg to observe that it appears that instead of 39,000*l.* and the 4s. 8d. or even 8s. 10d. per share, the first quarter of 1841 has produced 43,832*l.*, equal to 10s. per share, and that by the subjoined calculation a further 20s. per share to complete the 30s. per share for the next dividend may be reasonably expected from the traffic of the second quarter of 1841.

Thus, so far as regards the next dividend being equal to the last, there seems to be no ground for the alarm raised by your correspondent.

With respect to his apprehension of a rival line to Portsmouth *via* Horsham, it is equally groundless. If Portsmouth wants (as it must) a railway without having to cross the water as *via* Gosport, the best expedient will be to use the present line as far as Farcham, and make a branch of seven miles thence to Portsmouth. True it is, that this would be rather circuitous, but the difference compared with the most direct line practicable to London would not exceed in time of travelling three quarters of an hour, which surely is not to be put in competition with the expense and difficulty of forming a duplicate railway between London and Portsmouth.

Yours respectfully,

F.

Bath, April 7, 1841.

CALCULATION.

1840—Traffic 13 weeks, ending 20th March, on 58½ miles, averaging £37 per mile per week.
" 6 weeks, ending 11th May, on 58½ miles, averaging £47 per mile per week.
" 7 weeks, ending 28th June, on 77 miles, averaging £73 per mile per week.
" Average of said 13 weeks, £61 per mile per week.

1841—Traffic 13 weeks, ending 28th March, on 77 miles, averaging £43 per mile per week.

" Producing	£43,862	
Allow expenses, 40 per cent.	£17,544	
	£26,301	
¼ year's interest on debentures	7,500	£18,801
Dividend 10s. on 36,000 shares		18,000
Surplus, first quarter		801
" Traffic 13 weeks, ending 27th June, on 77 miles, assumed to be £73 per mile per week.		
" Assumed produce	£73,656	
" Expenses, 40 per cent.....	29,256	
	£43,851	
" ¼ year's interest.....	7,500	
	£36,351	
" 20s. per share on 36,000 shares	36,000	
" Surplus, second quarter		351

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last paper appears a letter signed "Plutus," comparing the prospects and position of the Cheltenham and Great Western, and the Eastern Counties Railways, respectively. Fully concurring in the mode of reasoning adopted by your correspondent, it is submitted that he has failed to do justice to his case, in assuming the sums of "considerably under 500,000*l.* and of 150,000*l.*," in respect of the cost of the 17¼ miles, and of the land for 48½ miles, which, on the contrary, he would have been justified in fixing at less than one moiety of those sums, viz., 249,601*l.* 5s., and 64,511*l.*, respectively. The authority for this, is the proceedings of the half-yearly meetings of November, 1837, and November, 1838. On reference to the former of these, it will be found that a calculation was then given of the cost from Swindon to Cirencester, viz., "219,500*l.* with all the improvements suggested by further experience adopted on the Great Western line, with 20 per cent added for contingencies." At the latter the cost of the whole was calculated at

£7,243 per mile for works.
1,326 for land and compensation.
7,400 for permanent way.

£15,971 on 37 miles main line.
6½ ditto including a tunnel and other works, £224,000.

£30,000 on four miles' branch to Cirencester.

According to these data, the cost of the portion about to be opened would be—

Main .... 13½ at £15,971	£219,601	5s.
Branch .. 4	30,000	0
	£249,601	5s.

And the land—
48½ miles, at £1,326 .... £64,311.

At the several general meetings since held, nothing has been communicated to the shareholders leading them to anticipate that any material increase would be necessary on the estimate, and therefore it has been tacitly confirmed until the present time by the Directors. It is impossible to suppose that a Board, so respectably constituted as this undoubtedly is, could lend themselves to the delusion which certainly would be practised on the shareholders and the public, if so important a fact as a material increase were withheld. Indeed, the usual plea of the notorious excess generally occurring of eventual cost over estimates on railway expenditure could not apply in this case, from the late date at which the estimate was formed; the Board and Engineer having then had considerable experience, and a Director having further declared at the half yearly meeting at Stroud, on the 2nd November, 1838, that "a great portion of the land was purchased, and all the contracts between Gloucester, Cheltenham, Cirencester, and Swindon, let considerably under the Engineer's estimate.—(Cheers.)" In addition to this, it is a fact well known that at dates long subsequent to 1838, in answer to enquiries on the subject, repeated assurances have been given, upon very competent authority, that this estimate would not be materially exceeded.

At the approaching half-yearly meeting it is hoped the correctness of these estimates will be confirmed. It would be a very inadequate reason for further delay in this respect, that the accounts may not be finally made up, as the work being finished, it would be easy to furnish at the meeting an approximative account and estimate sufficiently accurate for the purpose and occasion.

BRISTOLIAN.

Bristol, 6th April, 1841.

GLASGOW AND GREENOCK RAILWAY—FATAL ACCIDENT.—We regret to state that a fatal accident has already occurred to one of the officers of the Glasgow and Greenock Railway Company. On Thursday night, while the train which left Greenock at half-past four was proceeding to Glasgow, one of the guards, named Barclay, was in the act of folding up a tarpauling upon one of the carriages, when his head came in contact with the arch of a bridge on the Glasgow side of the Arkleston tunnel, and from the velocity at which the train moved, he was killed on the spot. The deceased was quite a young man, had only been a few days on the line, and is a native of Bullochmyle.—*Scotch Reformers' Gazette.*

DESTRUCTION OF RAILWAY GOODS BY FIRE.—The Staffordshire papers give the particulars of a fire that took place on a luggage train on the Grand Junction Railway, occasioned by sparks from the engine chimney falling on the top of one of the loads. The whole of the goods on the first lurry were destroyed, and part of those on the second.

ON THE MECHANICAL ARRANGEMENTS OF RAILWAYS. CARRIAGE FRAMES, WHEELS, AXLES, AND TRACTION RODS.—BY MR. ADAMS.

No. IV.

It was reserved for the era of the most remarkable progress in that branch of human civilization designated as "inland transit," and for the country laying claim to the highest rank in all the physical appliances of civilization,—it was reserved for such an era and such a country, to exhibit the anomaly of the rudest mechanical contrivances in the form of wheel carriages that ever emanated from any barbarous tribe abandoning the use of the sledge, and making its first essay with wheels. The experience of centuries has been thrown aside; progressive improvements, dictated by necessity, have been abandoned, to return to practices which science has long condemned, and which were only to be found in the records of by-gone ages, or in those remote nooks of the civilized world, where prejudice and superstition have upheld the reign of ignorance and practical absurdities. In Spain, Portugal, and their colonies, the rude Roman plough, formed of the branch of a tree hewn out with a portion of its trunk, is the common agricultural implement. In the peasant cars of these same semi-barbarous countries, on the railways of highly civilized England, and on the railways of all parts of the world to which she has set the type, are to be found wheel carriages so constructed as to be adapted only to *roll* in one single direction, and only capable of varying from that direction by the process of becoming partial sledges. And, as though the evil of converting two wheels into a solid roller were not sufficient, two of these rollers have been placed side by side, for the purpose of constructing what is facetiously designated a "four-wheeled carriage." This absurdity has been carried to the extreme, by placing three of these rollers side by side, to make a "six-wheeled carriage." Thus, the Roman baggage waggon has been eclipsed. These proud conquerors carried their contempt of the laws of friction to the extreme limits of animal powers with the usual military disregard of cost, but

"The force of *cattle* could no further go."

By the power of "unconquered steam" our men of peace have been enabled to carry their contempt of the laws of friction to a pitch

"Above all Greek, above all Roman fame."

The Roman despot achieved the use of a car on two rollers. By the power of steam the English engineer has achieved the use of one on three rollers, and move it must, though it *grind* for it, harder than ever slave of the "heroic ages" "toiled in the mill."

On no highway in England does there exist a vehicle similar in principle to those used on the railways. It is therefore clear that the railway vehicles must have been constructed with purpose aforethought. Not unknown were the properties of the rival construction of vehicles, and magnificent were the aspirations of their planners in providing roads for them.

A pair of straight, parallel, horizontal, rigid, iron lathe beds, of indefinite length, and perfect in all particulars—so perfect, that trains of parallel rollers, of equally perfect construction, might run on them for ever, without irregular movements, and with equal pressure at all times and places,—so perfect, that the bungling contrivances of springs,—contrivances only resorted to in order to compensate for the irregularities of bad roads,—might altogether be dispensed with—such was the brilliant idea of the lights of modern science!

Nothing could be finer in plan, save the idea of the philanthropist who determined that if he chanced to be present at the next setting out of the plan of the earth, it should have a surface of all "down hill," with a view to the saving of much superfluous labour. But, alas! the lights of modern science turned out to be an aurora borealis. Nature would be nature, and, working herself, by the principles of irregularity and compensation, she would not suffer herself to be circumvented by any of the contrivances of art. Indignant at the thought that her chief handmaid, her universal agent—elasticity, was to be so unceremoniously set aside and dispensed with, she multiplied irregularity on irregularity to such an extent, that, of the famed miles of proposed *lathe-beds*, not a single one is to be found. They still remain as problematic as the perpetual motion, the squaring of the circle, or other questions of a similar kind, which have in turn distracted the brains of over hard thinkers, if not over clear ones.

One of the soundest men amongst railway engineers, after labouring hard for some time to produce a reform in railway mechanism, abandoned the task in disgust, and became a manufacturer for railways. As such, he occasionally turned out extraordinary absurdities. On one occasion a friend asked him how he could possibly sanction the construction of some articles more than usually absurd. His reply was "I work from drawing and specification only, and never attempt to advise. It would be only lost time, and if any railway engineer or secretary should take a fancy to order his wheels eight square, instead of circular, I should express no surprise, but merely make sure that I work to order. It is a hard thing to be thus converted into a blind mechanical brute, for the purpose of spoiling good materials, but so it is. *Il faut vivre.*"

Assuming that it is not yet in the power of human art to produce or maintain such a road, as the *beau ideal* of the engineer, adapted to his rigid rectilinear carriages, the next thing to consider is, how to construct carriages adapted to run on the *de facto* roads with the minimum of friction, by producing compensation for irregularities. To this end it will be well first to examine the existing carriage, as regards the arrangements of wheels and axles.

The diagram, fig. 1, represents it in its supposed most perfect state, on a pair of rails supposed also to be in their most perfect state. The wheels, or rollers are all coned to the same angle, and stand in the same planes, while the traction rod, in the exact centre of the carriage, intersects at right angles the axles which are truly parallel to each other. It is obvious, that on a pair of parallel rails perfectly level, and with joints as firm as solid iron, this carriage might run round the world with the minimum of friction, as both ends of the rollers, being of the same diameter, would pass over equal spaces in equal times.

But the carriage, to begin with, is nearly imaginary, and the rails are purely imaginary. Taking the carriage to be one of the exceptions to the general rule of inaccuracy, what will be the result if it runs upon a pair of rails such as are represented at fig. 10, the rails being parallel to each other, but curvilinear, with the convexities and concavities alternating from side to side? The curves are purposely exaggerated, in order to make the illustration plain.

It is clear that, in this case, friction must take place at the peripheries of the rollers, because they are immoveably parallel, whereas to run without rolling friction they would require to diverge from their parallelism alternately to right and left, pointing to the imaginary centre of the curves on which they run. If this movement were provided for, then the carriage would run without friction at the peripheries of the rollers, because the cones would compensate by increasing and diminishing diameters, for the proportionate increase of diminution of the space passed over. Without this movement considerable torsion in the axle or shaft is produced.

If this carriage were made to run upon fig. 9, it would run without friction at the peripheries of the rollers; because, though the rails are not parallel, the track formed by the two is not curvilinear laterally. But the result would be, that the rollers would constantly be alternating on increasing, or on diminishing diameters. This would be equivalent to passing over a succession of hills and hollows, materially increasing the draught, and requiring very efficient springs to produce steadiness. These rails show the effect produced by the widening out of the gauge at intervals.

Fig. 8 shows a pair of rails not parallel to each other, but irregular in their curvature. In fig. 9, the widening of the gauge is produced equally on each rail, but in fig. 8 the widening of the gauge is unequal, sometimes on one rail and sometimes on the other. It is the very worst form of irregularity, and the carriage (fig. 1) could not run upon it except with great friction on the rollers. The cones of the wheels, or rollers, on such a rail as this could afford no compensation, and the carriage would be dashed from one rail to the other with violent concussion and great torsion strain on the axles. It has been laid down as a railway dogma, that the coning of the wheels compensates for curves, but it would be difficult to show how it would operate in this case beneficially, other than as a lateral gradient to the wheel, enabling it to slide back to the safe position, when the violent impinging from side to side drives the flanges against the rails ultimately. To run on such rails as these with the minimum of friction every kind of compensation for irregularity is requisite. The axles must sometimes be parallel to each other—sometimes at an angle; sometimes one axle is required at a right angle with the line of traction, while the other varies from it. The wheels require to travel at different speeds, and consequently should revolve on the axles, independently of each other. The wheels are at times required to be in different planes, and consequently the axle to which they are attached should have a facility for running laterally. The wheels, in short, should dance freely under the framework, moving into every position—offering the least friction—of which gravity will be the accurate measurer, and without this provision for their perfect freedom of movement, destructive wear of all kinds will take place, proportioned to the rigidity of the carriage, and the irregularity of the rails. The *ignis fatuus* of the engineer, the axle-*guards* or axle-*guides*, for they are called by both names, a contrivance to keep the axles rigid without ensuring truth of position, will be discussed hereafter.

The carriage, fig. 1, represents the engineer's *beau ideal* of a railway carriage—a machine sometimes made geometrically true, but rarely, if ever, preserved so. Witness the commonly unequal wear of the rollers in the same carriage. Fig. 2 represents the simplest form of irregular construction—want of parallelism in the axles. It is obvious that this carriage is only adapted to run with the minimum of friction on a curved line of rails, the centre of the curve being determined at the point where the radii of the two axles intersect each other. When running on a straight line of rails, the wheel flanges on the side to which the axles converge will constantly grind on the rail, with the constant risk of running off. This risk will be enormously increased if the carriage runs upon a curved line of rails, the curvature being in the opposite direction to the radiation of the axles. In such a case, the carriage would probably only maintain its place on the rails by being coupled fast between the preceding and following carriages. The wheels or rollers, by their irregular or crab-like movement, would be converted into sledges, making heavy demands for engine power, and producing rapid wear of their tyres, and of the rails they run on. If one roller, or pair of wheels, were correctly placed at right angles to the traction line, and the other out of the parallel with it, the friction would be lessened one-half. If the accurately placed roller travelled foremost, the hind roller would have something of the effect of a break; but, if the *in*accurately placed roller were foremost, the tendency to go off the rail would exist in full force. Great as the evil would be on a straight rail, it would be increased on the rails denoted by fig. 10, still more on those indicated by fig. 9, while on fig. 8 the carriage would become literally a sledge, drawing three-fourths of its progression.

Fig. 3 shows another kind of irregularity in a carriage frame, with the wheels on the same planes, and the axles at right angles to the central longitudinal line of the carriage. The irregularity of this carriage exists in the traction rod, which

Digitized by Google

s not at right angles with the axles, and therefore any force of traction applied to that rod will have a tendency to force the carriage out of the right line. Supposing the traction to be applied in a continuous line with the carriage frame, the evil would only be analogous to that of drawing by a single side chain, coupling two carriages together; but practically it would be much greater, unless we suppose that it were coupled to a carriage with a corresponding inaccuracy of the traction rod. In such a case, the tendency of the tractive force would be to draw the two traction rods into a straight line, and consequently to run the wheels on unequal diameters, or throw them off the rails. But as there would be the *inertia* of two carriages to assist to counterpoise this tendency, the evil would be lessened. This, however, would be the exception to the rule. In practice, the two coupling hooks would not meet in a parallel line, and therefore the coupling chain would draw at an angle with the line of rails, and there would be a constant struggle between the tendency of the coupling chain to take a line parallel with the rails, and the resistance of the wheels to running upon unequal diameters. This would involve much surplus friction, much torsion of the axles, and consequent risk of the carriage getting off the rails.

Fig. 4 shows a carriage frame indicating a third kind of irregularity—the wheels or rollers being in different planes, although the axles are at right angles with the central line of the carriage frame. This is a common defect in railway carriages. When the traction force is applied the wheels or rollers will have a tendency to equalize their diameters on the rails, impelled thereto by the great friction. But they will be encountered half way by an opposing friction, caused by the axles departing from their rectangular position with the line of the rails. Thus, the traction rod, supposing it to be parallel with the central line of the carriage frame, will always remain in a false position as regards the line of traction, and four distinct irregularities will constantly exist together, viz. wheels out of plane, wheels running on unequal diameters, cross traction, axles neither rectangular with the traction nor with the line of rails. The amount of surplus steam power thus consumed, and the amount of surplus destructive wear in such cases, must be very considerable, affecting engines, carriages, rails and roadway. On perfectly straight rails these disadvantages will exist, but on rails such as denoted by figs. 9 and 10, they will be multiplied and reach their maximum of mischief on rails such as fig. 8. The carriage would in fact be a sledge of the the worst kind, moving on points instead of lengthened bearings.

Fig. 5 represents a fourth kind of irregularity most common in carriages without spring buffers, and produced by a violent blow expending its force on one corner only. The carriage is supposed originally to have been of true form like fig. 1., till forcibly deranged. In some cases the derangement does not take place in the frames, but in the axle guards, the result being the same as regards the action of the wheels and axles. In this kind of irregularity the axles are parallel to each other, but are not rectangular to the traction, while all the wheels are out of plane. The results in traction will be precisely of the same mischievous kind as those previously described to belong to fig. 4, a complication of opposing mechanical tendencies, involving a wasteful expenditure, with considerable risk.

The distance between the axles of the above described carriages is that used in the first-class carriages on the London and Birmingham and other similar lines. On the Birmingham and Gloucester the distance is advantageously increased to twice the width of the gauge, which is not too much to ensure lateral steadiness. But the axles of the luggage waggons, for the convenience of using small turntables, are rarely suffered to exceed much the width of the gauge, varying from five to six feet. On the Great Western this absurdity is carried to the extreme in the case of horse boxes, the axles of which are six feet apart, while the gauge of the road is seven feet, thus presenting the anomaly of a carriage running broadside forwards. On the Great Western the horse boxes have spring buffers, and it is supposed that the coupling up tight steadies the horse box; but it must be evident that the elasticity of the buffers must be nearly overpowered before steadiness can be attained, and this will be at the expense of increased consumption of steam power by increase of rigidity in the train.

All the carriages before described are constructed on the principle of exact movements rigidly confined, without any compensation for irregularities, other than such as may occur vertically, for which purpose bearing springs are provided, yielding in a vertical direction, and in no other. Figs. 2, 3, 4, and 5, are exaggerated representations of these defects, which require compensation. Figs. 8 and 10 show the irregular kind of rails on which not even the geometrically true carriages, fig. 1, can run without excessive friction, though in fig. 9 it might run with a motion resembling the ascent and descent of hills. That these irregularities are real, and not imaginary, may be verified to demonstration by referring to the common class of accidents with luggage trains. The most common are the breakings of the coupling chains. It is evident that a larger amount of engine power must be requisite to start a train into motion from a state of rest than is requisite to keep up motion after the *inertia* is overcome. If, therefore, the coupling chains break while the train is in motion, it is obvious that irregularities must exist, producing an amount of resistance exceeding that of the whole *inertia* of the train. And these irregularities can only be accounted for by the defects of carriage construction, or of rails, or of both combined, illustrated by the diagrams, together with others which will be hereafter adverted to.

The proposition will be readily assented to, that if irregularities of construction cannot be avoided—and this will scarcely be disputed—the only remedy is to provide *compensation for irregularities*, following therein the example set us by nature in numerous ways. Thus, for instance, the curved courses of rivers compensate for, and retard by friction, the too rapid action of gravity, which would otherwise dispense with streams, and leave no distinction, save the extremes of a rapid torrent, and a dry ravine. The spiral tendrils by which the branches of vines cling to their supports, and by their elastic resilience equalise the irregular action of the winds, which would otherwise tear them down, are another example of Nature's compensating principles. In short all terrestrial motion is irregular, and has compensation provided for the irregularity, according to the quality of the irregularity.

Fig. 6 shows a carriage framed in two parts, which are connected together by the joint A. The axles are parallel to each other, the wheels are in the same planes, and the traction rod is rectangular with the axles. It is evident that this carriage will run as perfectly true on straight rails as the carriage, fig. 1. It will also by the free movement of the joint A, accommodate itself to run on rails like fig. 10 the axles diverging from right to left alternately, to suit the curvature. On the rails, fig. 9, it will run equally well. On the rails, fig. 8, the compensation will not be perfect, because by the mode of construction both axles are compelled to make simultaneous movements, whereas to accommodate that irregularity it is requisite each axle should be enabled to diverge and converge independently of the other. The traction rod also would occasionally be placed in the wrong position.

Fig. 7 shows a carriage also framed in two parts, which are not connected by a single joint, but by a bar secured by joint pins at B B, so that each axle is free to swivel round its own centre. C represents two segments, which are circumferences to the centres B, and take the thrust of the frames, when the carriage is propelled. D D represent two springs, jointed to the frames, and serving as ligaments to hold them in a straight line. When passing round a curve the outer spring will be elongated by tension towards a straight line, and the inner spring by its retractile action, will acquire a greater degree of curvature, and this action may be varied on either side according to the variations of the curvature of the rails.

This carriage will run equally well on the straight rails like fig. 1, on the curved rails fig. 10, and on the undulating rails fig. 9. And as each axle can swivel and diverge independently of the other, it will give and take with perfect facility to the irregularities of the rails fig. 8. But in order to insure truth of traction, it will be necessary to swivel the traction rod at the centres B, in which case they will always maintain their parallelism to the general line of draught, while the wheels and axles accommodate themselves to all the irregularities of the rails. For the same reason the traction rod of the carriage, fig. 6, should be swivelled at the centre A.

If either of the carriages denoted by figs. 6 or 7, were constructed in the defective mode of fig. 2, it is obvious that compensation would be immediately afforded by the play of the joints of figs. 6 or 7, and the axles would be enabled to find their true position, according as the rails might be rectilinear or curvilinear.

But the play of the joints would not afford compensation for the defective position of the traction rod shown in fig. 3. That could only be compensated for by swivelling the traction rod at the centre of the carriage, and allowing the ends to play freely and accommodate themselves to the draught.

The defective construction of fig. 8, the wheels out of plane, would to a certain extent be compensated for by the double jointed construction of fig. 7, which would allow the carriage to slide laterally, till the wheels approached the same plane. But in such case the traction rod in addition to being swivelled over each axle, should be divided into two parts by connecting links at the middle of its total length.

The double joints, fig. 7, would afford compensation in the same mode for the accidental derangement of form indicated by fig. 5.

The compensations thus far shown, are produced only by the arrangement of moving joints of the framework and traction rods. Other important compensations also are required by the agency of the wheels and springs. The latter will be treated of at a future time as belonging to the question of elastic compensation. The wheels being a question of moving joints, enter into the present discussion.

In passing round a curve with a railway carriage, it must be evident that the converging of the axles in lines radiating to the centre of that curve, will not alone compensate for the difference in the length of the pathway. The two wheels being fast on one axle, must travel at the same rate of speed, consequently they can only travel on curved paths, without friction, by means of varying diameters, proportioned to the variation of the tracks. This is accomplished by means of coning the wheels. But in order to bring this principle into action, it is necessary that the carriage should be more elevated on one side than on the other. This is equivalent to a lateral gradient or running up hill; consequently a larger amount of engine power will be requisite. It is alleged that the centrifugal force has a tendency to throw the carriages more on the outer rail, and therefore by altering the level of the carriage and inclining the gravity inwards, a compensation is provided. This is true; but that centrifugal force represents engine power expended, and if means can be found to diminish friction, it will be desirable to use them, the more especially that it is not a question of regular curves only, but of every variety of irregular curves, laterally and vertically, bad joints, worn rails, loose chairs, varying gauge, and similar circumstances. The principle of compensation for the difference of length of track in curves of regular form, may to a certain extent hold good, by means of coned wheels or rollers, but it is utterly useless for constantly occurring irregularities, requiring momentary compensation.

For this purpose loose wheels are essential, i. e.

Digitized by Google

each wheel should revolve on its axle independently of the other, while the axle revolves on its bearings. On this plan, cylindrical wheels might be used—*i. e.* cylindrical on their bearing surface—the angle between the cylinder and the flange being fitted up with a cone of sufficient size to prevent the flange from grinding against the edge of the rail. With diverging axles, and loose wheels on those axles, and the traction rod constantly swivelled, a carriage would possess all the mechanical movements necessary to pass round curves and inequalities. To compensate for the centrifugal force, the outer rails should be raised to a higher level.

The valid objections that have been made against the use of loose wheels are—first, that they are apt to escape from the rails; secondly, that they are apt to wear irregularly in their boxes, and cause the peripheries to run untrue.

The first objection is valid, when loose wheels are used with a rigid carriage, such as fig. 1, because when the carriage is passing a curve the axles are not at right angles to the centre of that curve, consequently the wheels are not parallel with the rails, but at a tangent with them. Under these circumstances, if the wheels be loose, the path of least friction is for the flange to roll over the rail and escape; but if the two wheels be fast, and thus form a roller by the solid connection of the axle, one side restrains the other, and then the path of least friction is to glide along the rail by the flange, instead of rolling over it.

But this objection ceases to exist with carriages constructed like figs. 6 and 7, inasmuch as, by the play of the joints, the axles can always be at right angles to the rails, and the wheels parallel with the rails, and therefore the path of least friction will be for the wheels to roll along the rails, equally well on the curve as on the straight line.

The second objection, of the wheel boxes wearing irregularly, is easily met. If the boxes wear irregularly, it is an evidence of their being too short to keep the wheels steady under their lateral leverage. The remedy for this is, to lengthen the boxes on the inner sides, till they have sufficient steadiness. They may, if required, be made to occupy the whole space between, but the length of rail being equal to half the diameter of the wheel, it will be found quite sufficient for the leverage. A channel should be formed inside each box, for the purpose of lubrication.

In practice, with coned wheels, it will be found that the axle will revolve in its bearings continually, while the wheels will only move so much on the axles as will compensate for irregularities, for the reason, that the conical form of the peripheries has a tendency to strain the wheel, and prevent the fair turning of the box. This, in fact, is the reason why a large box is requisite. But the axle always takes a fair bearing in the brasses, if it be truly turned and fitted, and therefore the movement will be determined to it as the point of least friction.

Wheels which are true cylinders in their peripheries, and bear over the whole breadth of the rails, will roll without rubbing friction.

Wheels which are conical in their peripheries and bear over the whole surface of the rails, will not roll, except at their largest diameters, while they rub and slide with the other portions. This is an advantage for the driving wheels of engines, but a disadvantage for all carriage wheels. It is yet a problem to solve whether sufficient bite in the rails can be obtained by cylindrical driving wheels? If it can it will be an important object to have all the wheels cylindrical, saving draught and wear—thus economising both steam and wheels.

So long as the driving wheels of the engines are conical, the rails must be laid at an angle with the horizon, corresponding to the cones, in order to ensure a fair bearing. If they be not laid so, the weight of the engine, will soon force them to that position—or, supposing they are fixed so firm as to resist alteration by pressure, they will laminate and wear down, till the angle is obtained. If, therefore, the rails be laid at the angle with the cones of the driving wheels, it follows either that all the carriage wheels must be coned to the same angle, or they will not bear even the whole surface of the rail. If they be cylinders, they will only bear on small portions of the rails.

To set against this there is, however, the question of proportional weight. If the driving wheels of the engine press on the rail with a force equal to four tons, and a pair of carriage wheels press with a force equal only to two tons, one-half of the bearing surface will be equivalent—probably less—inasmuch that the carriage wheel should be merely the pressure of a rolling surface, while the driving wheel bites into the surface, locking the salient and re-entrant angles of the particles of metal together. Theoretically the carriage wheel is a mere vertical pressure, while the driving wheel exerts a force longitudinal to the rail as well as presses on it.

But before this can be accomplished, it will be necessary to construct both engines and carriages so that the wheels may always be parallel to the rails in all conditions, whether straight, curved, or irregular, with the axles at right angles to the traction. As engines and carriages are at present constructed, cylindrical wheels would not be safe on the rails. The conical wheels act as lateral gradients, when the carriage acted on by any irregular bias of framework, or rails, as before described, brings the flanges in contact with the rails. The gravity and concussion together then cause a lateral slide to take place, restoring the wheels to the centre of the tracks.

In all the irregularities described, it is taken for granted that the wheels are all turned exactly alike; if they happen to vary in their diameters, which may often be the case, it is another source of friction and risk, producing another variety of the evils alluded to. *With the wheels, each revolving independently of the others, a variation in the diameters would be of little consequence.*

All the carriages treated of are four-wheeled carriages, which for many reasons are preferable to those on six wheels. The original motive for building six-wheeled carriages was to get steadiness by means of length, but that steadiness is attained at the cost of very considerable friction. On curves six-wheeled carriages are especially objectionable, and when used with axle guides they are little better than sledges, on any kind of rails. On the Great Western, where they were first used, it was a case of necessity. The four-wheeled carriages were too short in proportion to the seven-feet gauge, to produce steadiness. They were, in fact, of the same length as the carriages usually constructed for the four-feet-nine gauge. The necessary increase of length caused so much increase of weight that four wheels of the ordinary kind were insufficient to support it, and moreover it was necessary to distribute the weight more equally on the rails. This could only be accomplished by using an additional pair of wheels. Steadiness was thus gained, and the jumping motion formerly complained of disappeared. But it is probable that the friction was considerably increased, so much so as to give rise to the practice of using one loose wheel to each axle on the six-wheeled carriages. While the passenger carriages were thus improved, the horse-boxes were left unreformed. Nothing but close coupling can possibly prevent these machines from getting off the rails. Could the horses speak they would complain, like passengers, till the evil were remedied.

Since the introduction of six-wheeled carriages on the Great Western, and the discussion of the question between four-wheeled and six-wheeled engines, six-wheeled carriages have been introduced on rails of the narrow gauge, without any better apparent motive than imitation. The reasons why six wheels should be used for engines, which are locomotive *agents*, do not at all apply to carriages, which are locomotive *patients*, or would be so; *i. e.* unresisted followers, if deprived of their rigid bias.

My next communication will be on the subject of bearing springs, and their various modes of compensation. I remain, Sir, yours, obediently,

WILLIAM B. ADAMS.

March 3, 1841.

P.S. Since the article on the subject of wheels, I have had an opportunity of inspecting some of the wooden tyred bearing wheels, made apparently on the plan of Mr. Parkin. I was informed that they had been in use less than a month, and they were worn out. They were worn into ruts, upwards of an inch deep, by the action of the rails, and though the wood was sound hard beech, it had become so fibrous and yielding, that the breaks had no power to hold the wheels. In one instance, the rapid friction without effective pressure caused them to take fire, like a Sandwich Islander's tinder-box.

MESSRS. ADAMS AND BUCHANAN'S BREAK.

Sir,—In his reply to W. G., Mr. Adams seems to me to have omitted, or rather misconstrued, a very material point in the objections urged against his break, more important, if possible, than any of the other very pertinent observations in the letter which appeared in your columns of the 20th ult.

That the whole force is communicated to the parallel bars, through the medium of springs, as stated by Mr. Adams, is indeed perfectly correct; but the grand and almost insurmountable objection to the break, as at present constructed, is the want of springs, (to which I conceive "W. G." alludes, and which must surely have escaped the notice of Mr. Adams,) between the break frame and the framework of the carriage.

The common railway carriage springs at present in use allow a play of from 4 to about 5 inches. A very small portion of this, it is true, is at any individual instant required either by the irregularities of the road or the motion of the carriage, but the slight variations continually occurring would tend (supposing the break in action) alternately to tear away the whole break from the side framing of the carriage, or to throw the entire weight of the carriage on the breaks.

In conclusion, I would suggest to Mr. Adams, that if in any part of the two feet or four feet lengths of bars (however the ends may be finished) the section of them shown in the diagram be retained, all the objections before urged must still hold good, and in innumerable instances total disorganisation of parts, and consequent danger to passengers must inevitably ensue. I am, Sir, yours, respectfully,

W. H.

Sir,—If you will favour the following remarks on Mr. Adams's railway break with a place in your valuable journal, you will oblige the writer, who has always derived great pleasure and information from its valuable pages.

Your correspondent "G. D.," in his communication dated March 2nd, has omitted to state what I conceive to be the greatest objection to Mr. Adams's break—namely, the effect which it would have upon the rails. We are all aware that the rails are subject to great wear and tear; that they require the most constant attention to keep them in true gauge, and that on every railway a "gang" of men is constantly employed in fixing the chairs, and replacing the wedges and screws deranged by the vibratory motion of the carriages. Now, I think that it will appear evident that this already heavy item in the maintenance of way would be greatly increased by the effect of Mr. Adams's break on the rails. As the whole momentum of the train must be destroyed by the action of the "jaws" of the break on the rails, the whole stress must fall on the screws which fasten the chairs to the sleepers, unless the wedges of the chairs give way; in which case the rails will be loosened, and the next engine passing must necessarily fly off the rails. The injurious effect of so immense a stress on the screws would alone cause such an increase in the expense as to prevent the introduction of the break into general use. Again, as the carriage vibrates, so also must the break, clasping the rails, which is of itself, in my judgment, an insuperable objection to the adoption of this break. I shall conclude with putting the following question to Mr. Adams—How would the break adapt itself to the position of the carriage on a sharp curve? By springs? I remain, Sir, your obedient servant,

T. F.

London, 29th March, 1841.

1. Toll to London and Birmingham 116*l.* 5s. 11d., to be deducted from gross receipts.
2. The receipts are exclusive of those from the Post-office.
5. Receipts include the Northern and Eastern toll, &c.
6. The capital expended includes 132,371*l.* 14s. 11d. laid out on the Glasgow and Paisley Joint Line No. 7.
7. Made jointly by the Ayr and Greenock Companies.
8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*
10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.
12. The 25*l.* 10s. 8d. from goods, &c. is for toll only.
13. Ten per cent. is the maximum dividend allowed by the Company's Act.
14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line.
17. The capital of 741,000*l.* includes the new capital for London and Brighton station.
18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. are guaranteed.
19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.
21. Canal cost, 100,000*l.*; railway, 677,936*l.* 3s. 0d.
22. The 3,080*l.* 19s. 10d. are the net receipts.
23. The receipts for goods, &c. include, carriages, 25*l.* 5s. 0d.; horses, 81*l.* 9s. 0s.; parcels, 155*l.* 0s. 8d.; dogs, 1*l.* 18s.; cattle, 16*l.* 14s. 6d.; corn, 10*l.* 17s. 10½; heavy goods, 399*l.* 5s. 9d. Total, 692*l.* 10s. 9½d.
26. The receipts stated are after deduction of Liverpool and Manchester toll.
27. Out of the receipts stated, the Company have to pay toll, &c. to the Eastern Counties' Company—about 150*l.* weekly.
28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.
31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Railway.—*We do not think the publication of our correspondent's letter would serve his object.*

Chester and Crewe Railway.—*A second perusal of the letter of* A Cheshire Farmer *induces us to recommend to him and his neighbours to try the Grand Junction Board again. We think they are more likely to succeed in that way than in any other.*

Ink-horn *has certainly forgotten his Christian name.*

The Great North of England Railway.—*The "Bradford Clothier" has won. The Act of Parliament terminus of this line northwards is* Newcastle, *though for the present it has been carried no further than* Darlington. *We believe that in this instance want of means has been the sole cause of stopping short. Of its speedy extension to the Tyne there can be little doubt; and scarcely less of its ultimate extension to the Scottish metropolis. We have received an interesting letter on this subject from* A Glasgow Citizen *which shall appear in our next.*

A Manchester and Leeds Shareholder *in our next.*

Darus *declined.*

Expurgator.—*We must make inquiries.*

Communications received from W. G. B.—Fitzaxle—An Expectant—K. K.—Mr. G. Curtis—Glottianus.

THE RAILWAY TIMES.

SATURDAY, APRIL 10, 1841.

We have received the following letter from the Secretary of the Edinburgh and Glasgow Railway:—

Glasgow, 6th April, 1841.

Sir,—At a General Board Meeting of the Directors of this Company, held here to-day, consisting both of Edinburgh and Glasgow members, it was considered that it would be advisable for the interest of this undertaking that no more printed statements should be laid before either the public or the shareholders. And in accordance with this view, it was mutually agreed to request you to withdraw the Address of the Edinburgh Directors, and Reply by the Glasgow Directors, from your next number, in which you mention that they are to appear. The Board regret that this may interfere with your arrangements, but they trust you will agree with them in thinking that this step is decidedly for the benefit of the concern.

I am, Sir, your most obedient servant,

H. G. WRIGHT, Secretary to the Board.

To the Editor of the *Railway Times*.

We are very glad to be released from our promise to insert the papers referred to—which would, we fear, have been found of a length very disproportionate to their interest to the general reader—and sincerely hope that the Directors will be able to adjust among themselves, in a satisfactory manner, all their existing differences, without any further reference either to the public or to the shareholders. Of "the benefit to the concern" from such an adjustment, there can be but one opinion.

The progress of the works has, we are glad to learn, experienced no interruption from these "domestic broils." Mr. LEADBETTER stated last week, at the opening celebration dinner of the Glasgow and Greenock Railway, that "the Directors of the Edinburgh and Glasgow were doing all they could to have their line opened early in August, and that no doubts were entertained of its being ready before the end of that month." When opened, there will then be a complete railway communication, of less than three hours' duration, across the entire breadth of Scotland from sea o sea, with the exception of the couple of miles between Edinburgh and Leith, to be hereafter filled up by the Newhaven or some other short extension line.

We presume it will be generally admitted that a law, good in itself, is not the less deserving of respect that the means provided for enforcing it may happen to be feeble or inefficient. Pains and penalties are for those only whom nothing else will restrain, not for men who desire only to do what is right, acknowledge the supremacy of the laws, and yield them a ready obedience. Viewed according to this standard, the Railway Returns made to Government under Lord Seymour's Act, exhibit a laxity of regard for its provisions—even for those of the most unquestionable utility—which it must be confessed is but ill calculated to recommend the claim of the Companies, to be left to themselves, to the favour of a discerning and impartial public. We see that, *left to themselves*, the disposition of too many of them is to set themselves above all law—to treat with the greatest imaginable indifference, the most reasonable requisitions of the Legislature and Government of the country.

We mentioned lately the startling fact that of forty-seven (at least) railways which have been wholly or partially opened to the public, not less than fifteen had made no returns whatever of their traffic to the Board of Trade. And on since looking over the returns of the thirty-two Companies which have professed to comply with the requisitions of the Board, we find that eighteen of them (more than a majority of the whole) are of so imperfect a character that they might as well not have been made at all. The eighteen we allude to, give merely the total numbers of passengers carried and miles travelled, with the gross receipts, while the columns appropriated to amount of "toll" levied and cost of "locomotive power" per passenger, are left blank. In two or three instances, apologies are made for the absence of the information required under the last two heads, with promises of more complete returns in future; but in the great majority of cases, no reason whatever is assigned, nor (evidently) meant to be assigned.

We may particularly instance the Liverpool and Manchester, the Grand Junction, and the North Union, as Companies which have drawn a dry pen through the columns in question, without caring to offer one word either of explanation or apology. "You can't compel us to give you any information on these heads; and since you can't, we don't choose;"—that is plainly what the manner of their returns expresses. Inability to furnish the information asked for, is of course out of the question. Several Companies of much more recent standing than these—the London and Birmingham, for example—have furnished the fullest information on every point embraced by the requisitions of the Board of Trade; and what one Company can do, so can every other Company under the like circumstances. It is the *will* only that is wanting.

Now either it is right that the information called for, but withheld, should be furnished, or it is wrong; if right, then means should be devised to enforce compliance from all Companies alike; or if wrong, it should be shown to be so, in order that all the Companies might zealously co-operate to induce the Legislature to dispense with these returns altogether. It will not do, to say merely, that there are no pains or penalties for the refusal of the information, for besides that this is but a rogue's plea at best, pains and penalties may be at any time enacted in abundance enough, and of stringency enough, to make the most obstinate and contumacious yield. The refractory Companies must either show good and sufficient reasons, for their non-conformity, or they must lay their account with being *compelled*, whether they will or no, and that at no distant period, to fall into the ranks of the conformists.

But such good and sufficient reasons we suspect they will find it rather difficult to furnish. For our own parts we can imagine none. We have considered the matter well, and are decidedly of opinion, not only that the public are entitled to the information sought for, but that it would be for the benefit equally of the public and of the proprietors of railways themselves, that it should be furnished.

First, as to the *tolls*. The power of the Companies to levy tolls is derived from the State, and it is a consequence of obvious necessity that they should be responsible to the State for the manner in which they exercise it. The tolls, it will be observed, are in every case *maximum* rates; and these maximum rates were mostly agreed to at a time when it was hard to say from any existing experience on the subject, what they ought really to be. Much was necessarily left to the discretion of the Companies, and much it now behoves, therefore, the legislature to ascertain what the use made of that discretion has been. Have the Companies generally levied their maximum rates, or how much less? Would lower have sufficed to remunerate them, or would the justice of the case have been better met by the adoption of a higher scale? (Of exacting *higher* tolls than they are authorised to do, we here say nothing, for that is a case the proper remedy for which is to be found in the Courts of Law.) Answers to these inquiries are desired not because it would be proper, or that it is contemplated by any one to deprive the Companies of their vested right in those tolls on the faith of which they embarked in their respective undertakings—be they what they may in amount; but simply because it is of the utmost importance for future guidance, that the legislature and the public should know distinctly what rate of toll, on any given amount of traffic, will pay the proprietors of a railway for making it. We must further remind our non-conforming friends, that it has been generally a matter of *positive bargain* that in the event of a Company's acting in the two capacities of toll proprietors and carriers (as *all* Companies now do), they should keep separate accounts of their receipts from both sources, and that these accounts should be accessible to the overseers of parishes for certain stated periods in every year. We do not recollect to have seen a single Railway Act which did not contain strict provisions to this effect—fenced in some instances with very heavy penalties. Now to withhold from the Government, acting

Digitized by Google

in the interest of the country at large, information which they have covenanted to furnish for mere parish purposes, is manifestly a very idle, and inconsistent course of proceeding. To say as is done in several of the Returns before us, that "no separate charge for toll" is made, or "no separate account" kept, is to plead guilty of a *double* breach of duty, and yet to act ingenuously withal; but to offer no such apology, nor any apology whatever—leaving it thereby to be inferred, that a "separate account" has been kept, which any *overseer* may examine, provided only he is not an *overseeer* appointed by the Government—is a piece of mere impertinence, which can serve no good purpose on earth.

The *second* point raised by the nonconforming Companies is the right of the public to know the cost of "the locomotive power" on each railway. Were the state of things the same now as it was five or six years ago, when the majority of the existing Railway Acts were passed, we should say that the public had no such right. But it is not so. The Railway Companies were originally supposed to be subject, as carriers on railways, to the same chances of competition to which carriers on highways and canals are subject; and had such been really the case, the public might have relied with perfect safety on the all-powerful influence of competition, to keep the carrying charges within strictly remunerative limits. But experience is said to have since shown that the carrying business on railways can only be carried on, with safety and advantage to the public, by the Railway Companies themselves, to the exclusion of all other competition of every description (so far, at least, as the providing of engines and carriages goes); and a Committee of the House of Commons has, after long inquiry and great deliberation, affirmed this view of the subject. At the present moment the general understanding is, that the Companies must of necessity be the only runners of engines on railways. But as yet—be it remembered—*there is no legislative enactment to this effect;* the practice exists but on sufferance only—by way of trial, as it were. The Companies have still the absolute monopoly to establish absolutely; and if they imagine that the way to establish it is to begin by refusing the public all information respecting their net carrying cost, we think it is likely they will find themselves involved in a great mistake. The legislature will not jump, to such an absolute monopoly, in the dark; they will require to see clearly what is on the other side. Confirmed it may be, but on conditions only—such conditions as will protect the public from being sufferers by it, and these conditions can only be rightly adjusted by knowing what the *net* cost of conveyance is. The only difficulties at present in the way of persons running engines on railways as well as the Companies themselves, arise from certain deficiencies in the existing Railway Acts; but they are deficiencies which may be very easily supplied (so we at least presume to think). It could not be said, in opposition to a General Act to supply these deficiencies, that it was ever intended, by the encouragement of the railway system, to make a close monopoly of the whole (land) carrying business of the country; and it would be but following out the original intentions of all parties, were every possible means now used to throw the railway carrying trade as open as possible.

But is a perfectly open trade the grand desideratum which our nonconformists aim at? We trow not. We pray them, therefore, to take heed while there is yet time. Let them deal frankly with the public, or the public will assuredly deal sharply with them. Complete returns, or no monopoly! A monopoly on terms, or no monopoly at all!

A CONVERSATION took place in the House of Commons a few evenings ago, on a proposal that the Standing Orders be relaxed to enable the North Midland Railway Company to introduce a Bill for the raising of a further sum of money, but ultimately the motion was withdrawn. On that occasion Mr. HUME is reported to have said, that "he objected to the House giving these Companies any further facilities for the borrowing of additional capital." So far as we can, from the context, arrive at Mr. HUME'S reason for opposing the grant of further powers in cases of the kind referred to, it seems to be based on the very fallacious character of railway estimates generally. If Mr. HUME could, by any legislative enactment, put a stop to this great scandal, none would feel more indebted to him than railway proprietors, who have already suffered so much from what cannot, we fear, be at all times characterised by so gentle an epithet as the blunders of *incompetency;* but until he can do this, it seems to us, that it is but a very unsatisfactory mode of proceeding to prevent them from finishing their works, merely because a great deal of money may have been unnecessarily lavished in bringing them so far towards completion. The amount already expended might, on Mr. HUME'S principle, remain wholly unproductive, while those through whose "fallacious estimates" the proprietors had been compelled to appeal again to Parliament, would be almost the only parties who would *not* be sufferers.

There is no denying the fact, however, that the gross inadequacy of railway estimates has been, and is, what we have above described it to be, namely, a great scandal upon the system generally. For an excess of estimate when railway operations were new and untried, every one must have been prepared, but that now when works of this description *ought to be* understood, discrepancies of so extraordinary a character, as daily experience presents between the estimated and actual cost of particular undertakings, should occur, is almost unaccountable. Carelessness is the mildest charge that can be brought against the parties who frame such estimates; and carelessness, we fear, must likewise characterise those, through whose apathy this delusive system of proceeding is suffered to go forward.

The truth is, that with railway proprietors themselves rests the blame of many, if not of all, the grievances from the effects of which they are now suffering, and are likely to suffer still further. It may appear that the great body of subscribers to a railway project are completely at the mercy of the engineer, and to a certain extent it is so, but only to a certain extent. The majority of those who may feel disposed to embark their property in railway speculations are, of course, incompetent to form an accurate notion in the first instance, as to the sufficiency or insufficiency of a particular estimate; but all of them are capable of forming an opinion, and of giving utterance to it, when the result differs so materially as in most instances it has done from the expectations originally held out. It is, in fact, the silence which has hitherto been observed by railway proprietors at large in reference to these extraordinary excesses that has greatly contributed, if not wholly conduced, to the more recent instances of miscalculation—if miscalculation it can always be called. It would appear, indeed, too frequently, as if the Engineers were the masters, and not the proprietors themselves, so tenderly are estimates handled when occasion occurs (and it occurs but too frequently) of reverting to them at all. This false position extends, it is true, to other branches of the Railway Executive as well as to the Engineeering, but with the latter it is most conspicuous. To hint at the probable insufficiency of a particular sum set apart for a particular purpose, is a species of insubordination to be instantly repressed, at those periodical exhibitions, dignified with the title of General Meetings for investigating the affairs of a railway. And whose fault is this? Not in one sense, that of the engineer, for too much power has spoiled him—not that of the Directors, for they are virtually irresponsible, and therefore disposed to despotism; it is the fault of the shareholders themselves, who trust too much to the professions of their representatives—their agents—their servants—and take too little trouble to examine matters for themselves, and to keep a vigilant eye upon the actions of those to whom they have committed the details of their affairs. If but one Company would protest, in a determined spirit, against, for example, the "fallacious estimates" referred to by Mr. HUME, and follow up their protest by other measures, it is impossible but good would come of it to the railway public at large. A great moral lesson would be read, which Engineers are too wise in their generation to despise.

We know that this very fallaciousness of estimate has been looked upon by some as having contributed to the extension of the railway system, inasmuch as had the actual cost of many lines now in operation been at all accurately ascertained in the outset, these lines would never have been carried into effect. It may be so, but the reaction has extended to many sound projects which, as matters now stand, are likely to remain in abeyance for years to come. Such is the odium thrown, and very justly, upon the estimates of the profession at large, that the calculations of individuals, however carefully made, are regarded with suspicion—so much so that to "double the estimate of construction, and halve the estimate of traffic," has passed into a maxim in determining upon the pretensions of new railway projects.

It is indeed a fortunate circumstance that the latter half of this maxim has not proved as correct as the former. There is, we believe, scarcely an instance in which the traffic originally estimated as likely to come upon a railway, has not been greatly exceeded by the reality, whenever the capabilities of the line have had time to develope themselves. Moderate as railway dividends have hitherto been, and are likely to be, they would in many cases have been still smaller, had not the anticipations of the original promoters in regard to traffic been very considerably surpassed. This is some consolation, certainly, for the mistakes of engineers, although but a very poor one. If it could be shown that in every case the excess of estimate has been unavoidable—that no money has been wasted in committing one blunder and attempting to rectify it by the commission of another—that a line has actually and *bona fide* cost just the amount set down in the "capital account" of the Company—the proprietors would have less reason to complain. We suspect, however, that in too many instances so charitable a conclusion cannot be come to; but in either case the active interference of the parties principally in-

Digitized by Google

terested is much required, and we trust will in future be exercised much more frequently and sedulously than it has heretofore been.

We noticed lately the steps taken by the civic authorities of Inverness, the capital of the Northern Highlands of Scotland, to procure the extension of the Railway System to that part of the kingdom, and have now to record similar movements in the boroughs of Aberdeen and Stirling. We should like much, however, to see this spreading desire to participate in the benefits of the Railway System a little less tainted with a coincident desire to dip into the public purse. The Inverness petitioners pray the Treasury to order the Commissioners of Highland Roads and Bridges "to institute such a survey and investigation (of a projected line from Stirling to Inverness) as may pave the way for a speedy adoption of the Railway System," and the Aberdeen pray that the task of making the preliminary surveys may be confided to "the Government Commissioners lately employed in surveying the line of railway to connect Edinburgh with the capital of the United Kingdom;" but neither body of petitioners propose to do anything themselves for themselves—the petitioning or begging always excepted. Stirling—"Royal Stirling," has set an example, indeed, of a different sort, but such an example! The Town Council of that place, *anxious* to promote the *speedy* execution of that link of the chain in which they are more immediately interested, namely, that which is to join Stirling and Perth, voted last week towards defraying the expenses of making a survey of it, the *munificent* sum of—Ten Pounds! We must look for something better than such Ten-Pound and No-Pound demonstrations of support as these, before we can expect the Government or Parliament to sanction the expenditure of a shilling of the public money, on the present or any other Highland Railway project. These Hill people have been but too much and too long accustomed to draw on the public Treasury for the expenses of all their local improvements, (witness that great job, the Caledonian Canal.) It is now high time they should cease praying to Hercules, and put their own shoulder to the wheel.

The Aberdeen petition cites the appointment of Government Commissioners to survey the proposed lines of communication between London and Edinburgh, as if that furnished a precedent for the largess they pray for; but in that case surveys had *already* been made of all the competing lines, at the expense either of their projectors or of parties locally interested in them. The Address to the Crown from the House of Commons, in compliance with which the Commission was issued was expressly limited to the "respective *already surveyed and projected* railways between London and the cities of Edinburgh and Glasgow."

It is due to the local press of the north of Scotland to mention, that the want of self-reliance, on which we have just been animadverting, has not passed unnoticed or unreproved by it. We give in another part an extract from an Aberdeen contemporary, in which it is very sharply handled. We are glad to find matters of this kind undergoing discussion by the local press, for without local support few railway projects can hereafter look for success. The schemes most likely to attract the notice of distant capitalists have for the most part been already seized upon, and although Scotland is to a considerable extent an untried field, there are very obvious drawbacks to the investment of money in railway speculations in that country. The difficult character of the country may, in some degree be counterbalanced by the extreme cheapness of the land in those parts where the obstacles would be the greatest, but the comparative scantiness and poverty of the population are such as to render it doubtful whether, as mere pecuniary speculations, any very extensive scheme of Scottish railways would answer. There are, we believe, not a few districts in Scotland in which a railway would return a very fair rate of direct profit; but the main inducement must be a consideration of the indirect advantages which such undertakings, whether lucrative to the promoters or not, never fail to secure. Such being the case, it is to be hoped that parties desirous of participating in these advantages will trust less to the aid of others, and rely more upon their own resources.

"If (says our contemporary) the proposal was in favour of carrying a similar line from Oran to Algiers, or from Buffalo to New Orleans, there might be a strong probability that a large share of attention would be bestowed upon it; but as this matter affects *home* interests, it is very questionable if the apathy may not continue until the work is completed from some other quarter." We doubt greatly the completion "from some other quarter," supposing the district to remain indifferent to a matter so closely affecting its own interests, for it is very naturally imagined by strangers that a project of this kind can be of little worth, when those familiar with the locality deem it undeserving. The experience of several English towns which are at present shut out from railway facilities, and must remain so for years to come, in consequence of the coldness or opposition with which they received the overtures of projectors ought to prove a warning to Aberdeen and its sister cities. *Bis dat qui cito dat*, is a maxim peculiarly applicable to local support of railways. To wait until it shall be seen what may be done "from some other quarter" is about the most certain means that could be devised for insuring that nothing shall be done at all.

The Scotch are not without inducement to be active in these matters. The results of the few lines already opened in the North have been very striking, as witness in particular the case of the Dundee and Arbroath Railway, described in the opening paragraph of the article referred to. The passage is so much to the purpose that we repeat it in this place:—

"The value of property on the line from Dundee to Arbroath has (says our contemporary) increased since its formation, by a sum considerably above the entire cost of the railway. The proprietors of property would have been gainers if they had put the line in operation without any charge on the public. The land through which it passes was indeed in many quarters very profitless, and in some as useless as the deserts of Arabia, which, for that matter, it closely resembled. Masses of rock, imbedded in sand, formed the ungracious prospect exhibited to tempt the industrious; and few were tempted to more than a superficial acquaintance with its sterile character. But railways work wonders. Persons who may be conveyed along that line of 18 miles in the brief space of 40 minutes, including six or seven stoppages, as any person may be, during the current and the proximate month, will catch glimpses of a busy, almost a continuous population along the entire line. He will be hurried past villas and pretty gardens, conquered from the waste in the neighbourhood of Broughty Ferry, looking as rich and fertile as if they stood on spots that nature had ever favoured, and art had only required to polish. He will naturally imagine that the huge rocks standing out in the very centre of clumps of flowers have been brought to their present position at considerable expense, as a curious and not unpleasing contrast with the scenery around, whereas the difficulty experienced in their removal sufficiently accounts for their presence to those who are acquainted with the old features of the locality. The proceedings along the entire line promise, ere many years pass over, to convert the railway into a street, through a *continuous* line of busy villages, and literally to convert a desert waste into a home for thousands, of whom many, very many, will experience at least comparative happiness."

THE question raised in our last and present numbers by our correspondents "Enquirer" and "Evander," respecting the authenticity and correctness of the Weekly Returns published in this journal of the Traffic of the Eastern Counties' and Northern and Eastern Railways, demands from us a few words in explanation. We agree with "Evander," that such statements, if incorrect, are calculated to have a very "misleading" effect on the public; and are anxious to make it clearly understood, that we are no parties to any system of delusion of which they may possibly form a part.

We do not understand that any suspicion actually attaches to the Returns of the Northern and Eastern Company, and do not see ground for any. Every thing in and about them, bears the appearance of the most perfect correctness; they are distinct and clear, and uniformly consistent one with another. It is only as contrasted with the Returns of their Eastern Counties' neighbours, that their accuracy is challenged, and that *hypothetically*. "If theirs are right, yours must be wrong, and *vice versa*, if yours are right, theirs must be wrong."

The Returns really meant to be impugned are those of the Eastern Counties'; and certainly anything more enigmatical or incredible than the results they exhibit it would be difficult to conceive. Take, for example, a single instance from the many animadverted on by our correspondents: "In the last week an increase of upwards of 800 passengers is shown, but only 3*l.* in the receipts!!" Clearly an impossible result. How all this arises, whether from design, as insinuated, or from mistake, as it is charitable to suppose, it rests with the Eastern Counties' Executive to show.

We say "with the Eastern Counties' Executive," for we have now in our own justification to state, that the weekly Returns published in this journal, of the traffic of this line, have from the first been supplied to us by *the Eastern Counties' Company themselves*. The same is the case, indeed, with every Company included in our weekly Traffic Table: the Returns in every case are OFFICIAL. For some time after the first partial opening of the Eastern Counties' line, we did not publish any Returns of the traffic upon it; we were not furnished with any, and (for reasons with which we need not now trouble our readers) we did no choose to go after them. So matters stood, when, on the 21st July, 1840, we received a letter signed "Justus," which we immediately recognised to be in the hand-writing of Mr. Thomas Gibbs, one of the Directors of the Eastern Counties' Company, and one of the present Select Executive of Six, and which letter is, on many accounts, of so instructive and edifying a character, that we cannot forbear laying it *literatim et verbatim* before our readers.

To the Editor of the Railway Times.

SIR,—As an old subscriber to your paper *and an admirer of the zeal and ability with which you have*

Digitized by Google

advocated the cause of railways in general, I am induced to address you upon a subject that has probably not altogether escaped your observation. The extensive circulation of your journal has, in a great measure arisen from *the faithful report you have hitherto given of all railway meetings, combined with the accuracy of the weekly traffic returns;* but in the latter there is an omission, (wilful or accidental I will not stop to enquire,) which I think should from the present time be rectified. I allude to the traffic upon the Eastern Counties' Railway. I say "from the present time," because previously to the 1st of this month, (when the line was simultaneously extended to Brentwood and Shoreditch near the end of Bishopsgate-street) there were several causes (not necessary here to enumerate) which deprived it of that position in the list of railways in which it is now entitled to rank.

"In the early numbers of your journal, this railway was thought worthy of your favourable and especial notice. Latterly, you have been pleased to bestow upon it, *or rather upon its management*, a degree of censure, which it may or it may not have deserved. With your prerogative as a journalist, I am not disposed to interfere. I *accede* to you the full privilege of censuring or applauding the acts of the Directors. I care not whether you are of opinion they are committing a breach of faith with the original subscribers. in their intention of finishing the line to Colchester before they purchase the land beyond it, or whether they are faulty as you seem to imagine, in not beginning both ends at once. The only object I have in view, is that the public should know that the traffic receipts have been doubled since the above-named extension. I can verify this assertion from ocular demonstration at the office, where the Returns are never withheld from any person entitled to see them. Now there may be a disinclination on your part, from the view you have lately taken of its management, to seek for such information, even if it made your weekly return of railroad receipts more perfect. But as *I* feel no such squeamishness, and *am only desirous that the numerous parties now interested in railroads* should be apprised of the fact, and as you weekly solicit *your friends* to furnish you with such information, I will undertake the duty of transmitting you the Returns, as soon as I can procure them, if (as I consider it probable) such information will be deemed an acquisition to your columns. Without the slightest wish to foment party spirit, I cannot but think that your jonrnal, as well as your numerous readers, will be benefitted by such a contribution.

"I remain, Sir, your obedient servant,
"JUSTUS."

London, 20th July, 1840.

Considering how much the Eastern Counties' Directors had suffered from the lash of the *Railway Times*—how, many a time and oft, they had denounced it in *public* places, for its "wanton" and "unjustifiable" attacks upon them—and, how they had even consigned it in their *public* Reports to everlasting "contempt"—(ha! ha!)—it was impossible not to feel greatly amused at this *private* tribute from one of the most active of their body, to its "zeal and ability," (in flagellation?) "faithful reports," just exercise of "prerogative," "extensive circulation," &c. &c. But pass we over the fun of the thing for the present, to show how it bears on the responsibility of the Company for the Traffic Returns, the truth of which is now impeached. Mr. GIBBS, it will be seen, was extremely "desirous that the numerous parties now interested in railroads," should be apprised through the medium of our "extensive circulation" of the *then* increasing traffic receipts of the Company (the accidents of immortal memory had not at that time occurred), and no doubt Mr. GIBBS but expressed the general feeling of his colleagues on this head. Neither had we, on our parts, any objection; for as Mr. GIBBS states truly the fault we had found, was not with the line, to which we have always wished well, but "its management." We saw, however, a great objection to receiving these Returns in the underhand way proposed by Mr. GIBBS, since it would give the Company all the advantage they sought from the publication of them, and yet place it in their power afterwards to acknowledge or disclaim them as might suit their interest or convenience. We knew the men, and knowing them, did not choose to run such a risk. We therefore inserted in our paper of the 25th July, 1840, the following notice:—

"*The Director of the Eastern Counties' Railway, who, under the signature of* 'Justus,' *offers to supply us under the rose with the weekly traffic returns of that concern, is informed that if sent to us directly from the Company's office, and duly authenticated, they will be inserted, but not otherwise.*"

Ten days afterwards we received the following official letter from the Secretary of the Company:—

"Eastern Counties' Railway, High-street, Shoreditch, Aug. 5, 1840.

"SIR,—I beg to hand you the enclosed account of traffic on this railway, and should it be agreeable to you to publish it, the account will be continued weekly.

"I am, Sir, your most obedient servant,
"ARCH. BULKELEY, Sec.

"To the Editor of the *Railway Times*."

It could not of course but be "agreeable" to us to publish the Returns on the terms which we had ourselves prescribed; and so it has happened, that ever since the Eastern Counties' Railway has been included in our weekly Traffic Table. We subjoin a copy of the last Return received from this Company, which is in the same form as all the preceding Returns, in order that our readers may see how undeniably the Company are identified with them.

1841.

PASSENGERS FROM MARCH 29 TO APRIL 4.

including Northern and Eastern Railway Toll, &c.

NATHANIEL DAVIS, Acct.

If, therefore, there has been any "misleading" of the public in the Traffic Returns of the Eastern Counties' Company, the blame does not lie with us. We have but published in every instance what the Company themselves sent us. We may have been the instruments of delusion, but most unconsciously so. The Directors may possibly be able to show that they are perfectly innocent as well of publishing false returns, as of seeking to deceive the public by them,—we hope they may; but until they do so, they must excuse us for warning all and sundry, neither to buy nor sell in future on the faith of any figures they may see affixed to the name of the "Eastern Counties' Company" in our weekly traffic table.

THE Directors of the Bristol and Exeter Railway are making excellent use of the financial prosperity on which we had lately occasion to congratulate them. So actively have the works been prosecuted this spring, that the Directors have given notice to the Great Western Company as the lessees of the line, that the portion from Bristol to Bridgewater will be furnished and ready for opening to the public on the 31st of next month. We further understand that the contracts for the execution of the eleven miles between Bridgewater and Taunton have been let on such terms, that the Directors reckon with the more perfect confidence on being able to open that division also before the lapse of another year. Not the least gratifying circumstance is the low rate at which these contracts have been taken The entire cost, including that of the permanent rails, will not exceed 20,000*l.* per mile.

—o—

ON the motion of Mr. Richard Hodgson, returns have been ordered by the House of Commons of the following particulars of the latest arrangements for the conveyance of the mails between London and Edinburgh:—

"Time of arrival of the evening mail at Lancaster; time of dispatch from Lancaster to Edinburgh; time of arrival at each intermediate post town between Lancaster and Edinburgh, and at Edinburgh.

"Similar return as regards the morning mail from London to Lancaster and Edinburgh.

"Time of arrival of the evening mail at Darlington; time of dispatch from Darlington to Edinburgh; time of arrival at each intermediate post town between Darlington and Edinburgh, and at Edinburgh.

"Distance by the route of the mail from London to Lancaster, and from London to Darlington, respectively.

—o—

MR. WALLACE has placed on the books of the House of Commons notices of two motions (after Easter) which will illustrate still further the subject of Mr. Hume's motion, to which we alluded last week. The honourable member will move for "copies of the contracts for carrying all the mails on railways in Scotland; and also of the contracts for carrying the mails to the same towns or places by mail coaches, carts, or gigs on the same days as by railway; and especially to show what mails are detained on Sundays for want of railway conveyance, with the names of the places such mails are sent from and detained at during Sundays in Scotland." And also for "copies of the contracts for carrying the mails which are sent entirely by railways in Scotland, or partly by mail coach, mail cart, or riding post, and partly by railway, in that country; the return to show the number of mails sent each day, by the above mode, on each railway respectively, stating whether they are carried every day of the week at the same hours and by the same conveyances, and at what hours each is sent, and the time allowed for each transit by each mode of conveyance, with the cost of these respectively; also, copies of the correspondence between the railway companies in Scotland and the surveyors and Secretary to the Post-office in that country, respecting the carrying of mails on the railways on Sundays, and the letters from the Postmaster-General, Colonel Maberley, or the Treasury, on the subject of Sunday mails by railways in Scotland; distinguishing, also, the railways which carry mails on Sundays from those which do not."

—o—

ON Tuesday a petition was presented to the House of Commons from the London and Birmingham Company against the new Railways' Bill, It was referred to the Select Committee on Railways. The other Companies who have petitioned against the Bill in the course of the present week are the Bristol and Gloucester, the Edinburgh, Leith and Newhaven, the Newcastle and North Shields, the Northern and Eastern, and Newcastle and Carlisle.

—o—

ON Saturday last, trial was made on the London and Birmingham Railway, in presence of Sir Frederic Smith, of two plans for accomplishing the grand object of efficient railway signals. The first was that of Mr. Pettitt, already described in this jour.

Digitized by Google

nal, for effecting a communication between the guard and engine-driver—the other a contrivance to enable a policeman on the line to open a whistle on the engine by fixing a catch upon the chairs which support the rails, and thus give notice to the driver in a fog, or under other circumstances, should anything be wrong a-head. We understand that both plans proved highly satisfactory.

—o—

We learn from the *Derby Reporter*, that the magistrates assembled at the Derbyshire April Sessions, on Tuesday last, agreed after some discussion to the following resolution, a copy of which will be transmitted to the Lord Lieutenant of the county:—

"It is the opinion of this court, that the present military force, consisting of only two troops of yeomanry, is insufficient for the preservation of the peace of the county in the event of any popular commotion; and it being rumoured that the barracks at Nottingham are about to be discontinued, it is the opinion of this court that, considering the central situation of Derby as a railway station, added to the increasing population, it would be very desirable to have permanent barracks erected at Derby."

—o—

The total number of petitions against the Railway's Regulation Bill, at the rising of the House on Tuesday last, was 16. The number of Railway Companies is 77.

—o—

Mr. W. S. O'Brien has given notice that he will, on 29th inst., move that "the House will resolve itself into a Committee of the whole House, for the purpose of considering an address to her Majesty praying that she will be graciously pleased to recommend to Parliament that provision may be made for carrying into effect the suggestions contained in the Second Report of the Commissioners appointed to consider and recommend a general system of Railways in Ireland, subject to such extension or modification as may appear desirable to her Majesty's advisers and to Parliament."

—o—

Mr. Hume has given notice that he will, in the Committee upon the Railways Bill, make it "compulsory on the Directors of all Railroads on which mails are conveyed on the week days, to carry them on Sundays also, at the same charge on Sundays as on week days."

—o—

The Directors of the Glasgow and Greenock Railway, which was opened last week, have since received the following letter from Mr. Wallace, M.P. The unsolicited evidence which it furnishes of the superior manner in which the line has been executed, and of the excellence of the Company's working arrangements, must be highly gratifying to all concerned.

"Glasgow, April 1st, 1841,
"Half-past Nine, A. M.

"My Dear Sir,—I have arrived here by the railway in 56 minutes from Greenock, and cannot deny myself the satisfaction of informing you as the Chairman of its Directors, that I have met with nothing superior to the excellent accommodation which the Carriages offered, or the easy, smooth travelling which the railway itself furnishes. I have very lately travelled over a considerable portion of the famed Great Western line of Railway, as well as the whole of the London and Birmingham and Grand Junction lines, and can safely say that I was conveyed this morning more smoothly along the Greenock and Glasgow Railway than in any of the above. To this I may just add, that having no pecuniary interest in the railway, I am convinced my opinion cannot be biassed in that way.

"My dear Sir, yours faithfully,
"Robert Wallace.

"R. D. Kerr, Esq., Chairman of the Directors
"of the Greenock and Glasgow Railway."

RAILWAY OFFENCES AND OFFENDERS.

The circumstances connected with the recent fatal accident on the Birmingham and Derby Railway must be fresh in the recollection of our readers. Marston, the foreman of the works under Mr. John Stephenson, the contractor, was, it will be remembered, held to bail to take his trial for manslaughter, but the grand jury ignored the bill. Not seeing any notice of the trial of the two men, named King and Barber, who were acting under instructions from Marston on the day of the melancholy occurrence, we took it for granted that they, too, had been acquitted at the same time as Marston. It appears, however, that this was not altogether the case, for at the Warwickshire Assizes just terminated, they were charged under the coroner's inquisition with the manslaughter of Richard Bluck, the unfortunate man who lost his life. After a lengthened investigation they were found *Not Guilty*.

We take the following paragraph from a Manchester paper of Saturday last:—

"Another Accident on the Manchester and Leeds Railway.—About nine o'clock on Monday evening a boy, who is an apprentice to one of the men employed in the engine shed at the Manchester station of the Manchester and Leeds Railway, got upon an engine which had just come with a luggage train from Leeds, *and had been left by the enginemen in an improper state, the steam not having been let off.* Probably, not understanding the engine, the boy set it in motion, and it darted forward, broke through the wall of the shed, and fell a height of about 20 feet into the field below, where it was deeply embedded in clay. It lay there until about six o'clock next morning, when it was got out, and it appeared that the damage done to it was very trifling, probably not amounting to more than 25*l*. The boy got off the engine no one knows how, and has not since been heard of."

There appears to have been much blame attributable to the engineman, and we trust that measures have been adopted to punish *him*, although the immediate agent in effecting the mischief has escaped.

Railway trespassers may still congratulate themselves upon being treated very tenderly by the rural magistracy. The following cases are noticed by the *Derbyshire Chronicle* as having been decided at the "Justice Room, Eckington, before W. J. Bagshawe, Esq.":—

"William Torr, a railway labourer, was charged by one of the police with trespassing on the North Midland Railway. It appeared that Torr was found on the railway in a state of intoxication, and in imminent danger of losing his life. He was convicted in 20s. penalty and 9s. costs, and, in default of immediate payment, to be committed for a month.—John Horner, of Eckington, was charged with a similar offence. He was convicted in 20s. penalty, including the costs.—Thomas Dudley, of Staveley, spade and shovel maker, was charged with trespassing on the above named railway. He was also convicted in a penalty of 12s. including costs."

The very paragraph in which these cases are referred to gives the particulars of a conviction by the same magistrate on the same day, of a retailer of beer for keeping his house open after 12 o'clock on Sunday morning. The beer-seller was not so fortunate as the drunken trespassers, who were endangering their own lives and the lives of the public, for *he*, we are told, was "convicted in 2*l*. penalty and 9s. costs!"

We quote the following from the *Cheltenham Free Press* of last Saturday:—

Cheltenham, Thursday, April 1.—The magistrates present were J. E. Viner, R. Capper, and J. Overbury, Esqrs.

Charge of Assault by a Servant of the Birmingham and Gloucester Railway Company.—George Groves was charged by Mr. John Baptist Fleischmann, of the George Hotel, with an assault. Mr. Chesshyre conducted the case for the complainant, and Mr. Weedon, Solicitor to the Company, appeared for the defendant. Mr. Chesshyre stated the case for the complainant. It appeared that some dispute had arisen as to the admission of omnibuses into the railroad yard, and Mr. Fleischmann had received a notice from Mr. Burgess, that the Company had given permission to Mr. Dangerfield and Mr. Haines, and all other omnibuses would be excluded, Mr. Fleischmann wrote for a reason, and received an answer stating that that was the order of the Directors. On Tuesday last Mr. Fleischmann received the following note from the wife of Dr. Williams:—

"*To Mr. Fleischmann, George Hotel.*

"Mrs. Williams expects her family will arrive from Birmingham by the one o'clock train, and will be obliged by Mr. Fleischmann reserving the whole of the inside of his omnibus to convey them to No. 10, Portland-street.

"Mrs. Williams will call at the George Hotel, and go in the omnibus to meet her children.

"Portland-street, Tuesday Morning."

Mr. Chesshyre continued his statement of the circumstances, which were more fully detailed by Mr. Fleischmann, who deposed—In consequence of a letter I received from Mrs. Williams to send an omnibus to the railway station (she considered it as her private carriage as it was to convey no other passengers), at one o'clock I went down with the omnibus; when I got to the gates there was no obstacle to our going in; we are admitted into the yard at all times, but are not allowed to take passengers away.

Mr. Weedon—The magistrates should understand Mr. Fleischmann is allowed to take his omnibus into the yard to set passengers down, but not to remain there to take passengers out, but to drive instantly away.

Mr. Fleischmann continued—A policeman then ordered the omnibus out of the yard; I then went to Groves, the inspector, and told him I had an order to send my omnibus to meet the family of Dr. Williams; he said, "in that case you may go in;" we had gone out in obedience to the order of the policeman; we came in again; in about five minutes the train arrived with Mrs. Williams' family; I accompanied Mrs. Williams to see after her children and the luggage, and Mrs. Williams in my presence ordered the luggage to be taken to the George Hotel omnibus; the defendant asked her if she particularly wished to go by that omnibus, as there were other conveyances; I said, it is useless annoying Mrs. Williams about it, she has told you previously that she does intend to go by the omnibus—it was brought here on purpose; the defendant then pushed me, and said the omnibus should not remain in the yard, and said if they wished to go by the George Hotel omnibus they must get in outside the gates; the defendant then ran up the platform and ordered the omnibus again out of the yard; I ran to the man and told him not to go away until he had received the family which he was permitted to come in to take away; the defendant then ordered some men to take the harness off the horses and take it out; they then unbuckled the harness and took the horses and omnibus out of the yard; Mrs. Williams then went outside the gates; I then returned to the defendant and said, I must see about the luggage, and he said, I wont have you or your omnibus in the yard; he again pushed me.

Mr. Weedon cross-examined the witness, but complainant persisted in his statement that the assault was not merely a hand being laid on his shoulder but a push.

Mr. Weedon—Independent of the right which the Company claims of using their private property, this is a question of right, and consequently the magistrates have no jurisdiction; the 9 Geo. IV. is explicit in this case.

Mr. Chesshyre—Admitting that it is private property, we rely upon the right given by the servant expressly to go in.

Mr. Weedon—That right was immediately withdrawn.

Mr. Chesshyre—It was for the omnibus, but there was no refusal of Mr. Fleischmann to go out; they should have proceeded against us for a trespass, but we have our remedy for the assault.

After some further conversation, Mr. Viner said, we decide that there is no case.

Mr. Weedon said, when the railway was first opened, four omnibuses were permitted to go into the yard, but there were so many complaints in consequence of the omnibuses not coming to some of the trains which they thought would bring but few passengers, and also keeping the people waiting till a second train came in, that the Company made arrangments with Mr. Dangerfield and Mr. Haines, as being the two oldest coach proprietors, and they agreed to take all the trains and not to keep the passengers waiting.

Mr. Yearsley said the objection referred to all the omnibuses, but the Company would not give him and Mr. Fleischmann the chance of acceding to their terms. There were four omnibuses required, and he could not see why the Company should not allow the four to run one each; all the fly work, the coaching, the posting, and the parcels were confined to the two; such a monopoly was never heard of before, and would be much to the injury of the High-street; the Company allowed them to work all the winter, and turned them out just when the harvest begins.

In another part of the same paper the matter is thus farther referred to:—

"Railway Monopoly.—We direct the attention of our readers to our police report of Thursday, detailing the arbitrary conduct of the Secretary of the Birmingham and Gloucester Railway, in endeavouring to prevent omnibuses from the 'George' and 'Fleece' conveying passengers from the station, even when especially ordered by parties for that purpose. The following extract of a letter to the proprietors of the Fleece is a further exhibition of this oppressive spirit:—

"I hear to-day that Mr. Fleischmann and yourself are running your omnibusses to the station in opposition, and that you wait outside the gates for passengers, also that you either have done or propose to reduce the fares to 3d. Now, I do not know that the Company will take any measures to cause you to change this course of action, nor do I ask you to do so, but I give you this fair warning, that arrange-

Digitized by Google

ments have been made for the omnibuses to accommodate your houses fairly, in fact, to call regularly; these arrangements will be carried out unless you persist in your present course, and if you do that for more than another day, I shall write to Messrs. Haines and Dangerfield to say they need not call at your houses. I am thus explicit in order that you may not say you were not aware of the consequences. You will, of course, take which course you think best.

"I am, your's &c.,

"WM. BURGESS, Sec."

If such conduct as this is permitted to go on unchecked the public will have themselves to thank for increased fares, &c., which will, no doubt, be the next step. We are glad to see that the proprietors of the George and Fleece have determined not to be driven from the ground. The following is Mrs. Williams's opinion of the assault complained of by Mr Fleischmann on Thursday. It is contained in a letter addressed to the proprietor of the George hotel:—

"Sir,—As I leave to-morrow morning for Southampton, it is impossible I can attend to your request, and, indeed, were that not the case, it would not be pleasant for me to attend at the public office. I consider the conduct throughout at the station-yard this morning most disgraceful, and I should recommend as the best and most proper course to adopt, to lay your complaint before the Directors. I certainly did see the person who spoke to me relative to my conveyance, assault you, and no doubt he would, on a complaint being made, receive a severe reprimand. I have travelled on several railways, and until this morning, always been treated with civility. Should you wish to communicate on the affair further, with me, my address will be George Hotel, Southampton.

"I am. Sir, yours, &c.,

"CAROLINE WILLIAMS."

We shall not suffer this subject to sleep."

There appears to have been a good deal of unnecessary harshness and caprice displayed by Groves the inspector, in the particular instance narrated, but the great point to be considered is—whether the principle upon which the Railway Company are proceeding, namely, of confining as far as possible the conveyance of their passengers to a limited number of omnibus proprietors, be a correct one. It is easy to raise the cry of "monopoly," but we fear, that without some exclusive privileges being secured to them, very little dependence could be placed upon the punctuality and regularity of these vehicles. The Birmingham and Gloucester Company seem to have suffered, as we know other Companies have suffered, from an attempt to encourage competition. "Mr. Weedon said, when the railway was first opened, four omnibuses were permitted to go into the yard, but there were so many complaints in consequence of the omnibuses not coming to some of the trains which they thought would bring but few passengers, and also keeping the people waiting till a second train came in, that the Company made arrangements with Mr. Dangerfield and Mr. Haines, as being the two oldest coach proprietors, and they agreed to take all the trains and not to keep the passengers waiting." Of so much importance is it that passengers to and from a railway terminus should be able to depend with certainty upon suitable accommodation by omnibuses, that some Companies have given a bonus in money to secure their regular attendance. We doubt the policy of any such arrangement, but if by affording exclusive facilities to a few respectable parties, it can be made worth their while to embark in the business, we think that such facilities should by all means be granted. The public will thereby be much better served than by encouraging an unlimited competition, which makes up for the cheapness of the article by inferior quality.

So far, therefore, we consider the Birmingham and Gloucester Company to be justified in refusing to put all the omnibus proprietors on precisely an equal footing, but at the same time we must protest against the plan of petty retaliation and annoyance threatened against recusants, in the letter purporting to emanate from the Secretary of the Company, as quoted by our contemporary.

THE following is from the *Leicester Chronicle*. The railway referred to, appears to be the Midland Counties':—

"James Marr was committed from the County-office on Saturday, charged with negligence, in not removing a truck off the railway for the passage of a luggage train. The defendant was in the employment of the Company, and was stationed on the line near Syston. His business consisted in removing loose earth with a truck, from one part of the line to another. On Wednesday morning, about half-past ten o'clock, when the luggage down train from Derby was within about 200 yards of the spot where the man was employed, the engineer saw the truck on the line along which he was to pass. The train was at the time going at the rate of 20 miles an hour. He succeeded by great exertions to check its speed, and when with 50 yards of the truck the speed of the train had been reduced to about three miles an hour, and the engineer jumped off. As the speed of the engine when it came into contact with the truck was exhausted, no accident arose from the collision, and the truck was pushed along by the engine. It is due to the defendant, who was a steady man, to state, that when aware of the danger, he made the utmost possible exertion to get the truck off in time. A curve in the line about this spot prevented him from seeing the train as it approached. *Though this is a case that would appear to be marked by no incaution or culpable negligence, yet the Directors appear disposed to visit every case with the utmost penalty, so as to assure the public that every human means shall be resorted to, to protect the life and property entrusted to them, and that a vigilance commensurate with the importance of the charge shall in every case be exercised by the men employed on the line.*"

THE LATE GENERAL MEETING OF THE LONDON AND CROYDON RAILWAY COMPANY.

IN our report of this meeting, it is stated that "A Proprietor" *complained* of the principle of self-election which he said had been displayed in the appointment of their Directors to serve at the joint Board (for the management of their station), these Directors receiving a further salary from the Company's funds. The "Proprietor" alluded to requests that we will insert the following, as a more correct statement of what he did say on the occasion:—

"I beg to deny that *I*, "A Proprietor," made any such *complaint* as that alluded to in your report. All I did in this matter was merely to *ask* information on these subjects in the following distinct words:—1stly. Is the *principle* of self-election and self-appropriation that has recently obtained, as shown at the last meeting in this Direction, to be *persisted in* hereafter? 2ndly. As this railway has already cost about 1,200*l.* per mile in legal charges, I beg to ask if the very large item that appears in the accounts of to-day, as law charges, is to be anything like an annual charge? 3rdly. Also to ask if the Directors have made any estimate of income to be derived from the other two lines—Dover and Brighton—when coming in full operation into this?"

PLYMOUTH, DEVONPORT, AND EXETER RAILWAY.

MR. MACNEILL, the eminent civil engineer, who has been selected by the Provisional Directors to examine the various lines of railway which have been proposed to connect these towns with Exeter, met the Directors at the Secretary's office, on his arrival from London, on Tuesday evening, and on the following morning commenced his investigation of the Southern line, projected by Mr. Brunel in 1836, on which he is now engaged. As Mr. Macneill's inquiry is not limited to an examination of the plans already prepared, but will embrace the consideration of what improvements these plans may be susceptible, his report will be founded on actual survey of the country; and combined with the reports already obtained from Mr. Brunel and Mr. Rendel, and the investigations of Capt. Moorsom, on the Northern line, will afford a mass of information to the Directors and the local proprietary, which will place the line to be ultimately selected on a most satisfactory basis of inquiry.

Mr. Macneill is the Engineer to the Commissioners of Woods and Forests, and apart from his general high professional reputation, is well known in the railway circles, as the Engineer of the Dublin and Drogheda Railway, and as connected with the Slamannan and other lines. He was also employed by the Commissioners appointed by Government for the promotion of railway communication in Ireland, and reported on the several lines laid out through the North and North Western districts.—*Plymouth Journal.*

THE EASTERN COUNTIES.—We see that they have been asinine enough to enter an action for libel against the *Railway Times*. Without at all attempting to prejudge the question, we have no hesitation in saying that the paper in question will, as is always the case in such ill-judged attempts, be largely increased in circulation, and its hostility to the Eastern Counties will certainly not be diminished. The way to deal with these matters, is to prove from clear and undoubted statements, that the evils denounced in so many instances do not exist; till this is done the public will always support the men who expose to the scorching influence of broad paper and print the commission of iniquitous deeds. It would be very easy, as an example, to give a flat denial to the so oft-repeated state ment, that some of the Liverpool incubi do receive travelling expenses which are not paid by them, and to refer the Shareholders to the pages in the journal and ledger, where these items do not appear; or to give to the public a solemn denial by the individuals that they thus sack the Shareholder's money, accompanied by attestations from the station clerks to whom they paid their fares, or from the hotel keepers who received their cash in return for duly feeding them with turtle and champagne. This would be far more rational, proper and effective, than setting a boa constrictor foul of the printer, publisher and editor; because, if they even succeed in getting a verdict, which is by no means likely, if the charges are not disproved, they will be in a worse position than before, inasmuch as they have availed themselves of that disgrace to what are called our laws, "truth is a libel."—*Railroad Monthly Journal.*

SOUTH EASTERN AND DOVER RAILWAY.—The stupendous works of this railway between Dover and Folkestone, which are, we should say, unexampled in the experience of modern engineering, have been actively resumed this spring by a large force of workmen. The line lies along the sea shore, and is formed either by boring tunnels through the bowels of the taller cliffs themselves, by embankment on their ledges, or by cutting to the level in the crowns of the less formidable eminences. It is by no means Utopian to conjecture that this most important railroad will be available to the public in a couple more years, and perhaps sooner, as we understand the shareholders' list now comprises many of the most substantial and enterprising men of the day. Shakspeare's Tunnel, as it is called, from its running through the cliff of that name, a double tunnel, the most extensive of the whole line, twelve months since had been carried through the cliff, and the Herculean task of arching it over where the chalk is considered insecure is rapidly progressing. The sea walls, the cuttings and tunnelling beyond, towards Folkestone, are also in a forward state, while the other parts of the line at its London end are also proceeding vigorously.—*Morning Post.*

MECHANICAL DISADVANTAGES OF THE PRESENT RAILWAY SYSTEM.

(From a Correspondent.)

It is a self-evident proposition that mechanical art and science is now, in the middle of the nineteenth century, in a state of constant improvement and of daily advance. A few months or at the furthest a few years, have witnessed the introduction into actual use of agencies hitherto undreamed of, or considered only as a part of the mystical apparatus of the great laboratory of nature sacred from the rude touch or feeble control of man. Sorcery has been surpassed, alchemy realized, but the wizard of the present day no longer seeks for spells to bend to his will the powers of air or of darkness; more bold and more independent he grapples alone with mighty nature, pilfers her treasure, unlocks her secrets, and discovers and overlooks her most hidden operations.

The discovery, simple and unassuming, that letters could be more readily formed on paper by means of a stamp than by a manuscript process, proved the most efficient means for the civilization of the world: while the art of printing has daily improved in beauty and efficiency, from the rude blocks of Faustus to the steam presses of the *Times*.

The steam engine, from the apparently useless discoveries of the Marquis of Worcester, has advanced to its present state of mechanical perfection and universal applicability. But in them and all other scientific discoveries the progress has been made a step at a time—there has been no arriving, *per saltum*, at the acme of mechanical excellence and perfect arrangement.

The railway system, the first dim outlines of which appear to have been traced about twenty-five years ago—but which can scarcely be said to have been at all understood previously to the opening of the Liverpool and Manchester Railway—seems to form an exception to this general rule of the gradual advance of scientific improvements. The London and Birmingham, the Grand Junction, and other lines were designed and laid down with a haste that regarded the prospect of a speedy return for outlay, rather than a calm and scientific investigation into the best means of conveying the Great Northern traffic. The Great Western evinced more originality in its design, but it has rather been a series of bold experiments, some successful and others the reverse, than the result of scientific and practical experience. Such experience indeed, it was impossible to gain except from the actual construction and working of locomotive lines, and the eagerness with which speculators of all classes rushed into the market when any railway scheme was announced, gave neither time nor inducements, for professional men to investigate the matter with the circumspection and calmness demanded by a question so important as the internal traffic of a great country.

We now begin to feel the results. We find that the public traffic cannot be conveyed over a road that cost six millions of money at the same charge that would amply pay, had the cost of construction been a third of that sum. We find that certain means of ensuring mechanical facilities have been attained at so enormous a cost as entirely to prohibit the extension of those facilities to less favoured portions of the country—while at the same time it may be questioned whether those means are the best suited for the end proposed to be attained.

The outlay incurred to maintain the favourable gradients of the London and Birmingham line, for instance, has been very large, and yet the London and Birmingham is not superior in the average speed or economy of its trains to other lines of steeper inclinations. On the Great Western, the slight amount of the utmost deviation from a level, and the steadiness afforded by the broad gauge, have been succeeded by a speed superior to other lines. But here, again, the outlay to secure these gradients has been enormous. In all railways the cost of locomotive power (to say nothing of the expense of maintaining works of such magnitude) has been hitherto so great, as to evince that the advantages of first class gradients have either been greatly overrated, or are not as yet fully developed. Mr. Bury's evidence before the Railway Committee supports this statement.

Large cost in construction, and large expense in conducting traffic, are the commercial disadvantages of railways. They are disadvantages which operate on the pockets of the proprietors—on the convenience of the travelling public—on the development of increased traffic—and on every scheme for the extension of the railway system. But these commercial disadvantges are dependant on the mechanical imperfections of the railway system. If means can be devised by which the power now expended and wasted in the locomotive department, could be made to produce a direct and useful effect on the transits, we should at once have the means of conveying the public at as little *annual* cost over the natural surface of the country, as is now expected after the outlay of millions, spent in the first instance in the construction of embankments, excavations, viaducts, and tunnels.

We have been informed that such a mode of application has at length been discovered. The patents for this important invention are in the course of being taken out, and the public may expect, before very long, to have the new system submitted to the severest tests. Mr. H. Taylor, the inventor of the steam cooperage, and Mr. Conder, whose name is already known to our readers, are the gentlemen who are about to offer to the world an improvement in transit that bids fair to effect an entire revolution in the railway system.

Accident on the Birmingham and Gloucester Railway.—On Tuesday night an accident happened, near Bromsgrove, on this railway, by the blowing out of a plug from the boiler of one of the bank engines. It is stated, in the official account of the accident which we have received, that Mr. Creuze, the engineer of locomotives; Walworth, his foreman; Mr. Torry, a foreman of Messrs. Nasmyth and Co.; the stoker, and Mrs. Walworth, were on the engine at the time. The consequence was a sudden rush of the water and steam from the boiler, and, the fire door being open, all those on the platform of the engine, or on the tender, were more or less scalded: Mr. Creuze very badly; Walworth and the stoker, and Mrs. Walworth, not seriously; and Mr. Torry scarcely at all. Medical assistance was instantly procured, but Mr. Creuze lies in a very dangerous state; the others are doing well.—*Midland Counties Herald.*

As the *Times* Cambridge coach was passing through Hackney on Monday afternoon, the axletree broke, and occasioned the upsetting of the coach. The passengers inside were uninjured, but a gentleman on the outside was seriously hurt. The horses having broken the pole, disengaged themselves from the coach, and galloped off at a frightful speed.—*Daily Papers.*

THE GREENWICH RAILWAY.

To the Shareholders.

Gentlemen,—Having read the correspondence between your Directors and those of the Croydon Railway Company, upon the subject of tolls, and having studied the case of the two Companies before the Parliamentary Committees, as well as the late Reports of both parties to their respective proprietaries,—and all this, not for your sakes, but for my own, I am desirous, nevertheless, to offer to your consideration some reflections which this investigation has suggested to me. Before I do this, however, I wish to state candidly, that I have no direct interest in the Greenwich Railway, and that what railway property I possess is invested in the Brighton, Croydon, and South Eastern lines. After this avowal, I can only expect that my observations should have such weight with you as their intrinsic worth may entitle them to, and I desire nothing more; you are quite welcome to the belief that I am prompted to this course by my own interests alone; it is enough for me to show that your interests properly understood, point in the same direction.

It appears to me then that your railway will be either the best or worst in England, according to its management—but that no railway was ever so dependant upon management for success—no railway was ever in so perilous a predicament from the insensibility of its proprietors to this fact. Having already cost a larger sum per mile than any railway in existence, and being in progress of a further outlay of 200,000*l.* upon 1¾ miles of its length, it is nevertheless so situated, that properly conducted, scarcely any cost can be too great for a fair return—imprudently managed, it may not find remuneration for a tithe of its present outlay.

Starting from the centre of one of the most populous districts of the most populous city in the world, it ought to secure, over nearly one-half of its distance, the whole traffic of the Southern and South-Eastern division of England, and the chief communication with the Continent of Europe.

But its tenure of all this traffic is strictly dependent upon the quality and quantity of the accommodation which it is able or willing to afford to its customers; for so short is its whole length, scarcely stretching beyond the suburbs of London, that its point of junction with the other lines is still within the usual distance of most railways from the centre of the metropolis, so that the slightest inconvenience in its use, the smallest overcharge for its service, will be an instant temptation to an abandonment of its occupation.

Under these circumstances, what should be the feeling of its proprietors or their Directors? Manifestly to take care that, like a shop in Regent-street, its doors should be as wide, its step as low as possible, that its way should be smooth and easy, its charges moderate—even cheap—that no road should be found more eligible, no accommodation more perfect; that every inducement in short should be held out to all comers, and more especially, that whatever these might be called upon to pay, should be paid in the manner least onerous to themselves—in other words, that the contributions necessary for the remuneration of the Greenwich Company, should be levied from large numbers in small sums, rather than from small numbers in large sums; so that the individual pressure might be diminished to each: and that while on the one hand all the profit to be derived from this railway should be secured to the Greenwich Company, on the other hand no interference with the profits of other Companies should be allowed, but that these should have as free and unrestricted use of the railway for all other purposes, *but* those of profit, as if it were their own.

And now what *has* been the policy of your Directors under these circumstances? Just the reverse of that which I have been describing. They appear, in the first instance, fighting with the Croydon Directors to endeavour to induce the latter to lay out *their* money to render *your* railway more commodious and convenient to *your* customers; and when failing in this, they determine to lay out the money them-

selves, we find them endeavouring to levy an additional tax upon *your* customers in the vain expectation that these will consent to pay it. That is to say, having already a most expensive railway, and being obliged by the stringent recommendation of a Parliamentary Committee, to lay out another sum of 200,000*l.* upon it, they deprive themselves of all hope of sufficient remuneration for this enormous outlay, by trying to drive away the very custom from which alone they can expect repayment. If indeed, they had got a clause in their Act of Parliament to force the other Companies to bring their traffic over the Greenwich line, whether they liked it or no, such policy would be intelligible; but whilst these Companies can stop their traffic at New Cross, within four miles of all parts of London, or bring it on from Corbet's-lane, within three miles of the same places—such conduct on the part of your Directors appears to me to be little short of insanity. But this is not all — I see by the correspondence lately published, and by the reports, that your Directors have refused to receive the present impost from the Croydon Company in such manner as would be most convenient to the latter—for it comes to this, since your Directors were offered a guarantee as to *gross* amount—and that the consequence has been a raising of the Croydon fares, and a loss to the Greenwich Company of at least 1,000*l.* per annum. Why this is a sample of what is to follow, and is proof, if proof were needed, that the *gross* amount of tax to be paid is at the will of the payer and not of the receiver. Can anything be more demonstrative of the folly of the policy which has been pursued? It is true that, up to a certain point, it will be the interest of the tax payer to increase the consumption of his commodity, notwithstanding the tax, but this can be only when the tax is small in proportion to his profits, or where it does not increase in the same ratio. Here, however, this is not the case, for it appears that the Croydon Company have, by diminishing the consumption of their commodity, lessened the amount of the tax without diminishing their profits.

I have no objection to confess, that having my interest invested in the other three companies, I should be glad to see an arrangement of an equitable character established between these Companies and yours, and I think I am sufficiently acute to understand that if it were *not equitable* it could not long be maintained; but I wish to put it to you fairly whether you do not perceive that such an equitable arrangement would be for your interests also. Let us concede, for a moment, that if you could obtain a larger share of the profits of all this traffic than is justly due to your railway, you would be right to take it. Do you not see that this is impossible, and that the Croydon Company have already settled this question for you, and proved, beyond dispute, that, although you may diminish the profits of other companies, you cannot thereby increase your own? Do you expect that other Companies will be less astute upon this subject than they are? Is it not rather to be feared that, in this attempt to grasp at more than a fair proportion of their traffic, you may lose it all? Is there no mode of reaching London, and particularly the western parts of it, but through the jaws of the Greenwich Railway? London Bridge is certainly a good terminus for the city, and it might be made equally good for the West End, if all parties were to concur in desiring to make it so. How can it be for your interests that they should desire otherwise? I pray you think of these things—they are well deserving the deep attention of Greenwich proprietors.

I am, gentlemen, your humble servant,

EXPOSITOR.

Novel Chase.—On Tuesday last a small terrier dog started a rabbit near Bank Close, Chesterfield, and ran it along the railway. A train passing along at the time, put an end to the chase, both puss and her pursuer being run over by the engine and killed on the spot. They were picked up immediately afterwards by the policeman.—*Birmingham Advertiser.*

RAILWAYS FROM EDINBURGH TO ABERDEEN AND INVERNESS.

(From the "Aberdeen Banner.")

The railway system has been in operation on isolated lines in Forfarshire for some years, and has been found most successful on the Dundee and Arbroath, and Arbroath and Forfar lines. The value of property on the line from Dundee to Arbroath has increased since its formation, by a sum considerably above the entire cost of the railway. The proprietors of property would have been gainers if they had put the line in operation without any charge on the public. The land through which it passes was indeed in many quarters very profitless, and in some as useless as the deserts of Arabia, which, for that matter, it closely resembled. Masses of rock, imbedded in sand, formed the ungracious prospect exhibited to tempt the industrious; and few were tempted to more than a superficial acquaintance with its sterile character. But railways work wonders. Persons who may be conveyed along that line of eighteen miles in the brief space of forty minutes, including six or seven stoppages, as any person may be, during the current and the approximate month, will catch glimpses of a busy, almost a continuous population along the entire line. He will be hurried past villas and pretty gardens conquered from the waste in the neighbourhood of Broughty Ferry, looking as rich and fertile as if they stood on spots that nature had ever favoured, and art had only required to polish. He will naturally imagine that the huge rocks standing out in the very centre of clumps of flowers have been brought to their present position at considerable expense, as a curious and not unpleasing contrast with the scenery around, whereas the difficulty experienced in their removal sufficiently accounts for their presence to those who are acquainted with the old features of the locality. The proceedings along the entire line promise, ere many years pass over, to convert the railway into a street, through a *continuous* line of busy villages, and literally to convert a desert waste into a home for thousands, of whom many, very many, will experience at least comparative happiness.

This railway power of drawing out the resources of the country has been shown wherever lines have been laid down. Facility of intercourse is one of the greatest elements in national or local prosperity, and it is afforded in this more perfectly than in any other way. It is therefore surprising thet the population of this part of the country have bestowed so little attention on the subject. We understand that surveys have been made of various lines to the south; but we are not aware that they have been even put into the position of what might be termed "a working plan." Two Companies have been formed in the south for the establishment of railway communication, and both contemplate an extension of their operations, *at some period*, to Aberdeen, and subsequently to Inverness. They confine their proposals, in the mean time, to the construction of a line through Fife, to join the railway from Dundee to Arbroath, and thus present a complete iron line of communication from the latter place to Edinburgh. It is probable that even before that can be completed, the line from Edinburgh to Glasgow will be opened. Lines from the latter city to Ayr on the one hand, and Greenock on the other, are already open, and thus, excepting the voyage from the Clyde or Ayr to Liverpool, parties will be enabled to proceed from Arbroath to London, and thence to the Land's End, on one continued railway. Shortly after the works through Fife can be finished, a connecting line from Edinburgh and Glasgow to Newcastle or Carlisle will be formed, and thus a perfect line from Arbroath to London and Southampton will be obtained.

The distance from Aberdeen to Arbroath by the mail road is about fifty miles. It is probable that the line of railway will exceed this distance by five to ten miles; but the minor distance, at least, is already completed on the Arbroath and Forfar line, which, for part of its extent, forms the only, or at least the most judicious, line by which a railway could be carried forth from Arbroath. This extent of railway has to be formed, therefore, before the inhabitants of this city can participate in the advantages of that mode of communication, which will be speedily common to all the towns of the south, and which would probably reduce the mail-time betwixt London and Aberdeen to about *thirty* hours. The country through which the line must pass is not for a great extent of the way very promising. From the neighbourhood of Arbroath to Laurencekirk it would be carried through a fertile agricultural district, and comprehend communication with the populous towns of Montrose and Brechin. One of the lines surveyed, and we dare say the most practicable, would pass, we understand, through the suburbs of the former burgh, and to that point the line would be completed although Aberdeen did not exist. From the neighbourhood of Laurencekirk to the north, as indeed for a considerable distance towards that village from the south, the construction of a railway would be peculiarly easy; but as it would necessarily pass to the westward of Stonehaven by several miles, it would not involve a large population nor a fertile country, at least after leaving the "How o' the Mearns." Considerable difficulties are said to exist in carrying a line through the Grampians. We believe they have been overrated; and that a careful survey by parties acquainted with the ground would terminate in the discovery of several passes where this might be accomplished without much loss of time, or any great sacrifice of money. A far greater sum would be economised by the cheapness of the land through which, for many miles, the line must be carried, than any additional cost, over the average expense, incurred by the nature of the ground. It was once proposed, we believe, to cheat the Grampians entirely by doubling them about the Girdleness. It has been also proposed to form a tunnel underneath the English Channel from Dover to Calais. Both propositions are practicable to those who have an abundance of money to spend, and are not anxious for any return; but neither the one nor the other is a more rational, or perhaps a more foolish, undertaking than the railways planned and commenced in some of the Western States of the American Union. We think it tolerably evident, without naming any place where it must turn south, that a line of railway from Aberdeen to Edinburgh will run up the vale of the Dee for some distance.

We may now inquire in what measure the prospects of completing a railway to Aberdeen are affected by the proposals of the Eastern and Western Railway Companies of Fifeshire. Both Companies profess an intention to carry this mode of communication northward to Aberdeen, and ultimately to Inverness. Both intend to start their works at the same point and complete them at the same terminations. The Western Company intend to carry their lines from the neighbourhood of Bruntisland, on the north shore of the Frith of Forth (the precise spot is not, we believe, fixed,) through the western districts of Fifeshire, to a point from five to six miles below Perth on the Tay. The Eastern Company start at very nearly the same spot, and plan their lines from Kirkaldy to Cupar Fife, diverge there from the mail road, passing through the lower vale of the Eden, reach the Tay at Ferry-Port-on-Craig, crossing to Broughty Ferry by steamers.

The arguments advanced in favour of the western line are, that it passes through a district abounding with minerals, touches very nearly the town of Perth, to which a branch would be formed, and which would afford a starting point by the nearst route to Inverness, affords an outlet to the population and produce of Perthshire, admits of being carried over the Tay by a bridge, instead of involving the loss of time necessary in the movement of goods and passengers to and from steam-boats, and would carry passengers and goods through the Carse of Gowrie, and the populous town of Dundee.

The recommendations of the Eastern line are, that it involves a much larger population in Fifeshire—an additional population, indeed, almost equal to that of the town of Perth—passes also through a mineral district, which may be opened up to a great extent—reaches Broughty Ferry, through which it is proposed that both lines should pass by

Digitized by Google

a route at least *twenty* miles shorter than the Western, and thus would be carried to Laurencekirk at the same (or probably a less) expenditure of money which would be required to carry the Western line to Broughty Ferry, as sixteen or seventeen miles of the onward line (the line from Dundee to Arbroath) are already formed and occupied.

We are decided partisans of the Eastern line, as every person connected with Aberdeen must necessarily become; but we think there is excellent reasons in favour of our opinion.

Referring to the arguments deduced in support of the Western line through Fife, which we have stated with perfect fairness, we remark of the first, that the Eastern line passes also through a mineral district; and further, that a branch line could be carried, at comparatively little cost, through the upper vale of the Eden, from Cupar, into the very heart of the coal country of Fife; and if it would be profitable for a company to carry a general line twenty miles aside from the nearest route to embrace this mineral district, it would be far more gainful for the coal proprietors to carry a line of single rails half the distance, especially as they would not require to consult levels so carefully as a general company for general purposes. In reply to the statement, that the railway would form an outlet for the population and produce of Perthshire, it is urged that the river Tay would still carry the whole produce, and a decided majority of the passengers. To the assertion, that Perth furnishes the *nearest* starting point from Edinburgh to Inverness, we have only to reply by stating, that perhaps the nearest is not the best. It is possible that a railway could be formed from Perth to Inverness through the hills; but, excepting shepherds and sheep, with a few sportsmen and dogs in August, we know of no other living creatures betwixt the two towns whom it would accommodate; and we scarcely suppose that they are found in sufficient numbers to warrant the formation of a railway. On the other hand, there might be, and we have no doubt that there will be, a line carried from Aberdeen to Inverness, through a comparatively level and populous country, with a very considerable town and village population. There is no use in discussing the merits of these two lines. The people of Inverness have, we believe, already decided on that subject; and it is sufficiently evident, that if they are destined ever to enjoy the advantage of railway travelling, it must be by a line carried from Aberdeen.

Another argument is advanced in favour of the Western line through Fife—namely, that a bridge could be erected over the Tay at the point where it would cross, and the transference of goods and passengers to steamers would be saved. Many obstacles exist between the projection and the completion of this bridge. It must prove a very expensive affair, equivalent to the cost at least of twenty miles of railway. It must be completed upon a plan which will allow the passage of the Perth shipping. And, while we acknowledge the inconvenience of frequent transferences, such as must occur at two ferries, if the east of Fife line is adopted, betwixt Aberdeen and Edinburgh; yet we cannot forget that the extra expense of the length of the Western line over the Eastern, added to the cost of this bridge, would suffice to carry the latter on to Aberdeen, or at least to the Bridge of Dee, without any additional capital over that required to bring its rival into Dundee, and practically to Arbroath, fifty miles from this city.

We might be disposed to attach some importance to the argument that the Western line would pass through Dundee, if there was not already a railway from Broughty Ferry (on the Arbroath line). That being the case, and the distance only from two to three miles, we rather regard it, looking to the expense of carrying public works such as this through large towns, as a recommendation of the Eastern line, that it avoids Dundee, while it holds every conceivable advantage which proximity to that busy town can afford.

The difference between the Eastern and Western lines through Fife is thus, we think, tolerably perceptible, and the advantage of the former over the latter very great. The prosperity of Aberdeen is essentially mixed up with this question. The Eastern Company have already given notice of a bill, which they will endeavour to carry in next session, and the Western Company will oppose them. A pamphlet on the subject has appeared by Mr. Grainger, the Engineer of the Eastern line. We have not seen that pamphlet, but we understand that it contains a very fair statement on the subject. We do not necessarily place much reliance on the plans and estimates of this gentleman, for we frequently find that engineers, like advocates, work up to their brief; but, in the present instance, we think he has the best side of the question—always a strong recommendation in a debater.

The Town Council of Inverness, that of Arbroath, and several other bodies, have expressed their opinion in support of the Eastern route. But the people of Aberdeen, more intimately connected with the matter than the inhabitants of any other town, are apathetic on the subject. If the proposal was in favour of carrying a similar line from Oran to Algiers, or from Buffalo to New Orleans, there might be a strong probability that a large share of attention would be bestowed upon it; but, as this matter affects home interests, it is very questionable if the apathy may not continue until the work is completed from some other quarter.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

We gave in our last a brief account of the opening of this line on Tuesday the 30th ult. The event was celebrated by a public dinner in the evening. from the report of which, given in the *Greenock Advertiser*, we make the following interesting extracts:—

The Provost of Greenock in proposing "Success to the Railway," observed, that although limited in extent, it had presented physical difficulties of the most formidable nature—difficulties which could not be reflected upon without impressing them with a high sense of the abilities evinced by the able engineer near him (Mr. Locke) and his assistants, and of the skill and perseverance of the contractors by whom these difficulties had been overcome and the work brought to a successful termination. (Cheers.) When they looked to the importance and populousness of the district through which the line was carried, and to the immense traffic which was maintained between the two great towns at its extremities, and reflected on the impetus which its existence would give to traffic already existing, as well as to the new sources of trade which it would call up; and particularly when they looked at it as a link in the great chain which was so soon to connect the eastern with the western coast of Scotland, they had every reason to expect it would be a source of profit to its proprietors; and if, as he trusted, that profit should be proportionate to the benefits which the line was calculated to bestow upon the public, the gentlemen who had expended so much of their capital upon its construction would be amply remunerated for their outlay.

The Chairman (Robert D. Ker, Esq.) having proposed the "Lord Provost and Magistrates of Glasgow,"

Mr. Leadbetter, in returning thanks on their behalf, observed that the present undertaking was, he believed, the boldest ever attempted. It was a fair trial of railway *versus* water, and water *versus* railway. Travellers who wished to gain time at the expense of money, would undoubtedly use the railway; and those to whom time was of little moment, would naturally prefer the river. But these would not be the only results. The reduction of fares on the river would lead to a prodigious increase in the amount of travelling generally, and by that means he doubted not that ultimately, if not immediately, the Company would be paid for their outlay.

The Chairman called for a particular bumper to the health of Mr. Locke. (Tremendous cheering.) He well knew the effect which the mention of that gentleman's name would produce—a name which was not the property of this country only, but of Europe, and which in all time coming would be associated with the history of locomotion by steam. (Cheers.) So convinced were the Directors of his merits, that they had left the whole matter in his own hands, and they could now all judge of his workmanship. In its execution all the advantages of professional eminence, conjoined with all the knowledge of practical experience, had been brought into action, and he doubted not that it would long remain a standing testimonial to Mr. Locke's skill and ability.

Mr. Locke felt deeply how little he deserved the character which their worthy Chairman had bestowed upon him; but if even a small portion of it were his due, he had reason to be proud. It was not the case that the difficulties spoken of had been all overcome by him. He was only one of a staff of engineers, who had set themselves diligently, determinedly, and, he would venture to add, skillfully, to meet these difficulties, and if possible to get over them. In this work they were greatly assisted by the unanimity of purpose which had all along guided the Directors, and which gave to those professionally engaged upon it a degree of comfort and confidence that, under the circumstances, was perfectly invaluable. The confidence which they had reposed in him, he should always remember with feelings of mingled pride and gratitude, for in the whole course of his professional life he had never experienced greater kindness than from the Directors of the Greenock Railway. (Cheers.) There was his friend Mr. Errington—(cheers)—whom they all knew, and to whose exertions they were deeply indebted. He had the utmost confidence in his skill and assiduity, and knew that the works would proceed under that gentleman's care as satisfactorily as under his own. Of the contractors, Messrs. Mackenzie, Brassey, Lyon, and King, he would say that they did their duty admirably. Never did he know contractors who gave less trouble either to Engineers or Directors than they had done, and he should not be doing them justice if he did not state it as his conviction, that to their exertions they were greatly indebted for having the work finished in so satisfactory a manner. (Cheers.) And now that the work was done, let them look to its probable consequences. His friend on his right (Mr. Leadbetter) had rather begged the question in the share of the present traffic which he had allotted to the Railway. He (Mr. Locke) felt persuaded that the railway would beat the river. (Great chee ing.)

The health of Captain Huish, the Secretary, having been drunk with great applause,

Captain Huish, in acknowledging the compliment, observed, Mr. Locke might have furnished his skill, and Mr. Errington his labours, and the Directors their untiring assiduity, but what would they all have availed if they had not had a willing proprietary? The readiness with which they paid up their shares—and, although anxious for the completion of the work, the patience which they displayed under the vexatious delays which had occurred, were beyond all praise. The number of shares issued at the first was 16,000, and of these 10,000 had changed hands, but there had been only two bankruptcies. (Cheers.)

John Scott Russell, Esq., as an inhabitant of Greenock, rose with great pride to propose a toast, which he knew would meet with a cordial reception, as it respected the memory of a fellow townsman. He knew of no name which he would have greater pride in alluding to than James Watt. (Great cheering,) "It was our own little town, situated in a remote district of the country, which had given not merely to Scotland or to Britain, but to the world the man who had done most to benefit his fellow men. (Cheers.) It had been said that his townsmen had not sufficiently appreciated his merits, and that the country had not showed its gratitude by conferring on him a peerage. But the inventor of the steam engine required no monument of brass, or bronze, or marble—no crutch of any kind on which to hobble down to posterity. (Cheers.) There were monuments to Watt on every hand. Every pro-

Digitized by Google

perty purchased by the profits of manufacturing—every work driven by the steam engine, whether on land or on water, were monuments to Watt.—(Cheers.) But it had been said that as a town Greenock had not done enough to show her respect for his memory. They had formed a club in his honour, and one of their townsmen had been most untiring and successful in searching out the history of his early days, and accumulating facts regarding his family, which by means of their own local newspaper had been scattered far and wide. He would propose the memory of James Watt, and success to the Watt club.

Captain Huish called for a bumper to the English shareholders. (Cheers.) These gentlemen had given to them the most steady support, and remained firm by them through good and through bad report. Of these gentlemen none were better entitled to their approbation than his friend Mr. Christopher Saltmarshe. (Cheers.) After a most minute inspection of their line he had become a most extensive shareholder, conscious, as he had told him (Captain Huish), that the line was a good one, and that the Directors were men who would make it pay. The toast was drunk with great cheering.

Mr. Saltmarshe returned thanks. When he first heard of their undertaking he turned a deaf ear to it, as he had never heard of a line that he thought less likely to pay. When, however, he had personally inspected the line, he saw reason to change his opinion very materially. He saw that the Directors were an united body, that their engineers were skilful, and their secretary one whom he could not sufficiently praise, and the consequence was that he had not only increased his own shares but had advised his friends to purchase into it. (Cheers.) He was not led away by any mania, but had carefully scrutinised the facts as to the traffic, and completely satisfied himself as to its likelihood of success. Some had thought that the low fares proposed to be charged would never pay. He held a different opinion. If by cheap fares they got plenty of passengers, they would more than make up the difference. The Dublin and Kingston Railway, which carried at the rate of a penny per mile, had given a dividend of 3 per cent., but it had to pay to government as interest for borrowed money as much as would have paid 1 per cent. more. The railway, moreover, cost 50,000*l.* per mile, and had it like this cost only 25,000*l.* it would have given a dividend of 8 per cent. (Cheers.)

April 2.—Printed breviate of amended Bill laid on the table.

April 6.—Report further considered; amendments agreed to; Bill to be ingrossed.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

The following is the Report of the Committee:—

Lord Viscount Mahon reported from the Committee on the Northern and Eastern Railway (Hertford and Ware Branch) Bill, and to whom several petitions against the Bill were referred, that they had examined into the several matters required by the Standing Orders to be proved before Committees on Railway Bills, and had agreed to the following Report:—

That the objects of the Bill being merely to extend the powers of an existing Act, and to authorise the formation of a Branch Railway without raising any further capital, it did not appear to the Committee that the whole of the matters required by the Standing Orders relative to Railway Bills to be reported on, were applicable in the present instance:—That it appeared to the Committee that the capital of the Company is 720,000*l.*, and that they have the power of borrowing the sum of 240,000*l.* when one-half of their capital shall have been paid up, and the further sum of 240,000*l.* when the whole capital shall have been paid up, in addition thereto (no part of which last-mentioned sums have been raised); and that such sums were proved to the Committee sufficient for the construction of the Branch proposed by this Bill to be made, as well as the other works of the railway.

That the present means of conveyance and of communication between the proposed termini are insufficient for agricultural, commercial, manufacturing, and other purposes. That the amount of traffic by land and water, and the average charges made for passengers and goods, were estimated on the occasion of passing the original Act, but are expected to be greatly increased by the additional facilities to be afforded by the proposed Branch.

That the proposed Branch is intended to be a complete and integral line between the termini specified, in connexion with the Northern and Eastern Railway.

That there is no line of railway in existence, or in progress, or in contemplation, which competes with the proposed Branch.

That there is not any inclined plane on the said Branch proposed to be worked by an assistant engine.

That there are no engineering difficulties.

That there is no tunnel.

That the gradients and curves are generally favourable, the steepest gradient being 1 in 330, and the smallest radius of a curve being half a mile.

That the length of the Branch is five miles and three quarters.

That it is intended that the railway should pass on a level the highway at Stanstead; but the Committee are of opinion that the restriction in this particular imposed by the Standing Order of the House ought not in this instance to be enforced, for the following reasons, viz.—

1st, That if the road at Stanstead were carried under the railway, it would necessarily be below the level of the River Lea, and be always under water.

2nd, That if the road were carried over the railway it would be very inconvenient, from its height, and injure the property of residents, whereas, by crossing on a level, access to the station would be greatly facilitated; while from the immediate neighbourhood of the station no danger need be apprehended, as the spot would be continually watched by the police.

The estimated cost of the proposed branch to be incurred up to the time of its completion is 50,000*l.*, which appears to be supported by evidence, and to be fully adequate for the purpose.

It is estimated that the annual expenses of the branch, when completed, will amount to 3,000*l.*, and the calculations on which the expenses are estimated have been sufficiently proved.

The calculations given in evidence before the Committee have satisfactorily established that the revenue is likely to be sufficient to support the annual charges of the maintenance of the railway, and still allow profit to the projectors.

That the number of assents, dissents, and neuters on the proposed branch, and the length and amount of property belonging to each class traversed by the said branch, distinguishing owners from occupiers, are inserted in the Appendix.

That Mr. George Parker Bidder was the only engineer examined before the Committee in support of the Bill, and none were examined against it.

That the following petitions were referred to the Committee—

A petition from the Trustees of the River Lea Navigation alleging that the undertaking would affect the interests of the petitioners, and interrupt the traffic upon the said river, and praying that the interest of the petitioners might be protected; and provisions were inserted for protecting the interests of the petitioners and the public.

A petition from the Trustees of the Cheshunt Turnpike Roads, alleging that the petitioners were apprehensive of danger and inconvenience to travellers, if the said Company were allowed to pass the turnpike road under the management of the said petitioners at Amwell End, near Ware, on a level; but the Committee were of opinion that the Standing Orders, against passing roads on a level, should not be enforced in this instance; and a provision was inserted in the Bill accordingly.

A Petition of the Justices of the Peace for the county of Hertford, complaining that the Railway would interfere with the discipline of the House of Correction, but no one appeared in support of it; and the same having been presented later than the time limited for that purpose by the House, the Committee considered themselves precluded from entering into the consideration of it.

The Committee report in favour of the fitness, in an engineering point of view, of the projected railway; and that there are not any other circumstances which, in the opinion of the Committee, it is desirable the House should be informed of.

Lord Viscount Mahon further reported from the Committee, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

April 2.—Printed breviate of amended Bill laid on the table.

April 5.—Petition of inhabitants of Ware and Amwell End against the Bill; to lie on the table.

April 6.—Further consideration of Report fixed for Tuesday, 20th April.

NORTH MIDLAND RAILWAY.

April 5.—Mr. John Parker moved that it be an instruction to the Committee on the Bill for granting further powers to the North Midland Railway Company, that they have power, if they see fit, to dispense with the Standing Orders, so as to allow the said Company to borrow on mortgage the whole of the money which they ask to raise by the Bill.

Mr. Labouchere said that parties concerned in the Bill applied to the Board of Trade on this question, and his answer was, that it was not in the province of the Board to interfere, but that whenever it came in his way to discuss the Standing Orders in the House, he always recommended the House to adhere to them. But he certainly did, at the same time, give his opinion on this case, that if it should be found that there was no violation of the Standing Orders in permitting the course which these parties wished to adopt, he saw nothing in the Bill itself to make that course objectionable. But he most distinctly said that it would be a most improper thing in him to give an opinion in favour of departing from the Standing Orders—(Hear)—and so far from supporting any such departure, he would decidedly oppose it. He was not opposed to the application on the part of the Company, if it could be complied with without violating the Standing Orders.

Mr. Bernal thought the House should take the question of the Standing Orders into their consideration and make some alterations in them before they could entertain a motion like the present. He would express no opinion upon the case before the House.

Sir R. Inglis thought the Company, when they came before the House to raise an additional sum of money, should comply with the regulation which required them in the first instance to advance from their own funds 10 per cent. of the amount required.

Mr. Hume said one of the great evils of the railway system was the fallacious estimates on which they were originally based. (Hear, hear.] He would merely instance the case of the Great Western Railway, which had been compelled to come three times before the House in order to raise further sums of money, in consequence of their estimate being so much below the expenditure. He objected to the House giving these Companies any further facilities in the borrowing of additional capital.

Mr. Shiel thought that if the words "to dispense with the Standing Orders" were struck out, and it were left to the Committee to construe them, the difficulty would be removed.

After a few words from the Speaker, which were inaudible in the gallery, the motion was withdrawn.

The following are the terms in which the matter is noticed in the official records of the House:—

"Motion made, and question proposed, "That it be an instruction to the Committee on the bill, that they have power, if they see fit, to dispense with the Standing Orders, so as to allow the said Company to borrow on mortgage the whole of the money which they seek to raise by the said bill:" —Motion, by leave, *withdrawn*."

April 5.—Bill read a third time and passed.

WISHAW AND COLTNESS RAILWAY.

April 6.—Message from the Lords that they have agreed to the Bill without amendment.

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

April 5.—Message from the Lords that they have agreed to the Bill without amendment.

April 6.—Mr. Speaker reported the Royal Assent to the Bill.

TRAVELLING BY THE YORK AND NORTH MIDLAND.—A correspondent of the *Northern Times* praises highly the travelling arrangements on the line. "The carriages," he says, "both first and second class, are more commodious than those of the Hull and Selby Company, and *their second class carriages are supplied with slides to keep out the rain and wind!*" The cost of "these slides cannot, he thinks, be more than five or six shillings per carriage." Probably not; but he is mistaken in supposing that the *cost* of the slides is the obstacle in the way. The second carriages are left open on other lines to "the rain and wind," in order to oblige people to seek shelter in the first. A very silly scheme this for filling pockets, we must allow, yet still one which is in great favour with but too many Railway Boards.

WANTED, in a Locomotive and other Engine Manufactory, in one of the principal towns in the kingdom, two respectable Youths as Apprentices. As the utmost care and attention will be bestowed in instructing them in every branch necessary to a full and competent knowledge of the business, a commensurate premium will be expected.—Letters addressed "Mechanicus," and left at the office of this Journal, will be attended to after the 1st of May.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Published at the *Railway Times* Office, 122, Fleet street, and sold by Groombridge, Panyer-alley; Steil, and R. Tyas, Paternoster-row; Hyde and Co., and G. Bell, Fleet-street; Weale, Holborn; and by all Booksellers and Newsmen.

TREATISE ON THE IMPROVEMENT OF THE NAVIGATION OF RIVERS, with a New Theory on the Cause of the Existence of Bars, accompanied by Observations on the State of many of the navigable Rivers of Great Britain and Ireland, by W. A. Brooks, M. Inst. C. E.

Published by Mr. Weale, Engineering Bookseller, 59, High Holborn, 8vo. 5s., and sold also by Mr. Thomas Jennett, Stockton on Tees.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—The Public are respectfully informed that this Railway is now Open for the Conveyance of Passengers and Parcels.

The Trains will run at the following hours till further notice:—

FROM GLASGOW. DOWN.	FROM GREENOCK. UP.
8 a. m.	Half-past 8 a. m.
* 9 —	*Half-past 9 —
10 —	Half-past 10 —

	6 —	6 p. m.		

UP TRAINS.

Steam-Boats or Omnibuses arrive (weather permitting) from the undermentioned places for the Trains, which leave Greenock at the hours specified below:—

Gourock and Ashton.	Roseneath and Helensburgh.	Gareloch-head.	Dunoon.	Rothesay.
At 8 30a.m.	8 30 a. m.	8 30 a.m.	8 30a.m.	8 30am
10 30 —	10 30 —			
12 30p.m	12 30 p. m.		12 30p.m	12 30pm
1 30 —				
3 30 —	3 30 —			
4 30 —			*4 30 —	4 30pm
	6 30 —			

Passengers by the 8o'clock a. m. Down Train, can join the Lochgoil Boat to Inverary at Greenock.

‖ Other arrangements are in progress, and will be advertised shortly.

§ Children under 10 years of age, free; from 10 to 14 half price.

Luggage will be conveyed free, and transferred to and from the Boats without any additional expense.

Passengers are requested to look after their own luggage, as the Company will not be responsible for it, unless Booked and paid for.

Passengers to and from Liverpool, Dublin, Belfast, &c., will save two hours by taking the Railway to and from Greenock.

It is particularly requested that Passengers in going to and from the Steam-boats, will use all expedition, in order that the regularity of the communication may not be interfered with.

Time by Railway, between Glasgow and Greenock, till further notice, one hour; and the clocks will be set by the Tron Church, Glasgow, and the Mid Parish Church, Greenock.

Passengers at the intermediate stations should arrive five minutes before the Train may be expected.

For Fares and Rates of Parcels, see hand-bills.

Preparations are making for the conveyance of Goods at an early day.

The Servants of the Railway Company are strictly prohibited from receiving any gratuity on pain of dismissal.

No Smoking allowed in the Trains or at the Stations.

Any complaints, if addressed to the Secretary, will be immediately attended to.

By Order of the Directors,
MARK HUISH, Secretary.

5th April, 1841.

HULL AND SELBY RAILWAY.—TENDERS FOR LOANS. NOTICE IS HEREBY GIVEN, that pursuant to a Resolution of the General Meeting of Proprietors, the Directors of this Company are ready to receive TENDERS OF LOANS OF MONEY, in Sums of not less than £200, and for Terms of not less than Three Years, on Security of Bonds under the Common Seal of the Company, which will bear Interest at the rate of £5 per Cent. per Annum, payable Half-yearly.

Further Information may be had on application to the Secretary, at the Office, Railway-street, Hull; to whom also the Tenders, stating the amount offered, and the period for which it is proposed to be lent, must be addressed.

By Order,
GEORGE LOCKING, Secretary.

Railway Office, Hull, April 5th, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, on interest at the rate of 5 per cent. per annum, for a term not less than three years. The Tenders are to express the sums and the term of years for which the same are proposed to be lent.

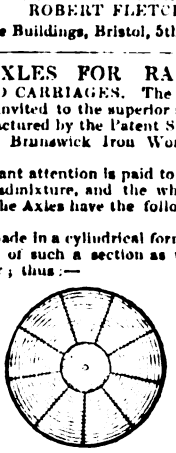
The Tenders to be addressed to the Secretary, at the Company's Office, in Waterloo Street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton Street, London; or to Messrs. Laurence, Cazenove, and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 10th day of March, 1841.

BRISTOL AND GLOUCESTER RAILWAY —EXTENSION LINE.—Call of £5 per Cent. being £2 10s. per share. By virtue of the provisions of the Acts of Parliament, the Committee of Management of the undertaking hereby give Notice, That the Proprietors of Shares are required to pay on or before the 1st day of May next, at one of the undermentioned banks, the sum of £2 10s. on each of their respective Shares, viz.—

London—Messrs. Barnett, Hoare and Co.
Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillie, Aimes and Co.; Messrs. Stuckly's Banking Co.; The West of England and South Wales District Bank.
Gloucester—The Gloucestershire Banking Co.
Manchester—Messrs. Jones, Loyd, and Co.

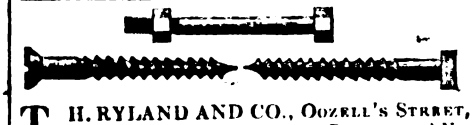


GEORGE JONES,
Chairman of the Committee of Management.
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, 5th April, 1841.

PATENT AXLES FOR RAILWAY ENGINES AND CARRIAGES. The attention of Railway Engineers is invited to the superior safety of the Railway Axles manufactured by the Patent Shaft and Axle-tree Company, at the Brunswick Iron Works, Wednesbury, Staffordshire.

Great and constant attention is paid to the quality of the Iron used, to its admixture, and the whole process of its preparation, and the Axles have the following peculiar advantages, viz.:—



The Faggot is made in a cylindrical form by the External Bars being rolled of such a section as will fit accurately round a centre bar; thus:—

By the arrangement of the Bars in the Faggot the lamination of the iron becomes cylindrical, and, consequently the axle is equally strong to resist bending or breaking in any direction. The Axle is made of Bars of the full length of the Faggot, and whatever its size may be, it is perfectly welded throughout at one heat; after which it is never heated more than is sufficient to allow of its being drawn under the hammer to the required size. By these means all risk of breakage, through partial welding of Bars or scarified Slabs, is effectually guarded against.

The Finished Axles are separately tested before they leave the Works. They are finished in such a style as leaves less to be done at them in the smithy or lathe, than at those made by any other manufacturers. They have long been exclusively used on some of the great lines of railway, where their reputation is fully maintained, and upwards of 10,000 are now in use on the principal railways of Great Britain, the Continent, and America, without a complaint respecting quality.

To meet the increasing demand the Works have recently been extended, and there are now the means of exceeding any other house in the rapid execution of orders.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic pistol, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine; works by hand, will plane 5 feet by 18 inches.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NEW SHARES.

—Second Call, £5. per Share. The Directors of the Birmingham and Derby Junction Railway Company having resolved that an Instalment of £5. on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto passed in the last Session of Parliament, (3 Vict., cap. 51,) payable on or before the 6th day of May next, should be called for, Proprietors of such New Shares in this Company are hereby required to PAY on or before that day, to any of the under-mentioned Bankers the sum of FIVE POUNDS on each of their respective New Shares.

BANKERS.

London.—Messrs. Glyn, Halifax, Mills, and Co., Lombard Street.
Birmingham.—The Birmingham Banking Company.
Manchester.—The Manchester and Salford Bank.
Derby.—Messrs. W. and S. Evans.
Burton-upon-Trent.—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield.—Messrs. Parker, Shore and Co.

The Bankers have been severally instructed to charge interest at the rate of £5. per cent. per annum, according to the provisions of the Act above referred to, from the 6th day of May next, on all sums which shall be tendered after that day.

HENRY SMITH,
Chairman of the Board of Directors.
THOMAS KELL, Secretary.

A Street, Birmingham,
pril 7th, 1841.

TAYLOR'S PATENT WOOD CUTTING COMPANY.

—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, I.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorising the transfer of the patent to more than 12 persons, and empowering the Company by Act to Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY.—NINTH CALL of TWO POUNDS per Share, making £25 per Share called up.

—NOTICE is hereby given, That in pursuance of a Resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to pay the sum of TWO POUNDS PER SHARE, being the Ninth Instalment, on or before the 1st May next, into any one of the following Banks:—

Edinburgh—Royal Bank of Scotland.
Glasgow—Ditto.
Greenock—Any of the Banks there.
Liverpool—Liverpool Commercial Bank.
Lancaster—Lancaster Banking Company.
London—The Chief Office of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry—Branch of the Provincial Bank of Ireland.

Interest at the rate of 5 per cent. will be charged on all sums not paid on that day.

By order of the Board of Directors,
MARK HUISH, Secretary.

Railway Office, Greenock,
April 6, 1841.

TO RAILWAY CONTRACTORS.—To be Sold,

140 2½-yard capital EARTH WAGGONS, 30-inch wheels, 3¼ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Further Opening of the Great North Line. LONDON to DARLINGTON,

☞ 45 Miles North of York, in One Day.
Only Day Train through.

The public are respectfully informed, that in consequence of the opening of the Great North of England line, passengers may travel by railway from London to Darlington, on *the same day*, by the train of the London and Birmingham and Birmingham and Derby Junction Railways—

Leaving the Euston Station at 6 h. 0 m. a.m.
Arriving at Darlington .... at 8 h. 30 m. p.m.

Being the only Day Train through.

By order,
THOMAS KELL, Secretary.

April 7, 1841.

No. 43, for April, price 1s. 6d.

THE CIVIL ENGINEER AND ARCHITECT'S JOURNAL, SCIENTIFIC AND RAILWAY GAZETTE, contains drawings and descriptions of Towing Paths and Banks of Canals in Great Britain; Railways Bill; Engineering Works of the Ancients, No. 3; Episodes of Plan; Establishments for procuring Moulds from Monuments of Art; Harbours on the South Eastern Coast; Coles's Patent Socket Axle-tree; Railway Statistics; Remarks on the Central Forces of Bodies revolving about Fixed Axes; on the power of Fluids in motion; Roman Architecture; Architecture of Liverpool; Railway Accidents; Public Safety and Convenience; Candidus's Note Book, Fasciculus XXV; Cheetham Church, &c.; On the Curvature of the Arches of the Bridge of the Holy Trinity; New Inventions and Improvements; The Artesian Boring at Paris; The Maplin Lighthouse; The Plymouth Breakwater Lighthouse; Mersey and Irwell Navigation—Mr. Palmer and Mr. Bateman's Reports; Warming Buildings by Hot Water; on the Style of Wren; Reviews of New Books, Proceedings of the Institution of Civil Engineers, Royal Institute of British Architects, and The Oxford Architectural Society; List of New Patents, and numerous Professional Criticisms and Remarks.

E. Hooper, Pall Mall; Groombridge, Panyer Alley, Paternoster Row.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *vis* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—From the

SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.

GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver, 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

THE HULL ADVERTISER.—Established for a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England, while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser.....	73,000
Hull Packet	10,000
Hull Times.....	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, April 10, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 172. Vol. IV.—No. 16.] SATURDAY, APRIL 17, 1841. [Price, 6d.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200., upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of six per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1844.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Halifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 15, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200 for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—Notice is hereby given, That the next Half-Yearly General Meeting of the Proprietors will be held at the King's Head Hotel, Cirencester, on Tuesday, the 4th day of May, 1841, pursuant to the Acts of Parliament. The Chair will be taken at One o'Clock.

CHAS. F. SAGE, Chairman of the Directors.

The Transfer Books of this Company will be closed on Saturday, the 24th of April, 1841, and will remain closed till after the General Meeting.

A. MERRICK, Secretary.

Cirencester, April 14, 1841.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER (late of Hambro' Wharf), having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required; and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

OPENING OF THE GREAT NORTH OF ENGLAND RAILWAY.—The Public are informed that the Great North of England Railway will be opened from York to Darlington, for Public Traffic, on Wednesday, the 31st March, 1841.

The Trains will depart at the following hours:—

FROM DARLINGTON TO YORK.

5 45 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, and Manchester.
8 a. m.—taking Passengers for London, Derby, Birmingham, Sheffield, Manchester, Leeds, Selby and Hull.
12 30 p. m.—taking Passengers for Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
3 p. m.—Mail, taking Passengers for London, Derby, Leicester, Birmingham, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—taking Passengers to York.

FROM YORK TO DARLINGTON.

6 a. m.—bringing Passengers from York.
7 20 a. m.—Mail, bringing Passengers from London, Leicester, Derby, and Sheffield.
9 35 a. m.—bringing Passengers from Manchester, Leeds, Selby, and Hull.
2 30 p. m.—bringing Passengers from Birmingham, Nottingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.
6 p. m.—bringing Passengers from London, Birmingham, Derby, Sheffield, Manchester, Leeds, Selby, and Hull.

On Sundays, only the Mail Trains will run.

Until further notice, Passengers will only be booked as far as York, where the carriages are changed.

Until the 6th of April, 1841, the London Mail Trains will leave York at 8 15 a. m., instead of the hours stated in the Time Table.

FARES BETWEEN YORK AND DARLINGTON.

PASSENGERS.		CARRIAGES.		HORSES.		
1st Class.	2d Class.	On 2 Wheels.	On 4 Wheels.	One.	Two.	Three.
12s.	9s.	20s.	30s.	20s.	30s.	36s.

Parties riding in their own Carriages, and Children under 7 years of age, at lower rates.

Carriages and Horses must be at the Station a quarter of an hour before the departure of the trains; and, to prevent disappointment, previous notice should be given to the Station.

The Company will not be responsible for Luggage, unless it is booked and paid for according to its value; and Passengers are particularly requested to have their name and address fully marked thereon, and to satisfy themselves that it is deposited on the Carriages.

EDINBURGH AND GLASGOW RAILWAY.—WANTED—

1. A Superintendant or Manager, to take the general charge of the out door business of the Railway.

2. A Manager for the Carriage and Waggon Department, possessing a thorough practical knowledge of the making and repairing of Railway Carriages, &c.

3. A Manager for the Goods' Traffic Department.

Experience in the working and management of railways will be a recommendation to parties applying for these situations; also engineering knowledge in the case of the General Superintendant.

These Officers will require to give their whole time to the service of the Company, and to be quite unconnected with any other pursuit.

Letters of application, containing testimonials and references as to qualifications, to be addressed to "The Directors of the Edinburgh and Glasgow Railway; for office of ———," and left at the Company's office in Glasgow, on or before the 10th day of May next.

The applicants are requested not to canvass the Directors. Those who may be considered likely to suit will be invited to meet them.

By order of the Board,

H. G. WRIGHT, Secretary.

Head Office, 7, North Queen-street,
Glasgow, 14th April, 1841.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £500, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,

THOMAS WOOD, Secretary.

LONDON AND BRIGHTON RAILWAY COMPANY.—SUPERINTENDANT OF TRAFFIC.—The Directors of this Company are prepared to receive Applications from persons qualified to fill the above situation, and who have been similarly employed in other Companies, and can produce unexceptionable testimonials as to character and capability. Applications in writing, accompanied by testimonials, to be sent in on or before the 21st. instant.

By Order,

THOMAS WOOD, Secretary.

London and Brighton Railway Offices,
10, Angel-court, Throgmorton-street.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages under the powers of their Act of Parliament of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater & Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

RAILWAY MATERIALS AND IMPLEMENTS.—Messrs. MULLINS AND MAC MAHON will Sell by Private Treaty, on the Lancaster and Preston Junction line, the following articles, in excellent condition, for immediate use:—

Three Locomotive Engines and Tenders, in good working order; one a 12-inch cylinder, with 5-feet wheels coupled, and two of 11-inch—one with 4-feet 6-inch driving wheels, the other with 5 feet driving wheels.

200 to 300 Earth Waggons, of the very best construction, part equal to carry 2¼ yards, with 2-feet 6-inch wheels, and part 1¼ yards per waggon, with 2 feet wheels.

Together with a large quantity of Railway Bars, from 30*l.* to 50*l.* per yard, with Chairs and Crossings, and a variety of other articles used in Extensive Railway Works.

The whole of the above materials, &c., are in convenient situations, for either water or railway conveyance to any part of the kingdom.

Application to be made at their office, Fishergate, Preston.

10th March, 1841.

A STEADY ACTIVE YOUNG MAN is in want of employment, either as Conductor or Clerk, or any other respectable situation on a railway, and is willing to give a *liberal premium* to any person that will obtain a situation for him on any line. The Advertiser can obtain security if required, and also the strongest testimonials as to character, ability, &c.

Letters addressed (pre-paid) to A. B., Post-office, Chipping Norton, Oxon., stating salary, and amount of premium required, will be attended to, and secrecy may be relied on.

CHESTER AND BIRKENHEAD RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the Company of proprietors of the Chester and Birkenhead Railway was held on Saturday last in the Clarendon-rooms, South John-street, for the purpose of receiving the Reports of the Directors and the Engineer, and a statement of the accounts for the last six months. The meeting was very fully attended.

WILLIAM DIXON, Esq., Chairman of the Board of Directors, took the chair exactly at twelve o'clock, and opened the proceedings by stating that the Directors had prepared a report, which was in the hands of the Solicitor who would read it.

Mr. MALLABY, the Solicitor, then read "The Report of the Directors of the Chester and Birkenhead Railway to the half-yearly general meeting of the proprietors on the 10th of April, 1841." This document was to the following effect:—

DIRECTORS' REPORT.

When the last yearly meeting of proprietors was held, the line, then incomplete, had been but imperfectly opened, and experience did not justify the Directors in expressing a decided opinion as to the traffic which might be anticipated. It was not until near Christmas last year that both lines of rails were opened the entire length for traffic. The charge for passengers which the Directors thought it right to make upon opening the line, though reasonable was found to expose the Company to the continued opposition of lower fares. So soon as the railway was in an effective state to answer the public demands for accommodation, the charges were therefore reduced, and the traffic has since steadily and progressively increased. A comparison between the traffic of the last week of the former prices, and the last week of the present prices (that is, last Saturday) will, it is hoped, afford abundant reason for congratulation, and be the best augury of the benefits to be obtained from a more genial season for traffic. For the week ending 12th December, 1840, there were 1,360 passengers, and the receipts amounted to 180*l.*; but for the week ending April 3, 1841, there were 5,879 passengers, and the receipts were 459*l.* 12s. 2d. This traffic, it must be observed, is a native one deriving no aid from any other line. When the public become better acquainted with the convenience of travelling by it, and the traffic becomes settled, the Directors confidently expect to render the line much more productive. Any detail of profits beyond what appears in the accounts may be dispensed with, as the Directors do not contemplate that a dividend from the past brief and imperfect working of the line will be expected. The proprietors may have heard that some arrangements are in progress with the post-office authorities for conveying the Irish and other mails along this railway; but, while the Directors think it may be satisfactory generally to confirm such a report, they purposely abstain from entering into the details until the whole be matured. The works, in connection with the stations, and which will economise the expenditure of the carrying departments, are now complete. Other works will appear, from the Engineer's Report, to be carrying on, the costs of which, and of whatever else may be necessary to make a complete and effective railway are anticipated to be provided for. The Report of the Engineer and the accounts referred to being produced, it is only necessary now to add, that the retiring Directors by ballot are Mr. William Jackson, Mr. Joseph Uniacke, and Mr. William Ravenscroft, all of whom are eligible for re-election.

Mr. MALLABY then read the Report of Mr. John Dixon, the engineer, which was to the following effect:—

ENGINEER'S REPORT.

At the last meeting of the proprietors, which was held on the 2d October, 1840, he had, in conjunction with Mr. Stephenson, to Report that the railway was opened throughout, but that a portion of it was ready only for a single line of rails. The other line could not be laid,—and inasmuch as the embankments were not formed of the full width, it was not till Christmas last that both lines were opened. He had now, however, to state, that the whole of the cuttings and embankments were formed, and nearly all of them soiled and sown. The station at Birkenhead had been so far completed as to be sufficient for present purposes: workshops were constructed, at which they were doing the chief repairs to the engines and carriages, and they were now erecting a small stationary engine for driving lathes, pumping water, &c., the latter having been done by manual labour up to this period. A new office was in a forward state—at Birkenhead. For five months after the opening there was only a very temporary wooden hut for a booking office, &c., at Chester; latterly, however, the houses purchased from Cromford and Kay had been rendered comfortable and convenient for passengers, by the erection of a large shed and landing stage. The engine-house was also completed; and, instead of pumping water for the locomotives by hand, they had erected a cistern and connected it with the mains of the Chester Water Works Company. The cottages for the intermediate stations at Sutton and Bebbington had been completed and were in regular use; but only temporary accommodation had been provided at Mollington and Heoton, where suitable cottages would be required previous to the next winter. A considerable traffic had sprung up between Mold and Sutton, and it would be found necessary to provide stables there. A stable capable of accommodating 24 horses was now completed. The maintenance of the way and works had been a heavy task upon the contractors. As to the state of the ground there had been no particular subsidence through the winter season. He was happy to be enabled to state, that there had not been any important failure in any part of the masonry upon the line, nor any slips of magnitude in the cuttings and embankments: and as the spring advanced the contractors were not only dressing the slopes, completing the fences, and repairing those which were injured, but they were going afresh through a great portion of the permanent way, in order to put it in efficient repair. With regard to the travelling department he would only remark, that he trusted the trains had performed their journeys with as great regularity as on most of the new lines, where the arrangements must be incomplete for a time—and what would be still more satisfactory, without any accident to passengers, servants of the Company, or to any individual, as well as freedom from casual breakage either of engines or carriages.

Mr. MALLABY next read a statement of the accounts, which were made up in two branches—the general account and the traffic account. By the general account it appeared that the Act of Parliament cost 60,000*l.*, law charges 523*l.* 13s. 10d., the expenses of opening the line 126*l.* 7s. 10d., works 13,643*l.* 12s., Monk's Ferry 14,731*l.* 10s. 10d. On the traffic account it appeared that the amount received from passengers and merchandise, from the 23rd September to the 3rd April, was 7,907*l.* 8s. 2d.; that there was a balance in the bankers amounting to 2,785*l.* 4s., and the liabilities on this account were 924*l.* 6s. 8d.

Mr. MOSLEY, before any discussion took place upon the Report, suggested that in future the Report and accounts be printed, and distributed to the proprietors in the room. The practice had been adopted with success in other Companies. It was quite impossible for the proprietors, upon merely hearing the Report, to form an opinion of it.

The CHAIRMAN promised that the suggestion should receive attention.

Sir JOSHUA WALMSLEY inquired whether the Directors could furnish an account of the total amount expended in the undertaking.

Mr. MALLABY said that would appear by the accounts. He then referred to them, and said that 388,044*l.* 8s. 10d. had been expended on the line, and 68,587*l.* 1s. 3d. on the stock; total 456,631*l.* 10s. 1d.

A PROPRIETOR asked whether the sums borrowed on mortgage were included in that amount.

Mr. MALLABY said everything had been included which had been received.

Sir J. WALMSLEY wished to know whether there were not some mortgages included in that amount.

Mr. MALLABY—Everything is included up to the 28th February.

Mr. HUDSON said the question was—had there been any money borrowed since the 28th February? (Hear, hear.)

Mr. JAMES (the Treasurer) replied in the negative.

Sir J. WALMSLEY—Then can you say what property that 456,000*l.* includes, exclusive of the railway?

The CHAIRMAN.—You have in the first place I should state a piece of land at Tranmere Pool, which has not been employed for any purpose for the use of the railway, the cost of which was 12,500*l.* We have had that land valued within the last week, and the valuation is 19,000*l.* There is also a piece of land at the station in Chester, which was purchased from the Dean and Chapter. The road has taken sufficient land for its present use, and there is a quantity left, which at a moderate valuation would produce the sum of 7,000*l.*

Sir J. WALMSLEY.—You do not state what the first cost was.

The CHAIRMAN.—The first cost was 7,000*l.* We made use of what was necessary for the road, and the remainder will realize 7,000*l.* I am glad to say that upon every purchase made by the railway of land not yet used, there is a considerable increase in value. Then you have the Monk's Ferry property.

Sir J. WALMSLEY.—Is there no more land?

The CHAIRMAN.—There is some near the station, and near Monk's Ferry.

Sir J. WALMSLEY.—But that you have sold?

The CHAIRMAN.—No; that is for consideration. There is land near the Grange station, but that I do not think it advisable to sell.

Sir J. WALMSLEY.—What is it valued at? In asking these questions I only wish the proprietors to see what property they have, as this railway is not a very beneficial concern. They would, therefore, like to know what beneficial interest they have.

The CHAIRMAN.—Perhaps I may state in round numbers; the amount is 37,191*l.* of valuable property.

Sir J. WALMSLEY.—What, in Grange Lane?

The CHAIRMAN.—That is included in it; the total is 37,000*l.*

Sir J. WALMSLEY.—Then be good enough to state what it consists of.

The CHAIRMAN.—Then, there is the land in James's-street, the purchase of which was made with the intention of erecting an office and an inn. The amount is 7,114*l.* and it is not wanted.

Sir J. WALMSLEY.—What would that sell at?

The CHAIRMAN.—For more than we gave for it.

Sir J. WALMSLEY.—It would?

The CHAIRMAN.—There is no doubt of it. Then there are some houses at Bebbington, for which we gave 1,700*l.* and which we expect will realize that sum. There is also the Dean and Chapter land, which is worth 7,500*l.*

Sir J. WALMSLEY.—Which you can re-sell?

The CHAIRMAN.—We can, but I do not think it desirable to offer it for sale at present.

A PROPRIETOR inquired whether the land adjoining Tranmere Pool was likely to be wanted for the purposes of the railway?

The CHAIRMAN.—Not at all, I think, at least according to our present views.

The PROPRIETOR.—Nor the James'-street property?

The CHAIRMAN.—Certainly not; and it is our intention to sell it. You have also the land at the station at Birkenhead.

Sir J. WALMSLEY.—What was paid for that at last?

The CHAIRMAN.—A variety of prices. The last price was 9s. a yard. We have now 15s. a yard offered for some, but the value would be nearer 20s. We have, however, offered 15s. There is also land in the neighbourhood of Monk's Ferry, which might be sold without interfering with the house or ferry, and which would realize 6,299*l.* I believe that to be a very low valuation. I believe it is valued at 20s. a yard, but it is worth 24s. or 25s. We take it, however, at 20s.

Sir J. WALMSLEY—Then the total amount of land available, if the proprietors were disposed to sell, would be 37,000*l.* In your previous report you stated that there were some peculiar advantages in the purchase of Monk's Ferry; but first let me ask what was the cost of Woodside Ferry.

The CHAIRMAN—£25,000.

Sir J. WALMSLEY—And what are the terms of that purchase?

The CHAIRMAN.—We purchased the ferry upon a lease for 18 years.

Mr. LAWRENCE said before the Chairman proceeded, he would read a clause from the Report this time last year, relative to this purchase. Mr. Lawrence then read this clause, which was to the effect that the Directors had purchased Monk's Ferry, but that to develope the whole plan would, at that time, be most prejudicial to the interests of the Company. They, therefore, threw themselves upon the proprietors, requesting that confidence which was necessary to enable them to carry out their views. Mr. Lawrence added that, as it would have been injurious to the Company for the Directors to develope their plans in this purchase then, perhaps they could do so now without such risk?

The CHAIRMAN—At that time we had the hope of making a tram-road from the permanent station to Monk's Ferry; that design was not accomplished, and we have been obliged to use omnibuses.

A PROPRIETOR—I presume that ferry was purchased for 14,000*l.*

The CHAIRMAN said 14,000*l.* had been paid.

Mr. LAWRENCE.—Have you received notice that that ferry must be discontinued?

Mr. MALLABY—I do not think it right or pru-

Digitized by Google

dent that that question should be answered. It would be inconvenient to answer it.

Mr. LAWRENCE—It came to my ears by a friend, and I could scarcely believe it to be the case.

The CHAIRMAN—I think that is a question which you should leave to the Directors.

Mr. MALLABY—Any individual proprietor can get the information; but I do not think it would be prudent or advisable to pursue the subject further in this meeting.

Sir J. WALMSLEY—I want to know whether we did not in the first instance, buy Woodside Ferry?

The CHAIRMAN—It is satisfactory to say, with regard to that ferry, that it is now doing exceedingly well. If it is the wish of the proprietors, under the sanction of the Directors, to sell that property, you may do it; and I believe you may get 25,000*l.* for it, and still retain the rights you have.

Sir J. WALMSLEY—What rights, Mr. Chairman?

The CHAIRMAN—The rights which we hold under the lease.

Mr. MOSLEY (we believe) thought the meeting ought to inquire into the circumstances of Monk's Ferry, because if they did not, they were doing an injury by trespassing upon some points which they did not yet understand. He wanted to ascertain whether since the period that purchase was made, any circumstances had occurred which tended to taint its value?

The CHAIRMAN—Certainly not.

Mr. MOSLEY continued—If not, then the ferry was in the same state now. If, however, the Directors said at the last meeting they were not, under the circumstances, justified in communicating information respecting this ferry, but that they hoped to be able to give it at this meeting, and they still deferred it, in dependence on the judgment of the proprietors, it must be for them to take the responsibility, with this full understanding, that the proprietors did not, at the present moment, see the ground of the purchase, the reason why all the circumstances were not now developed, and that they would, upon a future occasion, if the undertaking did not turn out beneficial, enquire how far they had been met in a fair spirit, and why they were not consulted upon a point of such vital importance. He contended that the investment of a large portion of the funds of the company in undertakings which might lead them into legal difficulties and controversies, was a very important item for consideration; but feeling that Directors were sometimes placed in situations of difficulty, that the answering of one question might lead to future difficulties, and involve matters of deep importance, he thought if the meeting were able to say that they had confidence in the discretion of the Directors, the proprietors had no right to trespass upon them further at the present moment.

Sir J. WALMSLEY said if the Directors at the last meeting had showed the Company that they had particular reasons for not laying the whole affair before them, and again, without the slightest reference to any such wish now, kept back information upon points so important to the Company as the expenditure of 50,000*l.*, the keeping up of two establishments, and of two sets of Directors, and still the proprietors were to rely entirely upon their discretion, without saying one word, as they did not wish to be asked any questions—and if gentlemen suggested they should not be asked—he (Sir J. W.) was at a loss to understand how their own affairs were to be brought at all before the proprietors. (Hear, hear.) They might go on blindly from year to year, and every year they came, hear the same persons say, "it is not convenient for you, the proprietors, to ask the Directors any questions—you must rely upon them—upon their discretion." (Hear, hear.) He did not wish to impugn the integrity, the good intentions, or the zeal and efficiency of any one member of the board; he had not the slightest reason to do so; but he did think it was necessary to put some questions to them when, at the last meeting, the proprietors had such important information kept back from them. (Hear, hear.) Surely it was now time for them to have some explanation. (Hear, hear.) He had several other questions to ask. The proprietors must bear in mind that it was very necessary to know for what reason it was that they had been buying land here and there. They were told that the land in Cheshire was all profitable. It was very well that it was so; but why, he wanted to know, were they to undertake, without knowing it, and without being asked a single question upon the subject, on this [Liverpool] side of the water, to build an inn, and carry on transactions here?

The CHAIRMAN rose, but gave way to

Mr. MOSLEY, who said Sir J. Walmsley would give him credit for not being in the least degree privy to these transactions. He knew nothing of the matters referred to; but he had heard their law adviser state that it might be dangerous to enter upon a subject the discussion of which would involve legal points. He, therefore, suggested that the discussion should drop, but at the same time putting it in this form, that as the Directors took upon themselves the entire responsibility, the question must rest upon them whether they had acted correctly. If the Directors stated distinctly that it would be inexpedient to communicate the points at issue, he (Mr. Mosely) put it to the proprietors whether they would press the inquiry, although, as regarded the information, no one would be more anxious to hear it than himself.

Sir J. WALMSLEY said if he understood or had been informed rightly, the Company had bought the Woodside Ferry for 25,000*l.*, that they were keeping up there an establishment of several boats, and that they were further paying a rent of 1000*l.* a-year for it. Subsequently to that purchase they purchased Monk's Ferry, which was close to Woodside! Now, he wanted to know what they had purchased that for? and Mr. Lawrence had asked another question since, viz., whether a notice had not been received that they had no right to use Monk's Ferry at all? Reports to that effect were as common as possible; and he had been informed that there was such a document in existence. If the Company had bought that ferry, and there was a right of ferry, they would have the right upon their side, and no law could take it from them: but if they had not, let the Directors meet the difficulty, if there was one, like men, and at once say—"we have made a wrong purchase." The shares could not be worse than they were at present.

The CHAIRMAN—There can be no feeling upon the part of the Directors. They can have no wish to keep back information merely for the sake of keeping it back. If you ask the Directors why the purchase of Monks' Ferry was made, we reply that it was made when it was necessary to have it for the convenience of passengers. You make an allusion to the purchase of land not wanted: I will first allude in reply to Tranmere Pool. It was at first thought that a dock might be made there, and that would require a depot for goods; and with regard to the purchase of the Dean and Chapter land in Chester, I think it was an exceedingly desirable purchase. Every one who knows Chester will say it was exceedingly cheap, considering the very little freehold land to be had in Chester. When that purchase was before the Directors, it was a question whether they would take a part or the whole; for myself I said if they would not take it I would, and I should be exceedingly glad if they would let me have it. The result shows that there has been no injury to the Company, but, on the contrary, a large profit upon every purchase made.

Sir J. WALMSLEY—You say you should want Monks' Ferry for passengers; perhaps you will explain that.

Mr. LAWRENCE—I never saw any use for it.

The CHAIRMAN—If the proprietors are willing to take the responsibility upon themselves from the Directors the explanations shall be made. If you want an explanation we will give it you; but you must understand that the responsibility goes from our shoulders. (Hear, hear, and cries of "No, no.")

Mr. LAWRENCE said he was a considerable proprietor in this railway: this was a very important question, and he should like to have some information upon it. (Hear.)

A PROPRIETOR—There was no want of the ferry at all when it was bought. (Hear, hear.)

Mr. MOLYNEEX said he was inclined to move for a Committee of Inquiry into these affairs. (Hear, hear.)

The CHAIRMAN—The Directors would not object to anything of the kind. If the proprietors would rather that we should explain the whole of the circumstances, we will do so, but as a Director I do not recommend it. Appoint any set of gentlemen you please, who are proprietors, and the Directors will meet and explain to them every particular. (Hear.)

Mr. MOSLEY said the question put to the Directors was, what were the original grounds upon which Monks' Ferry was purchased, and the necessity for it, when the Company had the command of another ferry? That was the question. He must confess that he was not very willing to take from the shoulders of the Directors the responsibility they were under of having made a bad purchase, but he wanted to know what had led them to buy that which was not wanted, when they had that which was necessary before?

Mr. RADCLIFFE approved of the appointment of the Committee, and suggested that the meeting should adjourn to receive its Report. It was useless, after what had passed, to ask the proprietors to agree to the Report of the Directors, until inquiry had been made.

A PROPRIETOR mentioned that he was a proprietor in the Monk's Ferry Company, and he would give the meeting his word that he was ignorant of any proceedings against the Railway Directors.

The CHAIRMAN—I am satisfied that any sub-Committee which may be appointed, will be satisfied that we have done quite right; but I do not think, as I have said before, that it would be for the interest of the Company to go into particulars here. We shall be very glad to meet the Committee.

Mr. MOLYNEUX—Then I beg to name as the Committee—Sir J. Walmsley, Mr. Lawrence, Mr. Radcliffe, and Mr. Mosley.

Mr. MALLABY—What are to be the objects of the Committee?

Mr. MOLYNEUX—Why, to inquire generally. We have had a Report this morning which I can compare to nothing but a king's speech, for it gives us no information. (Hear, hear.)

The CHAIRMAN—Is it to be a Committee of general inquiry into the acts of the Directors? If it is, its appointment is an act of direct disapprobation of the conduct of the Directors from the commencement. If that feeling is to be shown to us, let it be stated at once; let the proprietors say, "We are not satisfied with the conduct of the present Directors, let us elect Directors of a better selection." (Hear, hear.) I should be exceedingly glad to retire the first opportunity given to me.

Mr. MOLYNEUX begged to disclaim any intention to cast an imputation upon the character of any individual in the Direction, but he did not see any other means of arriving at the information, except through the medium of a Committee.

The CHAIRMAN—Then you should state the object of your Committee. Is it to go into this question only, or is it to inquire generally?

Mr. MOLYNEUX—The duties of the Committee, I apprehend, will be to inquire into the purchase of the Monks' Ferry.

Sir J. WALMSLEY—I should be glad to be relieved from attending to anything of that kind only; if the object of the Committee be only to inquire into the merits of that bargain, I will not be one. (Hear, hear.) I would rather go into the whole case. I do feel some dissatisfaction, I must say, not against any particular Director, or even against the Directors generally; but I do say the accounts brought before us this day are not such as to give me satisfaction, especially after the previous Reports, which stated we should place confidence in them for a time, after which they would give us a full explanation. (Hear, hear.) We are just in the same situation as we were twelve months ago,

Digitized by Google

and now we are going on another year without inquiry! I think it would be far better if Mr. Molyneux would make the question a broad one. (Hear, hear.) The Directors, I believe, will come out of this inquiry quite clear; and if I were one of them, it would be satisfactory to me that a Committee of Inquiry was instituted. (Hear, hear.) We had the same threat held out 12 months ago of resignation; if that threat is held out, for heaven's sake let the resignation take place. (Cheers.) Let us meet the question fully and fairly. There is no man in this community for whom I have a higher respect than for the Chairman; I believe him to be incapable of doing any one single thing that is incorrect; I speak of him with great respect, and it would be to me a matter of deep regret were he, or any of the Directors, to resign. I beg they will not consider there is anything offensive in this, but take it in the opposite sense. The shareholders wish for an inquiry from some other body than the Directors, and that is this Committee. The Directors have themselves suggested it; they have suggested themselves one part of the inquiry, but why are we to be restricted to one part? (Cheers.) I think there are no reasons why we should have two Directions; why we should have a Ferry Committee and a Railway Committee. And what is the reason there are to be seventeen Directors upon a line of only 16 or 17 miles? I cannot see the reason of that. I have many other questions to ask besides that.

The CHAIRMAN—If you will allow me, before you proceed further—

Mr. MOLYNEUX—Would it not be well, Mr. Chairman, that I should put my motion into a regular shape?

The CHAIRMAN—The pointed remarks made by Sir J. Walmsley are such, that I do not feel I ought to remain quiet without making a reply. He has alluded to a wish to retire which I expressed at our last meeting; but he must be aware that the subject of discussion at that meeting was not really upon the merits of the Birkenhead and Chester line, but the asking for information which I did not feel myself justified in giving, and the result proved that I was correct. It concerned an arrangement which was made for the sale of the Chester and Crewe line. I felt then, and I still feel, that it was a question that ought not to have been put to me. (Hear.)

Sir J. WALMSLEY—What was the question?

The CHAIRMAN—It was for the particulars of the arrangement made with the Grand Junction Company for the purchase of the Chester and Crewe line. It had nothing to do with the question before the meeting, and I am only surprised you should bring it forward now. With regard to our own proceedings, we court inquiry in every way—(hear, hear);—and for that reason I say appoint your subcommittee; but I would leave it to you, and to any gentleman present, if you were appointed as Directors, whether you would wish them to be instructed to look into every item? Say whether or not you approve of the conduct of the Directors; come forward at once if you disapprove of them, and let us retire. I am certainly ready to retire. (Hear, hear.)

A PROPRIETOR, whose name we could not learn, said he thought that Monks' Ferry might become a very desirable property. For instance, the Directors might think it necessary at a future time to make a tunnel—(loud laughter.)

Mr. MOSLEY put it to the chairman, whether it would not be better for the Directors to consent to the Committee having the objects proposed, from the fact that the suggestion had come from himself without mentioning any terms. It was the general wish of the proprietors to appoint a Committee, without the slightest intention of casting a slur upon the Directors; and if the Directors did not agree to it, the result would be that persons would presume that which he (Mr. Mosley) was sure was not the case, namely, that things had been done which ought not to have been done. He did not see, after what had occurred, how they could avoid the alternative—either to appoint a Committee of inquiry, or to enter upon a full discussion of things which they themselves had stated not to be advisable or prudent. (Hear.) At the same time, he thought if the motion could be so framed as to reach the objects of those gentlemen who wished for information, yet without any disparagement of the Directors, it would be exceedingly desirable.

Mr. MOLYNEUX—Then I move that a Committee be appointed, to inquire and report, to an adjourned meeting, upon the general affairs of the Chester and Birkenhead Railway Company. (Hear.)

A DIRECTOR—Let the information be given.

The CHAIRMAN — Well, as the question is pressed—

Sir J. WALMSLEY—The question is not pressed.

The CHAIRMAN—But there is a wish expressed to have the information. It does appear to me that the body of proprietors think they ought to be acquainted with the particulars of the arrangements. I should say, as one of the Directors, that we are willing to enter upon the explanation at once; but of course the proprietors are to take the responsibility of it upon themselves: we do not come forward to recommend it.

Mr. HUDSON—Has the difficulty which lies in the way of giving the information anything to do with pounds, shillings, and pence, or are the difficulties of a legal nature? The answer to that would decide, I think, whether the proprietors would have the information now or not.

Mr. MALLABY — They are both. The legal difficulties would involve the pounds, shillings, and pence—

Mr. HUDSON—That I can understand; but I want to know whether there are any independent legal difficulties?

Mr. MALLABY—There would be legal difficulties attending it. It is a matter of prudence—

Mr. HUDSON—Then before you proceed—

Mr. MALLABY—It is a matter of prudence or not which it is for you to decide.

Mr. HUDSON made some remark, the exact purport of which we did not hear.

Mr. MALLABY—Then I will proceed. With regard to the two questions— (Cries of "No, no.")

Mr. MOLYNEUX—I beg pardon, Mr. Chairman. I have proposed that a Committee should be formed, and the motion has been seconded. (Hear, hear.)

Mr. RADCLIFFE observed that their law adviser had stated it would be prejudicial to the interests of the Company to make the explanation, and if that was so the proprietors were satisfied. But now the Directors seemed to say, "if you dare us into the thing we will give the information, although to mention it publicly would be prejudicial." (Hear, hear.)

The CHAIRMAN said the proprietors had expressed a wish that the proceedings should be entered into, and the Directors had given their opinion that it was not desirable. Since that certain remarks had been made impugning the conduct of the Directors, not only upon this particular question, but their general management. As the matter had gone so far, perhaps the proprietors would think it desirable that the explanation should be given, and he as one of the Directors requested that it might be done—

Sir J. WALMSLEY—What, although it would injure the affairs of the Company? (Hear, hear.)

The CHAIRMAN—They take that upon themselves. (No, no.)

Mr. HUDSON—Mr. Chairman, there is no resolution before the meeting calling upon you to explain. (Hear, hear.) Had the proprietors undertaken to pass a resolution calling upon you to explain any transaction which you thought prejudicial to the Company to be explained, then I conceive you would be relieved from responsibility; but till that resolution is passed the responsibility rests with you, and by any unwise declaration of them you involve yourself in the difficulty of injuring the interests of the Company. A Committee of inquiry is proposed: I do think that to you and the Directors it must be satisfactory to have that Committee; for I am satisfied, as has been said by Sir Joshu Walmsley, though you may possibly have erred, though your intentions have been honest. You have property to the amount of 37,000*l.* to sell, which is an anomalous position for a small Company. That is a circumstance which of itself calls for inquiry, and I am sure you will consult, not only the best interests of this Company, but also that high honour and integrity which has ever charactised this Direction by allowing this investigation to take place. (Cheers.) I am satisfied that the shareholders will place the duty of inquiring in honourable hands, and that you will come out of it in a manner that will reflect credit upon the Direction.

The CHAIRMAN—I am sure it is the wish of every Director of this Company to give every possible explanation. The only question is the mode in which that is to be done. It had been stated that the proprietors thought it was better to enter into particulars; we objected; the matter was rather pressed; but as it seemed to be the wish of some of them yet. I say, in the position we are placed, let us do it. (Loud cries of "No, no.")

Mr. MOLYNEUX—It would be quite as well if my motion were put into a shape—

Mr. BOOTH—Is your Committee to make a general inquiry into the affairs of the Company?

Mr. MOLYNEUX—Yes. (Hear, hear.)

Mr. BOOTH—Then, that certainly appears to my mind to be a general reflection upon the conduct of the Directory. If that were passed, I for one should retire. (Hear.)

A PROPRIETOR—Then we must appoint some one else.

Mr. BOOTH—Very well.

The CHAIRMAN—If the proprietors have come here with the wish of having this matter fully explained, we, the Directors, are ready to do it. (No, no.) We merely give our opinion that we do not think it would be desirable; but if the proprietors think differently, they shall know the whole of our proceedings. Let us go on. (No, no.)

Mr. LAWRENCE—I did come here expecting this matter would have been explained, but you and the solicitor have said it would be injurious. I told you I would meet you at once, as a large proprietor. When you stated it would be disadvantageous to explain, it was the general wish that you must not; and as such a course seems to be most agreeable to the proprietors, I am satisfied with it.

Mr. JONES said he should be very sorry if the Directors conceived the resolution proposed to be a censure upon them. Were he a Director he should not so consider it, but, at the same time, he should wish the Committee to be limited in its objects. The great object of the inquiry which appeared to him at present was the mystery (for he could not call it anything else) respecting the two ferries. (Applause.) If the Committee was limited to an inquiry respecting these two affairs, then the shareholders and the Directors would unite, and it could not in any way be a censure upon the Directors.

The CHAIRMAN—That quite meets my views. It is quite clear if the Committee is appointed to inquire into this question, of course they will see the general working of the Company; but I must say I do not like a resolution of this kind passed which goes to make a general inquiry into the affairs and proceedings of the Company. It does appear to me to be a direct censure upon the Directors.

Mr. RADCLIFFE could not see how an inquiry into their own affairs could be a slur or censure upon the Directors, for they themselves had courted inquiry. They threw suspicion upon themselves; and it was not the proprietors who suspected them. They appeared to him like petted children, "Oh," said they, "if you do not do as we consider right, we will resign." He submitted that that was not the sort of conduct for them to adopt. (Cheers.)

The CHAIRMAN—There is no such feeling on the part of the Directors; and we are willing to explain every item. What is your motion, Mr. Molyneux?

Mr. MOLYNEUX.—My object is general inquiry.

Digitized by Google

I was inclined to limit it at first, but I now think the duties of the Committee should embrace a general inquiry. (Hear.)

Mr. Hudson suggested that the duties of the Committee should be limited, as the Chairman had such strong objections to a general inquiry. He for one would much rather have had a general inquiry, but—

A lengthened and somewhat warm discussion succeeded on a resolution which had been drawn up on the part of Mr. Molyneux by Mr. Mosley. This resolution underwent a great number of modifications, in the attempt to make it embrace a general inquiry by the Committee, without conveying an implied censure upon the Committee. We regret that we have not room to give the discussion on this resolution, as it was pungent and interesting. Eventually it was carried in this shape. "That a Committee be appointed to inquire into the purchase of Woodside and Monk Ferries, the propriety of a better arrangement of the Direction, and such other matters as can be inquired into without injury to the Company;" the Chairman promising that every thing should be open to the Committee.

The following gentlemen were appointed the Committee:—Mr. J. S. Ratcliffe, Mr. James Lawrence, Sir J. Walmsley, Mr. Nicholas Martindale, Mr. Robertson Gladstone, Mr. Abbot, and Mr. John Jones.

The meeting was then adjourned till Wednesday, the 12th May, for the purpose of receiving the Report of the Directors.—*Liverpool Standard*, April 13.

SUNDAY TRAVELLING—SENSIBLE JUSTICES.

We quote with much pleasure from the *Chelmsford Chronicle* the following report of a discussion which took place on this subject, of putting in force the ancient and still existing law respecting the observance of the Sabbath, (*existing*, but long ago *shelved*, by general consent). A report had been read from a Committee of the Justices recommending that Captain M'Hardy, the Superintendent of the local police, should be directed to issue orders to the local constables "to *lay informations* against carriers, waggoners, and drovers travelling on Sundays." The discussion took place on a motion for adopting this recommendation:—

Lord Rayleigh said, representations had been made by clergymen and others in the neighbourhood of Dunmow, that they had been enabled to stop Sunday traffic by the old constables, but the police said they had no orders to do so; and thus the parties were in a worse position than they were before. The chief constable was asked why he had not given orders, and he said if the men were always engaged in matters of this kind, they would not be in a fit state to be out in the night; therefore the Committee recommended the local constables should attend to it. When the clergymen came and pointed to the Act of Parliament, he (Lord R.) felt it his duty as a magistrate to recommend this; for so long as the enactment was the law of the land he did not see how they could say no to the request.

Mr. Sharn said, he must oppose the recommendation, for he thought it was very partial, as he could not see why they should pass over a gentleman's carriage drawn by four horses, and seize a donkey cart. (Hear.) If they gave orders to seize one class they should give orders to seize all travellers. He had repeatedly been applied to to stop coaches, waggons, and inferior travellers on the Sunday, but his answer was, "why seize on those who cannot resist, and pass over those who can."

Lord Rayleigh said, it was not fair to suppose that the Committee recommended anything partial: if the Act was partial then it was with the Legislature.

Mr. Leapingwell said this was a matter of great consideration; as to saying that they took notice of the lower class of travellers, and not of the higher, that was what the Act did. If any gentleman thought fit to take four post-horses and perform a journey of 100 miles on a Sunday, there was no law to hinder him (whether he was acting rightly in so doing, unless it was a case of necessity, he did not say); but if a drover or waggoner went there was a law to prevent him. On the continent the Sunday was a day of pleasure, and exhibitions of amusement were allowed; here many would not countenance that, but they would allow a certain degree of commerce; but so long as the law remained he thought they should enforce it.

Mr. Bramston said, the proposition was, that directions should be given from that Court to carry into force the Act of Charles II. which was passed for the better observance of the Lord's Day, and which said that drovers, waggoners, &c. travelling on a Sunday, should be liable to a penalty of 5s. Now, no doubt, here was an Act of Parliament unrepealed,—here was a penalty attached to it; but the question was, whether they, as a Court of Quarter Session, should give directions that this Act should be carried into effect more than any other Act. (Cheers.) That was the point they had to consider: if persons were brought before a magistrate for violating the Act, and the case was proved, he was bound to convict—if offences were committed, the magistrates might order them to be looked into, and they might order the local constables to act; but if they, as a Court of Quarter Session, were asked to give this general order to the police, he should hold up his hand against it. (Cheers.)

Mr. Cotton said, no gentleman was more anxious for a better observance of the Sabbath than himself, but he conceived that the course recommended, if taken, would tend to defeat the object of those who proposed it. If they could enforce a better observance of the Sabbath, he should be willing to incur some responsibility in carrying it into effect; but he thought they would rather be doing harm than good. It was perfectly competent for any person to lay an information, and if a neighbourhood desired to put a stop to the traffic, it could be done better by the neighbourhood and the individuals residing there, than by an order of that court. (Hear, hear.)

Mr. Tower said, he thought the recommendation ought not to be adopted, because a particular course was to be dictated to the chief constable adapted for every part of the county, so that all the thieves would know the police were engaged in looking after waggons, and would be able to commit their depredations. Therefore it was too much to step out of their course to prescribe a particular line of proceeding to the chief constable.

Mr. Disney said, he did not think by adopting the recommendation they should be doing a moral good to society. The Act was passed in times long gone by, and it had been found necessary to repeal part of it; and it was the duty of individual persons to look to cases that would tend to public good or lead to public evil. In this county travellers were sometimes obliged to travel on the Sunday, or they would not be in time for market in London on the Monday, but if they travelled to the injury of the public morals, or to the interruption of the public service, or the injury of individuals, let those individuals take notice of it. (Hear.) Were they to do this, and give regular instructions to lay sweeping informations all over the country, especially when the gentlemen who complained could do it themselves?

Lord Rayleigh said, Mr. Tower seemed to think that the police force were to be employed, but the recommendation was as respected the local constables. It was then said by Mr. Bramston that the local constables could be paid, but they could not if employed by individuals; before they employed the parish constables without paying them, but now they could not. As to giving a general order to the chief constable, no one more wished to leave him unshackled than he did, but this matter was considered at the chief constable's own request. They found these men occupied in bringing up people for driving without reins, and on that subject probably the chief constable had given them an order, but not for travelling on Sunday, because he supposed on that point he had no given them an order.

The motion was then put, and the recommendation of the Committee was ordered to be struck out of the Report by a large majority.

SUNDAY TRAVELLING.

Eminent success, we hope, will attend the opening of the Glasgow and Greenock Railway, and all other railways whatsoever. But how comes it that the respectable Directors on the Greenock line boggle about carrying the innocent mail bags on Sunday, seeing that they actually put on, as we are informed they did, an extra train on the Fast Day* last Thursday, and carried hither and thither an enormous number of human beings at so much per head on that said day? Is this consistency? Is it not palpable hypocrisy? How can they answer for their conduct to the Guardian Office, the managers of which, headed by Sir Andrew Agnew, flattered them into the stoppage of the train on Sunday with the quiet bags, injuring no one, but rather conveying glad and anxious tidings to all and sundry?

Let the Greenock people look to it. They will soon find that although they are travelling by speed, their correspondence is actually about to be arrested, or kept back from them twenty-four hours longer than it ought to be. They will find that they are about to meet with treatment not met with or tolerated in any other part of her Majesty's dominions! They will rise up like furies by-and-bye, at this treatment, when they come to experience it, to the ruin, it may be, of many of them. Let them consult with their active representative, Mr. Wallace, of Kelly. He knows, or he may have heard of, what is about to be done in the Post-office department at Glasgow and Greenock, between the hours of Saturday night and Monday morning. He is a better adviser for his constituents, in their temporal as well as their spiritual interests, perhaps, than any of the Agnew school. But we have a strong presentiment that the Directors themselves will see the absolute necessity of keeping pace with the spirit of the age, and leave cant and hypocrisy to find their level in other directions.—*Scotch Reformer's Gazette.*

Frightful Accident on the Eastern Counties Railway.—Last evening about 25 minutes before 8 o'clock, a most frightful accident occurred on the line of the Eastern Counties Railway, by which a passenger named Joseph Lovell, living at No. 2, Swallow's-gardens, Chamber-street, Goodman's-fields, was so much injured that it is supposed he cannot possibly survive. The Romford train, on its way to London, arrived at the station in Devonshire-street, Mile-end, at the time abovementioned, when Lovell, who had been riding in one of the third-class carriages, alighted, and was in the act of stepping across a platform with a stick in his hand, upon which he was leaning, when, owing to the greasy state of the platform, from the rain which fell on Sunday, in the afternoon, he suddenly slipped, and his stick breaking in half, he fell backwards on to the rails of the line. At this instant a policeman called out "all right," and the train started, and a violent shrick was immediately afterwards heard, and it was then found that the engine and carriages had passed over the unfortunate man. He was picked up apparently lifeless, and a litter being procured, no time was lost in conveying him to the London Hospital, Mile End-road, where the sufferer was attended by Mr. Luke, the house surgeon, and several other medical gentlemen, and on examination it was ascertained that his left leg was literally crushed to atoms, and the foot of his other leg also severely jammed. It was deemed expedient to amputate the left limb, and that operation was immediately carried into effect in the most skilful manner. At 10 o'clock last night no hopes were entertained of the unfortunate man's surviving.—*Times.*

* In Scotland a *fast* day is a day appointed by the Church to be kept holy, preparatory to a general dispensation of the sacrament. It is observed in the same way as Christmas Day or Good Friday in England.

THE ACCIDENT ON THE BIRMINGHAM AND GLOUCESTER RAILWAY.

We lament to state that Mr. Creuze has died of the severe injuries which he sustained from the accident mentioned in our last. Mr. C. was a young gentleman of high attainments and great promise in his profession, and his melancholy fate is very generally deplored. He was educated at Cambridge, where he took a wrangler's honours, and was brother of Mr. Creuze, of the dock-yard service, the editor, and in part author, of the highly-esteemed "Papers on Naval Architecture." On Friday, the 9th instant, an inquest was held on the remains of the deceased, at the Cross Hotel, Bromsgrove, at which the following proceedings took place :—

The first witness examined was Edward Shaw Carter, the stoker, who was carried into the room, and placed on a couch near the Coroner, apparently suffering a good deal from the effects of scalds on his hands and face. He said that he was employed on Tuesday night on the bank engine called the *Boston*, one of the American locomotives employed in working the incline near the Bromsgrove station. He left the station about 10 minutes before 11, for the purpose of assisting one of the mail trains up the incline, accompanied by the deceased (Mr. Creuze) and the driver, Israel York. After assisting the mail train up the incline, they returned on the other line of rails as far as Vigo Bridge, a distance of about half a mile. York stopped the engine there and went home, leaving witness in charge of the engine, and desiring him to wait for Mr. Creuze, who had also got off the engine. He remained about two hours in charge of the engine, until the watchman gave him notice that the next mail train from Gloucester to Birmingham would be up in about five minutes. He then ran the engine down the incline to the Bromsgrove station, where he crossed over to the other line, and got the tender filled with water. He afterwards took up Walworth, the foreman, and his wife, and the second breaksman, and ran the engine back to Vigo, where Mrs. Walworth got off, and the second breaksman walked along the plane. He then ran the engine nearly to the top of the incline, and ran her back again in order to fill the boiler. He stayed here about twenty minutes, at the expiration of which time the deceased, Walworth and his wife, and a man named Archibald Torry, foreman of Messrs. Nasmyth and Co., came and got upon the engine and tender. He then slackened the break, and they started down the incline at the rate of about seven or eight miles an hour, the balance indicating a pressure of 48lb. to the square inch. He knew that this was the exact indication, for he had himself altered it from a high pressure after they had ascended the incline with the mail train. The steam was just beginning to blow when they started. Walworth, as soon as they started, lifted up the balance and allowed the steam to escape until it had no longer sufficient power to raise the valve. When they had proceeded about 300 yards the water and steam began to escape in great quantities, and with great violence, through the fire-box, on the deceased and himself and the other persons who were on the engine, by which the fire-box was forced open. Witness ran immediately to the centre of the tender to save himself, and the deceased stood with Walworth, with his back towards the fire-box, a little on the left about five feet distant. After witness had got to the coke-box he attempted to get off the engine, in doing which his left hand got entangled with the break, and he was about a minute before he could release himself. As soon as he had done so he jumped off the engine, which went on about 300 yards before it stopped. He then went towards the engine, and on his way met Walworth and his wife, and Torry. On getting up they found Mr. Creuze sitting on the top of the tender. They spoke to him, but he made no answer. Walworth immediately slackened the break, and started down the inclined plane towards the station. Witness did not know whether Mr. Creuze had been scalded or injured at all; but heard Mrs. Walworth say that he was. He (witness) on arriving at the station got off, and walked home to get assistance. The engine had been lately repaired, but no accident had happened with it before. It had only been six or seven months in use. The witness, in reply to questions put at the close of his evidence, stated, that he had been employed as a stoker about five years, and was well acquainted with the mode of driving an engine. In the repairs which had been made a copper stay had been introduced through the boiler in place of one of the tubes; but this would, in his opinion, afford additional security.

Thomas Horton, an engine fitter, was examined as to the nature of the repairs that had been made in the engine. He was about four months in the Company's service, and the first time he had had anything to do with the engine was in taking it to pieces for the purpose of sending it to the boiler maker's. He afterwards put it together again. A stay was introduced through the boiler from the tube plate in the fire-box to the tube plate in the smoke-box. The stay was introduced for the security of the tubes, and to keep the plates from being drawn in by the fire. Witness made the repairs under the direction of Walworth. The copper stay was fastened by means of iron nuts screwed at each end. The stay was an inch and an eighth in diameter. The stay was of the same thickness, and fastened in the same way as that which he had been in the habit of putting them in other boilers. The engine had also a new fire-box put in, and she was started to work on Thursday week, taking the trains up the incline, at which she was continued until the time of the accident. On Wednesday evening last witness examined the boiler of the *Boston*, and found that a short tube that had been put into the boiler plate of the fire-box had been blown out. It had been introduced in the place of one of the tubes, which had been taken away in order that a hole might be left at the smoke-box end to blow the mud out of the boiler. This short tube or plug was driven in the hole of the tube plate at the fire-box. It was fastened by means of a strong steel ferrule, driven with great force into the tube. A man of the name of Morgan assisted him to plug up the hole. It was only fastened by being driven in with great force, and it would have to resist the pressure of the steam by the force with which it was driven in.

The Coroner inquired whether it was usual, in making such alterations, to do away with the long tube altogether?

Witness—It is the usual practice. In most engines the plug was made solid. They were not used in all boilers, and were merely introduced in order to clean out the mud and dirt that settled in the boiler.

Coroner—Have you seen other engines altered in the same way?

Witness—Yes; on the North Midland line, and in the Steam engines used at Newcastle.

Coroner—And in all cases the holes are stopped up in this manner?

Witness—Yes.

Coroner—And you have never known any of the plugs to be forced out before?

Witness—Never; I considered the tube perfectly safe.

Coroner—Are there any engines running now on the line plugged in the same way?

Witness—There was one, but there are none running now.

Mr. Whateley—I beg to state, that there was only one other engine on the line altered in this way, and the very moment that this unfortunate accident occurred it was removed, and is now in process of being repaired; indeed, I am informed by a gentleman near me, that the repairs have been made, and that the engine is now at work.

The witness further said, that he had frequently been upon the engines which had been plugged in the way stated, while they were at work, and never had the slightest apprehension of danger. It was the general practice on the North Midland Railway to plug the engines in this way when they required to be repaired. Every engine that came to be repaired had a tube taken out, for the purpose of cleaning out the boiler, and a plug substituted in the same way. The repairs on the North Midland were done under the direction of Mr. Stephenson, the acting Engineer.

Coroner—You do not suppose that a hole plugged in this way would be as safe as if there never had been a hole at all?

Witness—Certainly not; but it is possible to make it as safe.

Foreman—You would not consider it to be as safe as putting in a tube all along?

Mr. Whateley hoped the jury would bear in mind that if a tube had been put through the whole way, the object in view could not have been attained—that of clearing out the mud from the boiler.

By a juror—You are quite sure that in all you have seen altered, you have never known any of this description to give way before?

Witness—Never; I am positive of it.

The Coroner here inquired if the jury thought it would be necessary to call any further evidence; but they expressed themselves perfectly satisfied with the evidence that had been given.

Mr. Fletcher, surgeon, of Bromsgrove, who had been called in immediately on the occurrence of the accident to attend the deceased, described the nature of the injuries which he had received, and the treatment adopted. He continued in attendance upon the sufferer until about an hour preceding his death, which took place soon after 5 o'clock on Thursday morning.

William Woodward, Mr. Creuze's servant, also described the state of the deceased after the occurrence of the accident. On his being taken to his house close by the Bromsgrove station, a surgeon was sent for, but in the meantime witness tore up some shirts and bound up his legs and arms in linseed oil. He attended him constantly till his death. He appeared to be more composed about 4 o'clock on Thursday morning, when witness left him for a few minutes on his left side, but feeling anxious about him, he returned almost immediately, and found him lying on his back, the breath just leaving him.

Another witness was also examined, but he merely deposed to having assisted in removing the deceased off the engine to his own house.

In consequence of a communication made to the Coroner by one of the jury, Horton was recalled, and examined as to whether a similar accident had not occurred a few weeks before, by the blowing out of a plug which had been placed in a boiler of one of the engines in the same manner as that in the *Boston*. The witness replied that no such accident had occurred. An accident had occurred to one of the boilers, but it was not from the blowing out of a plug; it was from a different cause altogether.

The Coroner briefly addressed the jury, who after consulting for about half an hour, returned a verdict of "Accidental Death," with a deodand of 25*l.* on the engine.

The remains of the unfortunate deceased were interred at Stoke Church on Sunday last.

We have begun to share in the beneficial effects of the opening of the Great North of England Railway. The south mail is now conveyed by a light two horse coach from the Cowton station. It arrives at Richmond at half-past ten in the evening; the returning letter bag is sent off from the south at two in the afternoon, thus allowing sufficient time for answering any communication from the metropolis.—*Yorkshireman.*

The contemplated alteration of the times of the arrival and departure of the mails, came into operation on Wednesday, on which day the mail from Darlington arrived in this town at half-past one o'clock, bringing the London letters and papers of the previous evening, in the short space of sixteen hours and a half after leaving the Euston Square Station. This brings the time of arrival within an hour of the olden time, and makes a saving of no less than twenty-three hours in the time of conveyance from the metropolis.—*Newcastle Journal.*

RAILWAY ADJUDICATION.

APPEAL.

THE GREAT NORTH OF ENGLAND RAILWAY COMPANY, APPELLANTS; WELCH, RESPONDENT.

Durham Easter Sessions, 6th April, 1841.—Mr. Wilkinson (Chairman of the Great North of England Railway Company) and Mr. Ingham, appeared for the appellants; and Mr. Granger for the respondents.

Mr. GRANGER said, this appeal arose on the 76th clause of the Great North of England Railway Company's Act, which required the proprietors in that undertaking, at their own expense, to make and maintain all bridges, culverts, &c. of such dimensions and in such a manner as two or more justices of the peace might order, on complaint of the owner or occupier of land on the line of the railway which might require such modes of communication. In pursuance of this clause, the respondent, Robert Welsh, the tenant of Black Banks farm, near Hurworth, the property of the Rev. Hopper Williamson, had made application for a summons against the Railway Company, to compel them to make on his farm a bridge and culvert for his accommodation. The case was heard by Sir William Chaytor and Captain Garthwaite, who, after inspecting the premises, made an order for the erection of the bridge and culvert; against that order the Company had appealed to the quarter sessions, as they were empowered to do by sect. 183 of their Act. They had placed on record no fewer than twelve grounds of appeal, but out of all those, be believed but one would be insisted on. The first ground of appeal was, that under and by virtue of an arrangement between the Railway Company and the Reverend Hopper Williamson, a compensation had been fixed in lieu of the erection of the works in question, and he presumed that the appellants would say that the tenant as well as his landlord were bound by that arrangement. The fact was, a proposal had been made for an arrangement by Mr. Williamson, but as it had not been acceded to by the Company, it could not in law or reason be held binding on any party. But even if they could make out that an agreement had been actually executed by the Company and Mr. Williamson, such agreement could be in no way binding on Mr. Welsh, who was no party to it. Besides, he entered on the farm in 1836, whereas no arrangement whatever was proposed between his landlord and the Company till 1838; consequently the tenant could not be held to be bound by the arrangement, though the Act did say that it should be binding on all persons who held by, through, or under the landlord, the contracting party. The Act could not be construed to have a retrospective operation, and therefore, while he denied the execution of any agreement, he would contend that supposing it to exist between Mr. Williamson and the Company, it could not in any way apply to Welsh, who took and entered on the farm two years before the arrangement was proposed. The second ground of appeal was, that Welsh had used the new road made by the Company; and from that he presumed it was meant to be argued, that he had sanctioned and adopted the arrangement proposed by his landlord. In reply to this he would only say, that the Company having stopped the old road of the farm by their work, were bound to set out a convenient road for the use of the tenant, which they had not even yet done, though the Act required it of them in the very outset. The third ground of appeal was, that Welsh had made application to the magistrates for redress, of his own accord, and without the concurrence of Mr. Williamson, his landlord; that such application ought not to have been made without such concurrence; that Welsh's lease of the farm would expire in May-day, 1842, and that to make the bridge and culvert for his accommodation till that date, would be attended with great expense to the Company. Now, the language of the Act was, that either the *owner* or the *occupier* might demand the redress sought in this case; and very properly so too, for the protection of the tenant, who otherwise might be subjected to great inconvenience and injury by an arrangement between his landlord and the Company, in which his individual interest as occupier of the land might be sacrificed. Hence the propriety of the alternative presented in the Act. If it were set up, that the tenant could not proceed against the Company without the concurrence of his landlord, it must be also admitted that the landlord could not proceed without the concurrence of his tenant, which was manifestly absurd, and diametrically opposed to the letter and spirit of the law. As to the expense of erecting the works demanded, that was a matter which the court could not take into consideration, any more than the length of the lease.—The fourth and the only real ground of contest was, that the bridge and the culvert were not both requisite. On that he should produce evidence to the contrary. The fifth ground of complaint was, that Mr. Welsh's application came too late, not being made till the line was actually completed; and that to construct the works now, would cause the Company great inconvenience which might have been avoided by an earlier application. In answer to this, he would ask his learned friends to point out any clause compulsory as to the time of application. It was the business of the Company to assure themselves that they had done every thing necessary for the due accommodation of the tenant in occupation; but the truth was, Mr. Welsh had put off making application from time to time, hoping the inconvenience of crossing the railway on the level would be remedied, but at length his patience had been exhausted.—The next three or four objections would be at once thrown overboard by the court as reflecting on the magistrates who made the order now disputed. They set forth certain improprieties respecting the admission and exclusion of evidence at the previous hearing, which if provable, would form ground for a criminal information against Sir William Chaytor and Captain Garthwaite.—The tenth ground of appeal was, that no evidence had been allowed to be produced by the Company's agent to prove their alleged agreement with Mr. Williamson. That point would be decided by the evidence to be produced before the Bench; but, in answer to this allegation, he might observe, that the magistrates expressed their readiness to receive the evidence, but the attorney for the appellants said it was unnecessary.—The eleventh ground of appeal was, that the magistrates' order was unreasonable and oppressive. It was for the respondents to show that.—The twelfth and last objection was in substance the same as one already stated, that Welsh was not shown to have had the concurrence of his landlord in his application.—But to return, as he had proposed, to the fourth ground of appeal, the only one disputable, were the bridge and culvert demanded by Welsh necessary for his due convenience? His farm consists of 200 acres of land and before the railway came, there was a direct and proper communication from one field to another throughout. But by this railway, communication was cut off for 1300 yards by a deep cut and a lofty embankment. Formerly, the road from the farm-house to the Darlington turnpike was about 578 yards long, but now by the new road the distance was increased to 725 yards. The farm was, in fact, cut in two by the railway, the only land in it suitable for turnips and barley being on the east of the line, and the meadow and pasture on the west, while the only communication was by a steep and difficult road crossing the railway on the level where the cut and embankment meet. By their Act, the Company were bound before taking possession of the old road to make a new one just as convenient. Now the old road was very convenient; whereas the new one was very circuitous and very inconvenient, and so much out of repair as in wet weather to be impassable by a loaded cart, so that the tenant was compelled to load but half a load of turnips at a time, to his own manifest injury. But this was not the worst part of the business. The distance from gate to gate at the crossing was 65 yards, and before a person could, with any safety, drive a loaded cart across the railway, he must leave it at the foot of the hill, and go forward a distance of 45 yards before he could see whether a train was coming or not; and as in the Darlington direction he could not see further than 900 yards, it was calculated that before he had gone back, brought up his cart, and cleared the line, an engine (not in sight when he looked out) might come up and catch him. At this place the rise of the occupation road laid out by the Company was, on the one side of the railway, 1 in 10, and on the other 1 in 12, and therefore of so decidedly improper and dangerous a character, that if the Company had any regard whatever for the lives of their fellow creatures, they would not continue it in use. He should prove, that in one day recently, 21 trains had passed this place, on the next day 19, and on the third day, up to one o'clock, 13 trains had gone by; so that a person employed in leading produce from one part of the farm to the other, must do it at the imminent hazard of his life. Then, as to the cattle on the farm. Formerly, they had access to the water, but now there was none on the west side of the farm, and they must be driven twice a day across the railway, to their very great detriment, as it was well known that they did not graze so well for the market when subject to such hurry and alarm as would be inseparable from crossing this railway. Besides, to drive them to and from water would require at least three persons—one to open the gates, and two to prevent the animals straying upon the railway, and while they were crossing, an engine might come up in a minute or a minute and a half, to the great danger of man and beast. Now, was it reasonable that a tenant should suffer all this without compensation, or any attempt on the part of the Company to remedy such evils, the tenant being furthermore absolutely compelled to make the road himself, and suffer all this inconvenience into the bargain? He understood it would be one part of the defence that either a bridge across the cut, or a culvert through the embankment would be sufficient. But he would ask, could that be considered due accommodation along an extent of 1,300 yards. The Company themselves thought it insufficient, and therefore made another road at the other end of the cut, and 900 yards from the present dangerous crossing. The truth was, both the bridge and the culvert were absolutely necessary; the bridge was ordered to be formed about the middle of the cut for the free and safe passage of the cattle, and for the purpose of communication between one part of the farm and the other; while the culvert was directed to be made near the middle of the embankment for the sake of communication between the farmstead and the turnpike, the way to the proposed bridge being too steep for carriages. There was nothing whatever of an oppressive nature in the magistrates' order; the culvert was ordered to be constructed on the site of the old road, where, as there was a natural depression of the land, it could be most cheaply and speedily done. He was sure so wealthy a Company could well afford to grant the accommodation required, which was the more necessary, as, according to their own public statement, they expected an increased amount of traffic that must inevitably augment the dangers already pointed out. The learned counsel then proceeded to call evidence.

Thomas Dixon, land-surveyor at Darlington, proved the model and plan produced in court, and stated the difference in length between the new and old roads from the house to the turnpike, to be 147 yards. The rise to the railway on the west side is 1 in 10, on the other side 1 in 12. The rise of the land is so abrupt, that a person approaching the railway could not see down the line without going upon it. A person may then see down the line about 900 yards in the direction of Darlington. The distance from gate to gate on the sides of the railway is 65 yards. A person coming up the hill with a cart, must stop his cart about 16 yards from the gate, on account of the abruptness of the rise. A loaded cart could not go up the incline at the rate of more than two miles per hour, or a second to a yard. A railway train, at the rate of 30 miles per hour, would come 1196 yards in the time a careful driver would be able to cross the railway in in safety. If cattle were driven over the railway at the rate of three miles per hour, they would go the

Digitized by Google

distance while a railway train would traverse 1358 yards. Looking southward, one can see down the line about 1000 yards; but in that direction the advance of a train may be seen before a person comes on the railway. A cart would be in great danger of being upset on the bank by the horses taking fright at the engines. The difference of distance between the old and new roads from the house to the turnpike is about 150 yards, and from field to field 647 yards. There is no water on the west side of the farm, and cattle must be driven across the railway to water, unless it can be procured at the old watering-place, which is said to be dry in summer. There is no corn or turnip land in the farm, except some fields down by the Skerne side; a person leading corn or turnips might cross the railway to the farmstead 16 times in a day, though not less than two or three draughts ought to be employed at a time. The new road is very inconvenient and abrupt.

Cross-examined by Mr. Wilkinson—The horizontal and vertical scales of the model are different, the latter being much greater than the former, and, in consequence, the elevations appear much more formidable. I adopted these scales for my own convenience, to avoid making the model unwieldy. By the old road the rise must have been considerable. On the Stockton and Darlington Railway, the occupation roads are sometimes on the level, but I have known accidents in consequence; though I know no point on that line so awkward as the one in question.

Re-examined by Mr. Granger—I have surveyed the whole of the Stockton and Darlington line. Two horses were lately killed on it by an engine at the turnpike crossing.

William Welsh, son of the respondent, proved the old and new roads on the model, and said, the old road was not in any part so steep as the new one. We grow our turnips by the Skerne side, but in consequence of the state of the road, we cannot bring more than half a cart load at a time. It is more like a canal than a road. The Company have not laid out a farthing on it; we have laid stones and thorns upon it. Before the railway was made, the cattle came to the pump-trough at the house to water; a little boy could bring them, or, if the gates were open, they would come by themselves. Now, they must come a long way round-about, and it would require four persons to drive them; one to open the gates, two to prevent them going along the railway, and another to drive them forward. It is extremely probable that horses coming up to the railway would take fright; it once happened, and the cart was thrown over. The road on the level of the railway is our only way to market. It is very inconvenient for us to go round with our produce by the roads on the railway level.

Cross-examined by Mr. Wilkinson.—My father is tenant of the farm, and was one of the contractors in the formation of the railway and the culvert as set out by the engineer. He complained to me and several others, that the new cart-road would be very dangerous when the engines got on the railway. My father and his partners began their works in 1837, and finished in the latter part of last year. The cart I spoke of as having been upset, was not at the crossing; an engine was then coming down the Croft-branch. I know that Mr. Charles Armstrong, Mr. Williamson's agent, saw the works in progress from time time. I never heard my father speak of any arrangement between Mr. Williamson and the Company, respecting the crossings. He has talked about the crossings, but he said nothing particular. He did talk something about an arrangement, but not about the Croft-branch.

Re-examined by Mr. Granger.—The agreement that was talked about was not in writing.

John Welch, brother of last witness, said, my father has suffered great inconvenience from the railway. I never saw the place before last July. Last Thursday I took an account of the trains that passed up and down the railway. Twenty-one engines passed that day, between six in the morning and nine o'clock at night.—Nineteen passed on Friday; and on Saturday, up to one o'clock, eleven passed. If the road were good a cart in a long summer's day might carry eight loads over the railway.

Cross-examined by Mr. Ingham—I have been out of the country about six years. When I came home I found my father a railway contractor. The culvert he made was made according to his contract for the conveyance of water from the east to the west side of the embankment, but the sliding of the bank has filled it up. My father spoke to me about an arrangement between the Company and Mr. Williamson, but he said the Company never performed what they promised. (A laugh.) If the produce of the land were stacked in the field, it could hardly be got home in winter, it is such a long way to the bottom of the new road. (Laughter.) The new road, to be made good, would require a ditch on each side, and be very expensive.

Re-examined by Mr. Granger—When I came home the culvert was nearly dry, and my father said in the droughty weather it had been entirely so.

— Alderson, a farmer, said—I have examined the new road through the farm, and have succeeded sometimes in passing along it. I consider the railway crossings quite insufficient, and consider both the bridge and the culvert to be necessary. The old road was much more convenient than the new one could be made.

— Peacock, land agent at Bishop Auckland, said—I have twice viewed the farm, and think the present crossing very dangerous indeed. I perfectly approve of what Mr. Dixon said in evidence, and consider both the bridge and the culvert necessary to the cultivation of the farm; they could only be dispensed with at great risk and inconvenience to the tenant. The proposed culvert on the site of the old road is in the best situation, nature has made it. It is a great injury to grazing cattle to have to drive them to water, it puts them off their feed.

Edward Wallis, engineer on the West Durham Railway, said—I have examined the farm, and think the proposed sites of the bridge and the culvert the best that could be selected with a view to the convenience of the Railway Company.

Cross-examined by Mr. Wilkinson—The West Durham Railway, in spite of the Act of Parliament, crosses turnpike and occupation roads on the level.

By Mr. Granger—On that line we do not convey members of Parliament at the rate of forty miles an hour. (A laugh.)

Mr. Wilkinson, in opening for the appellants, wished it to be distinctly understood by the Bench, that in the grounds of objection which seemed to reflect on the conduct of the magistrates who had made the order now appealed against, all that was meant was, that those gentlemen had improperly and irregularly, not corruptly, refused to allow Mr. Hutchinson, the Company's solicitor, to inspect and read at length certain letters, of which portions were produced in evidence by the complainant. No doubt they thought they were performing their duty when they so acted; but he would contend that they had acted on an erroneous view of that duty, inasmuch as the context of the passages read, might have given, and, he believed, would have given, an entirely different complexion to the evidence so adduced. Certainly, though he must say the magistrates had not dealt with the evidence as they ought in strictness to have done, it was by no means intended to be intimated that they had rendered themselves liable to a criminal information. It had been said by the counsel for the respondent, that the fourth ground of appeal was the only one in any degree tenable, and to that alone the evidence produced had reference. Now, it did so happen, that this was the only one of the twelve which was really untenable. He would not deny that the present road was improper, and the Company fully intended, as early as circumstances would allow, to alter and improve it. What he would chiefly contend for was, that, on the facts which he should be able to produce, the order now appealed against was prematurely and improperly made. As to the first ground of appeal, he should show that on the 30th of August, 1838, an arrangement was ensered into by Mr. Williamson with the Company, dispensing with the bridge now demanded. The question to be decided was, whether or not that arrangement was such as contemplated by the 2 Vict. c. 8. sect. 20. If it was such an arrangement, which he should show it to be, then it must be binding on Welsh, who, in the terms of the Act, was claiming from, through, after, by, or under his landlord. By clause 77 of the first Act obtained by the Company, and which manifestly overruled clause 76 on which so much stress had been laid by his learned friend, it was provided, that in every case in which the *owner* of the land received or agreed to receive compensation for bridges, &c., the Railway Company was exempted from all charge for the erection and maintenance of such means of communication, the expense being fixed on the owner; and by another clause of the Act, such agreement was made binding on the representative of the owner. Now he should show, both by parole and documentary evidence, that an arrangement, such as was contemplated by the Act, was in progress between Mr. Williamson and the Railway Company so early as August 30th, 1838, when Mr. Williamson, writing to Mr. Otley, the Company's agent, said, that after duly considering the subject with Mr. Armstrong, his agent, he had finally determined to dispense with a bridge over the Great North of England Railway at Black Banks Farm, on the terms previously named, one of which was, that the land then occupied by the Croft Branch of the Stockton and Darlington Railway, which would be superseded by the Great North of England, should be given to him. On the 17th July, 1839, Mr. Williamson wrote again on the same subject, and spoke of a portion of land on the banks of the Skerne to be given up to him; evidently contemplating the completion of the agreement. Again, so lately as the 4th of March in the present year, Mr. Armstrong, Mr. Williamson's agent, had written to Mr. Otley, begging to know if there was any likelihood of the arrangement being completed, thereby recognizing it as being still in existence. But it was said, that supposing the pending arrangement to be valid, it could not be regarded as binding on Welsh, the tenant. Now he contended, in the terms of the second ground of appeal, that Welsh having used the present road, had manifestly adopted his landlord's agreement, and was thereby estopped from requiring other means of communication. And it must be borne in mind, that Welsh, being the contractor for this portion of the line, was the very party who must form the communications; and as he no doubt, would derive a handsome profit from his work, the more communications were made, the better for him. The third ground of appeal, namely, that the application had been made solely on account of Welsh, brought him to the interpretation of the 76th clause of the Act. He would not deny that application might be made by the tenant only, but then it must be on behalf of a person having a permanent interest in the land. To show the reasonableness of this; suppose such an occupier as, say, the tenant of the aftergrass were to require an expensive permanent communication to be formed by the Company, after the owner of the soil had agreed to dispense with such communication, could it be for a moment contended that such a demand ought to be complied with? Where a person held a long lease of land, as for 21 years, the case might be different. This showed, that the law required discretion on the part of the justices to whom application was made—a discretion which had not been exercised in this case; for, before the works demanded could be executed, Mr. Welsh's lease would have expired, and he would be out of the tenancy of the land. The Court must see, that under many conceivable circumstances, the claims of an outgoing tenant might seriously interfere with the interests of his landlord, and hence the reasonableness of clause 77, which made an agreement with a landlord binding on his tenant. He thought the Court would hesitate long, before granting the demand of a person enjoying the Company's money, who had long acted under them in the formation of that very piece of railway without complaint, and whose landlord stood in Mr. Williamson's position, under agreement to

Digitized by Google

dispense with the works demanded. He did not much rely on the fourth ground of appeal, but even on that he should be able to show that the arch and the culvert ordered to be erected were not *both* necessary. He was sure, if the justices had taken into their consideration the fifth ground of objection, namely, that the application came too late, they would have held their hand from making the order, as the whole line of railway was then completed, and had since been brought into use. It surely could not be considered equitable, that a demand should be granted that might have been made at any former period, but which could not now be complied with except at great public inconvenience, and ten times the expense to the Company it ought to have been. On the 6th, 7th, 8th, 9th, and 10th grounds of objection, he should be able to prove that inadmissible evidence had been received by the magistrates on the part of the applicant, that they had refused to receive certain important evidence offered on the part of the Company, that they had declined to allow the whole of the letters produced in evidence to be read, and that they had thereby not afforded the Company a full, fair, and ample opportunity of proving their case; for, unless he was misinstructed, he should be able to show, that Mr. Hutchinson had not (as stated by Mr. Granger) declined to offer evidence, but had been refused permission so to do by the justices. If he proved these facts, then there could be no doubt that the eleventh ground of objection, namely, that the order was unreasonable and oppressive, would be fully sustained. He would not occupy the time of the Court with the remaining ground of appeal, as he placed his main reliance on the agreement and the letters he had quoted on the relative situation of Welsh and the Company, and on the general circumstances that surrounded the appeal. If Mr. Granger contended that the Company's second Act of Parliament could not intend to make an agreement between the landlord and the Company to affect the tenant's lease, which had been executed two years before, then he would answer that Mr. Welsh ought to have opposed the Bill when before Parliament. The Company were anxious to conclude an agreement with Mr. Williamson, but they could not surrender the land of the Croft branch, as some of it was required for the Great North of England Railway. There would be no hardship to Mr. Welsh if his claim were set aside, as his lease would expire very shortly; and if there were, it was essential to the execution of all great undertakings, that some private rights must be sacrificed to the public good.

Some conversation here passed among the magistrates, a majority of whom seemed to be of opinion that the case must be stopped and the order quashed, as Mr. Williamson's letters recognised the existence of an agreement to dispense with the bridge and culvert.

Mr. Granger earnestly entreated that the case might go on. He should show that what was called an agreement, was nothing more than a mere proposal on the part of Mr. Williamson for an agreement that never could be executed, as he required the land of the Croft-branch, which, as his learned friend had just assured the Court, could never be given up by the Company.

Mr. Wilkinson contended, that in no point of view was Mr. Welsh damnified, and if he were, Mr. Williamson had put it out of his power to recover compensation, as in the agreement for the purchase of the land required for the railway, dated December 19, 1837, there was a clause stipulating, that in case of dispute respecting bridges, &c., each party should choose an arbitrator, and those two an umpire, to settle the matter in difference; but, as Mr. Williamson had never called upon the Company to appoint their arbitrator, it was out of his tenant's power to come into court. In truth, Mr. Williamson had disarmed himself, and could the tenant demand that which his landlord had surrendered? The turnip and barley land had been severed for years from the rest of the farm by the Croft branch, and it was therefore improper to attribute the severance to the Great North of England. If the Bench should decide against the appellants, it would be most unfortunate for Railway Companies, for a man having the least *scintilla* of interest in land, might henceforth enforce claims costly to the railway, and in many cases injurious to his landlord.

Mr. Hutchinson, one of the firm of Messrs. Mewburn and Hutchinson, Solicitors to the Railway Company, proved the original agreement for the land, and Messrs. Williamson's and Armstrong's letters.

Cross-examined by Mr. Granger—Mr. Otley is land-agent to the Railway Company, and the letters now produced are in his hand-writing. These documents bore date from April 21, 1840, to March 10, 1841, and stated the agreement to be unfinished, the road to be improper, and that the Company would consult their Solicitors and Engineer to see if they could dispense with the Croft branch, and, if so, that a clause empowering them to do it should be inserted in their next Act of Parliament.

Mr. Armstrong, land agent to Mr. Williamson, said, he had had correspondence and interviews with Mr. Otley respecting the business in question, but he did not know that any agreement had been come to between the Company and him.

Cross-examined by Mr. Wilkinson—There was some arrangement pending between the Company and Mr. Williamson.

Mr. Wilkinson said, the evidence of Mr. Armstrong fully established his case, it showed the existence of an arrangement—the term used in the act;—and Mr. Otley's letters proved that the Company were struggling to comply with its provisions as soon as possible, though circumstances had hitherto prevented them from carrying it into full effect. It was perfectly clear that there existed an arrangement ousting Mr. Williamson and every one claiming under him, and that his tenant could have no right to make his application.

Mr. Granger stood upon the words of the Act, and asked were the Bench prepared to go out of that Act? Before any agreement or arrangement was binding, it must be completed; but Mr. Williamson's letter was a mere proposal, which Mr. Otley's last letter proved not to have been acted on. An agreement or arrangement must be something determinate, or it could not be binding. Look at Mr. Otley's last note. There he says—If the opinion of the solicitors and engineer should be favourable, the Company would endeavour to come to a final agreement; putting everything on a contingency, and proving that the Company held themselves in no wise bound to Mr. Williamson, and that they intended to go on with giving him nothing but evasive answers. Because the tenant had quietly put up with inconvenience for three years, and waited patiently for redress, the Company now turned round and said—You are too late! Suppose they got rid of this application, the Company would very soon tell Mr. Williamson—We have referred your proposals to our solicitors, and, we regret to inform you, they think them inadmissible;—or, We have laid your suggestion respecting the land of the Croft branch before our engineer, and regret to say, that he is of opinion, it cannot be given up;—or, We applied to Parliament, and, to our astonishment, Lord Shaftesbury would not allow that portion of line to be abandoned. Fifty excuses would be made, and what remedy would Mr. Williamson have; or what could he expect when he found Mr. Wilkinson telling the court that the Croft line could not be given up?

Mr. Wilkinson.—It is arranged, that whatever portion of the Croft line is not given up to Mr. Williamson, shall be paid for in cash.

Mr. Granger was anxious to have placed Mr. Williamson in the box; had he done so, he was sure his evidence would have been—The Company have failed to perform every one of their promises, and I will have nothing more to do with them. But even if the agreement had been concluded, the tenant was not thereby estopped. Why was the word "occupier" introduced into the Act, but because the Legislature saw that cases would arise in which a tenant might require compensation, even after the demand of the landlord should be satisfied? Was it to be endured, that a tenant should be damnified as Mr. Welch was proved to be, who did not claim under his landlord, but by virtue of a lease executed before any arrangement was thought of? Mr. Wilkinson had said, that a confirmation of the order would be a hardship on the Railway Companies; but, as railways were made by the proprietors for their own benefit, they must in justice pay for all damage. The appeal said, his client was "too late;" Mr. Wilkinson, in his address, had intimated that he was "premature," and ought to have waited and seen what the Company would do for him; but he had waited too long already, and the Company had done him nothing but injury. He would not press it on the court to say, what would be their decision if the cost of the works demanded was small, and the lease a long one; for in any conceivable case they were bound to decide strictly by the words of the Act, which were clearly in favour of his client. The magistrates, whose decision was now appealed against, had seen the place and pronounced the communications demanded to be necessary, and all the evidence supported their opinion.

The Chairman, after a brief consultation with his brother magistrates, pronounced the order to be confirmed by a very small majority.

Mr. Wilkinson said, it was rather unfortunate that any expression of opinion in his favour had escaped the Bench in the early part of the case, as it had prevented him from going into evidence to show that the arch and culvert were not both necessary.

On the question of costs, it was determined by a majority of the Bench, that no order should be made, thus leaving each side to pay its own.

Sir W. Chaytor and Mr. Wharton, who were on the Bench, declined to vote. The magistrates on the Bench, who took part in the decision, were,

Mr. Williamson, Chairman.

Mr. Shipperdson,	Mr. Raisbeck,

SHEFFIELD AND MANCHESTER RAILWAY *v.* ARMSTRONG.

Liverpool Spring Assizes, April 7.—This action was brought by the Sheffield, Ashton-under-Lyne, and Manchester Railway Company, to recover from Mr. Robert Armstrong the amount of various calls made on the 20 shares he held in the Company, amounting to 750*l.* principal, and 36*l.* interest.—Total 786*l.* The defendant pleaded that he was never indebted.

Mr. CRESSWELL, for the plaintiff, said, this was one of the very numerous actions which the Company had been compelled to bring, for the purpose of enforcing payment of their calls. The transfer to him was on the 4th of December, 1837, and the register was dated 27th June, 1838, and these calls were made since that time. The 110th section of the Company's Act provided that the Company should enter in a book the names of the proprietors of the shares, which book should be sealed with the Company's seal, and should afterwards be evidence of the parties being shareholders. The Directors had power to make such calls at such periods as they thought fit, provided no call exceeded 10*l.* per share, and that there was an interval of three months between any call. It was necessary, under the Act, to show that the calls had been duly advertised in a newspaper circulating through the counties in which the railway was situated. The defendant had paid the first call of 2*l.* 10*s.* per share, and this claim was for the amount of the subsequent calls, including one on the 8th.

The register was produced, and the name of "Robt. Armstrong, 29th of August, 1838—20 shares," was found in it.

Mr. Stevenson (one of the clerks of the Company) read the advertisements for the several calls from different numbers of the *Manchester Guardian*, which were proved to circulate in the four counties of Lancaster, York, Derby and Chester.

Digitized by Google

Mr. CROMPTON, for the defendant, submitted that this was not enough; that the Company was bound to publish the call in one or more newspapers published and circulated in each of the four counties.

The jury found for the plaintiffs—damages 786*l.*, costs 40s.

THE COMPANY *v.* VERNEY.

This was a precisely similar case, except that the defendant, Mr. George Verney, a shopkeeper and tradesman at Greenwich, had not paid the first or any subsequent call upon his 20 shares.

The formal proofs having been given, Mr. Jay proved that he served the defendant with a writ, and that the defendant said he was the person named therein—that he had written to Mr. Parker (the Company's law clerk) in Sheffield, and had made an offer to pay all he could; but if called upon to pay the whole it would ruin him.

The jury found for the plaintiffs—damages 841*l.* 14s., principal and interest.

Mr. Baron ROLFE remarked, that if parties took shares they must *sometimes* expect to pay for them.

PURCHASE OF RAILWAY SHARES—STEWART *v.* CAUTY.

Liverpool Assizes, April 10.—The declaration in this case stated, that the plaintiff was Mr. John Duncan Stewart, and the defendant Mr. Henry John Cauty; and the action was brought to recover the sum of 161*l.* 1s., being the amount of loss which had resulted to the plaintiff from the sale of 20 half-shares in the Great Western Railway, which the defendant had purchased from him, but afterwards refused to receive.

Mr. Cresswell and Mr. Henderson appeared for the plaintiff, and Mr. Alexander for the defendant.

Mr. CRESSWELL, in stating the case, said, the plaintiff was a merchant in Liverpool, and the defendant either an apothecary or a medical man. On the 26th August last, the defendant employed Messrs. Radford and Co., share brokers, to purchase for him 20 half shares in the Great Western Railway, at the clear price of 52*l.* per share. Messrs. Radford and Co. purchased the shares from Messrs. H. Davies and Co., share brokers, at 52*l.* per share, being 40*l.* paid and 12*l.* premium, to which the commission had to be added. It was agreed that the commission should be 2s. 6d. per share. Sharebrokers in Liverpool had established for themselves certain well known rules, the first of which was, that the buyer should give the name of the transferer within three days after sale; and if the buyer's broker did not give the name to the selling broker in that time, the name of the buyer was to be put in. The vendor was also allowed seven days after the receipt of the name of the transferer to complete the transfer. Mr. Cauty, after the sale, was asked for the name of the transferer, and he replied, that he was not prepared to give it. Messrs. Radford pressed him for the name, and at the same time, he was informed that, unless it was given, his own, as the selling broker, would be put in. At length Messrs. Radford put in his name, not wishing to make themselves liable. The defendant afterwards gave to his brokers the name of Mr. John Whittle, of Gloucester, gentleman, as the transferer, and, on agreement, his name was substituted for the defendant's. Mr. Stewart was the holder of these twenty shares, but had not received the transfer from the person who had sold to him, and he had to communicate with that person to enable him to make the transfer to Mr. Little. In two days afterwards Mr. Cauty went to Messrs. Radfords' and asked for the transfer. He was told that the time for transfer had not yet come on, when he said, "Oh, you have pressed me for a name, and now I will press you." Mr. Radford told him it was of no use to do so, as the rules gave the selling party seven days; he advised Mr. Cauty not to press for the transfer, as the seller might be offended, and take the whole seven days. The transfer was got ready on the fifth day, instead of the seventh. In the meantime shares had been falling, and Mr. Cauty then said he would not have the shares. A tender of transfer was formally made, although it was unnecessary, and the defendant refused to accept it. On this the shares were resold, after the usual notice, and the loss was 160*l.* The present action was brought to recover that amount.

The learned counsel then called evidence in proof of this statement. In cross-examination Mr. Thomas Radford admitted that the defendant stipulated in making the purchase, that the contract should be completed immediately, and that he had asked for the transfer several times.

Mr. CRESSWELL then put in the rules of the Liverpool Sharebrokers' Association.

Mr. ALEXANDER submitted that the rules of the Association could not be evidence, as neither Mr. Davies the plaintiff, nor the defendant, were members of it.

The learned Judge was of opinion the rules were evidence, as the defendant's attention had been called to them, and all the shareholders acted in accordance with them.

Mr. ALEXANDER requested the learned judge to take a note of the objections. He then addressed the jury for the defendant, contending that the sale, after the defendant had refused to take the shares, should have been earlier. Had that been so, the loss would not have been more than 54*l.* on one day, or 70*l.* on a day still later.

The JUDGE then summed up, and the jury found for the plaintiff, damages 161*l.* 1s.

DRAPER *v.* SHURMER AND ANOTHER.

Western Circuit, Taunton, Tuesday, April 14.—Mr. Erle, Mr. Crowder, and Mr. Kinglake, conducted the case for the plaintiff, and Mr. Serjeant Bompas and Mr. Barstow that of the defendant.

The plaintiff is a lace-manufacturer at Chard, in the county of Somerset, and the defendants are carriers between Bristol and Birmingham.

The action was brought to recover the sum of 478*l.*, for loss which the plaintiff had sustained by reason of damage done to his goods through alleged misconduct of the defendants. The plaintiff sent a bale containing a quantity of lace from Chard to Nottingham by waggon from Chard, and on the direction was written "By Edwards to Bristol, and from thence by Shurmer and Co.'s waggon to Birmingham." It appeared, however, that upon the waggon arriving at Cheltenham, it was put upon the Birmingham and Cheltenham Railway; that a spark from the engine alighted on the tarpaulin, and burnt the goods, and the plaintiff therefore brought this action to recover the value of the goods which had been burnt. For the defendants it was contended that it was well known that they used the railway, and that the plaintiff ought to have been aware of it, because as soon as the railway came into operation, all conveyances on that line were withdrawn from the turnpike-roads and put upon the railways. The real point was, whether when a party undertook to convey goods from one town to another, and chose to take advantage of a railway, he was liable to any accident that might happen during the transit of the goods by that mode of conveyance, or might shift the responsibility upon the railway proprietors.

The Jury returned a verdict for the plaintiff for the full amount.

GLASGOW AND PAISLEY AND GREENOCK, AND GLASGOW AND AYR, RAILWAY STATION-HOUSE.

THE new station-house of the Glasgow and Paisley, and Greenock Railway Company was opened on Tuesday. We have extracted the following description of the building from a useful and carefully compiled little work, Morrison's Guide to the Railways:—

By an arrangement entered into between the Glasgow and Ayr, and the Glasgow and Greenock Railway Companies, it was agreed that this depot should be erected at their joint expense, and for their mutual accommodation. The ground laid out for the depot measures about 14,000 square yards; besides this, there is about 1¼ acres between Paisley canal and Cook-street, kept in reserve for yards, stores, and other necessary purposes. The station-house is 80 feet long, 60 feet broad, exclusive of the archway, and 45 feet high. It is built in the Grecian Doric style. On the front facing Bridge-street there is a massive portico surmounted by an entablature and pediment, and supported by four columns 30 feet in height. Round the building is a carriage way 15 feet wide, with a foot-path 5 feet broad. On each side of the portico there is a handsome arch-way. The railway is connected with the station-house, by an ornamented cast-iron bridge, 20 feet long, and 11 feet wide, over which passengers pass to take their seats in the carriages. The booking-office for passengers is 52 by 15 feet. It has on each side a broad flight of steps, leading to the first floor of the station-house, which is on a level with the railway. By these stairs passengers are conducted to a vestibule, 45 by 14 feet; on each side of which there is an elegant waiting room for first and second-class passengers—the one for ladies, and the other for gentlemen. On the left of the vestibule is an apartment where the meetings of the Directors are held, and on the right the Secretary's room and offices, where the general business is transacted. The whole space under the ground floor is arched and divided into cellerage compartments, porters' rooms, &c. Behind the building, between King-street and Clyde-place, is the passengers' depot, which is covered with handsome sheds, supported by ornamented cast-iron pillars. From Clyde-place to Cook-street, the line is carried along forty-nine arches, crossing four-streets, and from the number of bricks, upwards of five millions, made use of in the construction of these arches, an idea may be formed of the magnitude of the operations.

This depot, whether considered as a whole, or with reference to its multifarious details; the nice adaptation of means to the purposes for which they were intended—the ample provision made for the comfortable accommodation of passengers, or the chastely classical style of the architecture may challenge comparison with any establishment of a similar kind in the kingdom. It affords on the one hand a striking display of the scientific skill of the architect, and shows, on the other, how very liberal, in a pecuniary point of view, the Directors were disposed to act, when a great national undertaking was to be accomplished. The part of the building appropriated to the depot of the Glasgow and Greenock Company is so similar in its general arrangements to the Glasgow and Ayr department, that the description given of the one may be considered applicable to both. The seats must be paid for in the booking-office, and the tickets which passengers receive carefully kept, as they will be demanded by the guard, and if not given, the seats may be recharged. Passengers must also provide themselves with small change, that troublesome delays may be avoided. The comfort and convenience of passengers themselves will depend on the regularity with which in an establishment of such complexity as this the most minute details of business are conducted. It is but just to the agents and servants of the Company to say, that passengers receive from them every mark of civility and attention.—*Scotch Reformer's Gazette.*

EASTERN COUNTIES RAILWAY.—On Wednesday the 7th instant, the first stone of the New Bridge over the river Chelmer, in the parish of Springfield, about to be erected to connect the embankment of the Eastern Counties line, which has been some time in the course of formation, and which is now traversed by means of a wooden viaduct, was laid by Mrs. Braithwaite, the lady of John Braithwaite, Esq., the engineer-in-chief to the Company. The design for the bridge is distinguished by that neatness which characterises those already erected upon the line, and will consist of three arches, each of forty-five feet span. It will be forty-three feet in height from the surface of the water to the coping.—*Kent and Essex Mercury.*

PROPOSED RAILWAY FROM EDINBURGH TO NEWCASTLE.

To the Editor of the Railway Times.

SIR,—The question of having a railway communication between England and Scotland, is one that has excited considerable interest in the latter country for some time past; and the only obstacle thereto, is a doubt of its yielding a profitable return to capitalists to undertake it. It is obvious, that to have two competing lines, as has been contemplated, the one from Lancaster to Glasgow by Carlisle, Chapfells, and the vale of the Nith, and the other from Newcastle to Edinburgh by Berwick and the east coast, would be ruinous to the shareholders in both. Even a joint line, the length of Beatock Bridge, and diverging afterwards into two lines for a distance of 56 miles each, the one to Glasgow and the other to Edinburgh, would certainly be a losing concern. But if Parliament would engage to sanction only one line for the next ten or twelve years to come, and a proper selection be made, there is little doubt but it would be a profitable speculation; not only so in itself, but it would make a number of other lines already in existence profitable, which without such aid, have little chance of ever being so.

The first point for consideration is the line that ought to be preferred, and this can only be determined by its greater or less likelihood of remunerating shareholders. Indeed, without the prospect of a railway being profitable to shareholders, all recommendations of a particular line, either by Government surveyors, or other parties, will be made in vain. Though an inhabitant of Glasgow, I have no hesitation in giving a most decided preference to the east coast line from Edinburgh to Newcastle, by Portobello, Musselburgh, Tranent, Haddington, Berwick, Belford, Alnwick, and Morpeth. This line is the only one likely to pay the shareholders. It possesses the advantage of passing through the most fertile districts of Scotland, a populous country, and a succession of towns, without having any engineering difficulties to encounter. Whereas the other two lines, by the Vale of the Nith, and by Beatock Bridge, to both of which the obstacle of Chap-fells must be added, besides being beset with almost insurmountable engineering difficulties, and proportionate cost in construction, pass for the greater part of the way through barren districts of country, fit only for sheep pasture, that never can become populous, and consequently never can be benefitted comparatively in any appreciable degree by a railway. In short, it is quite preposterous ever to think of making a railway across Chap-fells. It would have to consist of little else than long tunnels, deep cuttings, and high embankments, for the whole distance between Kendal and Penrith. And it is probable, that the cost of these 26 miles, would be at least as great as the making of two-thirds, or perhaps three-fourths, of the whole line between Newcastle and Edinburgh. Unless Government intend therefore to construct a railway across Chap-fells with the public money (which is by no means likely), the idea may be altogether abandoned, for it is certain, that no capitalists, acting for private benefit, will ever embark in such a ruinous undertaking. Besides, it may be laid down as a general rule, that the cost of maintaining a railway in repair, provided the work be equally substantially done at first, is proportional to its original cost. And hence another reason, why a railway across Chap-fells, would be ruinous to all who engaged in it.

Let us next inquire who are the parties that have the deepest interest in the construction of a railway between England and Scotland, for the only prospect of such an undertaking being set about in good earnest, depends upon interested parties taking it in hand.

Upon the supposition that the east coast line from Newcastle to Edinburgh is considered the most eligible for a railway communication between England and Scotland, the parties most deeply interested in getting it up are, 1st, all possessors of household property, and those who have ground to sell or lease for building, in any of the previously mentioned towns through or near which the railway would pass. Towns through which railways pass must necessarily, in a short time, monopolize the trade of the country, and must rapidly increase in population. On the contrary, towns inaccessible by railways must very soon begin to be deserted, both by trade and population. Hence the obvious interest that all proprietors of houses, or of ground adapted for building, in Morpeth, Alnwick, Belford, Berwick, Haddington, Tranent, Musselburgh, and Portobello, have in getting a railway constructed between Edinburgh and Newcastle. It might be predicted, that within two years after such a railway was finished, building ground, and all household property in those towns, would rise at least 50 per cent.

Another class deeply interested in the construction of a railway from Edinburgh to Newcastle, are the shareholders in the Glasgow and Edinburgh, the Great North of England, the York and North Midland, the North Midland, and the Midland Counties' Railways. Unless such a railway communication be extended northwards from Newcastle, so as to make the line from Glasgow and Edinburgh to London complete, it is questionable if ever the Edinburgh and Glasgow, the Great North of England, or the North Midland Railways, will ever rise to par; whereas, were such a communication established, it is certain that all of them would rise to a high premium. At present, the number of persons conveyed in steam-boats between Glasgow and Liverpool on the west coast, and in steam-boats and smacks from Leith to London on the east coast, exclusive of those conveyed by coaches, is very great; and it is not too much to expect, that three-fourths of these during seven months in the winter portion of the year, and one-half during five months in the summer portion, would prefer the railway. In short, when it is considered that Scotland contains nearly three millions of people, that the trading intercourse between England and Scotland is very great, that the tourists visiting Scotland from all quarters every year (and who would all take the railway) are numerous, it may be reasonably anticipated that a railway from Edinburgh to Newcastle would have the effect of trebling the value of the Great North of England Railway shares, while it would double the value of the North Midland, the Midland Counties', and the York and North Midland shares, and raise that of the Edinburgh and Glasgow at least 50 per cent. Nor would the benefit accruing to the proprietors in these railways be deferred till the proposed line was completed. On the contrary, so soon as an Act for such an undertaking was obtained, the shares in all these railways would rapidly rise in value, in anticipation of the greatly increased traffic that must therefrom, in course of time, result.

The extent of rise in the value of the Great North of England and other railway shares above anticipated, is by no means chimerical. It is founded upon the well-known fact that an increase of traffic, while it yields a proportional augmentation of revenue, causes very little additional expenditure. And consequently, railways which, with nothing more than their present sources of traffic, can hardly be expected to yield more than from 3 to 4 per cent. on the cost to their shareholders, would become converted into railways paying from 7 to 10 per cent., with a much more limited increase of traffic than what may be expected to accrue from the accession of only a portion of the present passenger traffic existing between England and Scotland.

Having now shown the great benefit that would accrue to several railways already in existence by the construction of one from Newcastle to Edinburgh, whereby the longest lines of railway in the kingdom, and the largest amount of population along the line, and at its termini, would become connected, it remains only to point out the parties that ought to take the lead in setting it a going.

Now, the Directors in the previously mentioned lines of railway that would receive benefit from the construction of one from Newcastle to Edinburgh, are paid for their services, and in consequence thereof are expected, and in fact, it becomes their bounden duty to do the best they can to promote the interest of the different railways under their charge. But what benefit could any Board of Directors in any of these railways confer on their respective constituents at all equivalent to the establishment of a junction railway from Newcastle to Edinburgh, by which the Scottish railways already in existence or in progress become connected in one unbroken chain with the great English lines. Indeed, when it is considered that an intermediate link in any railway chain is generally more likely to succeed in proportion as it is further from either extremity, there are strong reasons for believing that the construction of this connecting link in the great chain of British railways must of itself be a profitable speculation to whatever parties might undertake it. But the proprietors in all the railways between Newcastle and Rugby, for reasons already mentioned, being doubly interested in its construction, it becomes the duty of the several chairmen of the different Boards of Directors in all of them to take a lead in the matter. Nor will it be found any difficult task to accomplish. Let but any one of them issue a prospectus pointing out the pecuniary advantage that would result to their respective shareholders by effecting the proposed junction. Let him communicate with the Chairmen of the Directors in the other interested railways, and at their next half-yearly meetings let them severally commence the subscription for shares, and there is no fear but the proposed object would be speedily carried into effect to the great profit of all concerned.

Since writing the above I regret to observe in the copy of your paper I have received this morning, that the Report of the Government Engineers on the different competing lines between London and Edinburgh, presented to the House of Commons, but not yet printed, states that the preferable line is a continuation of the London and Birmingham, Grand Junction, and Lancaster and Preston Railways, by Carlisle, Gretna, Lockarby, Beatock and Crawford, to Symington in Lanarkshire, and from this point by two diverging lines to Edinburgh and Glasgow, Symington being about 30 miles distant from each city.

There is no doubt that the line preferred by the Government Engineers would afford a more direct and speedier means of communication between London and Glasgow, and more particularly between the towns in Lancashire and Glasgow than the one I have ventured to recommend. But as the former crosses Chap-fells, and passes through barren, unimproveable, and comparatively unhabited districts of country for nearly the whole way, and must be attended with almost insurmountable engineering difficulties, and proportionate cost, the recommendation of it is worse than useless. No private speculators will ever engage in such a ruinous undertaking, and Government need never be expected to take the public money for its construction. Unless, therefore, the Government Engineers can be got to re-consider and amend their report, the only effect of the recommendation contained in it will be to suspend for several years to come any probability of getting a railway between England and Scotland commenced along the only line that has any chance of being profitable to those who undertake it.

In conclusion, to prevent its being supposed that the preceding letter is dictated by private interest, I have only to say, that though I am a shareholder in two railways I have no interest whatever in any of those that may be expected to receive benefit from the proposed junction line between Edinburgh and Newcastle.

I am, Sir, your most obedient servant,

A GLASGOW CITIZEN.

Glasgow, March 29, 1841.

1. Toll to London and Birmingham 129*l.* 0s. 2d., to be deducted from gross receipts.
2. The receipts are exclusive of those from the Post-office.
5. Receipts include the Northern and Eastern toll, &c.
6. The capital expended includes 132,371*l.* 14s. 11d. laid out on the Glasgow and Paisley Joint Line No. 7.
7. Made jointly by the Ayr and Greenock Companies.
8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*
10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.
12. The 25*l.* 8s. 0d. from goods, &c. is for toll only.
13. Ten per cent. is the maximum dividend allowed by the Company's Act.
14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line.
17. The capital of 741,000*l.* includes the new capital for London and Brighton station.
18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. are guaranteed.
19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.
21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.
22. The 3,080*l.* 19s. 10d. are the net receipts.
23. The receipts for goods, &c. include, carriages, 52*l.* 0s. 0d.; horses, 83*l.* 7s. 0s.; parcels, 167*l.* 1s. 3d.; dogs, 5*l.* 13s. 6d.; cattle, 24*l.* 14s. 6d.; corn, 117*l.* 8s. 8½; heavy goods, 297*l.* 17s. 2d. Total, 642*l.* 2s. 14d.
26. The receipts stated are after deduction of Liverpool and Manchester toll.
27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.
28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.
31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

The pressure of our Assize and Quarter Sessions intelligence obliges us again to defer the continuation of the Railway Returns to the Board of Trade.

An excellent Map of the Brighton Line *has just been published by Mr. Jobbins, on a scale of three miles to an inch. It includes besides a circle of thirty miles round London, exhibiting the relative bearings of the whole of the metropolitan lines.*

The Sham Kelveston and Bury Line.—*A correspondent informs us that when at the Bury Assizes he ascertained by personal inquiry of Mr. Holmes, the Clerk of the Peace for Bury, that no plans of this line had been lodged with him. The newspaper notices, therefore, of an intention to apply to Parliament must be all fudge.*

A Constant Subscriber *(Sheffield.)*—*We must make inquiry.*

A Scotchman.—*We shall have occasion to revert to the subject he treats of in our next, when his letter shall appear.*

A. B. *has our thanks. We shall probably make such an alteration as he suggests very soon.*

A B. *(in the matter of the Brighton Railway.)*—*We believe not.*

A Cheshire Farmer.—*His alternative request is complied with.*

A Constant Reader.—*We have not one of the quantities at hand, but shall give an answer next week.*

"One Interested."—*We believe the Stockton and Hartlepool Railway was constructed without any Act of Parliament.*

Castigator.—*Declined.*

Communications received from Vigil—A Subscriber to the *Railway Times*—A First-Class Traveller—L. G. F.—A Railway Director—Mr. Coles—Hibernicus—S.

THE RAILWAY TIMES.

SATURDAY, APRIL 17, 1841.

We publish this week some samples of the petitions, which have been presented by the Railway Companies against the new Railways Regulation Bill; but before commenting upon them, we desire to correct an error which we made in our last respecting the number of these petitions, which we stated to be 16. The Report of the Committee on Public Petitions, from which we adopted that number, though the last printed and issued previous to the recess, brought the list down to the 30th March only (a circumstance which we overlooked); but during the recess a further Report (the Seventeenth) has made its appearance, which brings the list forward to the 2nd May, at which date the total number of petitions had been increased from 16 to 28. We dare say that before long the number will amount to a decided majority of all the Companies; and shall not be surprised if it ultimately include the whole, without a single exception.

But when these are called petitions of *Companies*, it is very necessary it should be kept in mind that they are almost invariably the petitions of the *Directors* only. A few cases there may be in which the question of Government interference, has been indirectly and very vaguely touched upon at general meetings, and hasty expressions of opinion elicited against it; but we know of NO CASE in which the question has been *substantively put to any general meeting, fully discussed in all its bearings, and fairly disposed of on its merits.* Nearly all the 28 petitions reported, are undeniably petitions of *Directors* merely — petitions concerning which, the proprietors of the Companies in whose names they run, *have never once been consulted in any shape whatever.*

Now—we must have written to little purpose on the present subject, if we have not already made it tolerably clear to the meanest capacity, that so far as regards the objects aimed at by the Bill petitioned against, the interest of the *Directors* of Companies, and the interest of the *shareholders*, are not by any means *one and the same.*

Absolutism and secrecy are what all Boards delight in; but responsibility and publicity are all that shareholders have to look to, for honest management and good dividends; the Bill will be fatal to the former, and cannot be otherwise than highly favourable to the latter.

The Midland Counties' petitioners (Directors) "deprecate [investing Government with] the power of giving arbitrary and despotic orders without appeal, and even without hearing the parties affected by them." So should we, but where is any such power proposed to be conferred? Not in the Bill, certainly, which as we read it, goes no further than to authorise Government to insist upon the adoption of every means which has been, or may be, proved by experiment and trial, to be conducive to *the public safety*, and leaves the doors of the Board of Trade as open to all sorts of appeals and remonstrances as ever. We do not think there are any words in the Bill which will admit of a contrary construction, but if there are any, let them by all means be altered or expunged.

But there is "a principle," we are told by the Newcastle and Carlisle petitioners (Directors), involved in such interference on the part of the Government, which has been hitherto "unheard of in this country," and is as they "humbly contend, extremely unjust as well as inexpedient." What "principle?" So "unheard" of, so "unjust," and so "inexpedient?" Why, simply the principle enshrined in that very ancient maxim—as old at least as the language in which it has been best expressed—SALUS POPULI, SUPREMA LEX. The principle on which the State claims a right, not to allow such tremendous engines of power as railway locomotives, to be running about the country in all directions, except under such safeguards and such restrictions, as shall prevent their becoming engines of destruction, is precisely the same, upon which they have from time immemorial exercised the power of prohibiting the carrying of gunpowder to and fro, except in certain limited quantities and under secure cover—and a hundred other things besides, fraught with real or apprehended danger to the public.

The petitioners however are afraid, that if Government divide with the Companies the responsibility, of caring for the safety of the public, the security to the public will be less than if the burden is thrown on the Companies alone. We think they mistake altogether the position in which the Government desires to place them. It is not intended to divide responsibility with them at all. Every responsibility they are now under to conduct their traffic in the safest manner possible, they will still remain under, with the addition only of a little salutary pressure to keep them to their duty. All that the Government propose to do on the part of the public, is to look after the Companies somewhat more sharply than has heretofore been done—to see that Directors do not sleep at their posts, and that they really do (as they all profess themselves most anxious to do), every thing which the safety of the public may from time to time call for—to advise and recommend in the first instance, and if need be, at last, to order and enforce. Not that Government shall undertake, to order every thing needful for the public safety—that is out of the question; but that they shall have a power of interference, wherever that safety is manifestly and wantonly endangered.

The Government could hardly command anything to be done which could *lessen* the safety of the public; they might issue superfluous orders for that purpose perhaps, but none that would be likely to do any harm; if they erred, it would to a certainty be on the safe side—unless indeed, falling into the supineness so common to all classes of public functionaries, they should *omit* to order many things very necessary to be done. But whether the Government ordered too much or too little, that would not diminish in the least the obligation of the Companies, to do of their own accord what is right. It might serve to aggravate a case of damage to life or limb, that it had occurred through a wilful disregard of some Government admonition or order; but the absence of such admonition or order, could not make the responsibility of the offending parties one whit the less.

The petitioners boast of "the degree of perfection," at which the system of railway conveyance has arrived, unaided and uninterfered with by Government, and argue that that "degree of perfection" could have been "attained only by a constant vigilance and attention on the part of those to whom the management of railways has been entrusted." They do not pretend to have realised *absolute* perfection; only a "*degree* of perfection,"—something next of kin to it, or first cousin at least. This is well; for really, to talk of perfection and the railway system together, except in some such very qualified way, would be ridiculous. What is it that has led to all the present agitation about the regulation of railways—what to the Government measure so much deprecated—what, but the strong conviction which has been forced upon the public mind by a variety of concurring circumstances, that the arrangements of the Railway Companies in general, are to a most culpable extent defective and erroneous? We have on the one hand the Government Commissioners reporting, that in a period of less than six months no fewer than *twenty-eight* persons had lost their lives through railway casualties, and at least *one hundred and fifty* had been seriously injured; and all owing to causes "not in any respect inherent to the nature of locomotive travelling," but which "*might have been avoided by the adoption of a better system of arrangement*"—a Report too, the correctness of which has never, to this hour, been impeached. And we have, on the other hand, the public declaration of Captain MOORSOM, himself a Director of Railways, and a gentleman of as much experience of the Railway System as any man alive (with but one or two exceptions), publicly declaring in his Address to the Directors of the Birmingham and Gloucester line, no further back than the month of January last, that the present systems of management are so needlessly expensive—(think of this, shareholders!)—that "a saving of from 30 to 40 per cent. might be effected in the cost of locomotive power as applied to passenger trains." Allowing that there has been that "constant vigilance and attention

Digitized by Google

on the part of those to whom the management of railways has been entrusted," which the petitioners claim credit for, this, nevertheless, is certain, that all this "constant vigilance and attention" of theirs, has not been of efficacy enough to prevent a most deplorable amount of human suffering, and a most scandalous waste of the pecuniary means of the respective Companies.

The Midland Counties' petitioners assure Parliament that "they do not object to the closest and most minute scrutiny into their proceedings," and that they would "cheerfully submit" to any regulations which had simply such security for their object. But what do the thirty-three Companies, who have refused to make any returns of their traffic to Government, or made returns so defective that they are good for nothing, say on this head? Why, that they will not willingly furnish any information whatever—be it of ever so necessary, or useful or innocent a description! They will have no "scrutiny" whatever into their proceedings; they desire to be in all things absolute—the point of *perfection* always excepted. Even the Midland Counties' petitioners, who profess such a cheerful readiness to submit to "the closest and most minute scrutiny," have acted in a manner, with respect to the returns in question, which compels us to put but small faith in their sincerity. The average fare of their first class passengers they state to be 2d., of the second class the same, and of the third the same; and the 2d. is stated in all the three cases to be made up of 1d. toll, and 1d. for locomotive power. Evidently this is mere stumping work, in which all the pains taken has been to reduce the total receipts into pence, to divide the amount by the total number of miles travelled, and to sub-divide the quotient equally between the "toll" and the "locomotive power." So far as any information is to be gathered from this Return, respecting the *real* cost of the locomotive power on the Midland Counties' line, it might as well never have been made.

We have been told, that though we made out a very good claim last week on the part of the public, to be informed of the net cost incurred by Railway Companies for their "locomotive power," we did not make it so clear that it was for the *interest* of the proprietors of railways that such information should be furnished. We think it will not require a great many words to remove any doubt which may remain on this head. It is the "interest of the proprietors" that the net cost of carrying on each line should be as small as possible, in order that their dividends may be as large as possible. Captain MOORSOM tells them that if they will but look a little better after their Directors, the net cost may be reduced from 30 to 40 per cent., and so every pound of dividend they receive have some 7s. (or 8s.) more added to it. Now, it must be obvious that nothing could so surely enable the shareholders of any line, to know what the net cost of the locomotive power so paid ought to be, and whether their Directors are acting with due economy or not, than to have an insight into the net cost on other lines placed in the same, or nearly the same circumstances. Comparisons are commonly said to be odious, but here their utility would be past telling. Every disparity must lead to inquiry into causes, and every inquiry to a lowering of expenditure and an augmentation of profits. But without the interposition of Government, to make it compulsory on all Companies, to make *public* Returns of their net expenditure for locomotive power, no such insight could be obtained. Companies might communicate spontaneously with one another, but it would be through the medium of their Directors only, and the information obtained in each case would be for the benefit of those Directors only. The interest of the shareholders requires that they should be able to get at every useful information on the subject, *independently of their Directors*. It is adle to suppose that any body of Directors, guilty of a wasteful expenditure for locomotive power, would volunteer to tell their constituents where they could see the same thing done for a half or a third of the money. The Returns under Lord Seymour's Act are (for want of the pains and penalties merely,) shamefully deficient on this head, but such as they are, they exhibit some very remarkable results, of which, if due use be made of them, some good fruit may yet come. The average first class speed on the London and Birmingham line is 22½ miles per hour, on the Midland Counties' 21.519; the Northern and Eastern, 22; and the Glasgow and Ayr, 20; and the differences between them are so slight, that so far as the matter of speed is concerned, they may be considered as on terms of perfect equality. But the locomotive expenditure to obtain that speed is on the Glasgow and Ayr Railway a penny per mile; on the Midland Counties', a penny (assuming but not admitting the return to that effect to be correct,) on the Northern and Eastern, a halfpenny; and on the Birmingham one farthing! Again, the average first class speed on the Maryport and Carlisle Railway is only 14½ miles per hour; and yet it costs 75 per cent. more to obtain that indifferent speed than it costs the Birmingham to make its engines travel one-third faster! Who can say that it is not of the utmost moment, as well to shareholders as to the public, to ascertain distinctly and clearly the causes to which such prodigious discrepancies are owing? Whether it is to differences in price of material and labour? Or to differences of gradients? Or to differences in the cost of maintenance of way, and wear and tear of carriages, arising as they must in either case from differences in construction worth knowing? Or simply to unskilful and extravagant management? We can understand why Directors should resist such enquiries; but that any considerable number of reflecting and independent shareholders should bring themselves to imagine that it is for *their* benefit to back them in such resistance, we shall hold to be impossible, until we see better reason than any that has yet appeared, for believing that the Petitions, the merits of which we have been now discussing, are really the Petitions of the Companies (and not of the Directors) in whose names they profess to be.

SELDOM have the proceedings of any Railway Company, in public meeting assembled, afforded us more pleasure than those of the Chester and Birkenhead, a report of which is extracted in another part of our paper from a Liverpool contemporary. We hail the result of this meeting as an omen of the independence of railway proprietors generally, so soon as they shall begin to think for themselves, and to act upon the belief that they ought to have some small voice in the management of their own affairs.

Knowing nothing of the matters to which exception was taken at the Birkenhead meeting, beyond what appears on the face of the report referred to, it would be presumptuous in us to venture to anticipate the result of the labours of the Committee of Investigation, which was after so much discussion appointed; but we must say, it appears to us somewhat strange that a Company incorporated for the purpose of constructing a railway between two specified points, should take upon themselves to purchase and rent ferries, and to gain possession of such large quantities of surplus property. With respect to the terms in which the resolution for the appointment of a Committee was couched, they seem to us somewhat singular. The Committee, it is said, are to inquire into certain specific matters, "*and such other matters as can be inquired into without injury to the Company*," as if there were *any* matter which might not safely be inquired into by the shareholders at large, or by a deputation acting in their name and on their behalf! We can readily conceive that there may be cases in which it would be injurious to the interests of a Railway Company to make a *public* report of transactions still pending, but how *inquiry*, full and searching inquiry—should at all damage any properly conducted undertaking of the kind we cannot understand. What is this limitation of the Committee's labours, but saying in effect, that the Directors are to be at liberty to interdict examination into any particular transaction; for the Directors must after all be the sole judges of what is likely to prove "to the injury of the Company," since they alone are cognizant of all its bearings. We regret that the proprietors of the Chester and Birkenhead Company should have so far stultified themselves as to consent to any such partial investigation of their affairs. They should have left the Directors to do as they pleased, without inflicting upon them the odium of supervision (for in this light all Directorates look upon the interference of their constituents), or they should have insisted upon a full and explicit and most searching examination, whether to the seeming injury of the Company or not. They may rely upon it that half measures will not serve their turn.

It is not, however, with reference to the case of this Company alone, that we regard the proceedings at the late meeting with so much interest. The Chester and Birkenhead Board may or may not come scatheless out of the inquiry, but the inquiry itself will, if we mistake not, prove the forerunner of many a similar investigation. It is gratifying to find that in this instance there appears to be no personal hostility to individual members of the Board, nor indeed to the Board collectively; the parties who so resolutely insisted upon knowing what had been done and was being done, with their own property, being actuated solely by a determination to be no longer mystified by what was well described as the "Royal speeches" of the Executive. This is an example well worthy of imitation. The smallest infusion of factious opposition is sufficient to taint the most laudable exertions in the cause of Railway reform.

A blow has been struck at the "divinity which doth hedge about," or was supposed to hedge about, a Railway Board. The claptrap of "confidence in Directors" will avail no longer. When they threaten to resign, forsooth, if unpalatable measures are thrust upon them, proprietors will be apt to take them at their word, although in general nothing can be further from the serious intentions of the parties threatening, than to retire from office. On such occasions shareholders should act in the spirit of the old ballad:—

> "I trust I have within my realm
> Five hundred good as he!"

Digitized by Google

That there are many, very many railway Directors of great experience and ability—gentlemen to whose exertions their constituents owe a deep debt of gratitude, we are most ready to acknowledge; but it may, we think, admit of doubt whether taking Railway Boards, in the general, and taking into account those who are Directors only in name, the average qualification (apart from the "qualification" required by Act of Parliament) much exceeds the mediocrity of railway proprietors at large. Be this, however, as it may, there can be no question that the places of those who will consent to hold office, solely upon the condition of not having their conduct most rigidly scrutinised by their constituents, would be advantageously filled by parties more amenable to authority, even if less gifted than their predecessors. The grand requisites are zeal and honesty of purpose—qualities which are not so rare as to induce shareholders to succumb to official displays of offended dignity, at the risk of having their property brought to destruction.

It cannot but have been remarked that those Boards that are most in need of being overhauled, are the loudest in crying out against the interference of shareholders. We say this, however, without any particular reference to the Chester and Birkenhead Board, who we suppose are neither much better nor much worse than many of their neighbours. In truth, the Liverpool gentlemen who have contrived to become possessed of so large a portion of railway power, have hitherto carried matters with so high a hand, that to have their authority at all questioned, or their wishes thwarted, must be galling indeed. Nevertheless, to this complexion things must come at last, and it will be to their credit to yield voluntarily to the force of public opinion, rather than cling to the remains of their past supremacy, which daily experience proves can never be re-established.

We have always maintained, that the opponents of Sunday Travelling on Railways ought, if they wish to be consistent, to object equally to every species of locomotion upon the "Lord's Day." To do some of the Scottish agitators justice, they *do* object to every kind of land conveyance, although we have not yet heard that they contend for the stoppage of a sailing vessel or steam ship *in transitu*. There may be very sufficient reasons for the tenderness shown to water conveyance, seeing that many more of the parties who are prominent in preventing this so-called desecration are concerned in the shipping interest, than are in any way connected with railways or common roads, but at the same time it is only fair that the principle (if principle it can be called) upon which they profess to proceed, should be fairly and fully developed, so that the world may clearly understand whether the profanation of which they complain, rests in the mere change of place, effected alike on land or water, or whether it is peculiar to locomotion on land, be it by railway or road. We have sometimes been inclined to think that it is the use of railways alone that is considered in the eyes of these Pharisees to be sinful; since, in the first place, nothing was heard of their remonstrances till railways had begun to supersede the ancient mode of conveyance; and because, secondly, their efforts are even now directed almost exclusively to the eradication of what they are pleased to designate—the scandal of the railway system. It is true that some movements have recently been made for the stoppage of Sunday traffic on canals, but one need not go so far as an abstract regard for the sanctity of the Sabbath to find a probable motive for this new-born zeal. The appointment of a dozen or two of canal chaplains may have had some share in inciting certain Reverend Fathers to the course which they have pursued in this matter.

Looking, however, to the expressed wish of Sir ANDREW AGNEW, and his coadjutors to put a stop entirely to the running of the mails on Sunday, whether by highway or railway, a letter from Mr. CHALMERS, bookseller of Dundee, has very opportunely appeared in some of the papers of the district where this sanctimonious agitation principally prevails. From that letter we gather the following facts, as illustrative of the inconvenience and serious detriment to the public interests which would arise, were the plans of the Sabbatarians carried into effect. The writer confines himself to one line of road, namely, that from London to Aberdeen, via York and Perth:—

The distance from London to Edinburgh is 398 miles; from Edinburgh, by Perth, to Aberdeen, 134 miles—making together 532 miles; which distance the mail accomplishes in about 60 hours. Therefore the mail which leaves London at eight o'clock on Thursday evening, reaches Buckland (35 miles north of London) about 12 o'clock that night; reaches Durham, 263 miles, at 12 o'clock on Friday night; reaches Woodhill Inn (half-way betwixt Dundee and Arboath) 472 miles, at 12 o'clock on Saturday night—where it would have to remain 24 hours, until 12 o'clock on Sunday night.

Friday's London mail reaches Durham at 12 o'clock on Saturday night—there it would have to remain 24 hours.

Saturday's London mail reaches Buckland at 12 o'clock that night—where it would have to remain 24 hours.

Again, the mail from Aberdeen to London, which departs from Aberdeen at 3 o'clock afternoon on

Thursday, reaches Perth at half-past 12 o'clock that night;

Reaches Durham at a quarter-past 11 o'clock on Friday night.

Reaches Arlington (45 miles north of London) at half-past 12 o'clock on Saturday night—where it would have to remain 23 hours and a-half.

Friday's Aberdeen mail reaches Durham at a quarter-past 11 o'clock on Saturday night—where it would have to remain 24 hours and three-quarters; and

Saturday's Aberdeen mail reaches Perth at half-past 12 o'clock that night—where it would have to remain until 12 next night.

Can anything further be wanting to show the practical working of the arrangement which the Agnewites propose? If additional proof were required it would be found in a circumstance, hinted at by the gentleman above referred to, namely, that were the mails stopped on Sunday the post-offices would, as a matter of course, NOT be opened on that day. What would be the effect on the route already alluded to? Why this, that with regard to Durham, Dundee, and Perth, the north, south and west mails, arriving at these places late on Saturday night, the correspondence would have to remain in the respective post-offices until Monday morning—nearly 36 hours! This is but a specimen of what would occur upon almost every other road in the kingdom.

And what is the object which the agitators wish to secure? They would have us believe that it is solely from regard to the spiritual welfare of the parties employed in the conduct of this "unhallowed" traffic, that they are thus busy in overturning the established usages of the kingdom. But could they guarantee that, with the stoppage of the mails for 24 hours at some particular spot, be it a cathedral city or nameless village, the parties employed—the driver, the guard, the stable-helpers, and the passengers — would attend public worship? Hear what Mr. CHALMERS says:—"In respect to guards and drivers, they would be left on the Saturday nights at such distances from their homes that they might not be prepared to go to places of worship; and if mails were compelled to stop, perhaps at a country inn or some obscure village, where no place of security could be found to deposit the bags—however attentive guards might be in looking after their charges—many chances of robbery by stratagem or confederacy might take place. In fact, guards would be prisoners by day, and require assistants to watch along with them by night." In fact, the scheme is altogether so preposterous that even in these days of legislative wonders, there is little fear that the proposal for stopping the running of the mails on Sundays will be seriously entertained. Nevertheless, it is useful to lay before the public the consequences which would result from carrying such schemes into effect.

While on this subject, we may just allude to an explanation which we have seen given in one of the Scotch papers, of the strange conduct of the Postmaster-General in consenting to transfer the Sunday mails from the Glasgow and Ayr Railway to the common road. The explanation is to the following effect:—

"By the Railway Act recently passed, the Postmaster-General has power to compel the Directors of any railway to carry the mail, but there is nothing said as to the charge which the Company are entitled to make. The Directors of the Scotch railways have shown themselves willing to carry the mail on week days at a moderate expense, looking to the fares of passengers for their chief remuneration; but on Sundays they decline to carry passengers—and they say to the Postmaster-General, if we are to run a mail train on Sunday you must pay the whole expense, for we shall carry no passengers. In these circumstances, the Postmaster-General has done what any other man would do—he has declined to pay the whole expense of a mail train, preferring on that day the ordinary coach conveyance to the far dearer, though quicker, mode of transmission by railways."

Is there any person who does not see that this question of cost is a mere subterfuge? Is it credible that a horse coach, *to run on but one day of the week*, can be kept up for any thing like the sum which would suffice for a Sunday railway train, whether it carried passengers or not? If the railway absorb (as of course it will) the week-day passengers, why should it not have the Sunday passengers likewise? If no passengers at all are to be carried, what need of a "coach conveyance" in any shape? A single horse would be sufficient to do the business, and the cost to the country would be still further reduced! The truth is, that this consideration of cost is a hollow, flimsy pretence. The Postmaster-General has unfortunately suffered himself to be over-reached by the ultra-godly agitators of Ayrshire, and has given his sanction (if matters be as they are represented) to arrangements which we think he will find it somewhat difficult to justify, either to the legislature or the country.

SOME particulars of a fatal and melancholy accident which occurred last week on the Birmingham and Gloucester Railway will be found elsewhere. It will be seen that one of the superior officers of the Company has lost his life through the failure of a portion of one of the engines, and that a deodand of 25*l.* has

Digitized by Google

been imposed upon the engine by a Coroner's jury.

The occurrence is a very lamentable one, but is referred to in this place principally because the evidence adduced at the inquest seems to show that a remarkable degree of incaution and sloveliness, characterises the locomotive arrangements of the line. It appears from the testimony of CARTER, the stoker, who has himself suffered severely from the effects of the accident, that after performing the duty assigned to him, namely, of assisting the mail train up the Bromsgrove incline, ISRAEL YORK, the driver, allowed his engine to remain *on the line* in charge of the stoker for "*about two hours*," and that but for the praiseworthy vigilance of one of the police, a train would in all probability have run into it "in about five minutes." It further appears that the *stoker* having, when thus warned, driven the engine hither and thither for some time, at last took up on the tender several persons, *of whom one was a woman*, and that one of them was allowed to interfere with the machinery immediately previous to the occurrence which resulted in the death of Mr. CREUZE! Surely in all this there is evidence of great want of system? What business had the driver, YORK, to be absent from his post for ever so short a period? Was there no safer place for the stoppage of the engine than the main line, where a train might have at any time run into it? If the managers of the Company have no better employment for their assistant engines, than to suffer them uselessly to consume fuel for hours together, they ought at least to take care that they are not the means of causing some awful calamity to the public. Then again, the taking up of various parties, some of them apparently wholly unconnected with the line, is clearly against all rule. The unfortunate gentleman who fell a victim to the casualty must, we fear, be regarded as principally responsible, if not for the immediate cause of the accident, at least for those breaches of discipline upon which we have been commenting. His presence, as superintendent of locomotives, must have given a certain sanction to irregularities, which under other circumstances might not have been ventured upon. We trust that the acts complained of *were* "irregularities," and not part of the usual practice upon the line. If the latter, the sooner they are reformed the better it will be for the Company's credit.

THE Bill which has passed the House of Commons to "amend and enlarge some of the provisions of the Act relating to the Eastern Counties' Railway, and to authorise the Company to raise a further sum of money for the purposes of the said undertaking," contains clauses legalizing the memorable 8*l.* 6s. 8d. debentures, (so far as such an Act *can* legalize past transactions in these securities)—authorising the Company to raise 400,000*l.* more by preference shares or debentures convertible (like the former) into such shares—and empowering the shareholders to reduce the number of Directors from 22 to 12. Our readers will do us the justice to recollect that we long ago announced every one of these measures as being in contemplation, and the first two as being of absolute necessity in order to keep the Company on its legs. On the 31st October last we mentioned the intention of the Directors to apply to Parliament to legalize the debentures, in spite of the strong legal opinions which they pretended they had obtained (but could never produce) to the effect that they stood in no need of such recognition. And on the same date we observed, "We know also—as everybody acquainted with the line knows—that raise all the money they can by those debentures, it will not suffice to carry them as far as Chelmsford; so that of necessity there must be another sum of at least equal amount required to extend the Railway to Colchester, and a second class of preference shareholders or bondholders created who will have to be first served, out of any profits hereafter accruing to the Company." "First served!" Aye, there will come the rub at last. The 400,000*l.* to be last raised will hardly be obtained at a less discount than some 60 or 70 per cent., which will raise the capital on which interest or dividends will have to be first paid, to upwards of 1,000,000*l.*; (for the powers granted, be it observed, are not to raise 400,000*l.* *in shares*, but to raise that sum *in money*, "*by* creating new shares," which are to be disposed of "for such sum as the Company *can obtain for the same*,") nor can the new shareholders or bond holders be expected to stipulate for less than 5 per cent., on their nominal capital, before anybody else touches a shilling. But were all the traffic proper to the line of country between London and Colchester, or even up to Ipswich, to be ultimately secured to this line, and were it to be doubled twice over, it would not suffice, irrespective of the through traffic from Norwich and Yarmouth, (now so certainly lost to the Company through the intrigues of its stop-short betrayers,) to do more than pay 5 per cent. on the last million capitalised, and could only by the best of management do that. No Essex line merely, such as this is now become, can ever make a remunerative return for more than a million of capital at the outside; the county possesses neither population, nor business enough, to pay for more. To expend three millions on such a parish concern is downright madness, and so, ere long, the Eastern Counties' shareholders will find, to their cost.

—o—

THE Edinburgh and Glasgow Railway shares, which had, in consequence of the disputes among the Directors of the Company, declined to 10s. per share, have, since the happy adjustment of these disputes, made a start of 2*l.* per share, "with a good demand," say the Brokers, "at this advanced price."

—o—

THE opening of the Glasgow and Greenock line has given such an impetus to that stock, that it is now in request at 40s. to 50s. premium. The receipts from passengers conveyed during the first ten days (from the 31st March to the 10th April) amounted to no less than 1,566*l.* 18s. 4d. It would be wrong, however, to infer from these results what the future will be, for last week was what is called *Fast week* in Glasgow, (similar to Easter week in London,) when pleasure-seeking travellers are more numerous than usual.

But neither are such high returns required to enable the proprietors to divide, ere long, a handsome dividend—much less will suffice.

—o—

THE total number of petitions presented up to the 2d April, against the tax on railway passengers was 30. The Report of the Select Committee on Petitions, describes them as praying "for the modification of the tax upon railway passengers from a fixed rate per head, to a scale varying with the rate of fare."

—o—

THE Cheltenham and Great Western Railway was expected to be opened on the 26th instant, but in consequence of some slips which have taken place on the Cheltenham branch, it is now considered impracticable to have it ready so soon.

—o—

The Railroad Quarterly Journal is now changed into the *Railroad Monthly Journal*, and continues to be conducted in the same independent and fearless spirit which we recognised with so much pleasure in its first lucubrations. The editor is angry with us for some well-meant hints which we threw out for the improvement of his journal, but we are glad to perceive that he has had the good sense, nevertheless, to profit by them. Again we beg leave, to wish our worthy fellow-labourer all possible success and prosperity.

—o—

IT is understood that the Taff Vale Railway will be opened throughout—namely, from Cardiff to Merthyr—on Wednesday or Thursday next.

RAILWAY OFFENCES AND OFFENDERS.

LAST week a tradesman, named Harding, was summoned before Mr. Traill, of Union Hall Police Court, at the instance of the Directors of the South-Western Railway Company, for a trespass upon their line. It appeared that Harding having reached the Wandsworth station just as a train was about to start for town, but too late to get a ticket, scaled a gate leading to the platform and forced his way into one of the carriages, at great hazard to his own life, as a down train was passing at that instant. It was clearly proved that there was no wish on the part of Harding to evade payment of the fare, and it appearing further that he was anxious to join his sister who had previously got into a carriage, he was let off on the payment of 10s. and costs, the magistrate remarking on the impropriety of his conduct, which might have been productive of a serious accident not only to himself but to others.

John Crossley, a "shuntman" on the Manchester and Leeds Railway, was a few days ago charged before the local magistrates with being "quite drunk" and neglecting his duty. The case was clearly made out, but a gentleman named Hall, on behalf of the Company, having pleaded for a mitigated punishment, the man was allowed to escape with a fine of 10s. and costs—which (says the *Manchester Chronicle*) "was paid and the prisoner discharged." The grounds upon which the leniency of the Bench was solicited were (as stated by our contemporary) that "the prisoner had been discharged by the Company, and that as he had a large family, they thought that of itself would be sufficient punishment." If the discharge of the offender from the Company's service were deemed "sufficient punishment," why bring him before the magistrates at all? Do the managers of the Manchester and Leeds Company, who as stated by their representative on this occasion, wish to make examples of offenders, suppose that to take a drunken servant before the authorities, and then interpose between him and the punishment which he so richly deserves, will tend to make other parties in their employment more careful, or do they imagine that they have not a duty to perform to the public by strictly enforcing the law, whatever may be their private feelings towards delinquents? It is quite clear that the legislature in fixing the maximum fine for the offence of which Crossley was convicted at ten pounds, did not contemplate that because the offender might have a "large family," he should therefore escape on payment of ten shillings. Much

Digitized by Google

better would it be to pass over such cases without any public notice, than to make a parade of enforcing the law, and then, in effect, assisting to evade the consequences. The Directors of the Manchester and Leeds Company have hitherto been conspicuous for their zeal in bringing this class of delinquents to justice, and therefore we are the more sorry that on the present occasion they have allowed considerations of mistaken mercy to prevail.

Compare the penalty in the above case with that which we learn from the *Reading Mercury*, has been inflicted on a person whose offence, although a very serious one, could not possibly have been productive of consequences so serious as that of Crossley *might have been*:—

"The officers of the Great Western Railway Company appear determined to prevent, as much as possible, the occurrence of accident, by enforcing in every case the punishment of parties by whose misconduct the safety of the passengers is endangered. *A man named Hands was on Monday last committed by the Rev. N. Dodson (Abingdon) for throwing a stone at the train, for which offence, as will be seen in our report of the sessions, he was tried and sentenced to three calendar months' imprisonment.*"

The punishment of imprisonment inflicted upon Hands, will do more to check the mischievous practice of stone-throwing, than fifty convictions followed by ten or twenty shilling fines.

Another case brought forward by the Great Western Company is thus noticed in the same paper:—

"On Wednesday, a party, who was stated to be a London horse-dealer, was brought before the same magistrate, charged with seating himself in the place assigned for the conductor, and obstinately refusing to leave it. It appeared from the statement of the conductor, that the defendant and two others were returning on the previous evening to London from Wadley Fair, with some horses, which were placed on the same train at the Faringdon Road Station, where they insisted upon seating themselves in that part of the carriage assigned to him- that, on reaching Steventon, he requested them to come out and go into their proper seats, which they refused, and the police were ultimately compelled to remove the defendant by force, his companions in the confusion deeming it prudent to leave the conductor's place and mingle with the other passengers. The case was clearly proved, and the defendant was convicted under one of the Company's bye-laws, and fined in the penalty of 5*l.*, which he immediately paid."

We are glad to find that the Directors of the Great Western Company seem determined to carry out the intententions of the framers of the Act. We trust they will continue to be supported by the local dispensers of justice.

THE BIRMINGHAM AND GLOUCESTER RAILWAY AND THE CHELTENHAM COACHMASTERS.

To the Editor of the Railway Times.

SIR,—In the last number of your publication I find you have extracted from the *Cheltenham Free Press* an account of the charge of assault by Groves upon me at the railway station, and you have also given your opinion as to the "monopoly," and consider the Directors justified in the course they have pursued.

I think, however, the following explanation on the subject will, in some measure, alter that opinion. Previous to the opening of the Birmingham and Gloucester Railway, it was rumoured that the *Omnibus, fly, and posting* business would be given exclusively to Messrs. Dangerfield and Haines. Having an extensive business to protect, I wrote to the Directors to know if such were to be the case, and in reply, was informed that *no exclusive* privileges would be given. Consequently, at a considerable outlay, I provided a new omnibus with its appointments, all in the most expensive style. It is true several complaints had been made by servants at the station respecting the short Gloucester trains being neglected, but no direct complaint from the secretary was ever made, or any proposals offered to improve the system, though I had several times suggested (there being four omnibus proprietors) that two should work *to the trains*, and two *from*, by which means *every train* would be amply supplied with conveyances for passengers, but such proposition was rejected. After being permitted to work through the *winter* I received a FIVE days notice to withdraw, which I consider a most arbitrary proceeding, as I was, during winter, THE ONLY postmaster that kept the station supplied with post horses. It may be true that the sanctioned party are senior coach proprietors, but my trade, *in every respect*, has been equally injured.

Independently of the injustice I complain of from the Directors, you can form no idea of the petty conduct of the clerks. I will give you an instance. A few days past I furnished a party with a travelling carriage to Newport Pagnell, which was returned per railway via Birmingham. On the arrival at the Cheltenham station (with all due deference to Mr. Burgess' new arrangement) no post horses were in attendance, and though it was well known the carriage belonged to me, they actually (for no other purpose than to put me to *more expense*) sent to the Plough Hotel for post horses to bring *my carriage* into the town, with strict orders to the postboy *not* to drive into my yard, but to stop at the street door, and if I refused payment, to take the carriage to the Plough, which was done, where it was locked up until the following day. Surely such conduct should not be sanctioned; and with the hope it will not receive your countenance, I am

Your obedient servant,

J. B. FLEISCHMANN.

George Hotel, Cheltenham, April 15, 1841.

[The circumstances here stated certainly call for explanation. It is bad policy, any how, for the Railway Company to quarrel with one of their best providers, the coach and hotel proprietors; they might surely have contrived, and might still contrive, to arrange matters so as to please and benefit all parties alike.—ED. R. T.]

MESSRS. ADAMS AND BUCHANNAN'S BREAK.

To the Editor of the Railway Times.

SIR,—If your correspondent "W. H.," will turn to the engraving of Adams and Buchannan's break, he will see by the description that the carriage and break frame together, rise and fall on the vertical shafts to which the levers are attached, thus permitting the action of the bearing springs. If therefore the vertical shafts are placed in greased bearings the pressure elicited by the pull of the breaks *through a spring interrention*, will no more prevent the play of the bearing springs than the pressure of the horizontal axles in their bearings, prevent this revolution of the wheels. "W. H." must have overlooked this very material point. If the carriage were not allowed to rise and fall on the vertical shafts the evil he alludes to would be fatal; but with the vertical freedom the objection vanishes.

"T. F." misapprehends the action of the break if he supposes it would loosen the rails; the force is applied parallel to the rail, and is a length-long pull, and it would no more operate to disturb the rails than does the alternate expansion and contraction of heat and cold, or the sliding action of the wheels with the ordinary breaks. In any case whatever be the kind of break used, friction must be the agent to overpower momentum, and this must not be applied too suddenly, or mischief will ensue.

The force of the breaks nipping the rails laterally being applied through the agency of springs, would "give and take" in proportion to the increase and diminution of resistance with irregularities, and therefore this break would adapt itself perfectly well to curves.

The only valid objection to this break seems to have escaped the notice of your correspondents, and I will here state it. On some lines the rails are sunk so deep in the chairs that there would be no lip for the break to hold on without being thrown off. On such lines the wheel flanges break the chairs at times. But wherever the chain is sufficiently below the lip to clear the flange of the wheel this break would act. On a rail like the Croydon it would do perfectly well.

If breaks are to be used, *acting with mechanical power independently of the gravity of the carriage*, it can only be by clipping the two side rails or by a centre rail. Efficient side rails would be the cheapest. If the present breaks be considered sufficiently good, and that the wear of the tyres is a less evil than using efficient rails, there is an end of the discussion.

But in no case would the nipping breaks involve risk of breakage, because in encountering any projecting obstacles they would merely be thrown off.

I remain, Sir, yours obediently,

WILLIAM B. ADAMS.

April 13, 1841.

OPEN SECOND CLASS CARRIAGES FOR THE DESTRUCTION OF HEALTH.

To the Editor of the Railway Times.

SIR,—Will you permit me to enquire, through the medium of your widely circulating journal, which are the railways which use second class carriages *closed*?

Previously to their discontinuance on the Great Western Railway, I was a frequent traveller on that line; but since, I have avoided it on all occasions but those of absolute business.

This system of open carriages is neither more nor less than a very ill-advised attempt to drive the public, more especially those who are not in robust health, to the payment of first class fares, for the advantage of monopolists; who would not dare to continue the practice for a single week if a competing line were to start up against them.

But it is with me a matter of much doubt whether the accession of passengers, to be gained by a less shabby line of conduct, would not more than suffice for the loss of a few first class fares. For at present the Public are beginning to be weary of the arbitrary conduct of railway people, whose much longer continuance in such line, will drive away all travellers having no further object than amusement, and confine the traffic to business only.

A TRAVELLER FOR PLEASURE.

12th April, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The traffic hitherto on this railway has not demonstrated the opinions so generally entertained of a *pro rata* increase, upon every new portion of the line being opened. I understand the traffic of the last week, including Easter Sunday, was 7,336*l.* 12*s.* 11*d.*, with 92 miles opened; the Returns of the corresponding week last year, including also Easter Sunday, were 4,408*l.* 10*s.* 8*d.*, 36 miles only being opened. Now, if 36 miles give 4,408*l.*, 92 miles ought to produce 11,265*l.*, thus exhibiting a *comparative* decrease of 3,929*l.* on the 56 miles opened since last June.

Your obedient servant,

INVESTIGATOR.

April 13, 1841.

EXTRAORDINARY LOCOMOTIVE PERFORMANCES.—The *Pilot*, locomotive engine, built by Messrs. W. & A. Kitching, Darlington, in 27 working days, (March 1841) travelled 3712 miles, or 137½ miles per day; and hauled a gross weight of 13,856 tons, consisting of 6,964 tons coals; and weight of waggons 6,892 tons. Total weight 13,856 tons.—The *Middlebro'*, locomotive engine, built by Mr. W. Lister, Darlington, travelled in the same time 3,665 miles, or 135¾ miles per day; and hauled gross weight 12,987 tons, consisting of 6,542 tons of coals, and weight of waggons 6,445 tons; making total weight hauled, 12,987 tons.

WE announced in our journal of the 26th of November last, that on the 19th of the same month we had been shown by Mr. Walter Hancock, the ingenious and persevering promoter of steam-travelling on common roads, a plan for the prevention of accidents on railways, which we thought better calculated to effect the desired object than any other which had then come under our notice. The distinguishing feature of this plan was stated to be that it provided for bringing railway trains to a stand under nearly all possible circumstances, "*independently of the engine-driver.*" "Drivers might be incompetent or careless, or suddenly bereft of power of action, but the safety of the passengers would be provided for nevertheless. Trains would always come into stations with the precise degree of velocity which they ought to do, and the arm of a single policeman have power to arrest the progress of the largest engine or longest train by which any railway could ever be traversed." The plan, though patented, not having been then specified, we were not at liberty to lay any further particulars of it before our readers; but this week the specification of it has been duly enrolled, and we have now the pleasure of extracting from it the following very clear and complete description*:—

The invention is described as consisting in "certain mechanical contrivances and arrangements, by means of which common railway trains running upon railways of the ordinary construction, may be always brought to a stand without the agency and independently of the will of the engine-driver, guard, or other person or persons thereon, or travelling therewith, and at any given distance from a station or at any part of a line where it may be deemed advisable to have such independent means of stoppage provided."

The "mechanical contrivances and arrangements" divide themselves into two branches, the first including those which relate to the engines and carriages, and the second those which relate to the roadway.

I. The additions proposed to be made to locomotive engines for carrying this plan into effect are represented in the accompanying engravings, figs. 1, 2, and 3.

* The patent is in the name of Mr. Pettit, but Mr. Hancock and Mr. Pettit are joint proprietors of the patent right.

"Fig. 1 is an end elevation of a locomotive engine, and fig. 2 is a partial side view thereof. A is the handle of the steam regulator, and B is the handle of the steam whistle. These handles are each fitted with loose collars, but so as not to interfere with the common mode of using them by hand; each collar has a projection to which the ends of the chains D and E are attached respectively, F is a horizontal lever fixed upon the spindle G, carrying the pins *a* and *b*, and to the two loose collars on these, the other ends of the chains are connected in like manner. The vertical spindle G is secured near the top by the bearing *c* fixed on the projecting rail; from this it descends through the eye *d*, attached to the guide plate of the axle on which it is supported by a collar, and H is a crank lever fixed on the lower extremity.

"When the engine is running, and the whistle shut, the several parts described are in the exact position shown in the drawing, viz. both the chains D and E strained tight, and the crank lever H standing out at a right angle to the side of the engine.

"Now, it is obvious that by fixing any apparatus on the roadway outside of the rails, by means of which the lever H may be pressed against, as the engine passes, to the extent of turning it about one

Digitized by Google

quarter of a revolution, which will cause the two chains D and E to move with it, the steam will be shut off from both the cylinders, and simultaneously turned through the whistle.

"It may be proper, however, here to point out, that although the steam regulator, and whistle handles A and B, are connected to the lever F by chains, yet those handles can be worked by hand independently, either for the purpose of shutting off or putting on the steam to the engines, or blowing the whistle in the usual manner, leaving the crank lever standing in the position of fig. 1.

"Rods sliding in tubes on the principle of the telescope, admitting of the requisite contraction and expansion of the intervening distance, may sometimes be found convenient substitutes, for the chain D and E or any other suitable contrivance may be employed. A vertical instead of a horizontal action may be given to the lever by fixing it on a short horizontal axis, connected to the top of the spindle G by a small pair of mitre wheels, and supporting it by bearings fixed upon the most convenient part of the engine or carriage, or by any other mechanical means as circumstances may require."

II. The apparatus proposed to be affixed to the roadway to act on the combination of levers which has been just described, is also represented in figs. 1, 2, and 3, and in further detail in figs. 4, 5, 6, 7. "There are four sleepers of sufficient length to extend from under the line of rails to receive the apparatus fixed upon them in the manner shown in the fig. 3. Upon the two outside ones are bolted the blocks T T, of which figs. 4 and 5, represent an end and side elevation. The two middle sleepers are connected together about a foot asunder by the cross piece X, and they form beds fortified with plates for the carriage N to slide upon; fig. 6 and 7, represent an end and side elevation of this carriage, showing two ribs cast upon the bottom to drop between the beds for the purpose of keeping the carriage in a proper position, during its backward and forward travelling motion. L L, are two pieces of strong angle iron, though any suitable material and form may be employed which move on entire pins, fixed in the top of the blocks T T, while their other ends rest upon the end of the sliding carriage N, to which they are coupled by links O O moving on centre pins fixed in the back end of the carriage N. One end of the rod P is received by the jaws cast on the carriage N, in which it moves freely upon a pin, and the other end is forked, and forms a moveable joint with a piece or tongue projecting from the edge of thele ver R (see fig. 1[b]), and the fulcrum of that lever is fixed to the cross timber morticed into the sleepers fig. 3. By joining the connecting rod P to a piece projecting from the edge of the lever R, the lever and rod, when the lever is put down will form a line occupying the position marked by the dotted lines in fig. 6.

"In the position in which the apparatus is shown in fig. 3, the pieces L L, or the slants as they may be termed, are parallel to the rails S; and, of course, stand clear of the crank lever H, which is carried by the engine (see fig. 1), but when it is necessary to act upon the lever H, in order to stop the train, the lever R must be depressed, which operating on the sliding carriage N, through the intervention of the rod P, advances or thrusts it forward together with the centre ends of the slants L L, towards the rails S to the extent of the dotted lines (see fig. 3.), which are then in the position to act upon the crank lever H, when brought into contact by the advance of the engine.

"The break lever K, fig. 1 and 2, moves inside of, and is suspended when out of action on, a projecting stud, inserted in the vertical spindle G. W is a weight to increase its power, or a spring to press upon the lever may be employed for the same purpose; this lever is fixed upon a short spindle passing horizontally through, and having its bearings in two plates, K, bolted to the engine frame, one within and the other without; of these, the outside one only, *k*, is visible in fig. 2, and upon the inside end of the spindle is fixed a short cross lever, the position and form of which is shown by figs. 8 and 9. The ends of this lever, K, bear upon the breaks *h h*., when the lever K is down, but each end has two cross pins under the straps *l l*, secured and screwed on the breaks for lifting them off the wheels on raising the lever K. These breaks are brought into action by lowering the lever K, occasioned by the removal of the supporting stud on the vertical spindle G, which is effected when that spindle is turned by the crank lever H, coming into contact with the slants L L in the manner before described."

The machinery last described is stated to be as applicable to the breaks, attached to the different carriages in a train, as to the locomotive engine; "especially upon such breaks by means of a spindle similar to the vertical spindle G, in the manner before described."

The lever R that brings the stationary apparatus into use may be worked by hand by any of the policemen stationed on the line, or other person appointed for the purpose.

The claim of the patentee is as follows:—"I declare that though I have specified under this head those contrivances and arrangements by which I think the objects in view may be best accomplished, and mentioned also certain contrivances which may be substituted for some of those so preferred by me, I declare that I do not confine myself to the precise arrangement and construction of the parts shown, as they may be varied under different circumstances without departing from the nature of my invention, but I claim a right to all variations and modifications of the same, and to all substitutions of equivalent means, either in whole or in part, by which the like effects may in the same general way be produced. And I declare, that what I claim generally is the addition to railway engines and carriages of such a combination or system of levers connected with the steam cylinders, alarums, and breaks, that being acted on in the direction of the line of motion, they shall simultaneously, or nearly so, shut off the steam, sound the alarums, and bring the breaks down on the wheels, and also the fixing to or placing on railways of an apparatus such as that before described in such a position that it can be made to act on the said levers in the direction of the line of motion, (by some projected part or parts thereof) without the agency, and independently of, the will of the engine-driver, guard, or other person or persons on the engine or train required to be stopped. And I claim both of the mechanical means, or system of means, last herein generally claimed, whether used together or used separately, that is to say, whether both are used together as I have described, or one of them only in combination with some other and wholly different means, or system of means, from that which I have specified."

MAILS ON RAILWAYS.—The acceleration of the mails took place on Monday. The time of arrival of the mail train at the railway depot is now 36m. past eight in the morning, and at the post-office about a quarter before nine. In consequence of the early arrival, the Scarborough mail—through Beverly, Driffield, and Burlington—is despatched half an hour earlier, namely, at half-past nine, and the box will in future be closed at nine precisely. The Boston mail, the Lincoln mail, and the Beverley separate mail in connection with it, remain unaltered, as does also the north mail by coach to York. The Doncaster mail is discontinued, and the bags heretofore conveyed by it to North and South Cave, Howden, Goole, Rawcliffe, Snaith, Thorne, Bawtry, &c., will all be forwarded by railway in future. The time of departure of the mail train is altered to five o'clock, p.m., precisely; the departure from the post-office takes place at 4h. 45m., and the letter-box now closes at 3h. 45m. p. m., precisely.—*Hull Paper.*

HAZARDOUS LEAP.—On Friday a man leaped from one of the third-class carriages, while running into Ayr at the rate of thirty miles an hour. He fell flat on the ground, and seemed to the passengers to be dead, but on inquiry afterwards it was found that he had suffered no injury whatever. Those who escape unhurt in such a reckless and foolish proceeding, should be punished for the bad example they set to others as foolish as themselves. As a warning, we may mention that a person was killed in a similar adventure a few days ago, on one of the English lines.—*Scottish Reformers Gazette.*

ACCIDENT ON THE BLACKWALL RAILWAY.—On Wednesday evening, a few minutes after seven o'clock, the following accident occurred on the London and Blackwall Railway, to a man named William Drury, aged 26, a conductor on one of the trains. From the statement of Drury himself, made yesterday in the hospital, in the presence of parties who witnessed the accident, it appears that one of the up-trains left the Blackwall terminus at seven o'clock, Drury being stationed in front of the last carriage. At Poplar, the carriages stopping at that station are detached from those before them, in order to allow passengers to alight, and to take others up. Just before reaching this station Drury jumped off the carriage on which he had been standing, and missing his footing his right foot fell across one of the rails, and the whole of the wheels (three in number) of one side of the carriage passed over it. He was immediately picked up, and conveyed as soon as possible to the London Hospital, and on examination it was considered advisable to amputate the foot just above the ankle, and Mr. Adams, one of the house-surgeons, with several assistants, performed that operation, which the unfortunate man bore with great firmness.

MANCHESTER AND LEEDS RAILWAY.

To the Shareholders.

GENTLEMEN,—Our main line is now completed, and has been in operation for a month. The weekly receipts hitherto average only 3,000*l.*, of which 1,150*l.* is derived from Goods, leaving only the paltry sum of 1,850*l.* from Passenger Traffic, on a line 50 miles in length, passing through a populous country, and costing about 58,000*l.* per mile ! !

Experience has shown, that although the partial opening of a line affords no sure test of the result of the opening throughout, yet, that in a few weeks after the opening throughout, a pretty correct estimate may be formed of what the traffic will amount to a year or two after the opening, when more fully developed. The month of March may be taken as a fair average of the year, if not the most favourable season for travelling;—it is much more so than five months of the year, viz.: from October till March. During the summer months our weekly traffic receipts will probably average about 4,500*l.*, but during the next 12 or 18 months they are not likely to exceed 4,000*l.* on the average, unless a different system of management is adopted.

Our main line has cost 2,860,000*l.*; 4,000*l.* per week, taking the working expenses at 50*l.* per cent., will only afford a dividend of about 2 or 2¼ per cent. after paying interest on loans, and allowing for depreciation of stock, should the working expenses absorb only 45 per cent. of the gross receipts, the dividend would amount to about 3 per cent. But if our receipts should only average 3,000*l.*, as hitherto, the net profit would only amount to 78,000*l.* per annum (as in that case the expenses would amount to 50 per cent.), of which 70,000*l.* would go to pay interest on loans, leaving 8,000*l.* towards depreciation of stock and a dividend ! !

I do not now address you to cause unnecessary alarm, nor to depreciate the Leeds shares in the market. I am no speculator operating for a fall, but a *bona fide* holder on investment. Our line has great capabilities, and will, ultimately, I trust, pay well; but it cannot be denied that hitherto it has been a *complete failure*.

Our shares are now at a trifling discount of some 50s. or 60s. only, but we must not on that account suppose that matters are going on pretty well. The truth is, *we are in a most alarming condition*, and unless our traffic receipts should increase largely, our shares will ere long be at 20*l.* or 30*l.* discount, like those of the North Midland line, which has cost about the same per mile as the Leeds line, and draws nearly the same amount weekly. Yet the North Midland shares are now at 25*l.* discount! The Leeds stock is *well held* as it is called, and but for this our shares would have gone down much more than they have done. Our Board of Directors has till lately been deemed a talented one, but let us not blindly confide in them. Recent events have much shaken my confidence in their management.

We have reason to be satisfied with the receipts from goods' traffic, which will no doubt steadily increase. Our Directors have, in my opinion, acted most wisely in the system they have adopted for conducting the goods' traffic; but as respects the passenger traffic, they have erred egregiously in charging *much too high fares*. This is evident from the fact, that we drew 800*l.* per week from passengers, nine months ago, on the 13½ miles then in operation, while on the entire line of 50 miles our receipts from passenger traffic only amount hitherto to 1,850*l.*; this amount we might fairly calculate on deriving from *local traffic* alone, independent of the through traffic from Manchester to Leeds. Indeed, it would seem as if we had carried no thorugh passengers whatever hitherto; and if I am correctly informed, all the coaches from Manchester to Leeds are still on the road ! ! Can it be wondered at even if it is so, when we consider that our line is 20 miles round-about, and that we now charge the same fare as the coaches used to do (perhaps the coach proprietors have now reduced their fares).

Our Directors appear to have lost sight of the causes which operate to produce a large return from passengers and to sweep the coaches from the road; these are—

1st. The superior comfort of railways.
2nd. The great saving in time.
3rd. The reduction in the fares.

On the Leeds line we can offer superior comfort; but in the other items, of a saving in time and of expense, we have hitherto done little for the public. From London to Manchester the fares by coach, inside, were for many years at 4*l.* 10s., and the time consumed on the road was from 22 to 24 hours. The fare by railway, in first class carriages, is now 2*l.* 11s., and the time on the road has been reduced to 9 or 10 hours; a like reduction in expense and in time has taken place on the opening of most other lines of railway.

On the opening of the Manchester and Leeds line, however, *no reduction whatever* has been effected in the fares, and only a trifling saving in time ! ! Can it be wondered at, then, that our receipts from passengers are so small?

Our Directors ought immediately to reduce the fares to 11s. 6d., 8s. 6d., and 6s., for the first, second, and third classes. They ought also to reduce the number of *trains* per day; 18 passenger trains daily, producing only 1,850*l.* per week, is utterly absurd—it is the mountain bringing forth the mouse ! ! Our Chairman informed us that the trains were in general only two-thirds full; if he will only reduce the fares, and start fewer trains daily, I will ensure him a full compliment of passengers by every train, which will pay much better than running empty carriages ! !

In the above calculations as to a dividend, I have omitted all notice of the cost of the extension and branch lines, as it will be some years ere they are completed; and it is to be hoped our traffic receipts will ere then have considerably increased.

These branches, our Directors inform us, will cost 310,000*l.* In my opinion they are more likely to cost us 500,000*l.* or 600,000*l.* The works are of the nature termed "gigantic;" and there are one or two short tunnels. We *now* know what value to set on the estimates furnished us as to cost ! ! We are forced by our "Act" to construct the branch to Halifax; but as respects the Oldham and Extension lines, it would be well if our Directors would pause ere completing them; the cost will be enormous, in all probability, especially on the Extension line, which passes for half a mile, if I mistake not, through the town of Manchester. What a field does this open for such excess as 20,000*l.*, and other small amounts paid for the caprices of individuals, by which we suffered so severely in the Todmorden valley (so our Chairman informed us) as to raise the cost of land 100,000*l.* above the original estimate of 200,000*l.*

In a few months our Board will doubtless discover, like most others similarly situated, that it will be advisable greatly to increase the carrying establishment—to purchase more land at the different stations—to open fresh stations, &c. &c.; the consequence of which will be, that our line will cost some 3,500,000*l.* or 4,000,000*l.*, to yield a dividend on which of 5 per cent. we must draw 7,000*l.* per week ! !

In a letter I recently addressed to the Editor of the *Railway Times* (vide that paper of March 27,) I took the liberty of asking Mr. Houldsworth, our Chairman, several questions respecting our line. He has not condescended to favour me with a reply; probably he will yet favour me with a reply to two of them, viz. those respecting a dividend, and the excess of 370,000*l.* that has accrued during the last six months. We have a right, brother shareholders, to expect a reply to these questions, for at the meeting in September last Mr. Houldsworth entered into calculations showing a dividend from passenger traffic *alone* of 9½ per cent. founded evidently on a weekly receipt of 6,000*l.* He also assured us that the entire cost would not exceed 2,800,000*l.* Have we not a right, then, to expect some explanation as to how the excess of 370,000*l.* has arisen? The more especially so, as only 40,000*l.* appears on the face of the Report—if I understand it aright—all the other items being covered by the excess incurred previous to the estimate of 2,800,000*l.* furnished to us in September, 1840.

In conclusion, brother shareholders, allow me to remind you that until our receipts from passengers and goods average from 5,000*l.* to 6,000*l.* per week, we are in no enviable situation. While our passenger traffic yields only 1,850*l.* per week, depend on it "there is something rotten in the state of Denmark." I have endeavoured to point out the causes of this state of matters. Let me hope that some of you will answer the questions I put to our Chairman regarding the coaches still on the road, &c. and correct me as to any points on which I have been misinformed.

I remain, brother shareholders,
Yours respectfully,
A MANCHESTER AND LEEDS SHAREHOLDER.

London, April 7, 1841.

PETITIONS AGAINST THE NEW RAILWAYS REGULATION BILL.

Petition of the Bristol and Exeter Railway Company, under their Corporate Seal.

Sheweth,—That a bill is now before your honour-House, intituled, "A Bill for the better Regulation of Railways," under which it is proposed to vest in the Board of Trade a discretionary power of making such regulations, from time to time, as they may think fit for the government of railways, with a view to the public safety; and a select committee of your honourable House has been appointed for the purpose of considering how it may be desirable to vest in the Board of Trade such discretionary power, and under what conditions and limitations.

That your petitioners beg respectfully to submit to your honourable House, and to the said Committee, that under the present system of management railways have been brought, within a very limited period, to a most extraordinary degree of perfection; and it is admitted that they present a safer mode of travelling than other modes of travelling in use before their introduction.

That the degree of perfection has been attained only by a constant vigilance and attention on the part of those to whom the management of railways has been intrusted, and who are responsible for, as well as deeply interested in, securing the safety of the public by whom they are used, and in whose confidence and approbation they depend for support.

That if such discretionary power as aforesaid be vested in a Government board, not having the same opportunities of intimate acquaintance with all the minute details occurring in the working of every railway, varying, as such details must necessarily do, according to the different features of each, confusion and danger, instead of increased safety to the public, will be the probable consequence.

That moreover such board, not having any interest in the economical as well as the safe working of railways, might issue regulations of so expensive a nature as to be the most unjust towards those companies against whom they might be enforced.

That it is obvious also that the power so proposed to be vested in the Board of Trade might be exercised partially and tyrannically; and although your petitioners disclaim all intention of assuming that it would be so exercised, still they humbly submit that it is contrary to all the principles which have hitherto governed the legislation of this country, in regard to public undertakings carried out by private individuals at their own expense, to vest in any Government Board a discretionary power of interference with those undertakings, which, under any circumstances, might be vexatiously exercised.

Your petitioners therefore humbly pray your honourable House, that the discretionary power proposed to be vested by the said Bill in the Board of Trade, may be expunged therefrom, and that this petition may be referred to the Select Committee on Railways.

(Seal.)

Petition of the London and Greenwich Railway Company, under their Corporate Seal.

Sheweth,—That your petitioners were incorporated by an Act passed in the third year of the reign of His late Majesty King William the Fourth, intituled "An Act for making a Railway from London to Greenwich."

That your petitioners have, pursuant to the said Act, erected a railway from London to Greenwich, (which is less than four miles in length), at a cost of nearly one million sterling, and since the railway has been used by the public, about one hundred and seventy thousand journeys have been made, and nearly seven millions of persons have passed along the same without a single fatal accident to any passenger, which your petitioners attribute to the regulations from time to time made by them, from the daily experience of the working their line—public safety and convenience being their peculiar and incessant care.

That your petitioners are of opinion, that if the powers contained in the Bill now in your honourable House, intituled "A Bill for the better regulation of Railways," be vested in the Lords of the committee of Her Majesty's Privy Council appointed for trade and foreign plantations, their tendency will be materially to diminish rather than to increase the public safety, inasmuch as they will divide the responsibility between the Board of Trade and the Directors of Railway Companies, and destroy the efficiency of the Directors.

That your petitioners have carefully perused the Reports of the Inspector of Railways, and they cannot find any case to justify the removal to the Board of Trade of the powers already granted to your petitioners by the legislature.

That it is now and has been the practice of your petitioners, for some years, to start their trains at London and at Greenwich respectively every quarter of an hour, and during the period of the fairs which are held at Greenwich and Deptford, as soon as the carriages are loaded, which is usually done in five or six minutes.

That if in the exercise of the powers contained in the said Bill, the Board of Trade were to prescribe a regulation on your petitioners' Railway, for the purpose of preserving an interval of fifteen minutes between succeeding trains, it would be attended with great public inconvenience, and very considerable loss to your petitioners, without any corresponding advantage whatever, either in the way of public safety or otherwise.

That your petitioners have various other objections to the said Bill, and sincerely hope, if it shall pass into a law, they may be exempted from the operation of it.

Your petitioners therefore humbly pray your honourable House that the said Bill may not pass into a law as it now stands, or that your petitioners may be exempted from its provisions.

(Seal.)

Petition of the Midland Counties Railway Company, under their Common Seal.

Sheweth,—That a Bill has been introduced into your honourable House, intituled, "A Bill for the better regulation of Railways," whereby it is proposed to vest in the Lords of the Committee of Her Majesty's Privy Council for Trade and Plantations, an unlimited power of making such regulations as they may deem necessary for the prevention of accidents on railways.

That your petitioners submit to your honourable House, that to invest any portion of the executive government with the absolute and uncontrolled power of making laws for the regulation of any interests or any class of persons, is not only in itself unjust, but such as has never yet been sanctioned by Parliament.

That your petitioners do not object to the closest and most minute scrutiny into their proceedings, and they will cheerfully submit to such legislative enactments for their regulation as experience has shewn, or may shew to be requisite or conducive to the public safety, but they deprecate the power of giving arbitrary and despotic orders without appeal, and even without hearing the parties affected by them, which the before-mentioned Bill would confer on the Board of Trade.

That none can have a deeper interest in the prevention of accidents, and in promoting the safety and convenience of the public, than the Directors of Railway Companies; and your petitioners are convinced, that to establish an uncontrolled and undefined power over them, would, by diminishing their responsibility, only tend to retard improvement, and to lead to the occurrence of the very mischief which it is the professed object of the said Bill to prevent.

Your petitioners therefore humbly pray your honourable House, that the said Bill may not pass into a law as it now stands, but that any powers which may be vested in the Board of Trade may be clearly defined, and not of a discretionary or arbitrary nature.

(Seal.)

Petition of the Northern and Eastern Railway Company, under their common seal.

Sheweth,—That your petitioners have expended a large amount of capital in the construction of a railway, under the powers of an Act of Parliament, passed in the sixth and seventh years of the reign of his late Majesty King William the Fourth, intituled, "An Act for making a Railway to form a Communication between London and Cambridge, with a view to its being extended hereafter to the Northern and Eastern Counties of England," whereby, and by the several Acts since passed for amending the same, the entire control and management of the undertaking became vested in a Board of Directors selected from the shareholders.

That your petitioners have viewed with alarm the progress of a Bill now before your honourable House, intituled, "A Bill for regulating Railways," wherein a discretionary power is proposed to be given to the Board of Trade for issuing such regulations, from time to time, as they shall deem fit for the prevention of accidents.

That your petitioners believe that the exercise of such powers as by such Bill it is proposed to give to the Board of Trade, would not have the effect anticipated, inasmuch as it is impossible that any general regulations would be equally if at all applicable to railways indiscriminately; and it would require more local knowledge of each railway and the working thereof than can be obtained by any persons except those daily attending the practical operation thereof; and if it were attempted to make special regulations in respect of each railway, your petitioners humbly submit that any interference in the management of undertakings and works so peculiar as railways, would have the effect of dividing the responsibility, which when confined to one body, having a corresponding interest, affords the best security to the public for the safety of railway travelling.

That the powers given by such Bill, your petitioners are of opinion might be exercised in such a manner as unnecessarily to impose a heavy tax on many railways, by obliging them to adopt regulations involving great outlay and expense, which would be applicable only from some peculiar circumstances to a few railways.

That your petitioners are of opinion that the power of issuing such regulations by the Board of Trade must necessarily operate as a bar to the introduction, by railway companies, of many improvements, and ultimately prove highly prejudicial to the advancement and prosperity of railways generally, from the necessity imposed upon them of adopting all regulations which might, from time to time, be deemed expedient by the Board of Trade.

Your petitioners, therefore, humbly pray that the entire management of their railway may remain vested in the Board of Directors, under the provisions of their Acts of Parliament, and that no discretionary power to issue regulations in respect of railways may be given to any government board, and that your honourable House will expunge from the proposed Bill the eleventh clause thereof.

And your petitioners will ever pray.

Petition of the Newcastle-upon-Tyne and Carlisle Railway Company, under their corporate seal.

Sheweth,—That a Bill, intituled, "A Bill for the better Regulation of Railways," has been brought into your honourable House, and a Select Committee of your honourable House is now sitting, to inquire whether it is expedient to carry out, and if, to what extent, one of the provisions of the said Bill, whereby it is proposed to vest in the Board of Trade a discretionary power of making compulsory rules and regulations for the management of railways.

That your petitioners are much opposed to the granting of any discretionary power to the Board of Trade, or any other Board; and they humbly submit that the effect of such power would be to defeat the very object for which it is sought to be enacted.

That your petitioners feel satisfied that a full inquiry into the system under which railways are now managed, and under which they have been brought to a great degree of perfection, will satisfy your honourable House that the undertaking cannot be so safely or efficiently managed as by the Directors especially appointed for that purpose, and their officers, whose interest and constant care it is to make them as safe and convenient as circumstances will allow.

That the principle involved in the said proposed provisions is hitherto unheard of in this country, and is, as your petitioners humbly contend, extremely unjust as well as inexpedient.

Your petitioners therefore humbly pray your honourable House that no discretionary power of making regulations for the management of railways may be granted to the Board of Trade, or any other board.

(Seal.)

The *Havre Journal*, in noticing the arrivals of waggons and workmen for the Paris and Rouen Railroad in that port, says that the waggons have been hired from the London and Southampton Company at a much lower price than they could possibly have been in France, and that the workmen, who have been sent over, are all chosen from the most sober and laborious of their class that could be found in England. This journal takes the opportunity of pointing out the activity and energy shown by the English engineers, and the Paris and Rouen Company, and holds up their example to the notice of all engaged in France on similar works.

WANTED, in a Locomotive and other Engine Manufactory, in one of the principal towns in the kingdom, two respectable Youths as Apprentices. As the utmost care and attention will be bestowed in instructing them in every branch necessary to a full and competent knowledge of the business, a commensurate premium will be expected—Letters addressed "Mechanicus," and left at the office of this Journal, will be attended to after the 1st of May.

ANTI-DRY ROT COMPANY, KYAN'S PATENT, Office 2, Lime-street Square.—The Public is respectfully informed that Timber of every description is prepared by the process at the Company's stations, at the South Dock, West India Dock, and at the City Basin, City Road. The use of the Hydraulic Press ensures the greatest expedition in the preparation, and the most perfect saturation of the wood.

There are the greatest facilities for landing and shipping at both stations, and the charges on the same are at a remarkable low rate.

For terms and further particulars apply at the Office of the Company.

TASWELL THOMPSON, Secretary.

Fourth edition, just published, in 8vo., cloth boards, price 7s 6d., enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

Published by H. Renshaw, No. 356, Strand; sold also by the author, No. 16, Percy-street, Bedford-square.

"This volume presents to us a number of illustrations of his singular success under circumstances that would have induced despair in any professor of less mastery, or less accustomed to accomplish cures where cures seem impossible. The statements here made are most convincing, and place beyond doubt the superiority of the treatment to which he refers."—*Court Journal.*

MANCHESTER AND LEEDS RAILWAY.

—TIME TABLE.—The Public is respectfully informed, that on and after Monday, the 19th day of April, 1841, Trains will leave the Station, Oldham Road, Manchester, and Intermediate Stations, in connection with the London and Birmingham, Midland Counties', North Midland, York and North Midland, Great North of England, and Hull and Selby Railways, as hereafter stated, for Passengers and General Merchandize.

The upper line of this Table shows the times of the trains arriving in Manchester; the lower line the times of the trains arriving in Leeds; the other horizontal lines show the times at which trains depart from the several Stations named in the first column.

Thus, by looking down the second time column, it will be seen that the first train to Leeds leaves Manchester at 45 minutes past 6, A.M., departs from Rochdale at 33 minutes past 7, Horbury at 21 minutes past 9, arriving at Leeds at 15 minutes past 10.

By looking up the fourth time column it will be seen that the third train for Manchester leaves Leeds at 9, A.M., passes Morbury without stopping, leaves Brighouse at 15 minutes past 10, Rochdale at 22 minutes past 11, and arrives at Manchester at 45 minutes past 11, A.M.

☞ On the top and bottom of each time column are given the places on other lines to and from which passengers may proceed from any station, at the hour corresponding to such station in the said column.

Example.—A person desirous of going from Rochdale to York, will find the earliest train in the 3rd column, the hour of departure from Rochdale being 34 minutes past 8, a.m.

FARES.

First-class passengers, 3d. per mile; second-class, 2d. per mile; Children, under seven years of age, in first-class carriage, charged second-class fare; and in second-class, waggon fare; and in waggon, without any deduction. Infants in arms not charged.

Gentleman's carriage, with four wheels, 6d. per mile; and parties riding in their own carriage, 2d. per mile each; servants riding outside, and children, waggon fare.

A single horse, two-wheel carriage, or pony phaeton, 4½d. per mile. Any larger number of horses, if one property, 3d. per mile each. One ox, cow, or other neat cattle, mule, or ass, going in an open waggon, 3d. per mile each; any larger number, being the same property, 2d. per mile each. Sheep, 4d. per score per mile, or 6d. per single waggon, and 1s. per double waggon, per mile. Pigs, according to size, from ½d. to 1d. per mile each. Calves from ½d. to 1d. per mile, according to size. Any distance, under six miles, charged as six miles in all cases. The Manchester 6, 45, morning train is the only one by which passengers can go through to London in waggons, but they may proceed to Rugby by every London train.

Every train will have first and second class carriages, and some of them, for the convenience of the working classes, open waggons, without seats, at Fares proportionably low,

Luggage, to the followiug extent, may be taken, at their own risk, free of charge:—First-class passengers, 112 lb.; second-class, 60 lb.; waggon, 40 lb. Any excess charged, for any distance under 30 miles, ½d. per pound, and over 30 miles, ¼d. per pound, extra.

The Company's servants are not allowed to porter for waggon passengers.

Waggon passengers must be at the Booking Office ten minutes before the time of departure, or they cannot be booked for that description of vehicle. Gentlemen's carriages and horses must be at the Station a quarter of an hour before the departure of the Train; and if horses are to be sent from the intermediate stations, it is advisable to give previous notice.

The Company do not hold themselves responsible for any Luggage, matter, or thing, unless booked, and paid for accordingly.

Passengers are particularly requested to see their Luggage in and out of the carriages.

Parcels can be forwarded to all parts of the Kingdom, from 9, Brown-street, Manchester; Albion Hotel, Oldham; Reed Hotel, Rochdale; Swan Inn, Halifax; Railway Office, Bradford; Swan Railway Office, Huddersfield; Royal He-

Digitized by Google

tel, Dewsbury; Bennett's Office, Wakefield; and from the respective Stations of the Manchester and Leeds Railway Company.

Gratuities are not allowed to be taken by any of the Company's servants. Smoking is strictly prohibited on any of the Company's premises.

Passengers, &c. may be booked through at the Manchester Station to the following places:—

	First class.	Second class.	Third class.
Derby....	£1 2 0	£0 16 0	£0 9 0
York....	1 0 0	0 13 0	0 9 6
Selby....	0 18 0	0 12 0	0 8 6
London..	2 7 0	1 13 0	1 1 0
Sheffield	0 12 0	0 7 6	0 6 0
Hull....	1 3 0	0 15 6	0 11 0

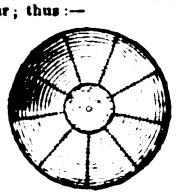
Passengers may also be booked through from every Station.

Gentlemen's carriages to London, by 6.45 morning train, £5 5s.

Passengers wishing to come from London by way of Derby to Manchester, or to any Station on the Manchester and Leeds Railway, must book for Rugby.

The Trains by which waggon passengers may be booked are those which depart from the Manchester Station at 6.45 morning, 12 noon, and 6. 15 evening; also from Leeds to Manchester at 6.45 morning, 12. 30 noon, and 5. 45 evening; and by all the Sunday Trains.

Some of the Trains are met at Mills Hill by Furbisher's omnibuses, for Oldham; at Todmorden, by Chaffer's, for Burnley; at Brighouse, by Scott and Co.'s, for Bradford; and at Cooper Bridge, by Elam's, for Huddersfield.



Parcels for York and Hull, if sent to the Manchester Station by 7 o'clock in the evening, will be delivered early the following morning. Those for the principal towns in Scotland are despatched by every Train. Those for all Yorkshire, Durham, Cumberland, and Northumberland, are despatched up to 7 o'clock p.m.; as are also those for London and the south of England, *via* Derby, all of which are at very reduced charges.

*** The Train which departs from Manchester at 8 o'clock, a.m., meets road coaches for Worksop, Newark and Lincoln, at very reduced fares.

PATENT AXLES FOR RAILWAY ENGINES AND CARRIAGES. The attention of Railway Engineers is invited to the superior safety of the Railway Axles manufactured by the Patent Shaft and Axle-tree Company, at the Brunswick Iron Works, Wednesbury, Staffordshire.

Great and constant attention is paid to the quality of the Iron used, to its admixture, and the whole process of its preparation, and the Axles have the following peculiar advantages, viz.:—

The Faggot is made in a cylindrical form by the External Bars being rolled of such a section as will fit accurately round a centre bar; thus:—

By the arrangement of the Bars in the Faggot the lamination of the Iron becomes cylindrical, and, consequently the axle is equally strong to resist bending or breaking in any direction. The Axle is made of Bars of the full length of the Faggot, and whatever its size may be, it is perfectly welded throughout at one heat; after which it is never heated more than is sufficient to allow of its being drawn under the hammer to the required size. By these means all risk of breakage, through partial welding of Bars or scarfed Slabs, is effectually guarded against.

The Finished Axles are separately tested before they leave the Works. They are finished in such a style as leaves less to be done at them in the smithy or lathe, than at those made by any other manufacturers. They have long been exclusively used on some of the great lines of railway, where their reputation is fully maintained, and upwards of 15,000 are now in use on the principal railways of Great Britain, the Continent, and America, without a complaint respecting quality.

To meet the increasing demand the Works have recently been extended, and there are now the means of exceeding any other house in the rapid execution of orders.

GATESHEAD IRON WORKS, Newcastle-upon-Tyne, April 8th, 1841.

GENTLEMEN,—Observing in the *Railway Times* of the 3rd instant, a section of the mode of faggoting your shafts and axles, we beg to acquaint you that the same plan has been in use in our Manufactory, as well as in the neighbouring forges, for the last half-century, we are now making 6-ton shafts upon that plan.

We are, Gentlemen, your obedient servants,
(Signed) HAWKS, STANLEY, & Co.

The Shaft and Axletree Company,
Brunswick Iron Works, Wednesbury, Staffordshire.

The Shaft and Axletree Company make their Axles for Railway Engines and Carriages from a Faggot, composed of Rolled Bars, which is passed through Rollers before it is drawn under the hammer to the required size; Hawks, Stanley, & Co. manufacture theirs without the intervention of a Rolling Mill, by drawing them to the required size under a Forge Hammer from a Faggot of Forged Bars the full length of the Faggot.

Hawks, Stanley, & Co. are willing to submit their Axles to any test to which the Shaft and Axle Company are agreeable to submit theirs.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—The Public are respectfully informed that this Railway is now Open for the Conveyance of Passengers and Parcels.

The Trains will run at the following hours till further notice:—

FROM GLASGOW. DOWN.	FROM GREENOCK. UP.

1 30 —				
3 30 —	3 30 —			
4 30 —			*4 30 —	4 30pm
	6 30 —			

Passengers by the 8o'clock a. m. Down Train, can join the Lochgoil Boat to Inverary at Greenock.

Other arrangements are in progress, and will be advertised shortly.

Children under 10 years of age, free; from 10 to 14 half price.

Luggage will be conveyed free, and transferred to and from the Boats without any additional expense.

Passengers are requested to look after their own luggage, as the Company will not be responsible for it, unless booked and paid for.

Passengers to and from Liverpool, Dublin, Belfast, &c., will save two hours by taking the Railway to and from Greenock.

It is particularly requested that Passengers in going to and from the Steam-boats, will use all expedition, in order that the regularity of the communication may not be interfered with.

Time by Railway, between Glasgow and Greenock, till further notice, one hour; and the clocks will be set by the Tron Church, Glasgow, and the Mid Parish Church, Greenock.

Passengers at the intermediate stations should arrive five minutes before the Train may be expected.

For Fares and Rates of Parcels, see hand bills.

Preparations are making for the conveyance of Goods at an early day.

The Servants of the Railway Company are strictly prohibited from receiving any gratuity on pain of dismissal.

No Smoking allowed in the Trains or at the Stations.

Any complaints, if addressed to the Secretary, will be immediately attended to.

By Order of the Directors,
MARK HUISH, Secretary.

5th April, 1841.

Interest at the rate of 5 per cent. will be charged on all sums not paid on that day.

By order of the Board of Directors,
MARK HUISH, Secretary.

Railway Office, Greenock,
April 6, 1841.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.*	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, I. N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two-horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act to Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

TO RAILWAY CONTRACTORS.—To be Sold, 140 2¼-yard capital EARTH WAGGONS, 36 inch wheels, 3¼ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NEW SHARES.—Second Call, £5. per Share. The Directors of the Birmingham and Derby Junction Railway Company having resolved that an Instalment of £5. on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto passed in the last Session of Parliament, (3 Vict., cap. 51,) payable on or before the 6th day of May next, should be called for, Proprietors of such New Shares in this Company are hereby required to PAY on or before that day, to any of the under-mentioned Bankers the sum of FIVE POUNDS on each of their respective New Shares.

BANKERS.

London.—Messrs. Glyn, Halifax, Mills, and Co., Lombard Street.
Birmingham.—The Birmingham Banking Company.
Manchester.—The Manchester and Salford Bank.
Derby.—Messrs. W. and S. Evans.
Burton-upon-Trent.—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield.—Messrs. Parker, Shore and Co.

The Bankers have been severally instructed to charge interest at the rate of £5. per cent. per annum, according to the provisions of the Act above referred to, from the 6th day of May next, on all sums which shall be tendered after that day.

HENRY SMITH,
Chairman of the Board of Directors.
THOMAS KELL, Secretary.

Birmingham, April 7th, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, and for a term of not less than Three Years, and to Grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's Bankers in London and Birmingham, will be delivered to the Lender with the mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office, in Waterloo Street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton Street, London; or to Messrs. Laurence, Cazenove, and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 14th day of March, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—FURTHER OPENING OF THE GREAT NORTH LINE.—London to Newcastle-upon-Tyne in One Day.—Only Day Train.—The public are respectfully informed, that in consequence of the opening of the Great North of England Line to Darlington, passengers may travel from London to that place (45 miles north of York) by Railway, and thence by coach to Newcastle-upon-Tyne, in one day, by the train of the London and Birmingham and Birmingham and Derby Junction Railway, leaving the Euston station at 6 a.m., arriving at Darlington at 8.30 p.m., being the only day train through. Fast coaches leave Darlington on the arrival of the above train, arriving in Newcastle in four hours.

By Order,
THOMAS KELL, Secretary.

Birmingham, April 14, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TENDERS FOR LOANS.—Notice is hereby given, that pursuant to the resolution of the General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £300, on security of Loan Notes under the Common Seal of the Company, which will bear interest at the rate of 5 per cent. per annum, payable half yearly.

Further particulars may be had on application to the Secretary, at the Office, Waterloo-street, Birmingham; to whom also the Tenders, stating the amount offered and the period for which it is proposed to be lent, must be addressed.

By Order.
WILLIAM BURGESS,
Superintendent and Secretary.

Waterloo-street, Birmingham, March 16, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—CONVEYANCE OF GOODS, &c.—The public are respectfully informed that this Railway is NOW OPEN for the CONVEYANCE OF GOODS AND MERCHANDISE.

For particulars of charge, &c., applications may be made at the Railway Stations, or at the office, Waterloo-street, Birmingham. By order,

WILLIAM BURGESS,
Superintendent and Secretary.

Waterloo-street, Birmingham, March 16, 1841.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS.—Contract, No. 4.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before Twelve o'Clock, on Monday, the 3rd of May next, Tenders for the excavation and formation of the earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying the permanent rails, of that portion of the railway commencing from a point in field No. 33, in the parish of Charfield, and terminating at a point near the road, marked No. 15, in the parish of Berkeley, being a distance of about 2 miles 16 chains.

Contract No. 8.—Also Tenders for the execution of similar works on that portion of the line commencing from a brook, the boundary between the parishes of Frocester and Leonard Stanley, and terminating in field No. 32, in the parish of Leonard Stanley, being a distance of 57 chains.

Contract No. 10.—Also Tenders for the execution of similar works on that portion of the line extending from a point in field No. 40, in the parish of Leonard Stanley, and terminating at or near the proposed junction with the Cheltenham and Great Western Union Railway, in field No. 8, in the parish of Moreton Valence, being a distance of 1 mile and 37 chains.

Drawings and Specifications of the above works are now lying at the Company's Offices, Exchange Buildings, Bristol.

The Directors will not consider themselves bound to accept the lowest Tender; and they expect the several parties to attend at the Office on the 3rd of May, at One o'clock.

ROBERT FLETCHER, Secretary.

Bristol, 14th April, 1841.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—CALL FOR TENTH INSTALMENT.—The Directors of this Company having resolved to make a Call, under the provisions of the Act of Parliament, for an Instalment of Ten Pounds per Share, Notice is hereby given, that the several Proprietors in the Capital Stock of the said Company are required to Pay the said Call or Sum of Ten Pounds on each of their respective Shares on, on before the 25th day of May next, to one of the undermentioned Bankers, viz.:—

SHEFFIELD.... Messrs. Parker, Shore, and Co.
MANCHESTER.. The Manchester and Liverpool District Bank.
LONDON..... Messrs. Rogers, Olding, and Co.; and Messrs. Smith, Payne, and Smith.

Interest, after the rate of 5 per cent. per annum, will be charged by the Bankers on all such sums as shall remain unpaid after the said 25th day of May next, until payment thereof.

The Directors take this opportunity of stating, that £5 per cent. per annum is allowed on all sums paid in advance.

By Order of the Directors,
JOHN WHITELEY, Secretary.

15, Piccadilly, Manchester, 14th April, 1841.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY COMPANY—A SECRETARY WANTED, Salary £300 a-year, and Security for £1000 required. Address, "stating the names of one or two Sureties," to No. 15, Piccadilly, Manchester.

By order of the Directors.

NORTH MIDLAND RAILWAY.—ALTERATION OF TRAINS. In consequence of the recent opening of the Great North of England Railway, passengers may now be conveyed by Railway the whole distance between London and Darlington, and also those from Gloucester and the West of England to the latter place, *via* the Birmingham and Derby Railway.

Full particulars and Time Tables may be obtained at the Offices of the Company, the London and Birmingham Railway Station, Euston-square, and all the principal Coach Offices.

By order,
H. PATTESON, Secretary.

Offices, Warnford-court, Throgmorton-street.

PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY.—Incorporated by Act of Parliament.—The Directors of the Preston and Wyre Railway, Harbour, and Dock Company hereby give notice, that in compliance with the provisions of their Act, the half yearly meeting of the Proprietors of the said Company will be held at the Company's Offices, No. 11, King William-street, in the City of London, on Tuesday, the 27th April instant, at 1 o'Clock precisely.

By Order,
JOHN POWER, Secretary.

11, King William-street, 14th April, 1841.

NOTICE.—NEWCASTLE AND NORTH SHIELDS RAILWAY. The Dividend of 6 per cent. for the half-year ending 31st of December, 1840, (ordered at the General Meeting of the Proprietors to be paid on or before the 3rd May next,) will be payable at the Company's Offices, in Pilgrim-street, Newcastle, on and after Monday, the 12th of the present month, (April) between the hours of eleven and three.

By Order.
W. SWAN, Clerk to the Company.

Railway Office, April 8th, 1841.

RIBBLE NAVIGATION.—Notice is hereby given, that in pursuance of an order of the Directors, the proprietors of shares in this Company are required to pay a Call of £5 per share on each of their respective shares in the capital stock of the said Company, on or before the 10th day of May next, at the bank of Messrs. Pedder, Fleetwood, and Pedder, in Preston, and that from and after that day interest at the rate of £5 per centum per annum will be charged upon all such sums as shall remain unpaid, until payment thereof.

RICH. PILKINGTON,
Secretary to the said Company.

Preston, Ribble Navigation Office,
8th April, 1841.

RAILWAY MONOPOLY.—THREE-PENCE INTO CHELTENHAM.—The Proprietors of the "George" and "Fleece" Hotels beg to intimate to their Friends and the Public, that in consequence of the Directors of the Gloucester and Birmingham Railway having deprived them the privilege of sending Omnibuses to convey Passengers from the Cheltenham Station, they have determined boldly to resist such an Infamous Monopoly; and respectfully announce that their Omnibuses will ply at the Gates of the Yard, to convey Passengers into the Town at Half-Price.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.

Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

SPECIFICATIONS OF RECENT PATENTS. The MECHANICS' MAGAZINE, No. 293, price 3d., published this day, contains Abstracts of the following recently enrolled Patents:—James and Robert Stirlings', for improvements in air engines, and Talbot's for improvements in producing or obtaining motive power. Also, Descriptions, with numerous Engravings, of Mills' patent sub-marine propellers; Improved blower for stove grates; Improved forge back; Remarks on the experiments at the Polytechnic Institution on marine propellers; On the construction of Velocipedes. On the calculation of life annuities; Account of an experiment with McNaught's indicator applied to a low-pressure steam-engine; The smoke nuisance; On the necessity for a fire police in Dublin; Royal Mail Company's steam packets; sounding the sea by electro-magnetism, &c. &c. &c.

Published at the Mechanics' Magazine and Patent Agency Office, 166, Fleet-street, and sold by all Booksellers and Newsmen throughout the kingdom.

Just published, price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the Birmingham Railway to all parts of the metropolis, by William Hill, of the Stamp and Tax Office, and formerly of the Hackney Coach Office, Essex-street, Strand, with a Map of London, and correct Railway Time Tables.

Also by the same author, price 6d.,
TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, with a Map, &c.

Published at the *Railway Times* Office, 122, Fleet-street, Bell, Fleet-street, and sold by all booksellers.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley; Steil, and R. Tyas, Paternoster-row; Hyde and Co., and G. Bell, Fleet-street; Weale, Holborn; and by all Booksellers and Newsmen.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, April 17, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 174. Vol. IV.—No. 18.] SATURDAY, MAY 1, 1841. [Price, 6d.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

EDINBURGH AND GLASGOW RAILWAY.—WANTED—

1. A Superintendant or Manager, to take the general charge of the out-door business of the Railway.
2. A Manager for the Carriage and Waggon Department, possessing a thorough practical knowledge of the making and repairing of Railway Carriages, &c.
3. A Manager for the Goods' Traffic Department.

Experience in the working and management of railways will be a recommendation to parties applying for these situations; also engineering knowledge in the case of the General Superintendant.

These Officers will require to give their whole time to the service of the Company, and to be quite unconnected with any other pursuit.

Letters of application, containing testimonials and references as to qualifications, to be addressed to "The Directors of the Edinburgh and Glasgow Railway; for office of ———," and left at the Company's office in Glasgow, on or before the 10th day of May next.

The applicants are requested not to canvass the Directors. Those who may be considered likely to suit will be invited to meet them.

By order of the Board,
H. G. WRIGHT, Secretary.

Head Office, 7, North Queen-street,
Glasgow, 14th April, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, and for a term of not less than Three Years, and to Grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum.

Inspect Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's Bankers in London and Birmingham, will be delivered to the Lender with the mortgage.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office, in Waterloo Street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton Street, London; or to Messrs. Lawrence, Cazenove, and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 14th day of March, 1841.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 9s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 78, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litte, Royal Exchange, and at the Office of the Railway Times.

BIRMINGHAM AND GLOUCESTER RAILWAY.—Wanted, a competent FOREMAN for the Workshops of the Locomotive Department of this Railway; he must be sufficiently educated to be able to understand accounts and express his ideas clearly by letter.

Satisfactory testimonials and references will be required, and must be sent in, addressed to the Secretary, at the Office, Waterloo Street, Birmingham, on or before Saturday the 8th of May next.

By order,
WILLIAM BURGESS,
Superintendent and Secretary.

April 27th, 1841.

RIBBLE NAVIGATION.—Notice is hereby given, that in pursuance of an order of the Directors, the proprietors of shares in this Company are required to pay a Call of £5 per share on each of their respective shares in the capital stock of the said Company, on or before the 10th day of May next, at the bank of Messrs. Pedder, Fleetwood, and Pedder, in Preston, and that from and after that day interest at the rate of £5 per centum per annum will be charged upon all such sums as shall remain unpaid, until payment thereof.

RICH. PILKINGTON,
Secretary to the said Company.

Preston, Ribble Navigation Office,
8th April, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

TO RAILWAY MANAGEMENT.—A Douceur of FIFTY POUNDS or TEN POUNDS per Cent. on Salary will be given on procuring the advertiser a situation on a railway. He has been employed for the last six years, in the management of three contracts on three main lines, and is competent to take the management of a branch line, or a contract in the hands of a Company under an engineer. Being acquainted with working prices of all descriptions of work, materials, &c., he considers he should be found an acquisition. References can be given to many Engineers, and testimonials shown from some of the most eminent Contractors in the kingdom.

Letters addressed to E. I. at Mr. Norris's, 33, Great Winchester Street, Broad Street, London, will be promptly attended to; the most inviolable secrecy relied upon.

TAFF VALE RAILWAY.—Notice is hereby given, That the RAILWAY is now OPEN from Cardiff to Merthyr for the Conveyance of Passengers and Goods. The times of departure and arrival of the Trains will be as follows until further notice:—

UP.

		H.	M.
From Cardiff—			
8 morning, arrives at Merthyr		9	25
11 ,, ,, ,,	(mixed train) ..	12	45
3 afternoon ,, ,,		4	25

DOWN.

From Merthyr—			
8 20 morning, arrives at Cardiff		9	45
11 35 ,, ,, ,,	(mixed train) ..	1	20
3 20 afternoon ,, ,,		4	45

On Saturdays an additional Train leaves Cardiff at 5h. 30m. afternoon, and Merthyr at 6h. afternoon.

The mixed train, for goods and second and third class passengers, at 11 o'clock, from Cardiff, and 35 minutes past 11 o'clock from Merthyr does not run on Sundays.

Goods may be sent from the several stations by the mixed train, provided they are delivered two hours previous to the departure of the train.

RAILWAY CLOTHS.—ORCHARD and CO., MARQUEE, TENT, and RICK CLOTH MANUFACTURER, 5, WEST SMITHFIELD, LONDON, beg to recommend to Railway Companies, Waggon Proprietors, and others, their much improved Waterproof Cloths, expressly made for Railway Trucks and Waggons, which, for lightness and flexibility, surpass anything of the kind ever before offered to the public. Rick Cloths, Marquees, and Tents, of all sizes. Black Composition Paint for Outbuildings, 12s. per cwt. Orders per post duly attended to.

HANCOCK AND PETTIT'S PATENT RAILWAY CONTROULER.—A Model Railway and Carriages, worked by Steam Power, exemplifying the manner of applying this most effectual method of arresting the progress of Railway Trains, independently of the Engine-driver or Guard, may be seen Daily, between the Hours of Twelve and Four, at the Zinc Works, No. 55, Parliament-street.

"Better calculated to effect the desired object than any other which has come under our notice."—*Railway Times.*

Applications for Licences to use, to be made to Mr. Walter Hancock, Civil Engineer, Stratford, Essex.

RAILWAY PLANT FOR SALE, in excellent condition, a large quantity of every kind. Apply to Mr. M'Keone, Office, Angel-lane, Stratford, Essex. It is conveniently situated for water or railway carriage. Approved bills will be taken in payment, if required.

THE VERY VALUABLE PATENT RIGHT for RAILWAY and other WHEELS, granted to John Frederick Bourne and John Bartley the Younger, 6th September, 1838, for 14 years, will be SOLD BY AUCTION WITHOUT RESERVE, in consequence of a Dissolution of Partnership, on Tuesday, the 4th day of May, 1841, promptly at One o'Clock in the day by Mr. Fletcher, Auctioner, at his Rooms, King-street and Cross-street, Manchester, of whom further particulars may be had. Wheels on this construction may be seen at work on the Grand Junction, Great Western, London and South Western, North Union, Bolton and Kenyon Junction, Manchester and Leeds, and other Railways, and are so well known and so much approved of, that description is unnecessary.

TO RAILWAY DIRECTORS, ENGINEERS, CONTRACTORS, &c.—A Young Man from Scotland, of respectable connections, who has been employed as Assistant Engineer in the construction of a Railway recently completed, is desirous of forming a new engagement as Assistant to an Engineer or Contractor, or as Superintendent of a Railway Station. References to Engineers of eminence.

Apply by letter, addressed to P., care of the Publisher of the *Railway Times.*

RAILWAY COMMUNICATION BETWEEN LONDON AND EDINBURGH AND GLASGOW.

Fourth Report of the Commissioners appointed by the Lords of the Treasury, in pursuance of Addresses of the House of Commons, of the 12th, 14th, and 20th days of August, 1839, and of the 6th of February and 19th of May, 1840, respecting Railway Communication between London, Dublin, Edinburgh, and Glasgow: with Appendix.—Printed by Order of the House of Commons, 15th March, 1841.

Railway Committee Office,
No. 3, Committee Room, House of Commons,
15th March, 1841.

SIR,—With reference to the instructions of the Lords Commissioners of Her Majesty's Treasury, dated the 26th November, 1839, the 14th February, the 29th May, and the 16th November, 1840, based on the Addresses of the House of Commons of the 12th, 14th, and 20th of August, 1839, and the 6th February and 19th May, 1840, we have now the honour of laying before you our final Report on the competing lines of railway to which our attention was therein directed.

The first instructions which we received confined our inquiry to an investigation into the merits of such proposed lines of railway communication with Dublin and with Edinburgh and Glasgow as had been projected and surveyed antecedently to the Addresses of the 12th, 14th, and 20th of August, 1839; but in consequence of the subsequent Addresses, and the desire of their Lordships to obtain for the public the best lines of railway that the nature and circumstances of the country would permit, and that were demanded by its commercial necessities, further instructions were given to us, extending in some degree the limits of our inquiry.

In order properly to test the superiority of competing projects for lines of railway communication, the explanatory documents which should constitute the evidence in their favour ought in fairness to be placed in equal detail before those who are appointed to judge of their merits.

Had this been the case in the investigation which we have had the honour to conduct, under their Lordships' orders, our task might have been briefly, easily, and satisfactorily performed; but instead of this, the information furnished to us has, with few exceptions, been very incomplete, and it has only been by repeatedly urging the projectors or promoters of some of the competing lines, that we have been enabled to obtain from them even the meagre documents with which we have been supplied; indeed, some of these documents have only reached us very recently.

We do not bring this part of the subject forward as an accusation against the parties concerned, because we have now reason to believe that it was solely from a want of funds that they were prevented from promptly obtaining and laying before us the various documents in question, which they admit to be necessary for arriving at a just and impartial opinion as to the relative advantages of their respective projects.

Our motive in touching on this matter is rather to remind their Lordships of the fact, of which they have from time to time been informed, of the delays which have arisen in conducting our inquiry, and which have occasioned us not only considerable official hindrance, but have increased our labour and personal anxiety respecting the important duty intrusted to us.

We shall not encumber this part of our Report with a detailed statement regarding the documents submitted to us by the promoters of the lines on which we are about to report, for as they are given in the Appendix, it is only necessary to remark that we felt it to be our duty to request these parties to supply us with the following information; viz.:—

1. A section of their respective lines, drawn to the Parliamentary scale, with remarks as to the nature of the soil through which the heavy cuttings and tunnels would be required.

2. A field plan, drawn to the Parliamentary scale, showing the property that would be interfered with by the proposed railways, and the nature of the curves.

3. A general tracing of the line, on county maps.

4. A detailed estimate of the probable cost of the railway.

5. A statement of the population within a certain specified distance of the line.

6. A list of the names of persons through whose property the railway would pass.

7. A statement of the present known traffic.

8. A list of assents and dissents.

9. Certain other statistical information, according to a form prepared by us.

By reference to the Appendix (A.), it will be seen that much of this information has not even now been supplied to us for some of these lines; and we think it right to observe, that Mr. Gibbs did not supply us with the estimates, &c., for the lines brought under our notice by him for the communication between London and York through Cambridge and Lincoln, until the 9th November last; that the projects of Messrs. M'Callum and Dundas for the line to the west side of the Pentland Hills, from Thankerton to Edinburgh, was not laid before us until the 2nd January; nor the estimates and other documents connected with it, until the 4th February of this year; that the proposition for the line through Morpeth was not received by us until the 6th January also of this year; nor Mr. Walker's last Report until the 11th of this present month.

The Addresses of the House of Commons under which, pursuant to your instructions, we have been acting are as follows:—

"*London and Dublin Communication.*"—Address, dated 12th August, 1839, "praying that her Majesty will be pleased to give directions that an Engineer or Engineers may be appointed to inquire and report upon the relative merits and the preference which ought to be given to the respective already surveyed and projected railways following; namely—from Holyhead *via* Bangor and Chester; Portdynllaen *via* Caernarvon, Bangor, and Chester; Portdynllaen *via* Barmouth, Bala, and Shrewsbury; Ormes Head *via* Chester. And also, that her Majesty will be pleased to give directions that proper persons may be appointed to inquire and report upon the best means of communication by sea between Dublin and London, as connected with the said intended railways."

"*London, Edinburgh, and Glasgow Railways.*"—Address, dated 14th August, 1839, "praying that her Majesty will be pleased to give directions that an Engineer or Engineers may be appointed to inquire and report upon the relative merits and the preference which ought to be given to the respective already surveyed and projected railways between London and the cities of Edinburgh and Glasgow, following; namely—*via* York, Newcastle-upon-Tyne, and Berwick; *via* York, Newcastle-upon-Tyne, and Hexham; *via* Lancaster, Whitehaven, and Carlisle; and *via* Lancaster, Penrith, and Carlisle. The said Inquiry and Report to include the relative merits of the two lines from London to York by Derby and Rotherham, and by Cambridge and Lincoln."

"*London, Edinburgh, and Glasgow Railway.*"—Address, dated 20th August, 1839, "praying that her Majesty will be graciously pleased to direct that the Engineer or Engineers to be appointed in pursuance of the Address of this House on the 14th day of this instant August, do, in addition to the Report thereby required to be made, report on the merits of the Cumberland railways as regards their connection with the western parts of Scotland and the north of Ireland; and that he be required also to report on the whole of the lines named in the said Address, as regards the relative merits of each, not only in respect to London, but also the comparative facilities afforded to the communication by railway between the manufacturing districts of Lancashire and Edinburgh and Glasgow, and the north of Ireland."

Address, dated 4th February, 1840, "praying that her Majesty will be graciously pleased to direct that the Engineers who have been appointed in pursuance of the Address of this House of the 12th day of August last, do, in addition to the Report thereby required to be made, report on the merits of the projected line of railway from London to Portdynllaen *via* Worcester and Newtown."

Address, "dated 19th May, 1840, "praying that her Majesty will be graciously pleased to give directions to the Committee appointed by Treasury Minute to include within their Report a new line which has been discovered between Carlisle and Lancaster, by which a portion of two lines called the Kendal and Lune lines will be united, giving the town of Kendal the advantage of the railway passing near it, and probably lessening the expense between Lancaster and Carlisle."

Our Report of the 16th April last having, according to the best of our judgment, disposed of the question respecting the communication between London and Dublin, our present Report is limited, in the first place, to the subject of the communication from London and from the manufacturing districts of Lancashire to Edinburgh, Glasgow, the western parts of Scotland, and the north of Ireland; and secondly, to the consideration of the relative merits of the lines from London to York by Derby and Rotherham, and by Cambridge and Lincoln.

With a view to clear away a part of the difficulties of the former question, we reported on the 16th May last on three projects which had been laid before us, for a railway between Lancaster and Carlisle; namely, one by the Cumberland coast, another by the valley of the Kent, and a third by the valley of the Lune.

For the reasons therein specified, we gave the preference to the project of the valley of the Lune, and we stated that the chief objections to the other projects were, that the Cumberland coast line would considerably increase the railway distance between Lancaster and Carlisle, and require a continuous embankment of the extraordinary length of 10 miles, and of the height of 36 feet across the estuary of Morecambe Bay, and another of one mile and a half across the Dudden; and that by the project of the valley of the Kent a tunnel would be required under the town of Lancaster, and another of two miles 21 chains in length, through the Gate Scarth mountain, which is supposed to be of a porphoritic formation, having a summit of 1,200 feet above the level of the tunnel.

We, however, suggested to the surveyors of both the inland lines the probability of such a pass being found at the foot of the Grayrig Fells as would unite the two lines and admit of a railway which, avoiding the necessity of the almost impracticable tunnel through Gate Scarth, would give to the population of the lower part of the valley of the Kent, and to the thriving town of Kendal in particular, the advantages of railway communication.

One of these surveyors, Mr. George Larmer, at length submitted to us a project, combining, in the manner we had pointed out, the advantages of both the inland lines, and avoiding their chief defects. This project, which, in conformity with their Lordships' instructions of the 19th May, 1840, we carefully examined, was favourably reported upon in our communication to you dated the 14th November last, and we may therefore conclude that we have thus accomplished our task in respect to the course of a western route as far as Carlisle.*

We have traced on the map, No. 1, the lines of the several projected railways that have been submitted to us, which may be subdivided into the following classes †:—

1st. Those which have been projected with a view of shortening or otherwise altering certain existing

* We have to observe that in consequence of the accuracy of that part of Mr. Larmer's project, which was submitted to the test of a fresh survey, conducted by Lieut. H. D. Fanshawe, of the 12th foot, we concluded we might rely on the section of the Grayrig Pass. We feel it also our duty to state, that Lieut. Fanshawe made a favourable Report as to the correctness of Mr. Bintley's section at the Gate Scarth mountain.

† For the purpose of bringing under one point of view all the various projects that have been submitted to our inspection, we have added the several Welsh lines referred to in our First Report.

Digitized by Google

routes between London and distant towns in the north of England, through which the Scotch and Irish traffic would probably pass.

2nd. Those lines intended to connect the more northern termini of the English railways with Edinburgh and Glasgow.

3rd. Two new trunk lines from London to York by Cambridge and Lincoln, which have to be compared with the existing route to York by Derby and Rotherham.

Of the first class there is a route projected by Mr. George Stephenson, and submitted to us by Mr. Edward Tootal, to connect by a nearly direct line the town of Stafford on the Grand Junction Railway with Rugby on the London and Birmingham line, by which the railway distance between these two places, and consequently between London and Lancaster, would be shortened by about nine miles and a half. This is marked No. 1 on the map.

No. 2, which is another proposition having nearly the same object, was laid before us by Mr. Locke. We have examined the section, &c., of this line, but we do not think it necessary to make any observations upon them, nor to take any further notice of this project, as it has been withdrawn from the competition.

No. 3 is a project brought under our notice by Mr. R. Remington, for a nearly direct line from London to Leicester, according to which the present railway route between these two places, by the London and Birmingham and Midland Counties' Railways, and consequently between London and York, would be reduced by about nine miles. We found, on inspection, that this proposition was in a very imperfect state, the ground having been levelled only from London to Bedford, a distance of about 47½ miles out of 97 miles, and we therefore did not consider it proper to extend our inquiry beyond the last-named place; nor, as this is an imperfect project, is it essential to the object of our inquiry that we should give a detailed statement of our examination of the country through which it is proposed that the line should pass.

No. 4. We next examined the Great North of England Railway. This line is at present complete for the conveyance of goods from York as far as Darlington. But although an Act was obtained in 1836 for the formation of a railway between Darlington and Newcastle, yet the work has not been commenced; and as its promoters now consider that the line is susceptible of improvement, fresh surveys have been made for the purpose of being brought under the consideration of the legislature, with a view to obtaining an amendment of the original Act.

No. 5. In competition with the said portion of the Great North of England Railway, and with each other, two projects have been brought forward, called the Northern Union and the North Junction. By these it is proposed to unite Darlington with Newcastle, by connecting together certain existing lines in the county of Durham, originally intended chiefly for the conveyance of coals. Either project however would lengthen the railway distance between the termini, a defect which the promoters of these union lines contend would be more than counterbalanced by their diminishing the required extent of new railway. These lines are marked 5 and 6 in the map.

The second class of lines, being those intended to connect Lancaster with Edinburgh and Glasgow on the west, and Newcastle with Edinburgh and Glasgow on the east, are sixteen in number, as described below :—

The four lines between Lancaster and Carlisle—which have been adverted to in a former part of this Report, viz :—

From Lancaster to Carlisle, across Morecambe Bay, and through Whitehaven and Maryport, (marked No. 7 in the map.)

From Lancaster to Carlisle by the valley of the Kent (marked No. 8.)

From Lancaster to Carlisle by the valley of the Lune (marked No. 9.)

From Lancaster to Carlisle by the valleys of the Kent and of the Lune, connected by the Grayrig Junction (marked No. 10.)

As already stated, we reported in favour of the last-mentioned project, under date the 14th November last, and this line will make the actual distance between Lancaster and Carlisle, 70 miles 17 chains, and the equivalent horizontal distance 78 miles 62 chains.

From Newcastle to Edinburgh four lines have been projected; namely, (No. 11,) Mr. Stephenson's line from Newcastle by the eastern coast *via* Howick, Berwick and Dunbar, the actual distance being 117 miles 62 chains, and the equivalent distance 123 miles 33 chains.

No. 12. A line from Newcastle by Morpeth, to join Mr. Stephenson's east coast line to the north of Little Houghton. The length of this deviation is 38 miles 45 chains, making the actual distance to Edinburgh 116 miles 42 chains, and the equivalent distance 122 miles 32 chains. This we shall term the "East Coast deviation line by Morpeth."

No. 13. An inland line from Newcastle *via* Morpeth and Wooler to Dalkeith, by Mr. Remington; the actual distant to Dalkeith being 104 miles 10 chains, and the equivalent 110 miles 18 chains.

No. 14. From Newcastle, by the Newcastle and Carlisle Railway, to Hexham, Note-oth-gate, and Galashiels, to Edinburgh, by Mr. Blackmore; the actual distance being 115 miles 76 chains, and the equivalent distance 130 miles 19 chains.

Thirdly. Between Carlisle and Glasgow, and Carlisle and Edinburgh, the following lines have been proposed :—

No. 15. From Carlisle by Lockerby and Beattock Bridge, Lanark and Hamilton, to Glasgow; the actual distance being 100 miles 74 chains, and the equivalent 116 miles 78 chains.

No. 16. From Carlisle by Annan, Lochmaben, Beattock Bridge, Lanark and Hamilton to Glasgow; the actual distance being 105 miles 55 chains, and the equivalent 121 miles 68 chains. These two are called the Clydesdale lines.

No. 17. From Carlisle *via* Dumfries, Cumnock and Monkton, to join the Ayr Railway, and from thence to Glasgow; the actual distance being 127 miles 58 chains, and the equivalent 153 miles 9 chains.

No. 18. From Carlisle *via* Cumnock to Kilmarnock, to join the proposed branch railway from that place to the Ayr Railway near Dalry, and thence to Glasgow; the actual distance being 125 miles 9 chains, and the equivalent 130 miles 4 chains.

No. 19. From Carlisle *via* Cumnock, Kilmarnock and Beith, to Glasgow; the actual distance being 120 miles 60 chains, and the equivalent 124 miles 54 chains; these, by way of distinction, are termed the "Nithsdale Lines." The five lines last-mentioned were surveyed under the direction of Mr. Locke and Mr. Miller.

As a mode of connecting Edinburgh with Carlisle, and with the manufacturing districts of Lancashire, a line has been projected (marked No. 20 in the Plan) by Messrs. M'Callum and Dundas, to join the Clydesdale line at Symington (a place 66 miles 14 chains from Carlisle), passing on the East side of the Pentland Hills; the actual distance from Edinburgh being 31 miles 30 chains, and the equivalent 38 miles 68 chains.

No. 21 is another project by the same gentlemen, passing on the West side of the Pentland Hills, and joining the Clydesdale line at Thankerton.

No. 22. Mr. Miller submitted a project for a line to proceed also from Thankerton, and to take a course so as to join the Glasgow and Edinburgh Railway, at about seven miles from the latter place, the actual railway distance from Thankerton to Edinburgh by this route being 37 miles 41 chains, and the equivalent distance 44 miles 24 chains.

In respect to the third class of lines to which our attention has been directed, viz., for the communication between London and York by Cambridge and Lincoln, we have to observe, that in the year 1825 the Messrs. Rennie proposed a line between London and Cambridge, leaving the valley of the Lea below Ware, and getting nearly in a straight line by the valleys of the Rib and the Quin to Cambridge, passing by the towns of Braughing and Barkway. This line, by way of distinction, may be termed the "Barkway line."

In the year 1835 the late Mr. Cundy projected a line from London to Cambridge by Bishop Stortford. About the same period Mr. Gibbs surveyed another line from London to Cambridge, passing near Dunmow in Essex. Shortly after this a committee of gentlemen was formed for promoting a railway from London to York, with a branch to Norwich, and it seems that, having engaged the services of Mr. Walker, that gentleman reported his opinion as to the best line for such railway communication.

The Report made by Mr. Walker in 1835 and 1836 will be found in the Appendix, where it will be seen that he gave the preference to the Bishop Stortford line, in consequence of its possessing superior gradients to those of the other routes, and of its passing near to a greater number of towns and villages.

This Report led to the formation of the Northern and Eastern Railway Company, whose line was originally designed to be extended to York, but the Act of 1836 was only obtained for the distance between London and Cambridge. By an Act, however, of last Session, the powers of this Company are limited to the construction of the railway to Bishop Stortford. It is now completed as far as Broxbourne, and the works are in active progress for extending it to Bishop Stortford.

On the receipt of our instructions we entered into correspondence with Mr. Walker respecting the communication by Cambridge and Lincoln to York, and that gentleman informed us, that having withdrawn from the Northern and Eastern Railway, it had not been his intention to submit to us a project for extending the line to York, but he expressed his willingness to lay before us his plans, sections, &c. and to accompany us over the country through which the line would pass.

This project, which is called the Bishop Stortford line, is marked No. 23 in the map. The course it is proposed to take is by Cambridge, Peterborough and Lincoln. It would reduce the present railway distance between London and York from an actual length of about 219 miles to 193 miles and 66 chains, and the equivalent distance from 222 miles 57 chains to 195 miles 76 chains.

Mr. Gibbs has also laid before us a project (No. 24) for the communication between London and York by Cambridge, Peterborough and Lincoln. This gentleman adopts a modification of what we have termed the Barkway line, having abandoned his original Dunmow route, and also the line of the Great Northern Railway, which was rejected by the House of Commons on the second reading of the Bill in 1836. The Barkway line, as modified by Mr. Gibbs, would reduce the actual distance by railway from London to York to about 185 miles 13 chains, and the equivalent to 190 miles 27 chains, being a saving in actual distance of 8 miles 53 chains, and in equivalent distance of 5 miles and 49 chains, over the Bishop Stortford line.

Having now enumerated all the lines submitted to us which have reference to the communication between England and Scotland, as well as those which bear on the question of the communication to the North of Ireland, we have to state that they have been subjected to a careful and minute examination. We have not only inspected the country through which the several lines would pass, but we have deliberately considered the various elements of superiority possessed by each. The chief of these elements are the distances and gradients, the probable cost of construction and working, the numerical and commercial importance of the population to be accommodated, the relative traffic and other statistical properties, and it is on a consideration of these that we have arrived at the conclusion which it is now our duty to report.*

* We have to observe, that no part of any of these projects, except the tunnel hills of the Westmoreland lines, were surveyed under our direction, and therefore we cannot pledge ourselves for the perfect accuracy of the sections, although we have seen no cause for entertaining any doubt on this subject.

Digitized by Google

We are led to believe, from all the information we have been able to collect, that the amount of traffic which in the present state of the commercial and other relations of England and Scotland may be expected between Edinburgh and Glasgow and the South is not such as would be likely to afford an adequate return for the outlay of capital required for the construction of two distinct lines of railway, the one from Darlington to Edinburgh, and the other from Lancaster to Glasgow. Were this otherwise, we should subdivide the question into two branches, and consider, in the first instance, which of the several lines would be the most suitable for a communication by Lancaster to Glasgow, as well as to the West of Scotland and the North of Ireland, and which would be the best route by Newcastle to Edinburgh.

Under such circumstances, we should have awarded the preference to the East coast line, whether deviated or not, between the two last-named places, and have then weighed the merits of the various routes to Glasgow; but seeing the extent of capital that would be required for the construction of two distinct lines, the one to Edinburgh and the other to Glasgow, we feel under the necessity of recommending, at present, the construction of one line only; and, after a careful review of all the circumstances of this important question, we give the preference to the line from Carlisle by Lockerby, Beattock, Lanark and Hamilton to Glasgow, with a branch from Thankerton or Symington to Edinburgh, as being the general route which would fulfil the greater number of requisites in the railway communication under consideration.

We give this opinion, however, under the supposition that antecedently to or simultaneously with the construction of this line, the railway has been formed, or is in the course of formation, between Lancaster and Carlisle. Should this not be the case, and parties should be found to construct the line from Darlington to Edinburgh, either by the Coast line *via* Berwick, or by the inland line *via* Hexham, then the western route should be abandoned for the present, and in that event we should award the preference to the East coast line, chiefly on account of its superior mechanical properties.

We shall now describe the various lines, and afterwards adduce the reasons which have led us to come to the above conclusion.

[The "Examination of the Lines" we shall give hereafter as we can find room for it; we pass on in the meanwhile to the Commissioners' comparison of the competing lines.]

COMPARISON OF THE COMPETING LINES.

As the question of preference between two or more lines may depend in a great degree upon the character of their respective gradients, it will be proper to state the principles upon which the effect of the several inclinations have been estimated in this Report.

It is well known that many civil engineers advocate very different views on the subject of gradients, some of them treating it as one of great importance, while others assert that it is of minor consequence.

By referring to Mr. Locke's Report on the projected lines between Carlisle and Glasgow, and Mr. Bidder's Report on the Stafford and Rugby line, it will be seen that these gentlemen appear to entertain very different ideas on the subject of the influence of gradients. The fact is, however, that the bases and hypotheses on which their arguments are founded are very dissimilar. If, for instance, we suppose a line to have such an abundant traffic, that the load an engine has to draw is limited in its amount by the prevailing gradient of the line, it is obvious that in such a case, a reduction of the slope would be equivalent to increasing the capability of the engine, and considerable expense might be advantageously incurred in making such a reduction; or, in the selection of one out of two lines, great weight ought, under such circumstances, to be given to the mechanical effect of the inclination. But there are perhaps few lines on which the traffic is so great that in one journey out of ten the loads regulated by the power of the engine; for it is determined almost generally, and particularly in passenger trains, by the demand for conveyance. In such a case, therefore, the mechanical effect of a gradient would be altogether overrated if treated on the principle above supposed.

There is this great difference in the views and doctrines respectively advocated by Mr. Bidder and Mr. Locke, that the former is looking at the Stafford and Rugby line as one for which he anticipates considerable traffic, while the latter, applying his reasoning to railways which he is aware can only command a moderate traffic, makes the question of gradients subordinate to other considerations.

The gradients on Mr. Locke's two Clydesdale lines, are it is true, of an unusual character, the principal plane in both cases having an almost continuous slope of 1 in 123, for a length of 18 miles; but on the Newcastle and Carlisle Railway there is a plane of 1 in 106, of 4 miles in length, which is worked several times every day with passenger trains at nearly the average speed of the whole line, and therefore there can be no question of Mr. Locke's longer but less steep gradient being also a practicable plane; consequently, as this line in all probability would not have an abundant traffic, it would be injudicious, even supposing it to be practicable, to incur a large expense for the purpose of reducing the gradient to one of less inclination.

In the Table of Distances here annexed, the value of the several inclinations in the various projected routes has been computed on the principles explained in our Report on the Cumberland lines, namely, by estimating the effect of the inclinations in both directions by a corresponding lengthening of the line; such increased length being what we have termed "equivalent lengths," or "equivalent horizontal distances."*

The calculation is made on a supposition that the gross loads of the trains will vary from 40 to 50 tons. With heavier loads the effect would of course be greater.

It may here be observed that in the numerous railway journies which we have made in the course of this investigation, no opportunity has been omitted of estimating, by practical observations, the retarding or accelerating effect of the several planes over which we have passed, and the results have been found, in general, consistent with the principles of reduction adopted in this Report.

In the description already given of the several projected lines will be found tables of their respective gradients, and their equivalent horizontal distances have, as above stated, been computed; the same has likewise been done in respect of those existing routes which are proposed to form part of the Great Trunk lines of communication between London and the manufacturing districts of England, and Edinburgh and Glasgow, and the results are given in the following Table.

TABLE.

NAMES OF THE LINES.	Actual Distances. M.	Ch.	Equivalent Distances. M.	Ch.
Mr. Stephenson's line, Stafford to Rugby	49	1	49	56
Stafford to Birmingham station	29	5	29	68
Birmingham station to Mr. Stephenson's Rugby station	29	35	29	74
Mr. Stephenson's Rugby station to London	82	55	†84	21
Midland Counties' Rugby station to London	82	40	84	6
Ditto ditto to Derby	49	16	49	72
North Midland from Derby to Junction of York and North Midland	63	76	65	44

The Barkway line, Pentonville, by Northern and Eastern to Cambridge — M. 48, Ch. 53				
Ditto from Cambridge to Lincoln — 79 59				
Ditto from Lincoln to junction of York and North Midland — 53 76				
Ditto by York and North Midland to York — 2 65				
Total London to York	185	13	189	78
Original Northern and Eastern from Shoreditch to Cambridge — 53 11				
Ditto continuation from Cambridge to York — 140 55				
Total London to York	193	66	195	76
North Junction from Croft to Newcastle	35	40	37	6
Great North of England from Darlington to Newcastle	29	70	31	11
Great North of England from York to Darlington	44	30	44	46
Mr. Stephenson's line from the Town Moor, Newcastle, to Leith Walk, Edinburgh — 116 42	117	62	123	33
Ditto ditto from the Newcastle and Carlisle station to the Town Moor — 1 20				
Ditto ditto with the deviation by Morpeth	116	42	122	13
			Equivalent.	
Mr. Blackmore's line from Newcastle to Hexham — 20 46 — 20 63	115	76	130	19
Ditto from Hexham to Edinburgh — 95 30 — 109 36				
Newcastle and Carlisle Railway from Carlisle to Hexham	40	0	43	46
Mr. Remington's line from Newcastle to Dalkeith	104	10	110	18
Grayrig line from Lancaster to Carlisle (see 3d Report)	70	17	78	62
Line from Carlisle, by the Nithsdale valley, to Cumnock	72	35	74	36
This is common to the three following lines, viz.—				
Cumnock and Monkton, by Ayreshire Railway, making total from Carlisle to Glasgow	127	58	133	9
Ditto by Kilmarnock branch, making total ditto	125	9	130	4
Ditto by Beith branch, making total ditto	120	60	124	54
Line from Carlisle, by Lockerby, to Glasgow	100	74	116	78
Ditto by Lochmaben, to Glasgow	105	55	121	68
Ditto from Carlisle to Symington, by Lockerby	66	14	77	75
Ditto to ditto, by Lochmaben	70	75	82	5
Ditto Symington to Edinburgh	31	30	38	68
Ditto Thankerton to Edinburgh, by Mr. Miller's line	37	41	44	24
Manchester to junction with York and North Midland	49	76	53	40
Ditto to Preston	30	50	34	45
Stafford to Newton	55	34	57	62
Newton to Preston	22	1	24	64
Preston to Lancaster	20	18	20	24

* It is proper to observe that great difficulty has been experienced in obtaining exact information respecting several of these distances in consequence of the difference in the statements we have received. The discrepancies, however, are small, and by no means such as to effect the conclusions we have drawn.

† The equivalent distances on the London and Birmingham Railway are only taken from Camden Town station.

COMPARISON OF THE LINES SUBMITTED TO OUR CONSIDERATION.

1. *The Stafford and Rugby Line.*

According to the tenor of the addresses to the Crown and our instructions from the Lords of the Treasury, our Report on the lines laid before us is required to be confined to the facilities they respectively offer for the railway communication between London and the manufacturing districts of Lancashire with Scotland and the north of Ireland.

By referring to the preceding abstract of the actual distances, and computing the equivalent distances for heavy loads, it will be found that by the present existing route the actual distance

	M. C.		M. C.
From Stafford to Birmingham is ..	29 5	equivalent	31 22
From Birmingham to the Rugby station is	29 35	ditto	30 44
Making the total	58 40	ditto	61 66
By Mr. Stephenson's route—			
From Stafford to Rugby	49 1	ditto	51 16
Making a difference of.....	9 39		10 50

If, therefore, this projected line were formed, the saving in actual distance would be about 9½ miles, and in equivalent distance 10¾ miles, supposing average loads of about 80 tons to be carried.

This saving of distance should produce a corresponding saving of time in actual travelling; and supposing that the rate of fare per mile to continue as at present on the existing lines, and to be on the same scale of charge on the proposed route, the saving in expense to the first-class passenger would be about 2s. 6d., and to the second-class passenger between 1s. 8d. and 2s. It is not, however, so easy to estimate what may be the saving of time, if any, at the stations by the adoption of the proposed route. Its promoters contend that there is at present a great loss of time at Birmingham, whereas its opponents assert that this loss of time will be more than balanced by the double detention of shifting from one line to another at Rugby, and again at Stafford. The detention at Birmingham, it must be borne in mind, does not result entirely as a consequence of the time requisite for transferring the carriages from the Grand Junction to the London and Birmingham line; but from the necessity of allowing, at some great station, not only a sufficiency of time for the refreshment of passengers who have long journeys to perform, but also a margin to meet those frequent delays which occur on the road. This, we apprehend, would have to be the case either at Stafford or Rugby if the direct line were formed between those two places; for if any detention were to take place between London and Rugby, and no margin were left in the time-table of the Extension Company, either some excessive speed must be used to regain this lost time, or else the passengers waiting for trains between Rugby and Manchester would be thrown out in their calculations; and the same inconvenience would be felt in the up-trains if no margin were allowed for a stoppage at one of the termini of this line. We therefore are of opinion, that the saving effected by the proposed route would only extend to the difference of time actually consumed in travelling over the two lines between Rugby and Stafford, and to the fares of the passengers. How far this economy of time and expense to the public traveller and the local accommodation to be afforded to the district through which this line would pass may render its construction desirable, is not a question on which we are called upon to decide. It is sufficient to state that such saving could be effected, that the mechanical properties of the line are very favourable, and that a great part of the country is well calculated for the construction of a railway. The chief difficulties would be encountered for the first eight miles proceeding from Stafford, but even here they are by no means of a formidable character.

It is further proposed, that a branch from the main line should be carried from a point between Rugby and Lichfield to join the Derby and Birmingham Railway at Alrewas. This appears to be considered an important feature in this project as a means of uniting the Grand Junction with the Birmingham and Derby Railway. The advantages proposed by the promoters of the project in question are fully detailed in a report by Mr. Bidder, together with his detailed estimate. On the other hand, the Directors of the London and Birmingham Railway have addressed to us a letter, containing a concise statement of the arguments which they conceive may be fairly urged against this project.

COMPARISON OF THE LINES BETWEEN DARLINGTON AND NEWCASTLE.

We have already adverted to the two lines which have been brought into competition with the proposed extension of the Great North of England Railway from Darlington to Newcastle, namely, the North Junction and the Northern Union.

	M. C.		M. C.
By the Great North of England the actual distance would be	29 70	and the equivalent	31 11
By the North Junction & the Northern Union }	35 40	ditto	37 6

The promoters of the two lines which have been put in competition with the Great North of England claim for their respective projects the merit of saving the construction of about 9½ miles of new line, and of affording direct railway communication from the south with Monkwearmouth, Sunderland Bishopswearmouth, Hartlepool, and South Shields. These places may, however, obtain the advantages of the railway communication in question, without subjecting the traveller to or from Scotland to the inconvenience and expense of extending his journey by six miles, and we have further to observe, that we consider it generally objectionable to run great trunk railways into minor lines of frequent and mixed traffic.

Indeed, it is a subject of regret to us that any of the great passenger railways should be under the necessity of admitting the traffic of heavy goods at the times of the running of the passenger trains, as the difficulty which seems to exist of enforcing the same degree of regularity and precision in their movements as in those of the passenger trains, must naturally tend to diminish the safety of the passengers. Under these views we cannot recommend the adoption either of the North Junction or the Northern Union lines.

COMPARISON OF THE PROJECTED LINES BETWEEN NEWCASTLE AND EDINBURGH.

These lines are numbered 11, 12, 13, & 14. By referring to the table of actual and equivalent distances, it will be seen at once, that, as regards the mere question of length, the preference is due to No. 13, Mr. Remington's line by Wooler; but by examining the Report and section delivered to us by this gentleman, and our observations on this project, it will be seen that it would involve works of such a difficult and expensive nature, as to lead at once to its rejection. The cuttings, tunnels, and embankments are of the most formidable character; and there appears to us no probability of the traffic being ever such as to remunerate any party for incurring the expense of such costly works as would be required to carry Mr. Remington's project into effect.

We are inclined to think that Mr. Stephenson might on further investigation be induced to carry his line nearer to Morpeth and Alnwick, and we shall therefore adopt in our future comparisons the shorter distance which this route would give.

By this the distance from the Newcastle station of the Newcastle and Carlisle Railway to the terminus originally intended at Leith Walk is 116 miles 42 chains. Since Mr. Stephenson's project was first submitted to us, he has determined to extend his line to the proposed terminus of the Edinburgh and Glasgow Railway at the North Bridge, Edinburgh, which will lengthen the line by 1 mile and 10 chains, according to section in Appendix 11; and the distance from the same station at Newcastle, by the inland Hexham line to Mr. Blackmore's terminus at the Links, Edinburgh, is 115 miles 76 chains. This point is 70 chains distant from the Edinburgh and Glasgow Railway, and 179 feet above its level, and therefore the communication could only be formed by means of an inclined plane worked by stationary power. The difference in the actual distances between the respective termini of the two lines is very inconsiderable, but the mechanical properties are greatly in favour of the coast line, its equivalent distance being only 122 miles 13 chains, while that of Mr. Blackmore's inland line is 130 miles 19 chains, being a difference of about eight miles in favour of the coast line. On the other hand, as the inland line proceeds for 20½ miles along the Newcastle and Carlisle Railway to Hexham, the length of new line to be formed for the inland route is only 95½ miles, while on the coast line it would be 116 miles 42 chains to Leith Walk. The traveller by the inland line would, however, derive no benefit as regards the amount of his fare, from this circumstance, as the present proprietors of the Newcastle and Carlisle Railway would have to be paid for the 20½ miles of their line to be used by the passengers to and from Scotland, and, therefore, the fare from Newcastle to Edinburgh would probably be the same in either case; and it must, however, be borne in mind, that the superiority of the coast line over the other, in regard to the saving of time and its working properties, is about one-twelfth.

With respect to the amount of population, it appears from the census of 1831, that it is nearly the same on both routes, averaging, for a distance of 10 miles on each side of the respective lines about 4,000 persons per mile, including the populations of Newcastle and Edinburgh.

The amount of coach and mail traffic is however greatly in favour of the coast line. According to the returns with which we have been officially furnished and which are given in the Appendix, it appears that the total number of passengers licensed per annum reduced to the whole distance is as below:—

Coast line, 40,644* persons, reduced to the average of the whole distance.
Inland line, 29,624 persons, ditto, ditto.

Of the former, 9,282, and of the latter, 14,199 are licensed for the whole distance.

Now, supposing one-half of each of the two latter number of passengers, viz. 9,282, and 14,199 are carried through, and that the other half are intermediate passengers, it follows, that by deducting one-half of the latter numbers from the former respectively, the remainders will give the amount of the intermediate or local present traffic on each line; and we thus obtain, for the

Intermediate traffic, coast line.....	36,003
Ditto..... inland line	22,525

and these numbers may be considered a measure of the comparative local accommodation that would be afforded by each line.

The above has reference to the intermediate or local accommodation of the two lines. Now, with respect to the actual total accommodation we must, of course, assume that all those passengers at present travelling the whole distance (estimated at half the number licensed) will pass by railway, whichsoever of the two lines may be adopted; we must therefore add to the existing coast traffic half the number of passengers at present licensed through on the inland line, and we must add, to the total of the inland traffic, half the number licensed through on the coast line, and we thus obtain—

Previous total traffic, coast line	40,644
Add half through traffic, inland line.....	7,099
Total traffic, coast line	47,743
Previous total traffic, inland line.....	29,624
Add half-through traffic, coast line	4,641
Total traffic, inland line	34,265

These numbers, of course, have no reference to that increase of traffic which has always hitherto followed the establishment of railway accommodation, but they are considered to be a fair comparative measure of the probable future traffic of the respective lines.

It appears, therefore, that as regards the traffic

* This includes the passengers between Edinburgh, Portobello, and Musselburgh.

Digitized by Google

and mechanical properties, the advantages are in favour of the East Coast line, whether the Morpeth deviation be adopted or not; and that there is nothing in the engineering properties of the coast or deviated line which would prevent its speedy formation, whereas the summit tunnel at Note-othgate would, from its length and the nature of the rock through which it would have to be cut, as we have mentioned in the examination of the inland route, be a work that would retard for some years the opening of that line. As, however, the above inland line has still to be compared with the projected western routes it will be again referred to in drawing that comparison.

COMPARISON OF THE FIVE WESTERN LINES BETWEEN CARLISLE AND GLASGOW.

These five lines, which are numbered 15, 16, 17, 18 and 19 in the foregoing enumeration, and are indicated by the same numbers on the accompanying map, were surveyed under the direction of Mr. Locke and Mr. Miller, as already stated.

Of these, Nos. 15 and 16 admit of a branch communication with Edinburgh, rendering the railway distances between Carlisle and Glasgow and between Carlisle and Edinburgh nearly equal.

Mr. Locke, after an able exposition of the respective merits of these projects, has recommended the route No. 16. The ground of this recommendation is principally the nearer approach that this line makes to the towns of Annan and Dumfries, by which the traffic to and from these two places would be more likely to be secured than by the route No. 15. This is, however, almost the only advantage which No. 16 possesses over No. 15, and as its formation would probably require an expenditure of between 8..000*l.* and 100,000*l.* beyond that required for No. 15, and as in either case public conveyances would be provided for the passengers to the nearest station, we are disposed to give the preference to the shorter line, which would afford for the local traffic not much inferior accommodation, and be decidedly better for the "through passengers."

The lines Nos. 17, 18 and 19, offer no facilities for reaching Edinburgh, except by means of the Edinburgh and Glasgow Railway, a route too circuitous to bear a comparison on the ground of distance with the Clydesdale lines.

The mechanical properties of the Nithsdale projects, Nos. 17, 18, and 19, are, however, decidedly superior to those of the two Clydesdale routes Nos. 15 and 16, but this advantage is more than counterbalanced by the additional length of the former, even between Carlisle and Glasgow, and much more still between Carlisle and Edinburgh, as will be evident from an inspection of the Table of distances, &c. given in the following page.

It is true that as each of these three routes is intended to form a junction with the Ayrshire Railway, or its projected branch to Kilmarnock, there would be a shorter length of new line to construct than for either of the Clydesdale railways; but we must here observe, as we did in speaking of the Hexham project, that this is rather to be considered as an advantage to the proprietors of these lines than to the public, whose fares would no doubt be in proportion to the distance travelled over, whether on an old or on a new line; and, although it must be admitted that in such cases as these it would appear fair to give reasonable advantages to persons who have executed works of such public utility, possessing but questionable remunerating returns, yet, on the other hand, it would be very unjust, for the exclusive advantage of such Companies, to tax passengers between Carlisle and Edinburgh or Glasgow, both in time and expense, to the extent that would be requisite in this instance. Viewing the matter in this light, it is conceived that neither of the three Nithsdale lines (Nos. 17, 18, and 19), can be recommended as a main trunk line of communication between England and Scotland.

The following table shows the distances, equivalent distances, and length of new line to be formed on the five lines now under consideration:—

ROUTES.	Distance to Edinburgh.				Distance to Glasgow.				Mean of the Two actual Distances.		Miles of New Line to be formed.	
	Actual.		Equivalent.		Actual.		Equivalent.					
	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.
From Newcastle by the East-coast deviated Line, *via* Morpeth, Alnwick, and Berwick, to Edinburgh, and Glasgow....	116	42	122	13	162	42	168	13	139	42	116	42
From Newcastle, by the Inland Line, *via* Hexham, to Edinburgh and Glasgow	115	76	130	19	161	76	176	19	138	76	95	30
From Carlisle, by the Inland Line, *via* Hexham, to Edinburgh and Glasgow	135	30	153	20	181	30	199	2	158	30	95	30
From Carlisle, by the Western Line, *via* Lockerby and Symington, to Edinburgh and Glasgow....	97	44	116	63	100	74	116	78	99	19	132	24

We shall now consider the question of preferenee in respect to the western communication from Carlisle to Glasgow and to Edinburgh to be settled in favour of the Lockerby route, as there are no statistical properties in the lines competing with it to counterbalance the disadvantage of their greater length.

It may be well to observe here that the Edinburgh branch assumed to be adopted is that from Symington to Edinburgh *direct*, in preference to the line by Thankerton to the Edinburgh and Glasgow Railway. The arguments in favour of the former have already been briefly stated, and are given in more detail in the following article.

COMPARISON OF THE BRANCH LINES FROM SYMINGTON TO EDINBURGH, AND FROM THANKERTON TO EDINBURGH.

The branches from Symington and Thankerton both diverge from the same line, namely, from the route (No. 15), *via* Lockerby and Beattock, to Glasgow. The former branch proceeds direct from Symington to Edinburgh, the actual distance being 31 miles 30 chains, and the equivalent distance 38 miles 68 chains; the latter from Thankerton, a point about 2¼ miles nearer to Glasgow than Symington, and falling into the Edinburgh and Glasgow line at the distance of seven miles from Edinburgh. The length of the projected new line between the two junctions, that is from Thankerton to the Edinburgh and Glasgow Railway, is 30 miles 41 chains. The whole actual distance, therefore, from Thankerton to Edinburgh is 37 miles 41 chains, and the whole equivalent distance is 44 miles 24 chains.

	Miles.	Chns.
The distance from Carlisle to Symington is..	66	14
The distance from Carlisle to Thankerton is	68	33

supposing the shorter of the two main lines to be adopted.

Adding together the respective distances above named, the whole line between Carlisle and Edinburgh by the Symington route (No. 20) will be 97 miles 44 chains.

Ditto by Thankerton (No. 22) 105 miles 74 chains, being an excess of 8 miles 30 chains in actual distance.

It follows, therefore, that, whether the line by Lockerby or that by Lochmaben be adopted, the advantage in respect to actual distance is in favour of the Symington branch. The working or equivalent distance is also in favour of that branch, being only 38 miles 68 chains, whereas on the Thankerton branch it is 44 miles 24 chains, and as the difference in the length of new line to be formed is less than a mile, and the population and traffic are nearly the same by both routes, the preference is due, statistically as well as mechanically, to the branch by Symington.

There remain four lines for further comparison between Newcastle and Carlisle and Edinburgh and Glasgow,* viz:—

1st. The east-coast line from Newcastle to Edinburgh and Glsgow.†

2nd. The inland line from Newcastle to Hexham, and thence to Edinburgh and Glasgow.

3rd. The inland line from Carlisle, *via* Hexham, to Edinburgh and Glasgow.

4th. The route from Carlisle by Lockerby and Symington to Edinburgh and Glasgow.

To avoid the necessity of reference to another table, the several particulars of these lines, as regards their actual and equivalent or working distances, and the length of new line to be formed, are given in the following Table:—

TABLE.

ROUTES.	Distances between Carlisle and Glasgow.		Distances between Carlisle and Edinburgh.		Actual extent of Railway required for the Accommodation of both places.		Mean equivalent distances on both routes.		Miles of New Line to be formed.	
	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.	Miles.	Chains.

* Nearly three miles of this distance is formed by the Polloc and Govan Railway, but as it belongs to a private individual, it would have to be purchased by any Company that might wish to use it as part of the Great Trunk Line.

* Since this Report was written, notice has been received from the promoters of the Hexham route that they have reason to believe that there is a practicable line for a railway to Glasgow, branching from the line to Edinburgh *via* Hexham, and they have requested time to survey the

Digitized by Google

From an inspection of the foregoing Table, it is clear that the western route, by Lockerby, has a considerable advantage in regard to actual and equivalent distance over the other lines, both to Edinburgh and Glasgow, reckoning from Carlisle on one side and Newcastle on the other.

Thus the mean of the two distances to Edinburgh and Glasgow from Carlisle is about 40 miles shorter than the east-coast deviated route to the same cities from Newcastle, and 39 miles shorter than the Hexham or inland route from the same place; and in respect to the mean distance from Carlisle, it is nearly 60 miles shorter than the mean from that place by the Hexham route.

A passenger travelling from Carlisle by the Hexham route would therefore pay to Edinburgh, at 2d. per mile, 6s. 6d. more fare, and to Glasgow 13s. 6d. more than by the Lockerby line with the Symington branch; the only counterbalancing advantages being, that there would be about 37 miles less of new railway to form.

We shall now refer to the existing English lines leading towards Newcastle and Carlisle from London and the manufacturing districts of Lancashire.

It has been seen that two lines have been projected, both proceeding from the Northern and Eastern Railway, one of which, the Barkway line, would reduce the present actual length of the railway route between London and York by about 34 miles; and the other, the Bishop Stortford line, by about 25 miles.

If the subject of a railway communication between London and York were now brought forward for the first time, and the relative merits of the existing line by Derby and Rotherham were to be weighed against those of the proposed routes by Cambridge and Lincoln, we should have no hesitation, after a full consideration of all the properties of both, in awarding the preference to the latter as a main-trunk line of communication to the north; but as the former has been completed, and has at this moment by no means an over abundant traffic, it does not appear to us that it would be expedient to construct, at the cost of probably more than 4,000,000*l.*, another line passing by Cambridge and Lincoln merely for the sake of shortening the distance for the "through passenger" to York and to the north of that city. Looking, however, at the highly productive district to the eastward of the Derby and Rotherham line wholly unprovided with railways, and the unusually favourable character of the country for their construction, we are of opinion that the period is not far distant when a new line will be formed to York, passing near Cambridge, Peterborough, and Lincoln; and that this line will, in all probability, be combined of parts selected from the various projects which have at different times been brought forward for this route.

We cannot avoid observing that the formation of the Barkway line, or any other direct line to York, would unquestionably draw a certain amount of traffic from the present lines to that place, as the "through passenger" would doubtless be carried on the shorter line; independent of which, the present licensed mail and coach traffic amounts to 63,543 persons annually, which is more than double that of the western route beyond Carlisle.

Our instructions do not require us to test the merits of these several projects against each other, but merely to state whether the preference is due to the Derby and Rotherham, or to the Cambridge and Lincoln route; and having awarded it to the latter, we shall confine ourselves to a mere statement of some of the leading advantages and defects of each, so far as the documents before us admit of a fair comparison of the proposed routes.

The Barkway line has the advantage over the Bishop Stortford line of shortening the actual distance to Cambridge by about five miles; and it leaves the question open of adopting any gauge that may be considered preferable, but it will require 25 miles more of railway to be formed to Cambridge.

We are aware that there are strong local feelings and prejudices in regard to these lines, but on these matters we give no opinion.

From Cambridge to Lincoln the distance by the line given in by Mr. Gibbs is five miles shorter than that by Mr. Walker's original project; but the latter runs nearer to the base of the high land, and by keeping clear the fenny districts interferes less with the inland navigation.

From Lincoln the projected lines are in scarcely any instance above three miles asunder; and if either of them should be carried into effect, the preference will probably depend as much upon the accommodation it will afford to local interests as to any mechanical properties it may possess.

In order to show the effect which a Cambridge and Lincoln line to York would have in respect to the "through passenger," two statements of mean and equivalent distances, &c., have been drawn up for the purpose of comparing the merits of the eastern and western routes, on the supposition on the one hand of the Barkway line from London being formed, and on the other of the Stafford and Rugby line being constructed. We beg to observe, however, that in making the Barkway line one of the elements of this comparison, it is not to be understood that we thereby express a preference for that line over any other between London and York; but that as the shortest we take it, for the purpose of trying in the severest manner the merits in regard to distance of the western route.

The distance from London to York by the existing route is as below:—

	Miles.	Chains.
London to Rugby	82	40
Rugby to Derby	49	16
Derby to York	87	7
Total	218	63

The total equivalent distance being 222 miles 57 chains.*

In continuation of the route from London to York, the Great North of England line is on the point of being opened for passengers for 44 miles and 30 chains; viz., from York to Darlington. In the course of probably a few weeks, therefore, a complete railway route will be established from London towards Newcastle, amounting in actual distance to 263 miles 13 chains, leaving only 29 miles 70 chains to complete the connection to the last-named place. For this part an Act was obtained in 1836, it being, in fact, a portion of the Great North of England line. Circumstances have hitherto prevented its being carried into execution; but, presuming that the Great North of England Company still intend to complete their project, or a modification of it, the distance of 29 miles 70 chains will be considered as the length of unformed line, making the total distance between London and Newcastle, following the existing route, 293 miles 3 chains, which would be reduced to 259 miles 33 chains provided the Barkway line should be executed.

On the western route the distance from London to Lancaster is as follows:—

	Miles.	Chains.
London to Birmingham	112	10
Birmingham to Parkside	84	40
Parkside to Preston	22	1
Preston to Lancaster	20	18
Total to Lancaster	238	69
Adding to this distance Mr. Larmer's new line from Lancaster to Carlisle	70	17
Total to Carlisle	309	6

Which distance, if the Stafford and Rugby line should be formed, would be reduced to 299 miles 47 chains.

The equivalent distance being 316 miles 49 chains.

Combining now the distances between London and Carlisle, and London and Newcastle, by the shortest proposed routes, with the respective distances between Carlisle, Edinburgh and Glasgow on the west, and between the two last-mentioned places and Newcastle on the east; we have

	M.	C.	M.	C.
London to Carlisle supposing the Stafford and Rugby line made	299	47		
Carlisle to Edinburgh	97	44		
Shortest distance, from London to Edinburgh, by western route			397	11
London to Carlisle, as above	299	47		
Carlisle to Glasgow	100	74		
Shortest distance, from London to Glasgow, by western route			400	41
Sum of both routes			797	52
Again by the Eastern route, adopting the Barkway line to York, and thence to Newcastle	259	33		
Newcastle to Edinburgh, by the deviated Coast line	116	42		
Shortest Eastern route from London to Edinburgh			375	75
London to Newcastle, as above	259	33		
Newcastle to Edinburgh	116	42		
Edinburgh to Glasgow	46	..		
Shortest Eastern route, from London to Glasgow			421	75
Sum of both routes			797	70

The shortest projected routes, therefore, on the east and west, may be considered of nearly the same actual length.

In consequence, however, of the better gradients on the eastern lines, the equivalent, or working distance, is much in their favour, as will appear from the following results, which are obtained in the same manner as the foregoing, except employing the equivalent lengths instead of the actual lengths; viz.

Western Routes.—	M.	C.
Sum of the equivalent lengths, between London and Edinburgh, and London and Glasgow, adopting the preceding shortest route to Lancaster	261	70
Eastern Routes.—		
Sum of the equivalent lengths, between London and Edinburgh, and London and Glasgow, adopting the Barkway line to York	321	56
Difference	40	14

Giving a difference of 40 miles and 14 chains in equivalent distances in favour of the eastern route, or a mean difference of about 20 miles on a single journey, and as the cost for locomotive power, and the time of performing the journey, are both dependent on the equivalent distance, it appears that under these two heads the advantage is at the rate of 5 per cent. in favour of the eastern route, supposing the Barkway line to be formed to York, and taking London as the southern terminus. The other expenses of the lines, such as maintenance of way, police, guards, stations, would probably be the same on both lines, being generally proportional to the actual lengths.

But supposing neither the Barkway line nor the Stafford and Rugby line to be formed, the difference in actual distance between the eastern and western routes would be 24 miles in favour of the western route from London; and the equivalent distance would be about two miles in favour of the same.

We must now consider the manufacturing districts of England.

With reference to the accommodation of these districts with railway communication to Scotland, particularly with Glasgow, we must assume some mean point of departure, and as we selected Manchester in our first Report, we shall do the same on the present occasion.

The distance from Manchester to Carlisle, and thence to Glasgow and Edinburgh, by the western route, may be stated as follows:—

	M.	C.
From Manchester to Preston	30	50
Preston to Lancaster	20	18
Lancaster to Carlisle	70	17
Total Manchester to Carlisle	121	05
Carlisle to Glasgow	100	74
Manchester to Glasgow	221	79
Manchester to Edinburgh by Symington	218	49
Total to both places	440	48

country; but our instructions preclude us from taking cognizance of any project brought forward at this late period.

† We take the deviated line in this comparison, although the same conclusion would be drawn by taking the original east coast line.

* From the Camden station.

Digitized by Google

By the eastern route:—				
From Manchester, by the Manchester and Leeds Railway to York	73	7		
York to Newcastle	74	20		
Newcastle to Edinburgh, by the coast deviated line	116	42		
Total Manchester to Edinburgh	263	69	263	69
Edinburgh to Glasgow	46	—		
Manchester to Glasgow			309	69
Total to both places			573	58

Manchester, therefore, is nearer in actual distance to Glasgow by the western than by the eastern route by 87 miles 70 chains, and to Edinburgh by 45 miles 20 chains. These results are obtained by comparing only the two routes we have specified; but in the following table deductions are made for several other routes for the communication between the manufacturing districts and London with Edinburgh and Glasgow; it is not, however, thought necessary to give all the calculations at large, as the preceding cases will sufficiently illustrate the mode by which we arrive at the results.

We may fairly conclude, from what we have just seem, that the advantages presented by the western route for the communication between Manchester and Edinburgh and Glasgow, as well as with the west of Scotland and the north of Ireland, more than balance the advantages which would belong to an eastern route from London, adopting even new line by Cambridge and Lincoln to York, as a portion of this great trunk railway; and if such new line were not to be formed, the superiority in respect to distance of the western route would be considerably greater, as we have already shown.

ROUTES.	Actual Distance to Edinburgh.		Actual Distance to Glasgow.		Mean of both Routes.		Mean of equivalent Length of both Routes.		Number of Miles of New Line to form. * The lesser Population in each case is exclusive of the Towns of Edinburgh and Newcastle, and the larger includes those Towns.

It will be evident, from an examination of the last Table, that, so far as regards accommodation to the traveller, both in respect to the economy of his time and purse, the preferable route for the railway communication to Edinburgh and Glasgow would be by the proposed Carlisle and Lockerby line (No. 1.), with a branch from Symington.

It will at once be seen, that the line (No. 3) by Lancaster, Carlisle, and Hexham, to Edinburgh and Glasgow, is, from its greater mean length, quite inadmissible as a single line; and it has four lofty summits to pass—the first between Lancaster and Carlisle, the second between Carlisle and Hexham, and the remaining two between Hexham and Edinburgh. It exceeds, both in actual and equivalent length, the mean of the two routes by the Lockerby line, no less than 60 miles, and the only advantage it possesses is that of having 37 miles less of new line to construct.

Comparing the first route by Lockerby with the Derby, Rotherham, Newcastle, and east coast route (No. 5 in the Table), the Lockerby route has the advantage of 24 miles less of mean actual distance, and two miles less of equivalent distance, but it has 56 miles more of new line to construct. The Lockerby line has nearly the same advantage of actual mean distance over the Derby, Rotherham, Newcastle, and Hexham line (No. 7), that it has over the east coast line; and it has also the advantage of 10 miles less in equivalent distance, but it has 77 miles more of new line to form, which is not sufficient to turn the scale in its favour.

If the Barkway line should be made, the mean to Edinburgh and Glasgow by the Hexham route (No. 8) would be nearly 10 miles less actual distance, and 23 miles less in equivalent distance; but for these advantages this route would require 94 miles more of new line to be formed than the Lockerby route. The balance of advantage is, therefore, with the Lockerby line, as far as regards the communication between London and Scotland; and they are still more so in respect of the communication between Edinburgh and Glasgow and the manufacturing districts of Lancashire, and with the latter and the north of Ireland.

We have had before us various statistical returns regarding the districts through which the several competing lines would pass, and as they are of an interesting nature, we have placed them in the Appendix, but we do not find that the results they give are such as to lead us to prefer any other line to that by Carlisle and Lockerby.

On commencing this inquiry, we anticipated that by means of the estimates we expected to obtain from the promoters of the various projects, it would be in our power to test minutely the relative probable cost of construction of the proposed lines of railway, as we have done their mechanical properties. With this view we supplied these parties with tabular forms, so that they might class the various items of expense under their respective heads, in such a manner as to give in detail the information we required as to the elements of their calculations; but unfortunately we have found such discrepancies in the estimates which have been laid before us, that we are precluded from following the course we had intended, and in our own justification we are under the necessity of inserting the following comparative statements of the quantities and prices extracted from these estimates, and these data will be found to differ so essentially in points where there is no apparent cause for such difference, that it must be admitted we could draw no satisfactory deduction from them, and consequently that they could neither confirm, nor tend in their present form to disturb, the opinion we have given as to the preference which is due to the lines we have had under consideration.

It is foreign to our duty to revise or to reconstruct any of these estimates in a detailed manner, nor have we been supplied with those working drawings by means of which alone this could be done in a satisfactory manner.

[Here follow the tables.]

It is hardly necessary to remark upon the discrepancies in these tables, as they will be obvious on the most cursory examination, but there are some points upon which it is our duty to comment.

Digitized by Google

In the first of the two foregoing tables we see the price of 28*l.* 10s. per lineal yard inserted for a tunnel proposed to be cut through green slate and porphyry, the summit of the hill being no less than 1,200 feet above the level of the tunnel; it is almost needless to observe that, if executed, the work would cost more nearly three times the price inserted.

Looking at No. 11, which is divided into the works north and south of the Tweed, we find in the former subdivision, where the amount of earthwork is stated to be double that of the latter, that nine acres of land only are estimated for per mile, whereas in the southern division of the line 12 acres are very properly allowed.

The price of the land in the northern division, is put down at nearly double the price in the southern, and the latter is precisely double what Mr. Bowman has allowed for the land he requires for the Morpeth line.

Projects 20 and 22 are both by the same parties, and it will be observed that, for the line in which they have the greatest quantity of cutting, they provide for the smallest quantity of land.

Projects 20, 21, and 22, are in nearly the same district, yet it will be observed that in 20 and 22, which are by the same parties, the average price allowed per acre for the land is 45*l.*, whereas the Engineer for the competing project has allowed 100*l.*, which is likely to be much nearer to the truth.

In the second table almost equal discrepancies occur to those which are observable in the first; for instance, in the price for fencing, only 200*l.* per mile is allowed for the Lune line, and 220*l.* for the Morpeth line; whereas for the Thankerton line, project No. 21, 528*l.* is allowed, and for the lines from London to York, 836*l.*; neither the local circumstances nor the character of the work justifies such a difference.

In the price of blocks an unaccountable difference is made in nearly the same districts, and in the weight of the rails there is a considerable difference, without there being any ground for such variety; the same observation applies to the price of the iron.

There are many other parts of the estimates varying so much in price for works which would be nearly similar in execution, that any deduction drawn from these discordant documents could only serve to mislead. For instance, there is on the Inland line by Hexham a tunnel proposed to be cut of 2,970 yards in length through clay, slate and grauwacké, in the formation of which it is only proposed to make use of four shafts, two of 450 feet in depth, and the other two of 200 feet in depth. The price inserted in the estimate for the tunnel is only 30*l.* per lineal yard. There can be no doubt that this work would be more likely to cost double the sum allowed for it; and if no more shafts were used than four, several years would be occupied in its completion; but we have shown in a former page that it will be necessary to extend this tunnel to the length of 4,840 yards.

For the tunnels north of Berwick the prices are specified, but the nature of the soil does not seem to have been ascertained, and, consequently, no great reliance can be placed on the amount inserted for these works. In respect to the estimated price of bridges, we have had similar difficulties to contend with, and no satisfactory deduction could therefore be drawn from estimates founded on such data; indeed, in many cases, the amounts inserted for bridges have not been the result of actual calculation.

Great preparations are making for the erection of the Cheltenham Railway station, the site of which is in a field called the Wall Ground, north of the town; the intended entrance being through the once extensive timber-yard of Mr. John Provis.—*Bristol Gazette.*

Birmingham and Gloucester Railway.—We understand that a carrier for the accommodation of first-class passengers between Worcester and Spetchley will be launched in a week or two.—*Worcester Journal.*

REFORM IN RAILWAY DIRECTIONS.

To "C. D."

Sir,—It would be affectation in me to pretend that you do not refer, in your letter of the 19th instant, to "Examiner" and myself, and were I sure that he will reply to you, I should be well content to leave the subject in his hands.

Even in the uncertainty of my colleague's taking the field, I am visited by something like compunction in risking the disturbance of as comfortable a frame of mind as ever man was blessed withal. You ask questions which suit your argument, and answer yourself with such infinite satisfaction that I hesitate to rouse you from your vision of happiness to sad reality, and the stern voice of truth.

You say we have recommended annual or biennial change of Directors. We have done no such thing; our proposition goes the full length of the term judged sufficient by the legislature in Railway Acts, and so far from arbitrarily fixing the period, I do not even know whether it is universal or various. In no case however, (and it is a main point in securing the full advantage of our alterations,) would I have that period exceeded, nor the law virtually cancelled by re-election in less than three years.

Taking railways generally, if 1,200*l.*, divided amongst eight Directors, is to be considered "low salaries," then I would have low salaries, and unquestionably share-list selection.

The comparisons you institute between the qualities required for a Director, and for a "wine, oil, and corn" merchant, or a manufacturer, do not hold; and I have so often refuted and exposed the fallacy of considering them parallel cases, that I think you can have given to the letters you criticise but a cursory reading. Of all the occupations of civilised man, there is none probably that can be carried on—I do not say *well*, but carried on by a lower order of mind, than Railway Direction. The dealer in natural products must have knowledge of the quality, the yearly harvest, the state of markets for purchase and sale, the solvency and character of his buyers; he must have address in chaffering with the producer or his brokers, know how to thrust forward to the eye the bright side of his samples, and possess the art of persuasion to draw a good price from chary and hesitating purchasers. But all this is a simple process compared with the complex considerations which beset the manufacturer before he can affect the profitable disposal of a single yard of gauze ribbon, or even a ton of pig-iron. The cases are so wide of each other that the advocates of the present Directorial system must indeed be hard run to treat them as things alike. If railway management can be compared to any trade or calling, it must be to a vendor of some single article at *prix fixe*—at a given price, take it or leave it—to a buttered potato for instance, or a so-called mutton pye, for a penny—or to a playhouse where there is no dealing or bargaining with the customer—no trade knowledge exerted or wanted, where the matter ends and begins by taking money, or its equivalent, and giving admission. Ah! but, say you, the taking money is the least part of railway business, there are onerous duties for Directors to fulfil in getting ready to carry the public. I ask, what are they, and by whom done? Like you, I will answer myself. Directors, ostensibly, have to buy coals, and those stock in trade articles, in more ways than one, "oil, tallow, and cotton waste;" to provide engines, and to repair the roads. These are the head and front of their mighty labours; but, by whom are they really performed?—By the Secretaries, Contractors, and other subordinates. Of the little there is to do, I defy you to prove that a hundredth part is done by Directors. Will any man have the front to assert, that the business of a railway can be done by individuals living 200 miles from the scene of action, or by Engineers employed by and travelling over all Europe? They know it cannot; and how are they relieving themselves of the difficulty?—Why, by letting off everything, in some cases under private hole-and-corner agreements to Contractors, for shamefully, perhaps ruinously, long periods, to (as they express it) "lessen the office trouble." But that is not the only reason—by settling the whole routine for several years together they prevent any intermeddling from shareholders—for once the contract is signed, it is useless to say a word; ruinous, or advantageous, there is nothing for the miserable shareholder but a shrug and submission to his fate. *It is a deep laid scheme at sinecure and permanent Direction.*

Upon one only point are we agreed, namely, that malversation would be prevented by good Auditors. But what and who are good Auditors? Would your Auditors be nominated by Directors—would they be permanent? Because if they were any thing else than shareholders, taken in rotation from the share lists, to serve for one year and then retire, or if they were not to have plenary and independent power to inspect, enquire, and report, I would not give one shilling for any thing they might say or do. In some lines, Directors audit their own disbursements; it is hard to believe, in the year of grace and march of intellect 1841, in the existence of so monstrous an absurdity, but still shareholders "contented creatures," acquiesce in such arrangements!

That you may not be in doubt as to the changes I work for, and will continue to exhort shareholders to adopt, until I see them in practice, I here pledge myself that nothing less shall stay my pen than securing in our service *Directors taken from the share lists in alphabetical rotation, for residence near the lines, and for largest holdings; and Auditors from the share lists in alphabetical order, to serve one year and no longer.*

Oh! yes, I am sure you think that Directors should not be changed, and that they should be highly paid (it is not long since that *large numbers* of these unchangeable, highly-paid persons were contended for, but that point—it is the first outwork of corruption we have taken—is abandoned.) It is pleasant that a man, once in, can reckon upon a Directorship as a life annuity in money and patronage, and if we fail in our efforts at reform, he may presently very confidently leave the reversion to his descendants as securely as if it were real estate—a good snug freehold—a perpetual rent and other profits, unburthened by land tax. Hence the cry for "confidence," for undisturbed possession, that none but extravagantly paid service can be efficient, and all the other stale stories brought to bolster up the peculation, the jobbing, the misrepresentation, the false estimates, the trimming half yearly reports, the concealment of facts, the evasion of enquiry, the refusal of book and share-list inspection, which to this hour lowers and disgraces, through railway proceedings, the character of the British commercial community. The outside barbarians having stormed *numbers*, having got tired of paying four-and-twenty Directors per line, boards are forthwith assembled to ballot, or prick, out each other, and the weakest go to the wall—the little ones are thrown over-board without a pang. Straight come forth the Leviathans, with inimitable cunning, and say—not pretending to know a word of public opinion, 'See! we have entered upon reform, instead of 24, we mean to do the business with 5, or 8 or 9 (as may be) Directors, we shall devote most of our time to your interests, we have great "railway experience," and (this to secure permanence) in time we shall become quite perfect.' Of course we must be well paid—cheap service is worth nothing—you will give us the sum we took for the two dozen. And thus it is, by such bold devices as these, that it is attempted to keep on the juggle, and to continue turning over our profits to stock-jobbers, bankers, engineers, contractors, attornies, to the original provisional Committees, in short, or to their lineal descendants.

It is for the public, not for me to determine whether your letter weakens or sustains the present Directorial system, but were I one of that numerous fraternity, far from feeling grateful to you for re-opening or continuing the discussion, and reluctant as I might be to turn a cold shoulder to zeal and ardour in defence of my "order," I should be constrained to repudiate you as a friend, from

Digitized by Google

feeling that unbiassed persons will consider your arguments as tending more to hasten my ejection than to give permanence to my appointment.

BIRMINGHAM AND GLOUCESTER RAILWAY AND THE CHELTENHAM COACH MASTERS.

To the Editor of the Railway Times.

SIR,—Allow me space to make a few observations in reply to your anonymous correspondent on "The Birmingham and Gloucester Railway and the Cheltenham Coach Masters."

The public has already been acquainted that the omnibus, fly, and posting business at the Cheltenham stations has been with the sanction of the Directors grossly monopolised by two parties to the exclusion of another proprietor and myself. Your correspondent has published the letter sent to Messrs. Haines and Dangerfield, giving them exclusive privileges, but he has omitted the Secretary's arbitrary letter of the same date (January 19th) to the other proprietors, wherein he states that "in consequence of the very irregular manner in which the omnibus business between the railway station and Cheltenham has been conducted, and the great annoyances to which the public have been subjected, the Directors have determined upon confining the business to *two* parties, and have consequently instructed me to make the necessary arrangements with Messrs. Haines and Dangerfield to commence on Monday next, the 22nd instant."

I will now revert to my original intention, that of replying to your nameless correspondent's remarks. In referring to my last letter, he has the courtesy, in *one* instance, to give me credit for truth; and yet he immediately afterwards proceeds to flatly contradict my statements. If since the opening of the line to Gloucester, the trains have not been amply supplied with conveyances, it was not for the *omnibus proprietors* to have consulted together to improve the plan; *we* should never have agreed; it was for the *Directors to have insisted* upon their plan being carried into effect. *Once*, and once only, did I see Mr. Edgill upon the business, when he suggested a plan, and though *that plan* gave some advantages to Haines and Dangerfield, I *at once* expressed my willingness to comply, but the arrangement was never carried into effect. In that instance then, Mr. Burgess, as Superintendent, was remiss in his duty.

I must correct your informant on another point, as to which, although he took great pains to learn the truth, he is wrong. He says, that after Mr. Edgill's interview no change took place excepting that Mr. Fleischmann let his omnibus to two men of low character. Now, the fact is, *I had* let my omnibus for some considerable time previous to seeing Mr. Edgill, and one request made by him was that I would again take it into my own hands, which I promised I would, *and did*, when the time I had let it expired.

The circumstance respecting Mr. Hodgson I do not deny, but upon that gentleman complaining I told the man in the presence of Mr. H. that on the expiration of his time he should not drive again, and I carried my threat into execution. If other complaints were made I was ignorant of them, and it was the duty of Mr. Burgess to have put me in possession of the facts. By the Secretary's letter it is seen the complaints were general, *and not confined to the omnibuses of the George and Fleece Hotels.*

Your nameless correspondent denies the charge of assault committed upon me. In answer to this I refer to Mrs. Dr. Williams, Southampton. I deny also that I *insisted* upon going on the passenger platform. I merely accompanied Mrs. Williams in search of her children. I am happy to say my hotel stands too high in the estimation of the public to make it necessary to resort to the platform of a railway to solicit patronage. The circumstance of Mrs. Williams having engaged the entire of the carriage refutes this charge.

It is said no steps have been taken to prevent the opposition. I would ask, if on the very first day that Haines and Dangerfield were INTENDED to have the whole of the conveyance business, the omnibuses of the George and Fleece Hotels were not prevented taking passengers to *the trains?* Were they not stopped at the gates? and were not the passengers compelled to walk through the yard to the railway carriages? Have not my men, as also those of the Fleece, been threatened to be taken into custody if they dared to place the omnibuses *in sight of the yard?* Has not a one-horse omnibus been placed near the gates? And have not passengers been offered to be conveyed into town for twopence and even one penny? And yet no steps have been taken to prevent opposition!

I again assert that *I did*, at a very considerable expense, *purchase* an omnibus,* and I positively assert *no direct* complaint was ever made to me from the Company, *i. e.* until I received Mr. Burgess's letter of the 19th January, complaining of the system, and giving me THREE DAYS' notice to withdraw, without the *chance* of acceding to any proposition for the better regulation of the conveyance department.

Now, I would ask what is the result of the new system? Why, that the public are daily and hourly imposed upon. For instance; Mr. Sweetman, a gentleman well known in Cheltenham, with two friends, on Tuesday last were made to pay 1s. each for their conveyance into Cheltenham. Mr. Rodgers, with a party of five, was also subjected to the same imposition; and I have a family in my hotel who ten days ago were detained one hour and five minutes at the station, waiting for a conveyance.

I cannot but express my surprise that your correspondent, who has been so *particular* in inquiring into the circumstances of the dispute, has never mentioned one word regarding the carriage to which I alluded in my last letter. Let me ask him, can he deny the *disgraceful* particulars I related? If I am to be subjected to the tyranny and oppression of the railroad monopolists, I have one consolation, which is, I have the good will and support of the public, who hitherto have plainly shown their opinion of the monopoly.

I am, Sir, your obedient servant,

J. B. FLEISCHMANN.

George Hotel, Cheltenham, April 27, 1841.

The following additional correspondence has taken place between Mr. Fleischmann and the Railway Company:—

Mr. Fleischmann to the Board of Directors.

George Hotel, Cheltenham, April 17, 1841.

GENTLEMEN,—I again take the liberty of addressing you relative to the omnibus business in Cheltenham, and do trust you will re-consider the matter, and again allow my omnibus and post-horses to enter your yard. You must be aware I have an extensive trade to protect, and one that has *in no little degree* suffered by the introduction of railway travelling. Since being expelled your yard, I have, in my *own defence*, been compelled to ply outside your gates; and though I can assure you, *on my word*, it has *been more profitable* to me, I do not consider it respectable, or what I like to do. I really think, under the circumstances, that you receive *parcels* from my *coach office*, and *passengers* from my *hotel* (independent of the time it takes daily to answer the *innumerable* questions relative to the arrival and departure of trains), I am entitled to a share of your favours. Should you comply with my request, I will pledge myself to conform to any *restrictions* so long as preferences are avoided; and I feel convinced conveyances for your passengers can in *no way* be so well supplied as *by the four omnibus proprietors*, two of whom *should work to the trains*, and two *from*. Trusting you will in some way give me a reply,

I am, Gentlemen, your obedient servant,

J. B. FLEISCHMANN.

The Directors of the Birmingham and Gloucester Railway.

* We have been shown documents which prove this most satisfactorily.—ED. R. T.

Reply of the Board.

Birmingham, April 28th, 1841.

SIR,—In reply to your letter of the 17th, addressed to the Directors of this Company, requesting them to reconsider the matter of the Cheltenham omnibus arrangements, I am instructed to inform you, that in making these arrangements for the supply of omnibuses, &c., they had to consider by what plan the accommodation of the public could be best provided for, as by a due attention to this point, both the interest and character of the Company would be much affected. After four months trial of the plan of competition by four parties, and the disagreeable experience of constant and repeated complaints on the part of the public—after unavailing attempts on the part of the Directors to obtain due regularity and civility, and an adherence to regulated charges—after many and anxious discussions on the subject, it was deemed most desirable to place the business in the hands of two persons only; and the Directors, therefore, came to the resolution of adopting that plan. But though they felt themselves at perfect liberty to take such steps in this respect as seemed to them most advantageous to the Company, it was their earnest desire to prevent the arrangement operating injuriously to others who had previously had a share of the business. With this view, when you and Mr. Yearsley were apprised of the contemplated alterations, you were informed that the Company would take to the omnibuses you had employed in plying to and from the station, and also that the agreement with the parties who would in future transact the business, was so framed that the omnibuses would call at the "Fleece" and "George" hotels, to put down and take up such passengers as might wish to be conveyed to or from those houses. These arrangements were made with a *bona fide* desire to act fairly towards all the hotels, the Directors not wishing to interfere with the business of any house. They still entertain the same sentiments, and if their intentions have been hitherto frustrated, they feel that the blame does not rest with them. It may, perhaps, be necessary to add, that no alteration in the existing arrangement is contemplated. I am, Sir, yours, &c.,

WM. BURGESS, Secretary.

Mr. J. B. Fleischmann.

THE NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR.—In your journal of last Saturday, your printer's substitution of the word "and" for "than," rather mars the meaning of what I intended to say regarding the above railway in my short note to you dated the 19th instant.

I meant to show that the circumstance of the great trunk line of Railway through the midland counties and North of England, extending so much further on the east of the island to Darlington, *than* the main railway route on the west, which reaches only to Lancaster, was generally looked upon as promising beneficial results to the North Midland, by attracting a considerable portion of the Scotch traffic to that railway route, of which it forms so important a link.

As regards the Newcastle and Carlisle Railway, for instance the distance between Carlisle and Lancaster to be *coached* is 61 miles, the distance between Newcastle and Darlington is 32 miles—about half.

It is supposed therefore that many will take to the rail at once from Carlisle to Newcastle, coach the much shorter distance from the latter place to Darlington, and there reach the continuous main line to the south, instead of having to undergo the much longer coach journey between Carlisle and Lancaster, which awaits them by the west route. This is the view of the subject taken by many, but it does not *appear* to be mine, according to the version of my letter to you, as it stands in your paper of the 24th instant.

Perhaps you will have the goodness to give me a corner for this.

A NORTH MIDLAND SHAREHOLDER.

26th April, 1841.

MANCHESTER, BOLTON, AND BURY RAILWAY—MR. GORDON'S SLAUGHTER-OF-MOTHER-AND-CHILD STORY.

To the Editor of the Railway Times.

SIR,—In your last *Railway Times*, in reviewing Mr. Gordon's book, you give a quotation from it, in which he notices an accident as having occurred on this railway to a Mrs. Wood and child; *killing both on the spot, after having thrown them forward a distance of twenty yards, with other details of dismemberment*, &c. &c.; and which he adds is not in evidence before Parliament. Certainly it is in evidence nowhere, that I know of, simply because nothing of the sort ever occurred; for as it respects the public, no man, woman, or child, has ever been killed on this railway, or even seriously injured. Neither is there any part of the railway intersecting any such person's field, any more than that the railway carriages ever intersected any such person's legs, as the notice alludes to; and therefore it is curious to conjecture from what source Mr. Gordon has drawn his very grim story.

Perhaps you will do me the favour to insert this in your next.

I am, Sir, your's very truly,

JOHN HAWKSHAW.

Office, New Bailey Street, Salford.
25th April, 1841.

GREAT WESTERN RAILWAY TRAVELLING AND TRAFFIC.

To the Editor of the Railway Times.

SIR,—It would be well for your flippant correspondent of last Saturday, on this subject, under the signature of "A Looker-On," to inform himself, before he attempts to correct others.

He presumes to assert that "*closed carriages never have been used for second class upon that line.*"

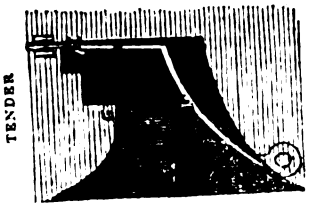
I reply that THIS ASSERTION IS WHOLLY UNTRUE, having repeatedly ridden in them myself. The fare used to be about 20 per cent. above that of the open carriages, and they were called, I think, "1st rate, 2nd class."

I therefore now challenge him to produce an authentic testimonial from the Great Western Railway in support of his denial of this fact, or to submit to be ever disbelieved in future.

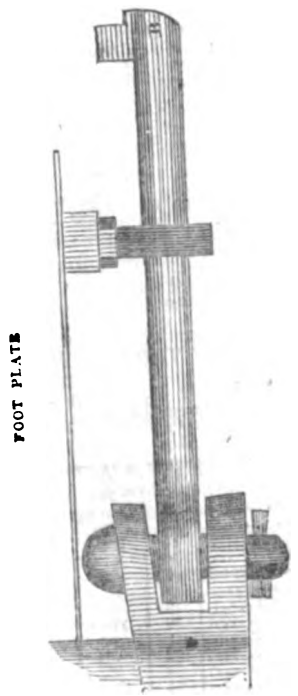
His ignorance and veracity seem much upon a par—for, whether he knows it or not, second class carriages, closed, are now running on the Greenwich Railway, if not on others also.

I may be a "hot-house plant." I take it he is an *ice plant*, as he enjoys the blowing in an open carriage at full speed upon a railway. The public generally may be expected to be classifiable rather under my genus than under his.

A TRAVELLER FOR PLEASURE.



April 26, 1841.



MR. SMITH'S PLANS FOR THE RESISTANCE OF SHOCKS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I request the favour of your making public the following plans of resisting shocks on railways which I have patented. My first idea was to apply a number of helical springs (similar to those in use on the Liverpool and Manchester first-class carriages), and of eight or ten feet of action; there was to be one of these springs brought into action for every additional carriage; and every carriage in the train was to act simultaneously upon these springs, whether the draw or shock was from the front or end; and the action was to be transmitted by a jointed buffing bar running under the train and projecting in front and behind between the carriages. The advantages I contemplated from this plan was a consolidation of the elastic resisting medium, thereby preserving more uniformity in the action of the carriages on the springs than when acting individually with different powers and different weights on their respective springs. For instance a shock decreases in power with each succeeding carriage—acting with undue and destructive violence upon the first, while the last scarcely feels the shock, as in the case of the Manchester train a little while ago. From these and other similar effects I draw the inference that a train of carriages may be stopped with safety (allowing a sufficient power of resistance), in one-tenth of its length, that is, a space made up of the action of all the springs.

I have invented another machine spoken slightly of in pages 1100 and 1101 of your last volume, which I believe to be an improvement upon the before mentioned apparatus inasmuch as it is more portable, more economical, and is without recoil. I employ, as in the former case, a strong hydraulic tube placed under the tender with a buffing bar projecting 8 or 10 feet in front of the engine, and on which the whole train acts, but with this difference, that there is no bar under the carriages which are all coupled together in the manner represented in the accompanying sketch, so as to afford instant disconnection of any one or more at will.

There is a bell-mouthed aperture in the tender at A, into which the pin B connected with the engine slides, and when it arrives at the point C, it is forced up into the recess D, where it remains. When required to disconnect the tender the pin E presses down the spring, and at the same time the pin drops, and connection is broken. The carriages are firmly attached by merely bringing them together, so that an engine-driver may disconnect the engine from the tender, or the engine and tender from the train, without getting from the foot plate. The advantages of this contrivance are obvious.

The third and last subject with which I will trouble your attention is an alteration in the vertical or side springs of carriages, which I propose to be of a helical form instead of the usual plate elliptical springs. I propose that there should be four of these springs at an angle from the axle to the external brace frame of the carriage. The advantages I perceive accruing from this system are an equal spring resistance in every direction, whether lateral or vertical; and each spring having a double action, that is acting either by compression or expansion, should a shock be given from any part of the carriage, its tendency would be to contract that spring and expand the other three. All the springs being exposed to the same shock with equal strength, it seems reasonable to conclude that their weight need not be so much as that of those in general use, and they might be always screwed down in such manner as to give the carriage an equal and level bearing whatever the number of passengers.

All these plans are at present quite matters of theory, and as such I submit them to your readers, than a certain class of whom I know of none whose criticisms are more just or valuable. Should even a part of them prove a failure (of which I have little doubt), I shall feel amply rewarded in having contributed my mite to the splendid collection of scientific and practical matter with which your columns for the last six months have abounded.

I remain, Sir, yours respectfully,

WILLIAM HENRY SMITH.

Finsbury Chambers, Bloomfield-street.

ANOTHER FATAL ACCIDENT ON THE BIRMINGHAM AND GLOUCESTER RAILWAY.—It is our painful duty to record another fatal accident on this line by which the company have been deprived of the services of one of the most active and attentive guards upon it. The name of the unfortunate man is Dudley, and he was well known to the inhabitants of this city, from the fact of his having acted as guard to one of the omnibuses from the railway office in Foregate-street to the Spetchley station, until the practice of sending guards with the omnibuses was abandoned. It seems that the poor fellow was coming up from Gloucester yesterday afternoon with the train which arrives at Spetchley a little before six, and with the temerity which too frequently attaches to persons employed on railways, proceeded from the last carriage (in which, it seems, he was often in the habit of sitting) to his proper seat on the outside of one of the carriages, while the train was still in motion, before it arrived at the Eckington station. While thus employed, it is supposed the unfortunate young man fell between the carriages, and the train passing over his body, he was instantly killed, for when the train stopped at Eckington, his lifeless corpse was seen lying on the line a few yards from the station. In this instance no blame appears to attach to any but the ill-fated man himself, and it is a most extraordinary fact that every person who has been killed on this line has been in some way or other connected with the Company, thus showing that a due degree of caution has not been exercised by their servants. It is greatly to be hoped that these repeated and awful warnings will at length have their due effect upon the survivors, but it is unfortunately in the very nature of things that persons become more indifferent to danger the more they are accustomed to it. Poor Dudley (who as we before hinted, was much respected for his civility and attention to passengers) was a married man, with no family, and we believe was formerly a member of the Society of Friends. We understand that his regular district was between Cheltenham and Gloucester; how he came to be near Eckington we know not.—*Worcester Chronicle*, April 28.

LEEDS, BRADFORD, AND HALIFAX PROPOSED RAILWAY.—A section of the proposed line has been submitted to some of the most influential gentlemen of Halifax, who have generally expressed themselves much pleased with it. We understand there are no works upon it, but what are of the most practicable description. The saving of distance from Leeds to Halifax, over the present railway route, will be fourteen and a half miles; by this line Bradford will be accommodated with a line of rails to Manchester direct, also London, Hull, and York. The advantages that Bradford and Halifax would derive from the formation of this line of railway are inestimable. This line has been laid down under the direction of Messrs. George and John Rennie, civil engineers, by Mr. Hamilton H. Fulton.—*Sheffield Patriot*.

1. Toll to London and Birmingham 117*l.* 7s. 3d., to be deducted from gross receipts.

2. The receipts are exclusive of those from the Post-office.

5. Receipts include the Northern and Eastern toll, &c.

7. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*

10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.

12. The 32*l.* 16s. 7d. from goods, &c. is for toll only.

13. Ten per cent. is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

17. The capital of 741,000*l.* includes the new capital for London and Brighton station.

18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

22. The 3,459*l.* 13s. 0d. are the receipts after deducting the toll to the North Midland Company.

23. The receipts for goods, &c. include, carriages, 80*l.* 13s. 0d.; horses, 118*l.* 18s. 6d.; dogs, 1*l.* 17s. 6d.; parcels, 164*l.* 3s. 2d.; cattle, 21*l.* 1s. 6d.; corn, 14*l.* 15s. 8½d; heavy goods, 40*l.* 6s. 1d.; coal, 46*l.* 11s. 3½d. Total, 854*l.* 6s. 9d.

25. Including 12*l.* 15s. 11d., Manchester and Leeds traffic for present week.

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A North Midland Proprietor *inquires why the Directors do not include in their weekly traffic returns the toll payable to them by the Manchester and Leeds Company. Since the Manchester and Leeds Railway was opened throughout the Directors have given the traffic weekly, deducting the tolls for the ten miles they travel on the North Midland line, and the amount of these tolls must therefore be ascertained every week. Why, then, should the Directors of the North Midland Railway withhold them?*

Manchester and Leeds Railway.—*The report of an accident on this line copied in our last number from a Manchester paper, turns out to have been only a duplicate version of the accident on the same line noticed in our journal of the 10th inst.*

Bristol and Gloucester.—*We do not fully comprehend the scope of the letter of* A Constant Reader (*Lancaster.*) *He will perhaps put his inquiry into a more explicit shape.*

THE RAILWAY TIMES.

SATURDAY, MAY 1, 1841.

It gives us great satisfaction to be able to announce, on the best authority, that a plan has been at last matured, and *has received the sanction of Government*, by which the benefits of the Railway System will be speedily extended to Ireland, on a large and comprehensive scale, *independently of any aid from the public purse*, and with no more of Government interference than will conduce equally to the protection of private interests and of the public weal. We have from the first contended, that any amount of public money that could have been required to carry into effect the recommendations of the Government Commissioners of 1839, would have been well and wisely expended; but we are not on that account the less disposed to welcome a plan by which the great end and object of these recommendations may be accomplished without any public aid whatever. Nay, it rejoiceth us much that a way has been found out by which *Irish* property and credit alone may suffice to procure for Ireland all the capital she stands in need of for the improvement of her internal communications. Self-reliance is always a pleasant thing to contemplate, whether it be exhibited by nations or by individuals. All that is asked by the plan we speak of is Act of Parliament powers to enable Ireland to borrow on the credit of *her own resources*, money enough to give her facilities of intercourse and transport equal to those of England and Scotland; and such powers we hold it to be impossible to refuse.

The leading principle of the present plan is such *a combination of private enterprise with Government superintendance and regulation*, as shall procure for Ireland a general railway system at the least possible cost.

To *raise the capital required*, which is the first important thing to be done, it is proposed to offer to private individuals disposed to advance it, the following advantages:—First, four per cent. per annum *certain*, to be secured on the Irish County Rates; and second, one-half of the profits arising from the railways executed with the capital furnished, exceeding the sum necessary to pay the four per cent. so secured in the first place. We are happy to add that a body of London capitalists of the highest eminence have already come forward with an offer of all the capital wanted on these terms. At the head of the list are the names of Mr. Alderman Thompson, M.P., John Abel Smith, Esq., and Isaac Lyon Goldsmid, Esq.

The *inducements to the Irish Counties* to guarantee the payment of the 4 per cent. certain, are many and obvious, but we shall content ourselves with pointing out a few of the most prominent. First, it is proposed to appropriate to the Counties the remaining half of the surplus profits of the railways after payment of the 4 per cent. The traffic estimates of the Irish Railway Commissioners in 1838-9, would not warrant us in anticipating above 4 per cent. from more than a very few Irish railways, but it has been generally allowed that these estimates were a great deal too low, and to any one who doubts this, we recommend an attentive perusal of a very clever dissection of them in the last number of our Birmingham contemporary, the *Railroad Monthly Journal*. Sooner or later, we have not a doubt that the half of the surplus profits falling to the share of the Counties, would be so considerable as to enable them not only greatly to reduce their present rates, but to lay out large sums in local improvements. We have seen in the case of the English county of Cheshire, how much may be done from funds obtained in this way—the whole of the rates of that county, and the cost of the magnificent bridge and spacious Courts of Justice at Chester, having been defrayed out of the profits arising from the river Weaver navigation (sometimes facetiously called *Miss Weaver, the Cheshire heiress*), and this is but a sample of what every Irish county possessed of a proprietary interest in railways might reasonably anticipate for itself in course of time. Secondly, the execution of the railways would give employment for several years to many thousands of the present starving poor of the sister kingdom, and reduce in a corresponding degree the poor-rates to which Ireland as well as England is now subject. And thirdly, the counties will immediately secure for themselves, at an exceedingly small risk, all the inestimable advantages of the Railway System, while, if the present plan be rejected, they may have many long years to wait for so desirable a consummation.

It is not proposed that *all* the counties of Ireland shall become bound for the 4 per cent. interest, nor any but such as are actually intersected by the railways to be executed; neither will those liable to be rated to make it good, be assessed equally, but in proportion only as they are respectively benefitted.

The works are to be executed by Commissioners to be appointed by Government; subject to a Board of Control, consisting of gentlemen of rank, station, and influence, belonging to or officially connected with, the counties intersected.

Each railway is to be the subject of a separate and distinct subscription; and the subscribers to each are to form a Corporation, and to be represented by a Board of Directors.

The first which it is proposed to make is the great southern trunk line, recommended by the Railway Commissioners in 1838-9, commencing at Dublin and proceeding by way of Holycross to Limerick and Cork. And this line is to be divided into two sections—the Dublin and Limerick and Limerick and Cork—to be executed, the one after the other. The estimated cost of the former section is 1,300,000*l.*; and small as the Commisioners' estimate of the traffic upon it is, should the actual traffic not fall below it, that will yield on the required capital a net profit of full 7 per cent.

The Grand Jury of the county of Limerick in their admirable petition to the House of Commons, inserted in our last number, complain of the "legislative restrictions" thrown in the way of capitalists disposed to embark in railways—alluding apparently to the 10 per cent deposit required before any railway Act can be obtained; but so little has that been felt to be an obstacle in the present instance, that the capitalists, by whom the present plan is promoted, have engaged with the Government to deposit at once the 130,000*l.* required for the Dublin and Limerick line, on the understanding that an Act for it shall be allowed to pass during the present session. For our own parts, we have all along been of opinion that no really good project was ever seriously impeded (not to say vitally injured) by the regulation in question. Speculation — baseless unprofitable speculation—speculation that could tend only to the advantage of the projectors at the expense of their credulous dupes, may have been, and we know has been, checked by the regulations so frequently complained of, but wherever a disposition has been evinced, as in the present case, to carry out a railway undertaking fairly, honestly and fully, we venture to assert that no perceptible obstacle has ever been thrown in the way by any enactment of the kind. Capitalists do not (at least we should hope they do not) embark in speculations of this description without good cause shown, and we will not pay them the bad compliment to suppose that they would abandon a really promising project, merely because the rules of Parliament require that a certain per centage of the necessary capital shall be forthcoming a few months earlier than might otherwise be required. Those who risk their property in railway adventures must of course make up their minds in most cases to a long course of unprofitable expectation, and to imagine that the difference of a few months would change their views as to the desirableness of a particular scheme, would be to suppose that they look less to permanent investment than to the stock-market prices of the day. Share gambling has been one of the greatest inflictions with which the Railway System has hitherto been cursed, but it cannot be questioned that much money has been embarked in railway undertakings without regard to temporary fluctuations of price, and solely from a well-founded anticipation of future benefit to the investors, as well as to the country at large. In such cases the Standing Orders as to deposits can have no influence.

The Limerick Grand Jury Petitioners expatiate on the great advantage which Government Commissioners must possess over any

Digitized by Google

Company of private individuals in settling all matters of compensation with owners and occupiers of land; and they will be glad to learn that this advantage has not been lost sight of in the concoction of the plan before us. The land required for each railway is to be vested in the Company of subscribers to it; and the Commissioners are to be empowered to settle and adjudicate in all cases of disputed value. It is but fair to the Irish landowners to state that in the few cases that have hitherto come before them, they have shown a much more commendable spirit, in this respect, than too many of their English brethren. In the instance of the Dublin and Kilkenny project—in which there was, perhaps, less reason for forbearance than in many others—the landowners, we understand, met the Directors with a most amicable feeling, and in the course of a few weeks arrangements were voluntarily and cheerfully entered into which, in this country, would have required the interposition of some forty or fifty Sheriffs' juries.

The merit of devising the plan, the leading features of which we have now presented to our readers, and of advancing it so far towards a happy accomplishment is chiefly due, we believe, to Mr. CHARLES VIGNOLES, C. E., whose valuable contributions to the Reports of the Irish Railway Commissioners in 1838-9, must be in the recollection of all who have taken any interest in this important subject.

THE fourth, and we suppose the final, Report of Lieutenant-Colonel Sir FREDERIC SMITH and Professor BARLOW, the Commissioners appointed to investigate the best railway routes between the capitals of the three kingdoms, has just appeared, and its most material portions will be found in another part of our present number.

It will be seen that, after full consideration, the preference has been given to the western route to Scotland, by Lancaster; not as being the most expedient route *so far as Scotland alone* is concerned, but as being the route which best combines in one the threefold object of (1.) a communication between London and Edinburgh and Glasgow, (2.) between the manufacturing districts of Lancashire and the west of Scotland, and (3.) between Manchester and Glasgow and the north of Ireland —which threefold object formed the problem which the Commissioners were appointed to solve. Few disinterested persons will be disposed, we think, to call in question the judgment of the Commissioners, while none can refuse them the credit of having used extraordinary diligence and displayed great talent in deciding between the claims of the rival projects. Any decision to which the Commissioners could have come would, of course, have given dissatisfaction to the promoters of the rejected schemes, and probably to parties locally interested in their success; and it is not to be supposed that the disappointment naturally felt by the advocates of the east coast route will not vent itself in criticism and carping; but it will require a great deal more than this to convince Parliament and the public that the conclusion to which the Commissioners have come is not a very proper one. Indeed, the Report speaks for itself; and until the facts therein so lucidly set forth can be proved to be fictions, it will be useless to clamour against the Commissioners' decision. We say this, because we have already seen various indications of a determined opposition on the part of some of the over-zealous friends of the unsuccessful schemes, even when the result of the Report was only conjectured. Now that the matter is placed beyond a doubt, the storm will probably burst forth in all its fury. The Commissioners may however afford afford to treat the matter with perfect indifference, leaving their character for impartiality and independence to be judged of by the country at large, from the contents of the very able document now sent forth. The hostility exhibited to their Report on the competing projects to the Welsh coast has already died a natural death, and such we predict will be the issue of any similar exhibition in the present instance.

The Commissioners, it will be seen, give it as their opinion that at present there is not sufficient traffic to justify the formation of a double line to Scotland, namely, one by the east coast and another by the west; and although we know that contrary views are entertained by many persons who profess to have investigated the matter, it is much better to err on the safe side, and to get *one* line constructed before a second is brought forward. That ultimately there must be both an east and a west coast line to Scotland seems pretty certain, but at present it would only be risking the chance of railway communication by either route to have both schemes in the field. The Commissioners, indeed, are so little sanguine as to pecuniary results that they do not hesitate to pronounce even the one line as not very tempting in a commercial point of view, and hence urge the necessity of support from the local landowners, and of facilities at the hands of Parliament. In both of these recommendations we very cordially concur, but at the same time we do not think that the prospect of direct profit from such a speculation is by any means so unpromising as the Commissioners appear to suppose. We are satisfied—although we speak with all deference in opposition to the deliberate opinion of gentlemen who have so thoroughly investigated the matter as the Commissioners have—that whatever may be the amount of present traffic, the formation of a railway would so open up the resources of the district, that *much* local trade would immediately spring up, in addition to the great increase of *through* traffic which would inevitably result from an increase of travelling facilities. A line economically constructed would therefore, we have no doubt, return a very fair pecuniary profit, and the more especially so, if it were taken up in right earnest by the landed proprietors on the route, for in that case we might reasonably expect that one great cause of first cost, and consequently of diminished income—we mean the extortions and graspings of the lords of the soil—would be removed. If these parties are wise, they will for their own sakes adopt and act upon the advice given by the Commissioners, for the benefit to *them* is certain, however doubtful to mere capitalists and speculators; and if they do not *at once* take the matter up, they are throwing away the chance of an ultimate advantage, the importance and extent which it would be difficult, if not impossible, at present to calculate. Persons at a distance will, of course, take their cue from those who are more immediately connected with the district, and if the latter are found to be insensible of the benefits which such a project would supply, or apathetic as to the means of carrying it into effect, it is easy to foresee what will be the result. Parliament may appoint Commissioners to report, but the locality will be as far as ever from securing the means of railway communication—nay, much farther off from their object than before, since every abortive attempt of the kind only tends to heap up obstacles against future attempts. All difficulty is at an end as regards doubts of obtaining the sanction of the legislature, and if under these circumstances, the landowners of the district keep back, they will be wholly without excuse. Railways are fortunately much better appreciated now than they were some three or four years back, and we cannot suppose that in this instance northern acuteness will fail to perceive, or northern enterprise hesitate to secure, the advantages which are now placed within their reach.

We should have taken it for granted that Parliament would at once give every facility to parties who may feel disposed to carry out the recommendations of the Commissioners, had we not before us the most extraordinary, and indeed wholly unaccountable, determination recently come to in the case of the proposed Great Holyhead Railway, when a suspension of the Standing Orders was refused, although it was admitted on all hands that no injury could possibly have resulted to any one individual from complying with the prayer of the petitioners. It strikes us as being most absurdly inconsistent for Parliament to take so much pains to have the best railway route between two given points determined upon, and then on a mere point of form to interpose between the recommendations of their own appointed officers, and those who are anxious to carry such recommendations into effect. Honourable members, in voting for the appointment of Commissioners, must, one would think, have regarded the object as of national interest and importance, and yet, by refusing to dispense with what may under ordinary circumstances be a very necessary precaution, but which in the instance referred to was altogether uncalled for, they practically put off for a year, if not for a longer period, the realisation of their self-expressed desires. We sincerely trust that, in the case of the Scottish line, a different course will be pursued, and that every means at the disposal of the legislature will be called into action, to expedite the completion of so important an undertaking. Much will depend upon the spirit shown by those locally interested, and it is to be hoped that no shortcoming on their parts will furnish an excuse for refusing the desired facilities by those who are hostile to every project of the kind, or the kindred class who would sacrifice a reality of the most useful description, to the punctilious observance of an appointed form.

We shall have frequent occasion to return to the Commissioners' Report, but we cannot conclude our present notice without calling attention to the extraordinary discrepancy which appears in some of the estimates handed in by the Engineers connected with the several schemes. Is it to be wondered at that public confidence should be shaken in regard to the ability or integrity of the profession, when they find instances of difference so glaring in matters which one would suppose might by this time have been reduced to accurate calculation? To call Engineers' estimates mere guess-work, would be in many instances, we fear, to treat them too leniently. They are a discredit to the railway system, and a disgrace to their framers. One of our correspondents last week spoke of an alleged want of patience on the part of railway proprietors at large, whereas had he reflected upon the very many provocations which estimates of construction alone have supplied, (to say nothing of other sources of indignation,) he must have admired the forbearance which has been so signally manifested—a forbearance

Digitized by Google

which we cannot but think, has been carried to a most culpable extent. We know of no means whereby Engineers can be rendered more competent or more careful except by making their emoluments strictly dependant upon the accuracy of their calculations. At present they have too frequently a direct pecuniary inducement to swell the expenditure of their employers at the cost of their own reputation. Were they held personally responsible for every item of excess which they could not clearly prove it was impossible to have foreseen, they would frame their estimates after another fashion. The "evil that men do lives after them," and the injury which has been inflicted upon the railway system and upon its best friends through the incapacity or worse of the great body of Engineers, will rebound upon their own heads, and descend to their successors, unless a speedy and very effectual reformation —of which we confess we see but small hope— should take place in the tactics of the profession.

We congratulate our friends of the Principality on the auspicious opening of their first passenger railway (the Taff Vale), and on the very superior manner in which the work is universally allowed to have been executed. We mentioned in our last that the officer (Sir FREDERIC SMITH) appointed by the Board of Trade to inspect the line had reported most favourably of its working condition, and we now publish elsewhere a letter addressed by that gentleman to the Secretary of the Company, in which he bears very handsome testimony to "the skilful manner in which Mr. BUSH has grappled with the professional difficulties he had to contend with in the formation of the line." The Taff Vale Railway extends from Merthyr Tydvil, the capital of the Welsh iron districts, to the port of Cardiff, a distance of 24½ miles; that is to say, the *main* line of the railway which was that opened last week, for there are three short but important branches which still remain to be completed. The first which is called the Dinas branch, leads to the collieries of Mr. COFFIN, who is stated to have contracted with the Great Western Railway Company to supply them with no less than 40,000 tons annually for seven years to come; the second, called the Dowlais branch, connects the line with the extensive iron works of Sir JOHN GUEST, Bart., the Penny Darrin Iron Works of Mr. Alderman THOMPSON, the Castle Morlis lime quarries, &c.; and the third, which is called the Lancaich branch, will bring on the line the traffic arising from the collieries of Mr. POWELL and others. The Dinas branch is expected to be opened in a month or two; but the other two branches are not in so forward a state. Considering the vast quantities of valuable mineral produce of which this line will have the exclusive conveyance, and the great and rapidly increasing amount of population concentrated within its immediate vicinage, we cannot doubt but that it must prove eminently remunerative to its proprietors. The *Bristol Mercury* states, on the authority of the amiable and accomplished Lady CHARLOTTE GUEST, (a *poetical* authority certainly, but one whose *numbers* may, we feel assured, be entirely relied on), that "the receipts from passenger traffic when only open to Navigation House, had *far exceeded the estimate for the whole distance.*" The part from Cardiff to Navigation House (14 miles) was opened in October, 1840. The total capital authorised to be raised for the execution of the railway is, we believe, only 620,000*l.*, so that if this amount has not been exceeded—on which point we shall be glad to have some information from Mr. BUSH—the average cost as compared with other lines has been exceedingly moderate.

THE opening of the Cheltenham and Great Western Railway to Cirencester, announced for the 1st of May, is unavoidably delayed, in consequence of a serious slip in the joint embankment near Swindon. The permanent way is laid throughout, and the line, with the exception of this one point, is perfectly ready for the traffic. Messrs. Oldham, the well-known Contractors, are using their wonted energy to repair the disaster, and are actively filling up the gap at the rate of between 1,800 and 1,900 cubic yards per diem—an amount of work never, we believe, hitherto equalled, on any railway or public work in the kingdom.

—o—

A MOTION was carried in the House of Commons on Tuesday evening, by a majority of 54 to 50, the result of which may have some influence on the prospects of the proposed Cornish railway. The motion originated with Mr. Freshfield, and had for its object the appointment of a Select Committee to consider of the best port for the departure and arrival of the West India mails. It will be recollected that certain Commissioners have already reported in favour of Dartmouth, but it is contended that they have reported in error; and, in addition to Falmouth, claims are now put in for Bristol, Southampton, and some of the ports on the south-west coast of Ireland. The Chancellor of the Exchequer opposed the motion, but, as already intimated, without effect.

—o—

THE long-bottled wrath of our Eastern Counties' friends has at length exploded; and we give elsewhere *the Report*. When we have had time to examine the elaborate affidavits of the plaintiffs we shall be able to say how far we think we have wronged them—if wronged them at all. Meanwhile we may be allowed to express our surprise that persons professing so much anxiety to set themselves right with the public, should have taken so tedious a mode of doing so—(to say nothing of the expense which, even to a Company more embarrassed with wealth than the Eastern Counties' is commonly supposed to be, might have been expected to be a matter of some little consideration). A letter to our readers, of half the length of the Chairman's affidavit, and written at the time of the statement complained of, would have answered the purpose (always supposing that there is nothing simply vindictive in the proceeding) a vast deal better.

—o—

WE have to record this week the occurrence of another destructive conflagration at a railway station—but, thanks to the providence of the Directors of the Bristol and Exeter Railway, to whom chiefly the property destroyed belonged, we have not to lament the swallowing up of a single shilling of railway dividend by the flames. The total loss we are informed does not exceed 10,000*l.*, while the Company are insured to the extent of 30,000*l.* The offices concerned are—the Sun, to the amount of 20,000*l.*—the Atlas, 5,000*l.*—and the London Union, 5,000*l.*

We are glad to learn that this disaster will not cause any alteration in the time for opening the portion of this line from Bristol to Bridgewater, which will certainly take place, as announced, on the 31st of May. The timber and rails were laid down over nearly the whole of that distance a week ago. Since the late great improvement in the pecuniary condition of this Company, a most commendable degree of activity has been observable throughout their works, giving visible tokens of a well-supplied and well-administered Exchequer. The debentures of the Company are in such good repute, that no doubt is entertained of their being able to raise on loan all the money they are authorised to borrow, as rapidly as it may be wanted.

—o—

THE Companies who have this week petitioned against the new Railways Regulation Bill, are the Aylesbury Garnkirk and Glasgow, the Great North of England,, the London and Blackwall, the Sheffield and Manchester, the Stockton and Darlington, and the York and North Midland. A petition on the subject has likewise been presented from Mr. John Finney and will be found in another part of our present number. The whole of the petitions have been referred to the Select Committee on Railways. The total number of petitions against the Bill up to the 23rd ult. (the date of the last return) was 34.

—o—

ON Thursday the return ordered on the 2nd ult. "of the arrangements for the conveyance of the mails between London and Edinburgh," was laid before the House of Commons. It will no doubt be printed. On the same evening (on the motion of Mr. Wallace) copies were ordered:—

"Of the proposals made by the Postmaster-General to the Railway Companies in Scotland, for conveying the mails in that country, and of any offers made by the said Companies to the Postmaster-General for that purpose; showing whether these proposals were respectively made for conveying the mails on every day of the week, or were to the exclusion of Sundays, and in the latter case to state the reasons assigned for the said exclusion."

"Of any correspondence which has taken place between the Directors or Secretaries of the Railway Companies in Scotland, and the Surveyors and Secretary to the Post Office in that country, with the Postmaster-General, Colonel Maberly, or the Treasury, respecting the carrying of the mails on railways on Sundays, as they had formerly been on the common roads in that country.

"Of the contracts which have been made for carrying the mails which are sent entirely by railway in Scotland, or which are sent partly by mail coach, mail cart, riding post or otherwise, and partly by railway, to the same post towns in that country; the return to show the number of mails sent daily by one or other of the above modes respectively; showing whether they are carried every day of the week, at the same hours, at the same speed, and by the same conveyances, with the hour at which each is sent off, and the time allowed for each transit by each mode of conveyance on week days and on Sundays, when any alteration takes place on that day; and in such case to state the nature and effect of the alteration; showing also what mails are now detained in Scotland on Sundays, with the names of the chief post towns (such as London, Birmingham, Liverpool, Manchester, Aberdeen, Dundee, Perth, &c.) such mails had been sent from, and are detained at during Sundays, with the authority therefor, and the reason, if any, for these not being forwarded now, as formerly, on that day."

"Of all correspondence on the above subject between the Postmaster General, Colonel Maberly, Sir Edward Lees, the Surveyors to the Post Office, or the Treasury, with the magistrates of the city of Glasgow, with the Chairman of the Chamber of Commerce of that city, and the Magistrates and Chairmen of the Chambers of Commerce of the towns of Paisley, Greenock, Port Glasgow, Johnston, Beith, Irvine, Saltcoates, and Ayr, or with any

Digitized by Google

other public authorities whatever in these towns, including the Postmasters in each respectively, respecting the discontinuance of the conveyance of the mails on Sundays, as these were usually sent before railways came into operation, between the towns of Glasgow and Ayr, and Greenock and Glasgow."

—o—

THE House of Lords have, on the motion of the Home Secretary, appointed a Select Committee to enquire into Sunday Trading, on Canals, Navigable Rivers, *and Railways*; but we are glad to perceive, from what fell from Lord Normanby on the occasion, that it is not his intention "to interfere with or encroach upon the recreations of the poor," and more especially that he does not design "*to deal in any respect with travelling on the Sunday.*

—o—

THE further consideration of the Railways Regulation Bill in Committee, has been postponed till Monday next.

RAILWAY OFFENCES AND OFFENDERS.

ON Monday a man named James Betts, employed as a guard on the Great Western Railway, was charged before the Marylebone magistrates with being drunk and severely assaulting the landlord of a public house, and a police constable. The case was wholly unconnected with the prisoner's duty, but the magistrates being of opinion that a person in so responsible an office as that of a railway guard ought not to be engaged in drunken brawls, inflicted a fine of 10*l.* for the double assault. It was stated that the man would be dismissed from his situation, and it is very proper he should.

John Mann, an engine-driver in the service of the same Company, was on Monday brought before the magistrates of Eton charged with drunkenness and neglect of duty. The case was clearly proved, and (we quote from a report in the daily papers), "he was fined 4*l.*, including costs, *which he immediately paid!*" Surely, if ever there was a case in which the discretion vested in magistrates of substituting imprisonment and hard labour for a pecuniary fine ought to be exercised it is a case like the present, in which the safety of the public is perilled through the gross misconduct of a driver.

A more severe punishment for a much less serious offence was inflicted a few days ago upon one of the servants of the North Midland Company. The case is thus reported in the *Derbyshire Chronicle*:—

"On Tuesday last James Carroll, a pointsman and flagsman in the employ of the North Midland Railway Company, was brought before the magistrates at Derby, charged by Mr. Jackson, inspector of police on the line, with absenting himself from his post near the north end of Clay Cross tunnel on the 13th instant. *He was fined 5l., and in default of payment was ordered to be sent to prison for one month, with hard labour.* We understand that Carroll's conduct, if strictly investigated, would have subjected him to a much severer punishment; for, on the day on which he left his employment, a parcel for a gentleman connected with the railway at Clay Cross was given into his care: instead of delivering the parcel to the gentleman to whom it was addressed, Carroll, on the true principle of "Irish reciprocity," opened it himself, and finding it contained five sovereigns, he appropriated the money, and started off on a drinking spree to Derby, where he was captured by Mr. Jackson. The gentleman whom the prisoner had robbed declined to prosecute, the Railway Company had him brought up for the offence committed against them, in neglecting the performance of his duty."

The charge of felony not having been pressed, we are bound to suppose that the fine of 5*l.* was imposed solely because the prisoner had absented himself from his post, and although his conduct richly merited the punishment he has got, it will not be pretended that his offence involved consequences half so serious as that of the Great Western driver, who was fortunate enough to escape at a cheaper rate by just *twenty shillings*, and whose better wages enabled him to satisfy justice by purse instead of person!

Another fine of 5*l.* was on Saturday inflicted on a labourer, named Richard Hill, in the service of the Midland Counties' Company "for disobeying orders [says the *Leicester Journal*] and refusing to remove certain waggons from off the main line at the time a down train was due, thereby placing the lives of passengers in imminent danger." Here again the punishment was well deserved, but the salutary strictness exercised in this case only contrasts the more strongly with the culpable leniency of the Eton Bench. It would appear too, that different justices take different views of the value of money as measured by periods of incarceration. In the Midland Counties' case, we are told that the offender was "convicted in the penalty of 5*l.*, or *two* months imprisonment," whereas the delinquent on the neighbouring line (as above noticed) got off with *one* month!

Of all *merciful* magistrates, however, commend us to those of Darlington, who have on previous occasions figured in our pages. The following are a few cases as noticed in the *Yorkshireman*. Comment were wholly superfluous:—

"James Miller, of Shildon, waggon driver on the Stockton and Darlington Railway, fined 5s. and costs, for absenting himself from his horse and waggons, and leaving them standing on the main line; Edward Burnsides, of Aycliffe, waggon driver, fined 2s. costs, for being on the railway with waggons after sunset, without a signal light; George Strong, of Shildon, boilersmith, fined 5s., for trespassing on the above railway, and refusing to quit when requested: Thomas Jobbing, of Stockton, joiner, fined 5s., for a similar offence."

All magistrates, however, do not err on the side of mercy, as the following paragraph from the *Sheffield Patriot* of the present week will prove:—

"On Tuesday last a joiner, named Henry Weston, took his seat in one of the carriages belonging to the North Midland Railway Company, at Derby, and proceeded to Belper, where he got out, and having neither ticket nor money to pay his fare, was taken before Jedediah and John Strutt, Esqs., who fined him 40s., and 11s. 6d. costs, and in default of payment sent him to the treadmill for a month."

We are as anxious as any one can be that Railway Companies should be protected against fraud, (and in this case it appears that fraud was contemplated, as the offender had no money in his possession,) but to send a man to the treadmill for a month for an act which could only take a few shillings out of the pockets of the Company, and this in default of paying a fine just eight times as large (to say nothing of costs) as that inflicted by other magistrates upon delinquents, whose trespassing might have caused extensive destruction of property, or even loss of life to the public, seems somewhat too severe. It is probable that the bye-laws of the North Midland Company, under the authority of which we presume the fine was inflicted, resemble those of the London and Birmingham, and other Companies where the exact amount of *forty* shillings is specified, and in that case the Messrs. Strutt could have no alternative; but they certainly had it in their power to mitigate the term of imprisonment—and most persons will be inclined to think that the discipline of "the treadmill" might have been altogether dispensed with. The bye-laws relative to this class of offences are, in most Companies, much too harsh. There is, in the returns recently laid before Parliament an excellent letter on this subject, addressed by Mr. Laing, of the Board of Trade, to Mr. Burgess, the Secretary of the Birmingham and Gloucester Railway. That Company it appears adopted, at their general meeting last summer, a series of bye-laws, one of which imposed a penalty of 40s., *in addition to the payment of the fare*, upon passengers unable to produce their tickets, even though there might be no proof of contemplated fraud. Mr. Laing very properly holds that this is unjust—in fact, that in cases where no intention exists to defraud the Company, fines are altogether misplaced—and that payment of the fare is all that the Company have a right to demand. Mr. Laing recommends the example of the Birmingham and other great lines, where the fine of 40s. is alternative, on refusal to pay the fare, and adds:—"The evidence upon this subject before the Select Committee on Railways, shows strongly the impolicy, with reference to the interests of railway Companies themselves, as well as to the public convenience, of enforcing even the limited power of requiring payment of the fare, in all cases in which the ticket cannot be produced, *more rigorously than is indispensable for the protection of the Company against fraud and abuse.* Upon this point, my Lords direct me particularly to draw your attention to the evidence of Mr. Baxendale [then], General Superintendent of the London and Birmingham line, who states,] (Second Report, p. 68, Query 2605,) 'That the tickets are occasionally lost, and when they are lost that vexation necessarily arises when the passenger is asked to pay his money again; that this rule was strictly acted up to, but that he had been very determined in breaking through it, and that *whenever a ticket is lost, the principal officer at each station has the power to use his judgment, and not to require the repayment of the fare.*'"

MR. STEPHENSON'S LIME WORKS AT AMBER GATE.—Mr. Stephenson has now commenced burning lime at these works, and is sending it to the different places adjacent to the North Midland Railway. In the course of a short time it will be conveyed to most of the principal towns in England. The kilns are built in a handsome and substantial form, standing from 30 to 40 feet above the surface of the ground. The limestone is procured from the village of Crich, about two or three miles distant from the kilns, on a tramway formed for that purpose. A short distance from Crich, the tramway passes through a tunnel between 50 and 60 yards in length; a little further on is an inclined plane, worked by a wheel, which lets down six waggons full of limestone, and draws up the same number of empty waggons. Nearly adjoining this is another inclined plane, which is uncommonly steep, rising at the rapid rate of one yard in three and a half, and is worked by a large drum, round which passes a wire-rope; a lever is attached to the drum, by which one man alone is able to regulate the speed of the waggons at pleasure, or stop them altogether. Two full waggons are let down and two empty ones are drawn up at the same time. The full waggons pass over the Cromford canal by a wooden bridge (elevated several feet above the surface of the water) to the top of the kilns. These stupendous works, when finished, will be of the most extensive character in England, or we may say in the whole world. They will, when complete, be able to turn out upwards of 200 tuns of lime per day.—*Sheffield Patriot.*

Digitized by Google

MANCHESTER AND LEEDS, AND NORTH MIDLAND RAILWAYS.

To the Editor of the Railway Times.

SIR,—A letter from a "North Midland Shareholder," appears in your paper of the 24th instant, calling in question a statement made by a "Manchester and Leeds Shareholder," that the cost of the two lines is about the same. Although the cost *per mile* differs materially, yet the *total outlay* upon each will be very similar, and it is *to that* every shareholder must look on calculating for a dividend, viz.:—

North Midland 72 miles.... £2,929,696 expended per last Report.
Manchester and Leeds 50 miles.... £2,523,508 expended per last Report.

The additional capital required will make the cost of the former 3,350,000*l.*, and the latter 3,172,000*l.*, which includes the branches to Oldham, &c., so necessary to develope the sources of traffic. It is also *very unfair* to take the *present* weekly returns of traffic on the Manchester and Leeds line, as any criterion of its value compared with the North Midland, which has been opened throughout nine or ten months, and which will have increased in traffic 100 per cent. within 12 months from the day of opening. I shall now endeavour to show a "North Midland Shareholder" that even at the present prices, the Manchester and Leeds is a better investment than the North Midland Railway:—

Manchester and Leeds opened 1 March, 1841, average first 3 weeks		£2,976	3 8
North Midland opened 5 July, 1840	£2,345 9 6		
Less 40 per cent. for difference in time of opening ..	938 3 10		
		1,407	5 8

Leaving 1,568*l.* 18s. or 111 per cent. in favour of Manchester and Leeds Railway.

North Midland average receipts per week for August, 1840		£3,211	4 9
Do. do. for September, 1840....		3,520	6 9
Do. present receipts, 17 April, 1841		3,654	11 6
Do. add 40 per cent. for extreme receipts this Summer		5,129	0 0

From the above it would appear, that if a weekly receipt of 1,407*l.* 5s. 8d, on the North Midland, in *March*, 1840, increases to 5,129*l.* in September, 1841, then 2,976*l.* 3s. 8d., on the Manchester and Leeds, in *March*, 1841, ought to increase in the same proportion to 10,848*l.* in September, 1842; or, giving the North Midland the benefit of a *July* opening, against one in *March* for the Leeds, and taking the traffic just as it appears, it will stand thus:—If a weekly receipt of 2,345*l.* 9s. 6d., in July, 1840, increases to 5,129*l.* in September, 1841, then a receipt of 2,976*l.* 3s. 8d., in March, 1841, ought to yield 6,509*l.* in September, 1842: but I am by no means inclined to admit that the Manchester and Leeds Railway will be limited to anything like 6,509*l.* per week for summer traffic in 1842.

Then as to a dividend, it may be easily estimated, viz.:—

Cost of Manchester and Leeds Railway, *main line*		£2,800,000	
6,509*l.* per week gives a gross annual revenue of	£338,468		
Deduct 40 per cent. expenses	£135,387		
Ditto interest on 1,400,000*l.* loans	70,000		
	205,387		
Leaving for dividend on 1,400,000*l.* called up.....	£133,081	or 9½ per cent.	
Cost of North Midland, last Report		£2,929,696	
5,129*l.* per week gives an annual revenue of	266,708		
Deduct 40 per cent. expences	£106,683		
Ditto interest on 887,000*l.* loans	44,350		
	151,033		
Leaving for dividend on 2,012,000*l.* called up.....	£115,675	or 5¾ per cent.	

A "North Midland Shareholder" will at once perceive how desirable it is *to borrow* at the formation of every railway, and consequently to increase the early dividends. Had this been accomplished by the North Midland Company, they might have divided 5 per cent. instead of 2½ or 3—the utmost their present receipts can justify. These remarks and statements have been called forth in defence of the Leeds and Manchester line, which your correspondent has sought to *depress*, in order to *raise* the price of his own.

I am, Sir, yours, &c.,
ANOTHER MANCHESTER AND LEEDS SHAREHOLDER.

April 26, 1841.

EXTENSIVE CONFLAGRATION AT THE BRISTOL TERMINUS OF THE GREAT WESTERN AND BRISTOL AND EXETER RAILWAYS.

(From the *Times*.)

Bristol, April 29.

THIS City was last night alarmed at about eight o'clock with the intelligence that a most extensive and destructive fire had broken out at the Great Western Railway terminus. On proceeding to the spot we found that the fire had taken place in the timber yard of the Company, containing 100,000 loads of timber at the least. Various causes were stated as the origin of the fire, which commenced in the large tank of creosote, which has lately been used as a new and more expeditious process than Kyanising, for the preservation of timber. By some it was stated to have been caused by the accidental falling of a candle into the creosote. It was also stated, and perhaps more accurately, that the tank was overheated.

Upon arriving at the spot the yard presented the appearance of a vast sheet of fire of the most vivid description, arising from vast masses of burning timber, and the contents of immense iron tanks of coal tar, &c. The various engines of the city were speedily on the spot, and a vast concourse of people, amounting during the night to 40,000 or 50,000 persons, assembled from all parts to view the tremendous conflagration—many coming from Bath, Henbury, and the surrounding villages, where the fire was distinctly visible. Some idea may be formed as to its extent, when we state than an area containing nearly two acres, filled with timber and other combustible materials, was on fire at the same time. In fact, neither the fires in Queen-square at the memorable riot, or that of the Devonport dock-yard, were nearly so extensive as the present conflagration. All efforts to stem its progress were completely useless, until the plan of cutting it off from the remaining timber in the yard was adopted; for which purpose several hundred men and four or five teams of horses were set to work, removing the adjacent timber to a distance, by which means at about half-past four this morning the fire was at length got under, and from 15,000*l.* to 20,000*l.* of timber belonging to the Great Western Railway Company, together with the terminus, and neighbouring buildings, were saved. We regret to state, however, that the property destroyed (which belongs to the Bristol and Exeter Railway Company), has been estimated at from 18,000*l.* to 20,000*l.* The heat from the fire was so intense that the neighbouring trees were set on fire, and two of them were burnt completely to the ground. One of the trees presented a very picturesque appearance, its branches being on fire in a variety of places, conveying to the eye the appearance of a number of gas-lights.

If the efforts to stay the progress of the fire, by the removal of the surrounding timber, (about 1,800 loads,) had not been successful, the splendid terminus, as well as the surrounding manufactories, would in all probability have been destroyed. Fortunately, no lives were lost, and only one serious accident occurred, a gentleman having his thigh broken by the fall of a heavy piece of timber.

(From the *Bristol Gazette* of Thursday—Second Edition.

THE burning mass, in a state of brightest ignition, occupied at least two acres of ground, extending from the boundary wall by Pipe-lane, across the meads to the river on the other side; and the inflammable nature of the materials, consisting principally of prepared timber, seemed to bid defiance to the efforts of the firemen, to quell the raging furnace.

The first engine that arrived on the spot was the Norwich Union, quickly followed by the Imperial, those belonging to the Great Western Cotton Works, and the Police, and others. His Worship, the Mayor; the High Sheriff; W. Herapath, Esq.; Mr. Brunel; Mr. Clark, Superintendent of the Great Western Railway Company; Mr. Osler and Mr. Badham, Secretaries of the respective Companies; several of the Directors, and other gentlemen, were speedily on the spot, and rendered every assistance in their power. The entrance to the station was kept by a strong body of police, who properly prevented promiscuous ingress. The police, under Superintendent Fisher, Inspectors Bell, Webb, Bosworth, and others, also lent effectual aid. About two o'clock a party of seamen belonging to her Majesty's brig *Savage*, lying at Kingroad, (at which place the flames were distinctly visible), under the command of Lieut. Booker, arrived at the scene, and assisted in working the engines, removing the timber, and acting generally with that energy and skill they always display. It is due to these gallant fellows to state that on being roused from their beds by a summons for assistance, they obeyed the call with such promptitude that they reached the spot from Kingroad in little more than an hour.

The fire continued to rage with extreme vehemence till about two o'clock, being at its height from 10 to 12. Fortunately by the combined exertions before-mentioned, and by cutting down the trees at Pipe-lane, the conflagration was prevented extending its ravages to the neighbouring premises. Had the extensive saw mills of Mr. Kidd and other establishments caught fire, the devastation must have been awful, as nothing, in human probability, could have saved the numerous courts and alleys in the densely populated district of Temple Backs, from being involved in general ruin. The magnificent building forming the terminus of the Great Western Railway was also exposed to imminent danger, one of the immense stacks of timber, almost immediately contiguous, having more than once ignited. About four o'clock the fire had been so far subdued as to remove apprehensions of further destruction.

The value of the property destroyed is estimated at present at about 10,000*l.*; the stock of timber belonging to the Bristol and Exeter Railway Company was, however, we understand, insured to the extent of 30,000*l.* Fortunately, on the few preceding days, eight trow loads had been sent down the Exeter line, which, with the quantity placed during the previous twenty-four hours in the sulphate of copper tanks, will complete the permanent way from Bristol to Bridgewater; so the disaster that has occurred will have no effect in postponing the opening of the Bristol and Exeter line beyond the time fixed, the 31st of May; nor occasion any loss to that Company.

It is not known how the fire originated; but there is not the slightest ground to believe that it was otherwise than purely accidental.

ECONOMY OF RAILWAY TRAVELLING.—To show the great saving in time and expense by railway travelling over the late mode, a tradesman of this town left Hull on Thursday morning week by the quarter to seven train for Manchester, and arrived there at half past eleven; he had five hours and a half to do business, and returned to Hull the same evening by half-past nine, after travelling upwards of two hundred miles, and had his goods at the shop door by half-past ten o'clock the next morning, at a less charge than by the water conveyance.—*Eastern Counties Herald.*

This morning a serious accident occurred on the York and North Midland Railway in this city. An engineer from Leeds had come to York in search of work, but not being able to obtain any he paid his fare this morning to go by the luggage train. The engine set out from the station, and had proceeded a short distance, when the unfortunate man attempted to get upon the engine but failed; his foot slipped, he fell to the ground, and the train passed over him. He was immediately taken to the hospital.—*York Courant of Thursday.*

PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the Preston and Wyre Railway, Harbour, and Dock Company, took place on Monday, at the Company's Offices, King William-street, City; Sir PETER HESKETH FLEETWOOD, M.P., in the Chair.

The CHAIRMAN observed, that he believed he could offer no observations that were not contained in the Report of the Directors, and therefore he thought he could not do better than at once call on the Secretary to read it.

The SECRETARY then read the following

REPORT OF THE DIRECTORS.

11, King William-street, London, 23rd April, 1841.

The Directors are happy in being able to congratulate the shareholders on the satisfactory Report of the state of their affairs, which they now proceed to lay before them.

The traffic on the railway, and every other circumstance connected with the undertaking, have more than equalled the expectations they held out in their Report of October last. Considering that the town of Fleetwood is only now rising, that the landing wharf is but now being completed, and the accommodation and arrangements for commerce are yet only in their infancy, the railway traffic during the past winter (one of unusual severity) affords a prospect of the most cheering character to the shareholders. It was feared by many that for the reasons above mentioned, the first winter would show a considerable loss upon working the railway; while, on the contrary, during this trying period, the receipts have exceeded the expenses of the line by above 50 per cent.—46,764 passengers having been carried, and the receipts from the goods' traffic (though yet little more than local) have averaged more than 100*l.* per week.

Still more gratifying is the prospect held out by the present state of things. The *Fireking*, the fastest and one of the finest steamers now afloat, will commence plying early in May, between Fleetwood and Ardrossan, as the quickest route, by several hours, from the south and the manufacturing districts to Glasgow, which she will regularly continue to do twice a week each way, as will other steamers also from the beginning of May, to and from Belfast, the Isle of Man, and once a week to Dublin and back, and every day to Ulverton for the Lakes. There is little doubt that negociations now pending will likewise terminate in the speedy appointment of a regular steam-boat between Dundalk, Drogheda, or Newry, and Fleetwood. In addition to the numerous passengers whom these vessels and the local advantages of Fleetwood cannot fail to bring upon the railway, the applications and proffered support of influential parties in the manufacturing districts, afford every expectation of an equal addition to the goods' traffic on the line. Several coal-owners are now sending their coals upon the railway; and the trade in that article having already become both extensive and regular, the price and quality are the same as at Liverpool.

No less pleasing is the task of the Directors in reporting the progress of the Town of Fleetwood and its future prospects. Since the last Half-yearly Meeting of the Company, the population has much increased, (being now supposed to exceed 5,000) and a large number of good houses have been erected, many of which are already inhabited, while the land for building continues to let with undiminished rapidity and the houses to be taken, at good rents, long before they are finished. All the central part of the magnificent hotel has been completed and opened, having been let to Mr. Vantini, of the Euston and Victoria Hotels, Euston Square, London, which will furnish immediate and extensive accommodation of the first character, to travellers by the steamers or sea-bathing visitors. A large establishment of baths now being erected is also attached to this ("The North Euston") hotel. In addition to this other hotels and a number of lodging-houses are finished and inhabited, and others are in course of erection. A handsome church is about to be opened. The gas-works are completed and in full operation. A good market and shops of all kinds afford every necessary convenience and accommodation. The salubrity of Fleetwood and its vicinity to the Lakes cannot fail to make it a popular Watering place, while the advantages of its position in relation to the manufacturing districts combined with its railway communication with them and the Metropolis, and the singular excellence of its harbour, must render it a favourite packet station. The Directors confidently look forward to the establishment of Fleetwood as an important commercial port, and they entertain no doubt that the increased activity of its trade will more than keep pace with the facilities which it is their intention to provide.

The Directors regret that delay has arisen in the formation of the intended new landing-place at Rampside, on the other side of Morecombe Bay, in connexion with Fleetwood, in consequence of the Lord of the Manor, who is entitled to the shore between high and low water, not agreeing to its erection without receiving a rent or other pecuniary advantage. But although it is to be lamented that this accommodation cannot be obtained until the terms are settled, yet it is gratifying to find that the claim itself arises from the Engineer employed by the Lord of the Manor having reported so favourably as to the extent of the traffic that may be expected by this route, from Scotland, West Cumberland, and the Furness district.

The traffic of the railway will be sensibly increased by the recent opening of the Preston and Bolton line, which, although only yet completed to near Chorley, is carrying on a considerable passenger traffic by means of coaches over the unfinished portion of the route, now only a few miles. Application has also been made to Parliament for a railway from Preston through Blackburn, Burnley, and other populous manufacturing localities, to join the Leeds and Manchester Railway at Todmorden, which line will open a direct and continuous communication between Fleetwood and the important manufacturing districts of Yorkshire and the seaport of Hull.

The two shore lighthouses were lighted * on the 1st of December, and the new channel—a straight run of less than two miles direct from sea into the harbour—having been finished down to low-water spring tides large vessels can now pass at half-tide along the line of lights, and the port is thus opened for night navigation. The "Knott-Gulf" embankment has been completed and much extended, and withstands with complete success all effects of the tide notwithstanding the great increase which this embankment has caused in its rapidity. The first portion of the harbour improvements has thus been successfully completed; but these works having been entirely executed by the Company under the able management of their Marine Surveyor, Cap. Denham, without having had recourse to contractors (a course which seemed advisable, if not absolutely necessary, from the peculiarity of the works), the Directors thought it their duty before commencing the second and last portion of harbour improvements, to seek tenders for them, in order to compare the prices of contractors with the estimates of Capt. Denham and the cost of the similar works already executed. This was according done, and the result of a long and impartial investigation showed that the mode hitherto adopted by the Directors had saved a large sum to the Company; that the cost of the various works in the first portion of harbour improvements had not exceeded Capt. Denham's original estimates; and that there was every reason to believe that the remaining part could be executed in the same way for less than half of the lowest tender received. The Directors have, therefore, proceeded to commence the remaining works on the same system.

The timber dock has been completed on the outer sides, and now only needs enclosing on the side which will adjoin the ship dock, to render it a large and valuable receptacle for floating timber. The fine landing wharf, although retarded by meeting with rock in driving the iron piles (of which, and cast iron plates, its whole face is composed), is now on the eve of entire completion. It presents a frontage of nearly 600 feet, with a depth of about 300. In the centre has been erected a large goods' warehouse, through which a line of rails is carried, communicating with the main railway and all the other branches which intersect the wharf in various directions. One of these lines skirts the edge of the wharf, which enables goods to be craned at once out of vessels lying alongside into the railway waggons that convey them upon the railway, thus saving all the expense incurred in other ports by loading, carting, and reloading. Two flights of steps have been provided through the face of the wharf for landing or embarking passengers at any period of the tide; and the same convenience will be had as respects cattle, horses, &c. by means of a construction on piles at the north end of the wharf. A berthing for two steamers along the face of the wharf has already been excavated to a depth of 10 feet at low water spring tides, and a uniform depth of 12 feet at low water spring tides will soon be obtained before the whole front and in the approaches to the wharf and also between it and the "Canshe-hole," the fine, sheltered, anchoring basin, containing never less than 18 feet of water, and situated less than a stone's throw from the wharf itself. The Directors are happy to add that this noble wharf, which has been constructed from the plans of Mr. Robert Stephenson, under the indefatigable local direction of Mr. S. P. Bidder, will be completed within the original estimate of its cost.

The following extract from a Report recently received by the Directors from Captain Denham, will furnish additional details of what has been done since the last half-yearly meeting of the Company.—"The new channel through the 'Knot-spit,' and over the 'Little Ford,' has been so deepened as to now afford 13 feet of water at half tide through the straight course thus produced upon the line of lights direct from Sea into the harbour. The present period is occupied in dredging up the shelving bottom between the landing wharf and 'Canshe-hole' anchorage, so as to produce a continuous depth of 12 feet at low water spring tides, an object we hope to attain by June next, during which the upper layer of shelving shore now interrupting the north or early approach to the wharf, will be excavated, leaving the under or lower shelf to be dredged down to 12 feet over the whole space across to "Canshe-hole." The dredge's service this year will thus be wholly dedicated to the wharf frontage and approaches. The new Channel to Sea will, however, be improved by excavating and carrying away at low water the remainder of the 'Knot-spit,' and trimming down the surface and marginal projections of the new cut or channel, the marl arising from which will be appropriated to the 'neckings' half tide wier about to be constructed on the opposite side of the channel. This latter work will also be prosecuted this year, and additional pontoons and stone flats are preparing for it. This tide wier will have the effect of concentrating the whole volume of back water, the scouring force of which has already been so essentially increased by the completion of the 'Knot-gulph' embankment."

The Directors have much satisfaction in saying that no accident whatever, occasioning personal injury, has taken place since their last Report, nor indeed since the opening of the railway. They have also the pleasure to state that the line has withstood the effects of the late severe winter without the least injury, notwithstanding the heavy rains in the earlier part of the autumn, and that it is now in excellent order. Nearly the whole of the part previously ballasted with sand has since been covered with hard gravel from Fleetwood, and the state of the whole will bear comparison with that of any railway in the kingdom. All the stations have been much enlarged and improved since the last Report, to meet the increasing traffic, both in passengers and goods, which new and daily developing sources bid fair to impel with the most rapid strides.

* Both these lighthouses are lighted with gas.

The railway being now in profitable operation, and the harbour works being in a state of great forwardness, the Directors think that the time has arrived when it is their duty to proceed to place upon the most favourable terms the shares still remaining unissued, with the view of carrying out with as little delay as may be practicable, the ultimate and important object of making the dock which the daily increasing commercial traffic of the port renders indispensable, and of laying down hereafter a second line of rails, which before long will be absolutely necessary for the full development of the undertaking. The mode the Directors propose to pursue in the issue of the new shares will be to require only a payment of five pounds per share on each of these new 50*l.* shares on their first appropriation, with a further call of 5*l.* per share every three months till the whole 50*l.* be paid. As the railway is now paying a profit (which profit it may be confidently expected will be steadily and regularly increased,) and as the old shareholders will derive a great advantage from the mode proposed for raising the new capital, and its intended application, it seems a reasonable arrangement that the holders of the new shares should receive interest half yearly, at the rate of 5 per cent. per annum on the calls which they have paid, until the whole be paid up, or they will have the option of paying up in full, thereby entitling themselves to participate in future dividends in lieu of such interest. The anxious attention of the Directors is engaged in considering the best plans for the new dock.

The Directors consider themselves justified by the foregoing circumstances, in holding out to the shareholders the confident expectation of a dividend at their next half-yearly meeting.

P. HESKETH FLEETWOOD, Chairman.

Statement of the Consolidated Company's Receipts and Expenditure, from 1st September, 1840, to 28th February, 1841.

RECEIPTS.

Balance left in hand, applicable to Harbour improvements, as per last audit of 1st September, 1840	£28,560 10 11		
Balance at Bankers, as per do.	425 7 9		
Ditto of Secretary's Account, ditto	2 19 2		
			£28,988 17 10
Received from shareholders for Calls on shares			8,593 0 0
Ditto interest on Calls overdue..	£7 9 3		
Interest allowed by Bankers	11 8 6

The CHAIRMAN said, he would now move that the Report read be received and adopted by the meeting, and be printed and circulated amongst the shareholders.

The motion having been seconded,

Mr. F. WAILES observed, that there was an item in the accounts of a subscription of 150*l.* to the North Junction Railway. He wished to be informed what that meant?

The SECRETARY said, it was a railway which would be a most important acquisition to their line, as it joined Hull and Fleetwood. There was a difficulty in the North Junction Company raising sufficient money to enable them to comply with the Standing Orders, and deposit their plans, which they were compelled to do before the 1st of March. The Directors, feeling the advantages which would result from the Preston and Wyre Company being enabled to carry their traffic through its means to Todmorden, advanced the 150*l.*, in order to enable the North Junction Company to deposit their plans by the time required, which they had done.

Mr. WAILES said, he also saw that the receipts amounted to 6,000*l.* odd, and the expenses to 4,000*l.* odd—nearly 70 per cent. He hoped that that was not the same ratio at which the expenses were always to continue.

The SECRETARY observed, that during the first winter it was generally expected that the expenditure would have exceeded the receipts, whereas it did not do so within nearly 50 per cent.

The CHAIRMAN thought that the result was exceedingly gratifying, when it was considered that the town was only just rising, and that during the winter there had been no steamers at work between the port and the Lakes.

The SECRETARY believed that no railway in England, not even the London and Birmingham, had, upon a comparative ratio, met with more success than they had done during the winter. With only four trains a day, two each way, they had carried upwards of 300 passengers per day, or 2,000 odd per week. It was feared that things would have been a deal worse, and he believed there was no railway in England that did not have, during the winter, its expenditure amount to nearly 70 per cent. of its receipts; whereas, in the summer, the expenditure did not exceed above 30 or 40 per cent.

A SHAREHOLDER asked if there had not been some attempts on the part of another Company to rival that Company with respect to the harbour?

The SECRETARY—Yes; there was at Preston, but the parties admitted themselves that they had now done all they could do, and had failed. All that could be done by them was, that on the top of the spring tides, which only occurred during three or four days a fortnight, they could only get vessels of from 90 to 110 tons to come up. This was accomplished with the greatest danger to the shipping, in consequence of the sand banks and shoals, and therefore it was a fallacy to suppose that goods could be delivered so cheap as they could by being taken in at Wyre, and transmitted per railway to Preston.

The CHAIRMAN suggested that, as Capt. Denham was present, he would probably explain the nature of the locality to which the question of the honourable proprietor alluded.

Capt. DENHAM here exhibited the plan, and pointed out the shoals and other impediments to navigation up towards Preston. A vessel going up to Preston must be unloaded and discharged within the three or four days that the spring tides lasted, or it would have to remain for a fortnight, until their return. He would assert, that to clear the river was utterly impracticable—nay, beyond human power to remedy.

A SHAREHOLDER said, it was stated in the Report that it was necessary to allot some new shares. He wished to ask if the present shareholders were to have any priority of right with regard to taking them.

The CHAIRMAN—Yes, as a matter of course. I believe that is always done.

Capt. DENHAM said, he had omitted one very important point in his previous statement. The Belfast traders preferred Wyre to Preston, inasmuch as the former place was at once open to the sea, and the cost to them was nearly a fourth less than if they went up to Preston.

The CHAIRMAN observed, that he could add nothing to the Report, but he sincerely hoped that the shareholders would go down and inspect the works, and judge for themselves.

The Report was then unanimously adopted, as was also a resolution, without any discussion, empowering the Directors to raise the number of new shares mentioned in the Report.

The following six gentlemen, who, according to Act of Parliament, retired, were again unanimously re-elected Directors—viz., Levi Ames, Esq.; John Evan Ballie, Esq.; Henry Pitches Boyce, Esq.; J. Bighton, Esq.; Sir George Drinkwater, Knt.; and William Taylor, Esq.

Mr. L. Hodson having also been elected a Director in the room of Hastings Elwin, Esq., thanks were given to the Chairman, and the meeting separated.

NORTH MIDLAND RAILWAY.—In consequence of an order made by the magistrates, all prisoners committed to the riding house of correction, at Wakefield, from Sheffield and Rotherham, are in future to be conveyed to that prison by railway in lieu of coach. The average number is about sixteen weekly.—*Sheffield Patriot.*

YORK AND NORTH MIDLAND RAILWAY COMPANY—SPECIAL MEETING.

[From the *Yorkshireman*.]

A SPECIAL meeting of this Company was held in the Directors' Room, at the New Station, Tanner Row, York, on Monday last, "for the purpose (as was stated in the notice convening the meeting) of raising by contribution amongst themselves, or by the admission of other persons as subscribers to the undertaking, or in part by each of those means, such sum or sums of money as they shall think expedient, in addition to the monies authorized to be raised and borrowed by an act passed in the first year of the reign of her present Majesty, intituled 'An act to alter the line of the York and North Midland Railway, and to amend the act relating thereto;' and also for the purpose of dividing the monies ordered to be raised at such meeting into distinct and integral shares of such amount, and of appropriating and disposing of the same in such manner and by such means as the said meeting shall determine upon." Among those present we observed Thomas Bastow, Esq., James Richardson, jun., Esq., T. Laycock, Esq., B. Dodsworth, Esq., R. Davies, Esq., J. Rowntree, Esq., R. Nicholson, Esq., Joseph Pease, Esq., of Darlington, John Catton, Esq., &c., &c. George Hudson, Esq., the Chairman of the Company, presided.

Mr. BAKER, the Secretary read the notice convening the meeting, which we have inserted above.

The CHAIRMAN then said that the meeting had been called accordingly to the form prescribed by the Act of Parliament, and circulars had been sent to every shareholder stating the object of the meeting, and the resolutions which the Directors intended to propose. The resolutions which he should have the honour of submitting to the meeting were in substance the same as those stated in the circular, only with this alteration, that the first call was made payable on the 1st of May, and every shareholder had fifteen days beyond that time to determine whether he would take the new shares or not. These new shares were created under a recent Act of Parliament, which received the royal assent on the 6th of April, and the powers were under two clauses, which one of the solicitors to the Company, would read to them.

Mr. NEWTON read these clauses, which were as follow:—

And be it enacted, that it shall be lawful for the said Company from time to time by an order of any general or special general meeting of the said Company to raise by contribution amongst themselves, or by the admission of other persons as subscribers to the undertaking, or in part by each of these means, such sum or sums of money as they shall from time to time think expedient, not exceeding in the whole the sum of one hundred and sixty-seven thousand five hundred pounds in addition to the monies authorized to be raised and borrowed by the said last recited act. And be it enacted, that the monies so to be raised from time to time by subscription, shall be divided into distinct and integral shares of such amount, and shall be appropriated and disposed of in such manner and by such means as by the order of any such meeting shall be determined.

The CHAIRMAN said the first resolution which he had to propose, was as follows:—"That 6700 new shares of 25*l.* each be offered to the present shareholders in this Company, and every holder of an original share of 50*l.* to be entitled to a new share of 25*l.*" If any gentleman had any remark to make on this resolution, he should be happy to hear him.

T. LAYCOCK, Esq., complained that at the last meeting the proceedings were not faithfully reported in the newspapers.

The CHAIRMAN said it was no part of his business to lecture the reporters; the room was open to every reporter, but with the reports he had nothing to do.

Mr. LAYCOCK observed he hoped they would report faithfully all that passed.

The CHAIRMAN said he was anxious for publicity, but he could not go along with the principle that it was desirable to report every thing that occurred. Many conversations took place in which the public were not interested, and in which the interests of the Company ought to be consulted.

Digitized by Google

Mr. LAYCOCK said when questions were asked he thought those questions and also the answers ought to be given.

The CHAIRMAN remarked that these observations were foreign to the resolution; he should be glad to hear Mr. Laycock if he had anything to say upon it.

The CHAIRMAN next proposed the second resolution—"That a call of 10*l.* on each new share be paid on or before the 1st day of May next, and if the said call shall remain unpaid on the 15th day of May next, with interest at the rate of 5 per cent in the meantime, the Directors to have full power to dispose of such shares to whom they may think advisable for the benefit of the Company."

Mr. ROWNTREE remarked that he understood the resolution only gave the Directors power; it did not absolutely declare that they should sell them.

The CHAIRMAN replied, certainly not, and there would be no wish to press hardly on the shareholders. If the shares were not taken up, the Directors had the power of declaring them void.

M. LAYCOCK—What on the very day?

Mr. RICHARDSON—After the 15th.

The CHAIRMAN observed that the Directors had incurred great responsibility, in the expectation that their most sanguine expectations relative to an increase of traffic would be realized. They would listen with great pleasure to any suggestion that might be made by any shareholder.

Mr. ROWNTREE thought it extremely well to vest the power with the Directors, and he hoped they would continue to act as they had heretofore done.

Mr. BARSTOW observed that when shares were at a discount, it might be hard to press on the shareholders, but now, when the shares were at a high premium, he thought there could not be any such complaint.

Mr. LAYCOCK—Certainly not, where there is the option of paying five per cent.

The CHAIRMAN said they did not wish to press on the shareholders, but they hoped to receive the calls on or about the time fixed. The Directors were responsible for a large amount, and they would be glad to be relieved from their responsibility as early as they could.

The resolutions were then put and carried unanimously.

The CHAIRMAN said, that the meeting was called for a specific purpose; at the same time, if any gentleman had any question to ask, he was sure the Directors would have the utmost pleasure in giving all the information in their power.

Mr. LAYCOCK—Will it be out of order to ask what is the whole of the debt you owe?

The CHAIRMAN—Between 70,000*l.* and 80,000*l.* has been borrowed in anticipation of this Act. At a former meeting you gave us power to borrow 30,000*l.*; we exceeded at the last meeting that amount by 30,000*l.*; and it has now been increased, I apprehend, to 15,000*l.* or 18,000*l.* more. Under the powers of this Act, we can borrow 55,000*l.*, and raise by shares 167,000*l.*

Mr. LAYCOCK—Well, that I can reckon; 6,700 shares at 25*l.* each.

The CHAIRMAN—I have given you the information, what you don't want you can take as so much surplusage—is there anything else, Sir?

Mr. LAYCOCK—No.

The CHAIRMAN—If any gentleman has any other question to ask, I shall be very glad to answer it.

Mr. LAYCOCK—I think you never give any account of the Leeds and Selby line; is that an improper question?

The CHAIRMAN—I don't think any question improper; we have no secrets in the matter; it is more than paying its rent. Last week's revenue would be near 500*l.*

Mr. LAYCOCK—Be kind enough to give us a good reason why we should not know something about what it makes? It seems to be a profound secret amongst the subscribers.

The CHAIRMAN—You have nothing at all to do, but to call upon Mr. Baker to give you the information.

Mr. LAYCOCK—It would give him a great deal of trouble; you can tell me pretty near.

The CHAIRMAN—It will not have averaged more than 490*l.* per week for this last eight or ten weeks.

A SHAREHOLDER inquired how much profit had been gained by it during the half-year now ended.

The CHAIRMAN replied, the Company had not yet had the line six months; they took it on the 9th of November.

Mr. PEASE—Have you any account of the weekly expenses?

The CHAIRMAN—Yes, they will average about 120*l.* a-week.

Mr. LAYCOCK—It would be more agreeable to the subscribers if they could know what it does make.

The CHAIRMAN—That I cannot tell.

Mr. LAYCOCK—It's a very mysterious thing.

The CHAIRMAN—I give you this assurance. You have brought by its means from 300*l.* to 400*l.* a-week on to your line, which you are accomplishing with little or no extra expense, and by working the line you are more than paying the rent and expenses. I can give you no more information, and if it is not satisfactory, I do not know what is. I have said so over and over again, and I have no doubt at Christmas.

Mr. LAYCOCK—That is not sufficient information. What you will show six months hence is not an answer to my question now.

The CHAIRMAN—This is not a half-yearly meeting.

Mr. LAYCOCK—If you tell me I am out of order, I will not say another word. You allowed me to ask the question.

The CHAIRMAN—I don't say it is out of order.

Mr. LAYCOCK—You say you will tell us all about it six months hence.

The CHAIRMAN—The usual time of giving a statement is six months. If you pass a resolution that statements shall be made once a month—

Mr. LAYCOCK—Christmas will be more than a year from the taking of the line.

The CHAIRMAN—You should recollect that the traffic in July, August, and September is much larger, and at Christmas you will see a very handsome surplus after paying the rent.

Mr. LAYCOCK—I shall be glad to see it.

The CHAIRMAN—Of course I shall be glad.

Mr. LAYCOCK—I shall be glad, because the North Midland at first took a part with you, and I understand they gave it up.

The CHAIRMAN—I do not understand they gave it up.

Mr. PEASE apprehended Mr. Laycock would have all he required when he obtained an account of the weekly expenses and income of the Selby line.

Mr. LAYCOCK—If the Chairman had told me it was a forbidden subject, I would not have asked the question.

The CHAIRMAN—By no means. I said you want me to give you information which I am not able to give.

Mr. LAYCOCK—You say you don't know it.

The CHAIRMAN—I know so far as this; there is a profit on the line, it is not large at present, but as the Manchester and Leeds Railway becomes developed, and they increase their traffic, the income of the Selby line will materially increase, and there will be a surplus after paying the rent. The weekly returns will not be encumbered with any charge on behalf of the Leeds and Selby line.

A SHAREHOLDER inquired if any part of the traffic on the Selby line was included in the published returns.

The CHAIRMAN replied, certainly not. It is kept a distinct account.

Mr. LAYCOCK—But if it falls short, we shall have to make it up.

The CHAIRMAN—I have told you it does not fall short.

Mr. LAYCOCK—I will not tease you any more.

The CHAIRMAN—I do not say it is teasing.

Mr. PEASE—If the rent continues as at present, there will be a surplus of 9,000*l.* a-year for working the line.

The CHAIRMAN—I apprehend the receipts will be much greater than they are at present. We ought to be very well satisfied, for we have got a fair bargain.

Mr. LAYCOCK—I cannot speak to that.

The CHAIRMAN—You must be satisfied of it if my statement be correct.

Mr. LAYCOCK—I don't dispute you, Sir.

The CHAIRMAN observed, that there had been very little shipping from St. Petersburgh or other parts of Russia yet, which would bring traffic on the line.

Mr. LAYCOCK—Shall I be out of order if I move a short resolution?

The CHAIRMAN—Yes, you cannot at present, but perhaps you will state what it is.

Mr. LAYCOCK—It is relative to the business of the railway.

Mr. DAVIES observed, you must give notice.

Mr. LAYCOCK—I may reconsider the matter, and not bring it on at all.

This concluded the business, and the meeting separated.

TAFF VALE RAILWAY.

[From the *Monmouthshire Merlin*.]

ON Wednesday last we witnessed, by the invitation of some of the Directors of the Taff Vale Railway Company, a proud triumph of Cambrian enterprise and spirit, in the opening throughout its entire length, of this very interesting and important undertaking. It is now completed from Cardiff to Merthyr, and connects within an hour's interval of transit the immense iron workshop of the principality with its great outlet, the port of Cardiff, bringing to view proofs of the irrepressible energies of our country, whilst to the tourist it unfolds the most romantic and picturesque scenery in the kingdom. The morning was clear and propitious, and with the good taste and liberal feeling of the great proprietors and tradesmen, not only at the *foci* Merthyr and Cardiff, but at all the intermediate stations, the crowning day of the Taff Vale Railway was given as a holiday. Tens of thousands of gratified spectators were present, not only at the two chief towns, but at all the villages on the line. Gay flags waved in the morning breeze, the town and village church bells rang merry peals, and pieces of cannon were occasionally discharged as salutes to the passing trains. There was no public ceremony, but as if by one accord the Cambrian lads and lasses in holiday attire, crowded every eminence, or commanding situation from whence a view of the "flying carriages" could be obtained. The trains were filled to overflowing. It was our first progress by railway in this part of the country, and we took what might be called a hasty railway sketch, and never in our lives have we been more delighted with a morning's excursion. The line unfolds matchless beauty of scenery, and at frequent intervals the busy hives of industry gave animation to the scene. We have clear and full flowing rivers, beautiful and fairy bridges—amongst the last, the ever lovely and incomparable Pont-y-prydd, the Rialto of South Wales; and oh! we have romantic and apparently peaceful villages, that to our minds seem to realise the glowing fancy of the poet—

> "There is many a green and lovely spot,
> Embosomed in the silent hills,
> And many a woodbine trellised cot,
> By which the wild-bird sweetly thrills;
> Where quiet sleeps, and care is calm,
> And all the air is breathing balm.
> And there the sound of village bells
> In silvery music floats along,
> Now lingering o'er the shady dells,
> Now mingling with the river's song,
> As near at hand they seem to play,
> Or in the distance die away."

On reaching the inclined plane, to the passage of which, much attention and no little anxiety were directed, the train was met by the honourable Chairman of the Directors, Sir John Guest, M.P., and the accomplished Lady Charlotte Guest, who announced with their usual urbane hospitality, that a *dejeuner* would be waiting the arrival of the party at Dowlais House. The invitation was as general as it was polite, embracing all shareholders and persons con-

Digitized by Google

nected with the trade of Merthyr and Cardiff, and their friends. The progress of the train up the incline proved, although a critical, a successful ordeal for the talented engineer, Mr. Bush, in whose favor we deem it but justice to state, that Sir F. Smith, the Railway Commissioner, on his preliminary trip, passed a high encomium on him for the completeness of all the arrangements, pointedly remarking, that he never witnessed a railway better finished in all respects for opening, than the Taff Vale Railway. Indeed, Sir Frederick expressed himself highly pleased with the road and works generally, particularly with the viaduct, which he pronounced to be unique. Here we noticed several scientific gentlemen, who were warm, and indeed eloquent, in their congratulations upon the facility with which a crowded train was brought to the top, and thereby succeeded in the ordeal of what might be considered the greatest difficulty of the entire line. The machinery is worked by a splendid steam engine with three boilers, which can afford any requisite power of steam; and although as it were a preliminary effort, it worked admirably. We passed over a magnificent viaduct, through a tunnel about half a mile long, opposite the lovely and romantic Quaker's Yard, across a stupendous bridge 120 feet above the river; seeing in the distance quiet villages, and peaceful churches with their yew-tree'd yards:—

"How many hearts have here grown cold,
That sleep the mouldering stones among,
How many beads have here been told,
How many matins here been sung."

But we cannot pause in poetic expatiation, On we went with the march, or rather race of modern improvement, over an admirably made road and railway bridges—one of them a stone erection of five arches, which is perhaps, one of the finest specimens of mechanical skill in the kingdom. From thence up the valley, how truly beautiful is the scenery till we come to the immediate neighbourhood of that *Terra del Fuego*—Merthyr, the great capital and centre of the staple manufactnre of the country. On the arrival of the train at Merthyr, it seemed as if the whole population had turned out to receive us. The cheering intermingled with the booming of cannon, softened down by the strains of a fine band of music, was indeed spiritstirring. The enthusiasm of the people hailing us, found a sympathetic response from the railway travellers, who vehemently cheered, waved their hats, and hurraed in honour of the occasion. Thence according to invitation, we proceeded to Dowlais House, where we experienced a bland and hospitable reception from Lady Charlotte and Sir John Guest, who where happy to see their friends at an ample board, spread with a cheering variety of refreshments, bespeaking at once the refined taste and bountiful liberality of the entertainers. It was, in fact, a *dejeuner* at which a copious supply of Champagne, the finest pines of the principality, and the best delicacies of the season, abundantly refreshed the traveller. The healths of Lady Charlotte Guest, Sir John Guest, and success to the Taff Vale Railway, where toasted with animation, and responded to in the usual happy style of Sir John. Mr. Coffin, the Rev. Mr. Davies, Mr. Powell, and other gentlemen, were the speakers on the occasion. Professor Airy having called accidentally on a tour he is making in the principality, accompanied at the same time by his truly amiable lady, Mr. Coffin said, it was impossible not to mark the rare opportunity of having so distinguished an ornament of science in their company, by proposing the health of the learned professor. This was acknowledged by Mr. Airy, in a short but remarkably pleasing speech, and the party soon separated to make room for a succession of guests, who came to partake of the hospitality of Dowlais House. A fine band was stationed outside the window of the refreshment room, which continued to play a succession of Cambrian and other inspiring airs. We returned to Cardiff by the afternoon train, at half past three o'clock; and so urgent were the applications for tickets that we found it extremely difficult to obtain seats or standing places, and with others, felt much pleasure in giving up our places to fair tourists. The crowds of spectators, all the way from Merthyr to Pentrabach, were immense, and presented a fine spectacle in perspective as we gazed back upon the multitude. We were much pleased with the admirable completeness of the arrangements. Nothing can exceed the smoothness and pleasantness of travelling on this eminently beautiful line; and we must bear witness to the urbanity and politeness of Mr. Ball, the Secretary, and the other official gentlemen of the Company.

(Further particulars, from the *Bristol Mercury*.)

The lions of the day seemed to be the viaduct, and the inclined plane at Quakers' Yard, which, and more particularly the latter, excited an extraordinary interest. The inclined plane is about three-quarters of a mile long, the inclination being for the greater part of the way 1 in 20, but near the summit 1 in 18. The ascent of the train, which is effected by means of pullies worked by an engine of 40-horse power, at the top, was both easy and expeditious. The viaduct, which is 110 high and about 500 feet in length, is a most beautiful piece of masonry; indeed, we do not remember having seen anything within a reasonable distance of Bristol to surpass it.

A new source of revenue has just presented itself. The Great Western Railway Company have completed a contract with Walter Coffin, Esq., for the supply, for seven years, of 40,000 tons of coal per year from the Dinas collieries, the whole of which will have to pass along the line, yielding a handsome income, which is entirely irrespective of the estimated traffic.

The following is a copy of a letter addressed by Sir Frederic Smith to Mr. Ball, the Secretary, after he had finished his inspection of the line:—

"Cardiff, 20th April, 1841.

"Sir,—I have to acquaint you, for the information of the Directors of the Taff Vale Railway Company, that I shall this day report to the Lords of the Committee of Privy Council for Trade, that I am not aware of any objection to the opening of the line to Merthyr Tydvil to-morrow, provided the arrangements for working the inclined plane shall be then complete; and I shall have great satisfaction in making known to their Lordships the very satisfactory state of the line, and in bearing testimony to the skilful manner in which Mr. Bush has grappled with the professional difficulties he has had to contend with in the formation of this railway.

"I am, Sir, your obedient servant,
(Signed) "Frederic Smith,
"Lt.-Col. Royal Engineers,

"Joseph Ball, Esq."

RAILWAYS REGULATION BILL.

The following is the petition of Mr. Finney, noticed elsewhere as having been presented on the 23rd ult., and referred to the Select Committee on the Bill:—

To the Honourable the Commons of the United Kingdom of Great Britain and Ireland in Parliament assembled.

The humble Petition of John Finney, Gentleman, Sheweth—

That your petitioner most respectfully entreats your honourable House to provide, in the Bill now before Parliament, some efficient controul over the regulations for railway travelling, made by the respective Boards, which at present not only differ materially, but are all more or less unnecessarily oppressive to the public at large.

That, on the Great Western Railway in particular, there are regulations of a most inconvenient and arbitrary character. One of these is, that of marking the extreme ends of the second class carriages "Conductor's Box," and excluding the public entirely therefrom: another, that of placing the passengers in selected seats for particular stations, and also of locking the doors of the carriages during the time of travel. The extreme ends of the carriages are usually occupied by luggage, and perhaps one of them by a single conductor.

These practices were not adopted last year on the Birmingham line, since when your petitioner has not travelled by these railways; and, as no line in the kingdom has been of longer standing, of greater traffic, or more free from accidents, it may be fairly assumed from the circumstances, that the regulations now complained of are wholly unnecessary for the safety of the public. And, as the Great Western Railway Company have discontinued the closed second class carriages, which they used to run, it may be easily imagined that these practices are adopted to render the second class carriages, in themselves, unnecessarily open, as insufferable, and injurious to health as they can possibly be made, as a means of driving the public to the payment of first class fares.

Your petitioner, therefore, most respectfully solicits the consideration of your honourable House to such changes in the present state of the law as shall place the revision and alteration of all regulations affecting travellers on railways—if not indeed the origin of such regulations themselves—in the hands of the executive Government, or Board to be appointed by the Government, which course may be expected to lead to a fair arbitration between the cupidity of Railway Boards and the reasonable claims of the public.

And likewise, that your honourable House will make such further changes in the law in regard to the tax on passengers by railway, as shall cause a *pro-rata* charge to be levied upon the respective fares, instead of leaving those of the first class so unreasonably productive to railway proprietors as they now are, while at the same time the discouragement of all proper second class accommodation is so much promoted by the present mode.

And your petitioner, &c. &c.

Bolton and Preston Railway.—It is expected that this line will be opened as far as Chorley in the month of October next. At present passengers are conveyed from Bolton to Rawlinson Bridge, about two miles this side of Chorley, and as there is only one line of rails put down, no more than a single engine is used. Workmen are, however, actively employed in laying down the second line of rails, and in making the cuttings and erecting the viaducts necessary to the completion of the railway to Chorley. The scenery along is highly picturesque. Rivington Pike, and the long chain of hills in connection with it, lie a short distance from the line; which also passes near to Horwich, Blackrod, and Duxbury Park. Although some inconvenience is now experienced from the line not being completed to the town of Chorley, yet the weekly number of passengers is very considerable, and continually increasing.—*Manchester Times.*

The London and York Mail Train.—We understand that on the application of George Hudson, Esq., Chairman of the North Midland Railway Company, the Directors of the London and Birmingham Company have agreed to send down a special mail train, after the first of May for the accommodation of the Yorkshire and North of England passengers, who will now be conveyed in the same carriages from London to York, instead of having to change carriages at Rugby as heretofore. This arrangement is expected to facilitate the dispatch of the mail, in addition to the comfort which it will afford to the passengers.—*Yorkshire Gazette.*

Llanelly Railway.—It is with sincere pleasure we announce to our readers that this railway, which was intended merely for the transmission of coals, and was never thought would be able to command a traffic in passengers, and which, therefore, is provided with only two locomotives and two railway carriages to run on its single way, has actually carried 2,523 passengers in four weeks, or at the rate of 631 per week. Such a circumstance is strikingly indicative of the great powers of railways to increase and even to create passenger traffic in localities where it may be supposed it could hardly exist.—*Cambrian.*

RAILWAY ADJUDICATION.

THE QUEEN *v.* THE PROPRIETORS OF THE RAILWAY TIMES—LIBEL.

Bail Court, Friday.—(Before Mr. Justice Coleridge.)—The ATTORNEY GENERAL said, he had to move for a rule to show cause why there should not be a criminal information issued against the defendants for a libel against the Directors of the Eastern Counties' Railway Company. This application had been delayed in order to obtain the affidavits of all the Directors, to negative the charge made in the libel: and principally, the application was grounded on the affidavit of Mr. Bosanquet, the Chairman of the Company. The libel was as follows, published in the *Railway Times* of the 13th February last. It commenced,

"We beg to call the attention of such of our readers as take any interest in the fortunes of that great corporate misfortune, the Eastern Counties' Railway, or in the merits of the long standing disputes between its Directors and this journal to the report of the final proceedings, at Ilford Petty Sessions, as to the rate at which the Company should be assessed for the relief of the poor, in the parishes through which the railway passes. It may be remembered that ever since the line was partly opened to the public the Directors have contended that they were working at a considerable profit, and that we have as invariably contended that their representations upon this head (as upon too many others) were grossly and wilfully false. The Directors have shown in various ways vast indignation at this impeachment of their veracity and honesty, but never have attempted to show by figures and facts that they were 'not guilty.' Now, we have here two principal servants of the Company, their sub-Engineer and their accountant, proving upon oath before a public court, that the line for six months, ending June 6th, 1840, (up to which time the Directors declared that there had been a profit of 3,948*l.*) had been worked with an actual loss of 716*l.*, and that from June 6, 1840, to January 3, last, the total gain amounted only to 700*l.* Such facts need no comment. The career of such a shameless body of impostors cannot surely be of long duration."

Now, these most respectable gentlemen, the Directors, did not object to any comments upon their conduct as Directors, or on the manner in which they had exercised the trust reposed in them. But here was a direct attack upon their veracity and honesty, they were held up as "shameless impostors," they were charged with wilfully fabricating false accounts. He (the Attorney-General) held in his hand various affidavits with which it would be unnecessary to trouble his lordship, entering most minutely into all the transactions of the Company from the time it had been established; showing that there was not a particle of truth in these accusations, and that they had honestly and fairly to the best of their judgments, shown a determination to do what they could for the benefit of the shareholders, and accounting for these charges being published by the hostility believed to be entertained against the Company by the managers of the paper.

Mr. Justice COLERIDGE—Do the affidavits explain the discrepancy pointed out?

The ATTORNEY-GENERAL—Yes, my Lord, in the most clear and satisfactory manner, showing that they never pretended they had made a profit in the manner here represented.

Mr. Justice COLERIDGE—Do they say they never represented the traffic to have been carried on with a profit, or how?

The ATTORNEY-GENERAL—My Lord, I will read the affidavit jointly made by Mr. Bosanquet, the Chairman, and of the vice-Chairman of the Company. They state that since February, 1839, the *Railway Times* had contained frequent and violent attacks on their management of the Company's affairs, as they verily believed with the object of injuring them in the estimation of the subscribers (of whom there were upwards of 1000), and of the world. They stated also that they considered the duties they had been appointed to discharge, under two Acts of Parliament, as public duties, to be discharged with fidelity and honesty—and that to the best of their judgment and ability they had endeavoured so to discharge them: they further stated, that under the said Acts there were half-yearly meetings of the shareholders, at which were to be produced the accounts and the balance sheets, to be afterwards printed and circulated among the shareholders; that it was not till the line had been partially opened six months the balance-sheet was presented to the shareholders; that at the general meeting, August 28, 1839, (the line having been shortly opened), they then informed the shareholders that, taking the expences of working the line, the expenditure amounted not to more than 50 per cent. of the gross receipts; but that it was utterly impossible then to give a detailed statement of the expenditure; that the expenditure so calculated on the best estimate that could be formed, and set forth, there were no items for the maintenance of the way, or depreciation of stock. They further stated, that on the 27th February, 1840, there was another half-yearly meeting, the line having then been opened six months since the last meeting, and that there was another such meeting on the 27th August last: that they then annexed to the Reports balance-sheets for each half-year, (which, said the Attorney-General, they had also annexed to this affidavit), showing the traffic and expenditure, that they had stated that exclusive of the expence of maintaining the line, and for the depreciation of stock, the expenditure had been less than the receipts; but that never in any other manner had they pretended that the working of the line had been attended with a considerable profit. And the deponent denied that their representations on this head, or any other, were grossly or wilfully false, or false in any respect whatever, and they affirmed that they could by facts and figures, make it clear that their statements had been well founded, and that they have never been guilty of any imposition. And they further state that as to the sum of 3,948*l.* alluded to in the article in the *Railway Times*, the same sum was mentioned in the balance sheet, July, 1840—the line having then been one year partially opened, but that the Directors had stated to the shareholders distinctly, that the balance sheet contained on the side of expenditure, only the expences of the working of the line, not the expence of the maintenance of the way, or of the depreciation of stock; that they did not include these items, because it was the established practice of other railway Companies to exclude them from the balance sheet the first year, seeing that the contractors were bound to keep their works up for 12 months after completion. The deponents likewise stated, that they had been informed that the parish of Romford had rated the line at 800*l.* to the relief of the poor, that they appealed, and that the magistrates redueed the rating to 578*l.*; that neither of their officers who gave evidence before the Bench, stated that the Company had actually paid the charges for the 12 months, on account of the maintenance of the way or depreciation of stock, but had only given these items as part of the general estimate of what ought to be put against the receipts of the Company; and the deponents distinctly denied that they had ever pretended that they had realised a clear profit to the amount stated of 3,948*l.*; but that, excluding the charges for maintenance of way and depreciation of stock, there was an excess of receipts over expenditure of that amount, and that it was competent for the proprietors to treat this sum as profit, should they think fit, or to cause the same to be applied in reduction of the outlay. The reading of this long affidavit having closed, the Attorney-General said, he had the affidavits in confirmation of the Accountant and Sub-Engineer of the Company, who were examined before the magistrates; and of all the rest of the Directors. And he would ask respectfully, on these facts, (which, of course, if this rule were granted, the other side could reply to as they best might), was there the slightest possible colour or pretext for saying that these gentlemen had imposed on the public? On the contrary, were not the accounts they had rendered perfectly true? Had there been any attempt at delusion? Not only were their statements literally true, but the attention of the shareholders had been distinctly called to the fact of their being no charge made for maintenance of the way or depreciation of stock during this specific year. They had produced their accounts—challenging the most minute investigation to prove that their statements were true, and their officers had come forward to show that the course they had taken at the hearing before the magistrates was equally consistent with the truth. Had there not been a full explanation of what certainly at first sight required explanation? And was there any ground for charging that those gentlemen had deliberately stated one thing to deceive the shareholders, and then stated another thing to relieve themselves of a rate?

Mr. Justice COLERIDGE.—Take the rule *nisi*.

—o—

Worship Street Police-office (Yesterday).—Mr. James attended on the part of the Eastern Counties' Railway Company, to receive the decision of the presiding magistrate, Mr. Bingham, in reference to claims for compensation on the part of certain tenants, weekly occupants of tenements required by the Company, where demands were under 20*l.* Mr. Humphreys attended for the claimants. The question has been several times before the same magistrate, the claimants having in the first instance opposed the powers of the magistrate, their solicitor alleging that by the Act of the Company, the 6th and 7th of Will. 4, chap. 103, and the 2nd and 3rd Vict. chap. 78, their claims for compensation ought to be decided before a jury in a sheriff's court; but the magistrate decided that, in reference to the words in the Act, of "damage done," they intended loss by removal from occupation, as well as injury by demolition of structure. The argument on the other side was, that the power of the magistrate to decide upon compensation when the damage was under 20*l.* was, when an injury to property had been sustained, in consequence of the operations in the progress of the works of the Company, and not in consequence of removal from occupation.

There were several claimants, who were heard on Thursday, Mr. Bingham having deferred giving his decision till the following day, yesterday.

Martha Garratt, a widow, said that before the Company required the house, she lived in one of which a Mr. Kelburn was the landlord, and in which she had a shop and parlour; she kept a school, and had twenty-five scholars. They decreased in numbers so much that she was compelled to take a mangle and sell fruit. Her average profits were about 12s. a-week. She was now, however, compelled to leave as she was blocked out. She claimed 20*l.*

Mr. James stated that notice was given to the landlord on the 17th of December, 1840.

Mr. Bingham asked her why she did not leave then?

The applicant replied that if she had given up possession at that time she would have had no claim for compensation.

Mr. Bingham told her that she was forewarned of the obstruction, and that she ought to have given up possession soon after the Company had sent the notice.

Mr. James observed that a surveyor on the part of the Company and a surveyor on the part of the claimant had agreed to compensation to the various claimants, but some had refused.

Mr. Bingham said it had frequently occurred that juries had given a less amount than Companies had decided upon.

John Popkin, a maker of children's toys, claimed 15*l.*

Two weavers demanded 12*l.* and 9*l.*

There were various other claimants, but the above only were decided, and

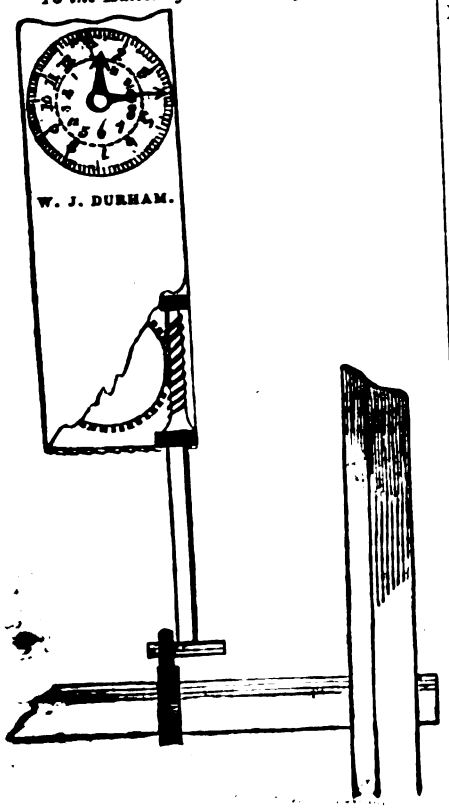
Mr. Bingham stated that the principal injury suffered by the woman was the loss of her school by being blocked up; but it had been decided in the Court of Queen's Bench that public Companies were not liable for that description of injury. He

Digitized by Google

would allow her for the time that would be necessary to find other apartments.

She was allowed 30s.

John Popkin, for loss of time and expense in putting up the machinery for his business, was allowed 3*l.*, and



The two weavers were allowed the full compensation demanded.

Mr. Bingham, after his decision had been given, said that if the Company were willing to increase the amount he had awarded to the woman he would not oppose it.

Mr. James said that last week the Company offered her 16*l.* 10s., and that he would give her a check for 3*l.*

RAILWAY ODOMETER.

To the Editor of the Railway Times.

SIR,—Parliament being about to determine that locomotive engines shall not travel upon railways beyond a certain rate or number of miles per hour, it will be necessary to have some means by which the *actual* speed can be ascertained. For this purpose I have contrived a little piece of machinery, of which a rough sketch is prefixed. It consists of a few wheels which set in motion two hands showing (upon a dial plate beneath) the number of miles run and revolutions made by the wheels. The dial plate is divided into as many parts as the wheels turn in a mile—one revolution of the longer hand indicating one mile—and one of the shorter as many miles as may be thought necessary—just in the same manner as the hands of a clock point out the hours and minutes passed. *The time* that the longer hand takes to perform one revolution will be the rate of travelling and the number to which the shorter one points the miles run. It can by a little contrivance be placed in any convenient part of the front or side of the engine, so that the driver may always have it in view—and from the nature of the moving power the hands will work either way.

Yours most obediently,

WILLIAM J. DURHAM.

April 22, 1841.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BRISTOL AND EXETER RAILWAY.

April 29.—Bill referred to Mr. Bernal, Hon. H. F. Berkeley, Mr. P. Miles, and Mr. W. Miles. Committee to meet on Tuesday, 11th of May.

EASTERN COUNTIES' RAILWAY.

April 30.—Lords' Amendments to be considered.

GREAT LEINSTER AND MUNSTER RAILWAY—(No. 2).

April 28.—Petition for Bill, reported, and Bill ordered to brought in by Mr. Yates and Mr. Morgan John O'Connell.

GREAT NORTH OF ENGLAND RAILWAY.

April 28.—Bill referred to Mr. Bernal, Mr. Pease, and Mr. Harland. Committee to meet on Monday, 3rd May.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

April 26.—Petition of John Gray and John Robertson Reid against the Bill; referred to the Committee on the Bill; counsel ordered.

April 28.—Petition of Chairman of the Board of Commissioners of Police for Glasgow, in favour of the Bill; to lie on the table.

Petition of the Lord Provost, Magistrates, and Common Council of Glasgow, against; referred to the Committee on the Bill; counsel ordered.

Bill referred to the South West Scotland list, and Captain Meynell (Lisburn), Mr. Maunsell (Northampton, North), Lord Milton (Malton), Mr. M. Parker (Devon, South), Mr. W. T. Praed (St. Ives). Three to be the quorum of selected members, and the Committee to meet on Tuesday, 4th May.

April 29.—Bill "for extending, enlarging, and amending some of the provisions of the Act relating to the Great Leinster and Munster Railway," presented, and read the first time.

April 29.—Petitions against; from proprietors and occupiers of lands and houses near the road leading to Renfrew and Paisley from Glasgow; John Sligo, Esq.; Trustees of the Glasgow and Parkhead Road; George Lyon Walker, Esq.; Proprietors or feuars of ground in the suburbs of Tradeston; and, Trustees of the road from the Glasgow and Parkhead Road to Woodend; referred to the Committee on the Bill; counsel ordered.

NORTH MIDLAND RAILWAY.

April 23.—Bill read a third time and passed.

STAFFORD AND RUGBY (LATE MANCHESTER AND BIRMINGHAM EXTENSION) RAILWAY.

April 28.—Petition from Staly Bridge in favour; to lie on the table.

GATESHEAD IRON WORKS, Newcastle-upon-Tyne, April 8th, 1841.

GENTLEMEN,—Observing in the *Railway Times* of the 3rd instant, a section of the mode of fagoting your shafts and axles, we beg to acquaint you that the same plan has been in use in our Manufactory, as well as in the neighbouring forges, for the last half-century, we are now making 6-ton shafts upon that plan.

We are, Gentlemen, your obedient servants,

HAWKS, STANLEY, & Co.

To the Shaft and Axletree Company,
Brunswick Iron Works, Wednesbury, Staffordshire.

The Shaft and Axletree Company make their Axles for Railway Engines and Carriages from a Fagot, composed of Rolled Bars, which is passed between Rollers before it is drawn under the hammer to the required size; Hawks, Stanley, & Co. manufacture theirs without the intervention of a Rolling Mill, by drawing them to the required size under a Forge Hammer from a Fagot of Forged Bars the full length of the Fagot.

Hawks, Stanley, & Co. are willing to submit their Axles to any test to which the Shaft and Axletree Company are willing to submit theirs.

PATENT AXLES FOR RAILWAY ENGINES AND CARRIAGES.—Brunswick Iron Works, Wednesbury, 22nd April, 1841.

GENTLEMEN,—We have seen your advertisement in the *Railway Times* of the 17th inst., and leaving still open the question of your right to manufacture Shafts and Axles, even in the way you describe, we wish it to be understood, that we ground our claim to the superior safety of our Axles upon many of the processes of their manufacture differing from yours.

We also believe that by our peculiar mixture, and by the more than ordinary watchfulness the Iron undergoes during the progress of its manufacture, our Axles have the advantage of being made of iron of an uniform quality, and particularly well adapted to the purpose.

We think that by our mode we make very superior Axles to those made by yourselves and other manufacturers, but it would be no proof of our superiority if we accepted your offer, and a chosen sample were, on being tested, found stronger than yours, or *vice versa*. The determination of their respective qualities, we must be content to leave to the experience of those who use them, and are interested therein, for on this only can they, you, or we, place reliance.

We remain, Gentlemen, your obedient servants,

THE PATENT SHAFT & AXLETREE CO.

Messrs. Hawks, Stanley, and Co.,
Newcastle-upon-Tyne.

GATESHEAD IRON WORKS, Newcastle-upon-Tyne, April 29, 1841.

GENTLEMEN,—We cannot discover by either of your advertisements in the *Railway Times* that you have the merit of any novelty in your mode of making the Fagot for your *Rolled* Axles for Railway Carriages and Engines, at the same time we feel bound to admit that, by the process of *Rolling* you are enabled to produce a much cheaper axle than we can make under the *Forge Hammer*. We do not study cheapness of production so much as excellence in the manufacture of articles of such vital importance as axles for railway carriages and engines, and notwithstanding it is your opinion that your Rolled Axles are very superior to those made under the Forge Hammer, by ourselves or other manufacturers, we believe such an opinion will NOT be given by any disinterested practical person. You ground your claim to superiority from "a peculiar mixture, by more than ordinary watchfulness the iron undergoes during the progress of its manufacture, and from the uniform quality of the iron." Now, is it unfair to question whether a number of persons, for speculation forming themselves into a Company, and individually irresponsible, have stronger ground to such claim than persons born and bred in, and inheriting Forges established by their fathers, and grandfathers. Of this we leave the public to form their own opinion.

We suspect that *formerly* it was believed your Axles were manufactured under the Forge Hammer.

We are, Gentlemen, your obedient servants,

(Signed) HAWKS, STANLEY, & Co.

To the Shaft and Axletree Company,
Brunswick Ironworks, Wednesbury,
Staffordshire.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That a SPECIAL GENERAL MEETING of this Company will be held at the Station House at Derby, on Saturday the 8th day of May next, at 12 for 1 o'Clock precisely, for the purpose of determining on the measures to be adopted for raising the further sum of money required for the completion of the Railway.

By Order,
GEORGE CARR GLYN, Chairman.
H. PATTESON, Secretary.

London, April 24, 1841.

TO CONTRACTORS AND OTHERS.—FOR SALE, by Private Contract, 50 capital Earth Waggons to carry 1¼ yards, with 2-ft. wheels, of the best construction. Also, a quantity of parallel rails, about 30lb. per yard, with Chairs and Crossings. Three portable Steam Engines, of 8, 10, and 14-horse power respectively. Several powerful Cranes. Two cast-iron Diving Bells, with Air Pumps, and the requisite gear: together with some excellent blocks, chains, &c. The whole conveniently situated for water conveyance.

Apply to Mr. Radford, 87, Upper Ground-street, Blackfriars road, London.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents:—

Fox, Hawkins, and Hickling, New-st. Birmingham.
Robertson and Co., 12, Goree Piazzas Liverpool.
Mathias Dunn..... Newcastle-upon-Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co..... Wigan.
J. T. Tregelias..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young..... Belfast.
James Kibble and Co..... Glasgow.
James Gunn..... Leith.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of eight months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

STAFFORDSHIRE POTTERIES.—PHENIX IRON FOUNDRY TO BE LET with immediate possession.—The above newly erected Iron Foundry, lately in the occupation of Messrs. Thomas Edwards and Company, is situated on the banks of the Cauldon branch of the Trent and Mersey Canal, near Hanley, in the centre of the important manufacturing district of the Staffordshire Potteries.

The premises are extensive, and the buildings conveniently arranged for carrying on a very extensive business, for which there is an advantageous opening.

The foundry has been recently fitted up with a steam engine of 12 horse power, boring and turning lathes of the best construction, and machinery and fixtures of every description, and with the general business might be advantageously combined, manufacturing of locomotive engines for which the premises are admirably adapted, coal is got in the immediate neighbourhood and is cheap and plentiful, and the above canal affords a cheap mode of conveyance to all parts of the kingdom.

For further particulars, or to treat for the same, apply to Messrs. Ward, Son and Leman, Solicitors, Newcastle-under-Lyne.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER (late of Hambro' Wharf), having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required; and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

RAILWAY MATERIALS AND IMPLEMENTS.—Messrs. MULLINS AND MAC MAHON will Sell by Private Treaty, on the Lancaster and Preston Junction line, the following articles, in excellent condition, for immediate use:—

Three Locomotive Engines and Tenders, in good working order; one a 12-inch cylinder, with 5-feet wheels (coupled), and two of 11-inch—one with 4-feet 6-inch driving wheels, the other with 5-feet driving wheels.

200 to 300 Earth Waggons, of the very best construction, part equal to carry 2¼ yards, with 2-feet 6-inch wheels, and part 1¼ yards per waggon, with 2 feet wheels.

Together with a large quantity of Railway Bars, from 30*l.* to 50*l.* per yard, with Chairs and Crossings, and a variety of other articles used in Extensive Railway Works.

The whole of the above materials, &c., are in convenient situations, for either water or railway conveyance to any part of the kingdom.

Application to be made at their office, Fishergate, Preston.

10th March, 1841.

TO BUILDERS AND CONTRACTORS.—PROPOSED HOTEL NEAR THE RAILWAY TERMINUS.—Persons desirous of contracting for the immediate erection of a First-rate Hotel, opposite the Terminus of the South-Western Railway, at Southampton, are requested to apply at the Office of Mr. W. Hinves, Architect, 16, St. Mary-street, Southampton, where the Drawings and Specifications may be inspected, on and after Monday, the 26th instant.

Sealed Tenders, addressed to Mr. G. Laishley, Southampton, are to be delivered at the Architect's Office on or before Saturday, the 15th of May.

No pledge will be given as to the acceptance of the lowest Tenders, and the party or parties whose Tender may be accepted will be required to enter into approved security for the due fulfilment of the Contract.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—From the

SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver, 16*s.* 6*d.* each pair.

Omnibuses to and from every train—Fare 6*d.*

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, I.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two-horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act to Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

TO RAILWAY CONTRACTORS.—To be Sold, 140 2½-yard capital EARTH WAGGONS, 36-inch wheels, 3¼-inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55*s.*
Beer, Hides, Soap, Sugar, &c.	60*s.*
Raw Coffee, Rice, Earthenware in Crates, &c.	62*s.*
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65*s.*
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70*s.*
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80*s.*
Feathers, Millinery, Furniture, Hats, and similar Articles	100*s.*

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

TO CAPITALISTS.—WANTED by a Gentleman manufacturing largely for Railway Companies and others, and having an excellent connexion, a Sleeping Partner, who can command not less than £4,000. The most satisfactory references, &c. can be given.

Apply by Letter, A. D., at the *Railway Times* Office.

PATENT MANUFACTURE.—An excellent opportunity offers itself to any person disposed to embark in the Manufacture, under Patent, of an article in extensive demand, the present cost of which will be reduced by the patent process upwards of 50 per cent. For the purchase of the entire Patent Right, and the fitting up of the requisite manufacturing machinery, £5,000 will be required.

Letters from principals to be addressed to M. M., care of Mr. Robertson, Patent Agency Office, 166, Fleet-street.

GREAT WESTERN RAILWAY.—VERY IMPORTANT TO RAILWAY CONTRACTORS.—Extensive Sale of Railway Plant, now in use on Contracts Nos. 5 and 6, C., near Wootton Bassett and Christian Malford. Mr. HUNT has received instructions to sell by public AUCTION, without the least reserve, about the first week in June, all the very useful and extensive Plant of Railway Materials belonging to the Contractor, who will have completed a distance of seven miles on the above line of Railway, in the course of a few weeks from the date hereof, comprising more particularly 200 Waggons, (half of which are nearly new); 150 tons of Railway Bars; 70 Iron Crossings; 40 tons of Chairs; 10,000 Sleepers; 3,000 Wheeling Planks; 700 Wheelbarrows; 70 sets of Bridge Centerings, of various sizes; 9,000 feet of Legging for ditto; quantity of Timbers such as Uprights, Wall-plates, Sills, &c. &c. Several sets of Materials for Brickmakers' Moulds; 2 sets of Blacksmiths' Tools, complete; 10 Pug Mills, for grinding clay and mortar; a good six-inch wheel Timber Carriage; quantity of Bricklayers' Scaffolding; 100,000 Bricks; 10,000 Pantiles; a large Water-butt; and a variety of other unmentioned effects.

Due Notice of the Sale with further particulars will appear in handbills and future advertisement.

Wootton Bassett, April 17, 1841.

SPECIFICATIONS OF RECENT PATENTS. The MECHANICS' MAGAZINE, No. 925, published this day, price 3d., contains abstracts of the following recent Patents:—

Newton's for certain improvement in engines to be worked by air or other gases; Earl of Ducie, Clyburn, and Budding's for certain improvement in machinery for cutting vegetable and other substances; Hancock's for an improved method of raising water and other fluids; Pettit's for improvement in railroads, and in the carriages and wheels employed thereon.

Also, a descriptive account of some new instruments for correctly graduating glass tubes for Eudiometrical and other purposes, with four engravings; Carpenter and Stevens's modes of propelling; Mr. Pearce's plan for reversing the action of locomotive engines with an engraving; Treggon and Co.'s galvanic plant-protector, with an engraving; on the action of the Cornish single and double engines; improved door-catch, with two engravings; portable tincture press, with two engravings; The Calculator, No. 11,—tithe commutation; answer to the Cambridge mathematical question; mode of preventing collisions at sea; laws of falling bodies; list of designs registered in April; list of English, Irish, and Scotch patents granted in April.

Published at the Mechanics' Magazine and Patent Agency Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1*s.*, in cloth 1*s.* 6*d.*

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1*s.*, in cloth.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley; Steil, and R. Tyas, Paternoster-row; Hyde and Co., and G. Bell, Fleet-street; Weale, Holborn; and by all Booksellers and Newsmen.

Just published, price 6d.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 175. Vol. IV.—No. 19.] SATURDAY, MAY 8, 1841. [Price, 6d.

DUKE OF CORNWALL'S HARBOUR and LAUNCESTON and VICTORIA RAILWAY COMPANY.—Notice is hereby given, That the Adjourned HALF-YEARLY GENERAL MEETING of the Proprietors of this Company, will be held at the London Tavern, Bishopsgate street, on Thursday, the 20th day of May inst. at One o'Clock precisely.

GEO. DYSON, Secretary.

No. 3, Copthall Buildings, May 3, 1841.

LONDON AND BIRMINGHAM RAILWAY.—ADDITIONAL TRAINS.—The public are informed that, on and after MONDAY next, the 10th instant, a Train for the accommodation of the Nottingham, Leicester, Derby, Leeds, York, Hull, and intermediate traffic, will leave the Euston Station, London, at Nine o'clock in the Evening; and that a corresponding Train, bringing passengers, parcels, &c from the above places, will leave the Rugby Station at One, a. m., arriving in London at about Five o'clock.

By Order, R. CREED, Secretary.

STOCKTON AND DARLINGTON RAILWAY.—To IRON MASTERS and TIMBER MERCHANTS.—The Directors of this Railway will receive TENDERS for 500 Tons of Rails, 200 Tons of Chairs, and 3,000 Sleepers, and 9,000 Wood Blocks cut out of Larch or English Elm Timber; the Sleepers to be 8 feet long, 13 inches by 6 inches, and the Blocks 2 feet 6 inches long, 12 inches by 6 inches.

For further particulars, and a printed form of Tender, application to be made to John Harris, the Company's Engineer, Darlington.

The Tenders to be sent not later than Thursday, the 23d day of May next.

The Directors do not bind themselves to accept the lowest Tender.

SOUTH-EASTERN RAILWAY.—Notice is hereby given, That the Transfer Books of this Company will be Closed on Saturday, the 15th day of May, and will remain closed until Thursday, the 27th day of May instant.

By order of the Directors,

J. S. YEATS, Secretary.

Railway Office, 10, Colman-street, London, May 4.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—Tender for Loans on Debentures.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than 200*l.* for terms of four, six, or ten years, on interest at the rate of 5 per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester.

By order of the Board of Directors,

A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of 17,000*l.* per annum, payable half-yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

HENRY HUNT.—If Henry Hunt, Carpenter and Wheelwright, born near Sittingborne, Kent, about the year 1810, supposed to be employed on one of the Railways, will apply to Mr John Stevens, No. 6, Featherstone Buildings, Holborn, he will hear of something to his advantage.

Any person who can give such information as will lead to an interview with the said Henry Hunt, will be rewarded for their trouble.

RAILWAY PLANT FOR SALE, in excellent condition, a large quantity of every kind. Apply to Mr. M'Keone, Office, Angel-lane, Stratford, Essex. It is conveniently situated for water or railway carriage. Approved bills will be taken in payment, if required.

LLANELLY RAILWAY AND DOCK COMPANY.—The ANNUAL GENERAL MEETING of PROPRIETORS will be holden at the London Tavern, Bishopsgate street, in the City of London, on Monday, the 7th of June next, at half-past Twelve for One o'Clock precisely.

By order of the Committee of Management,

JOHN BIGG, Secretary.

59, Old Broad-street, London, May 7, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

6. REPORT OF CAPT. MELHUISH ON THE EASTERN COUNTIES' RAILWAY, ADDRESSED TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE, WHITEHALL.

London, 30th November, 1840.

MY LORDS,—In obedience to your Lordships' instructions of the 19th instant, referring certain documents relating to an accident upon the Eastern Counties' Railway, and requesting me to report my opinion upon them, and generally with reference to the cause of this accident, and the precautions proper to be taken in order to guard against the recurrence of similar disasters in future:

I have to state that I met Mr. Bulkley, the Secretary of the Company, by appointment, at the station in Shoreditch, on the morning of the 20th, for the above purpose, and have the honour to report as follows:

I immediately proceeded, accompanied by Mr. Hall, the Eastern Counties' Manager, to make an inspection of the railway at the place where the accident occurred, as well as of the engine which occasioned, and the carriages which received, an injury from the collision; and on my return to Shoreditch commenced an investigation of the circumstances which had led to the accident in question.

Before entering upon the evidence, it will be proper to observe, that the first three miles of the Eastern Counties' Railway, which includes the place where the accident occurred, is used in common with the Northern and Eastern Railway Company, but that the management of this portion of the road is altogether vested in the hands of the former Company. It will, therefore, easily be seen, that the subject which has been entrusted to my investigation is one of great interest and importance to the parties concerned, and that they look forward to the result with considerable solicitude, as a means of settling certain questions upon which the two Companies are at present divided in opinion.

I therefore suggested that the inquiry should be carried on in the presence of the Manager of each Company, and in order to avoid any display of feeling between the parties, I informed them that I should be happy to receive any statement they may have to offer upon the subject after the evidence should be closed.

The statements which I have received in consequence of the foregoing arrangement from Mr. Hall and Mr. Bell, the Managers of the two railways, are herewith enclosed for your Lordships information; they appear to be drawn up with considerable ability; but the more attentively I have perused them, the more I am convinced that my judgment on the present occasion must be confined to the facts, and the value which attaches to the evidence that has been brought before me.

I shall now proceed to state in what manner the accident occurred, and what was the result of the collision; after which I shall hope to be excused for entering more fully into the detail of the evidence taken on the present occasion than is generally usual in such investigations.

It appears that the Eastern Counties' train, which ought to have left Shoreditch station at 10 o'clock on Sunday morning, the 15th November, did not start till four minutes and a-half after its time, and in the following order, viz., an engine and its tender, followed by a third-class carriage, with the senior guard and brake; a second class carriage; a first class carriage; a second class carriage, with second guard and brake, and a third class carriage bringing up the rear; thus making in the whole a train of five carriages, and containing 24 passengers.

It proceeded with its usual speed to Devonshire-street station, a distance of one mile and a half, when it stopped about one minute, and then left for Bow station, about a mile further on, where it arrived at 13 minutes after 10 o'clock. The train, from the slippery state of the rails, overshot the station about 20 or 30 yards, but having only one passenger to leave there, did not put back. The time of stopping did not exceed two minutes, when it again started, but had not proceeded many yards, when several voices called out to stop, as some passengers were left behind; the train stopped again, took up two passengers, and was proceeding at a slow rate towards Stratford, when a return engine of the Northern and Eastern Railway Company, which had left Shoreditch at 14½ minutes after 10, ran into the train.

The weight of the engine which occasioned the accident was 20 tons, and its tender probably about 10 tons, and from the buffers of this large engine standing rather higher than those of the Eastern Counties' train, it glided upon the platform of the carriage, lifting the fore wheels of that carriage and hind wheels of the adjoining second class carriage from the rails, by which means the back of the former carriage was broken, and its benches destroyed, and the superstructure of the latter carriage was rendered a complete wreck, and the ironwork of each much injured. The springs of the first class carriage were also much shaken and injured, and one of the iron guard plates broken in pieces. The next carriage sustained no injury, but the coupling hook of the one next the engine was broken, and the engine in consequence detached from the train.

The appearance of the train at the time of the collision will be better understood by reference to the accompanying sketch. The actual position of the passengers cannot be exactly ascertained; but I have every reason to believe that all those who sustained injury were seated in the two last carriages. The only accident of consequence was that of the unfortunate woman seated in the last carriage, who, on seeing the engine approach, jumped from the carriage with her child in her arms, and thus broke her leg. Had she retained her seat, the accident, in all probability, would have been attended with fatal consequences.

[Captain Melhuish then details, at great length, the evidence given, of Francis James, and other persons, whom he examined on the subject, and sums up the substance of it as follows:]—

The evidence that I have recorded is certainly of a most conflicting nature, but I still think there is sufficient data upon which to form a sound judgment of the whole transaction.

The time of departure from Shoreditch has not been disputed; the train at 4½ and the return engine at 14½ minutes past 10 A. M. The time is again recorded at Bow station by Serjeant Otway, who states positively that the train arrived there at 13 minutes after 10, and that the first and second stoppage did not occupy more than four minutes. In this assertion Otway is borne out by the testimony of three respectable persons travelling by the train, who are perfectly disinterested people, and not one of whom makes the time of stoppage, both at Bow and afterwards, to exceed five minutes. This is further corroborated by the Eastern Counties' agent at Stratford, who received an account of the accident by the *train engine* at 20 minutes past 10 A.M.; and as it must have taken the engine, under the circumstances, at least two minutes to get to Stratford, I consider I am fully justified in concluding that the collision took place at about 18 minutes after 10 o'clock.

As regards the evidence of the policemen on the line, I find it so conflicting, and displaying such a want of correct observation, that I can only consider it as valueless. Clark's description of the speed of the return engine is so vague that nothing can be made of it. Serjeant Parker says, the train left Devonshire-street station nine minutes past 10, and the return engine five minutes afterwards, thus bringing the return engine to Devonshire-street half a minute before it had actually left Shoreditch; and Cooper makes the engine go so slow, that, he says, he could have got upon it; the whole, in my opinion, indicative of inattention to their respective duties as policemen, and for which they ought to be severely admonished.

On referring to the letters that have been laid before me, relating to Hindley's character and knowledge as an engine-driver, I am disposed to think he was not sufficiently qualified for the employment, and that it would have been better to have placed him on an engine for two or three months, under an experienced person, before appointing him to such a responsible situation.

Had Hindley maintained a speed of 15 miles per hour, which he was bound to do, after the caution he admits himself to have received from Inspector James, and which appears to be the rate of speed laid down in his own Company's regulations to be observed in foggy weather, he would not have reached Lea Bridge, where the collision took place, till 24 or 25 minutes past 10.

From the evidence that has been given as to the state of the weather, I am decidedly of opinion that the train could be seen from Bow station, and that had not Hindley's speed been excessive on his passing that station, he would have been able to stop his engine before arriving at the point of collision.

I am inclined to give Hindley credit for having seen the train, and that he used every possible exertion to stop his engine, but his speed at the time was so great that he was unable to reduce it below 15 miles an hour—had his speed been greater than this at the time of collision, the effect must have been attended with much more frightful consequences.

I am therefore decidedly of opinion, that the accident in question was mainly attributable to Hindley's want of caution and disobedience of orders, and would recommend his immediate removal from his situation as engine-driver.

The conduct of the guard, Croker, appears to be almost as culpable as that of Hindley; for had he not most improperly stopped the train, to take up two passengers, after leaving Bow station, the collision could not have taken place. He states, he was called upon by a gentleman, of the name of Braithwaite, to do so, or he would get into trouble. Mr. Braithwaite was not brought forward to corroborate this testimony; and, even if he had, I can consider it but a poor excuse for a man who receives his orders for the guidance of his conduct on the road from the proper officers appointed by the Board of Directors, and I would therefore recommend that he be removed from his present employment for at least 12 months.

Serjeant Otway's conduct appears to be consequent upon the irregularity of the guard; had he not, by the stoppage of the train, been compelled to go from his station, I have no doubt but the proper signals would have been made to the return-engine, either to stop altogether or to slacken its speed. It will therefore be observed, that I consider the cause of the late accident on the Eastern Counties' Railway to be attributable, in the first place, to the want of caution and disobedience of orders on the part of Hindley, the driver; and, in the second place, to the irregular conduct of Croker, the guard, in stopping the train to take up passengers, after he had been regularly started by Serjeant Otway, in charge of the Bow station.

The rules, regulations, and orders, &c. &c. which have been submitted for my inspection, for working both lines of railway, appear to have been framed with great care, and only to require a more rigid enforcement of them to ensure the public safety. By the evidence of Inspector James, it appears that it is not his invariable practice to start return-engines, if he knows that a quarter of an hour has elapsed from the departure of the previous train, and that there are no obstructions on the road. To allow engine-drivers at any time to start of their own accord is, I think, a bad practice, and very likely to be productive of accidents; and I would, therefore, most strongly recommend that no train or return-engine should be permitted to leave Shoreditch station, during the 24 hours, without being regularly started by the officer appointed for that purpose. A practice has obtained, and I believe pretty generally, at the principal stations round London, of substituting some conventional signals instead of (as at other stations) most strictly adhering to the regular printed code. Hindley says he did not see the signal of Inspector James, and if he had he should not have considered it (holding up one hand) the signal to stop. This want of uniformity I consider very objectionable, particularly when a terminus is used in common by two companies, although the management might be, and is in the present instance, vested in one of them; and I would therefore beg to recommend the strict observance of the printed code of signals at the termini, as well as at the intermediate stations.

In the course of my inspection of the line as far as Stratford, which I here beg to observe I found in very perfect order, I had some conversation with Mr. Hall relative to the propriety of retaining the stopping places at Devonshire-street and Bow. I fully concur with the remarks contained in Mr. Bell's statement upon this subject. Stopping places at such short intervals, where a road is used in common, must tend to produce accidents, cannot be very productive, and would require a larger number of police, to prevent passengers getting upon the road, and running after the train, as was the case at Bow, than are at present kept there; and I would therefore recommend that the Eastern Counties' Railway be called upon to relinquish them.

The clocks at the Shoreditch and Stratford stations are badly placed, and very difficult to be seen, either by the engine-driver, guards, or passengers; this, I am informed, is very generally the case throughout both lines; but I have every reason to believe from the conversation I have had with Mr. Hall and Mr. Bell, the managers, upon this subject, and from the discrepancies as to time which have been made manifest in the course of this investigation, that the evil will be remedied without your Lordships' intervention.

On the Eastern Counties' Railway, the time of departure and arrival of trains is kept by inspectors at the several stations; the guards and engine-drivers are

Digitized by Google

not furnished with watches, though the latter have a time-table given to them. Whereas, on the Northern and Eastern Railway, the time of arrival and departure is kept by the conductors of the trains, who have watches furnished them for the purpose, but without any locks to them, and consequently at their own command to alter or not, as may suit their convenience.

This want of uniformity of system between two Companies using the same terminus and three miles of road in common, I am inclined to think objectionable; and it seems to point out the necessity of some uniform system for the regular working of all railways, to be determined upon and promulgated under your Lordships' authority, without which, I am of opinion, safety, as regards locomotive travelling, will never be accomplished.

All the letters, regulations, and other documents which have been furnished for my information by the two Companies, though many of them are not particularised in my Report, are herewith transmitted, with an index of reference; and I will here take leave to bring under your Lordships' notice the kind attention and assistance I have received from all parties during this investigation.

In conclusion, I would beg generally to remark that in all instances of trains arriving late at their destination, which have come under my immediate notice, I have invariably observed that it has arisen from the engine being overpowered by too many carriages; and as a want of punctuality in arrival is decidedly at variance with the safety of the public, I would suggest for your Lordships' consideration the propriety of having the power of all locomotive engines determined, not so much with regard to weight, as to the number of carriages they are capable of drawing; and that hereafter each locomotive engine should be licensed to proceed with so many four or six wheel carriages (as the case may be), and no more.

I have, &c.,

S. C. Melhuish, Capt., R. E.

Copy of a Letter sent to the Eastern Counties' Railway Company, inquiring what steps have been taken relative to William Croker and William Moore.

Board of Trade 22d December, 1840.

Sir,—With reference to my letter of the 17th, enclosing a copy of Captain Melhuish's Report on the accident which occurred on the Eastern Counties' Railway on the 15th November, I am directed by the Lords, &c. to inquire what steps have been taken by the Company with regard to William Croker, the guard in charge of the train, to whose misconduct, in stopping to take up passengers after the train had been regularly started, the accident appears to be in a great measure attributable.

I am further directed to inquire what steps were taken with regard to William Moore, the engine-driver, by whose misconduct the accident of the 14th of September was occasioned.—I am, &c.

S. Laing.

To the Secretary of the Eastern Counties' Railway.

In reply to Letter from this Department of the 22nd December.

26th December, 1840.

Sir,—I beg leave to acknowledge the receipt of your letter of the 22nd instant, and to acquaint you that your letter of the 17th instant would have received an immediate reply, but that I waited a meeting of the Directors to receive their instructions thereon; those instructions had been taken, and a reply in conformity with them was preparing previous to the receipt of your letter of the 22nd instant, and has this day been transmitted to Mr. Porter.

In reference to your inquiry with regard to William Moore, the driver in charge of the engine when this accident occurred on the 14th September, I am desired to state that he was forthwith dismissed, and orders given that he should never again drive an engine on this line; but being a clever workman he was subsequently engaged by the foreman of the repairing shops as a mechanic.—I have, &c.

(Signed) Arch. Bulkley, Sec.

S. Laing, Esq., Railway Department, Board of Trade.

---

7. Report of Sir F. Smith on the Lancaster, and Preston Railway,—to the Lords of the Committee of Privy Council for Trade.

Board of Trade, 11th January, 1840.

My Lords,—Your Lordships having directed me to inquire into the circumstances connected with the accident which occurred on the Lancaster and Preston Railway on the 16th ultimo, I proceeded to both places and entered into communication with Mr. Bolden, the Secretary of the aforesaid Company, and Mr. Power, the Secretary of the Preston and Wyre Railway. The latter met me, and the former accompanied me to Preston, at which place the accident in question happened.

The sketch which I have the honour to transmit for your Lordships' information shows the spot where the accident occurred, the relative position of the Preston and Wyre and the Lancaster and Preston Railways at their junction, and the Preston and Wyre station at Preston.

It appears that the Preston and Wyre Railway was the first formed, and that in order to have a terminus in connexion with Preston, the station for passengers and goods was established at the point marked A. in the sketch.

This railway is crossed nearly at right angles, and on a level, by the Lancaster line, at the point B., and the Wyre passenger trains, for the purpose of taking persons to join the North Union trains, run into the Lancaster line at the point marked C.

It appears by the return made to your Lordships on the 18th ultimo, by Mr. Bolden, the secretary of the Lancaster Railway, that on the 16th ultimo, Henry Taylor, a waggoner in the employment of a contractor on the Lancaster Railway, was driving a horse attached to ballast waggons on the "up-line" of that portion of the said railway which passes through a part of the town of Preston, and that at a little before half-past four P.M. on that day, a policeman of the Lancaster company, being aware that a train from Wyre would shortly arrive, warned Henry Taylor of the circumstance, and desired him to go off the line.

The Report adds, that, in defiance of this warning, Henry Taylor made another trip with the waggons, and in consequence the up train from Wyre (it being then dark) ran against the waggons, and killed the driver.

Mr. Bolden adds, that an inquest was held on the body of the deceased, when the jury returned a verdict of accidental death, and expressed their unanimous opinion that no blame attached to any one but the deceased himself, and that the Company and their servants had taken every precaution to prevent accidents.

After a deliberate consideration of all the circumstances of this case, and a careful inspection of the spot, I regret to say that I cannot arrive at the same conclusion as the Coroner's jury.

In the first place, there should have been the most positive written prohibition to the contractors' waggons being worked at any time against the stream of traffic, and the orders should have extended to preventing their being on either line within half an hour of any train being due. Not only does it appear to me that these precautions were indispensable for the safety of the public, but that either the contractor or his foreman should have been on the spot while ballast waggons were working on the permanent rails, in order to render it a matter of certainty that no irregularity was practised of the kind which caused the accident; and, moreover, the policeman who warned Henry Taylor to discontinue his work, should have either exercised force to turn the waggons off the line, or should have shown signals to stop the Wyre train.

On interrogating the policeman, he informed me that he was not authorised to use force on such an occasion, and that it was not in his power to show a red light to stop the Wyre train, as he had sent his lamp to Lancaster for the purpose of being repaired.

In Mr. Bolden's Report to your Lordships it is stated, that the accident occurred at eight minutes before 5, and by a return with which that gentleman supplied me I find that the Wyre *up* train was due on the *up* line at the spot where the accident happened at eleven minutes before 5; and also that a Lancaster *down* train was due on the *down* line at seven minutes before 5, at the same point; so that the contractors' waggons should not have been permitted on *either* line, at or near the hour when the fatal collision took place, and yet I find by Mr. Bolden's Report that the policeman required the deceased to move from the *up* to the *down* line, which would of course not have made the irregularity a bit less likely to be attended with serious consequences.

However, it should not have been left to a waggon driver or a policeman to settle on *which*, if on *either*, line the former should work; and I think great blame attaches to the contractor, who, I understand, had been told not to use the line within half an hour of the time when any train was due, and there should have been a properly authorised person belonging to the Company, who, in respect to a matter so essential to the public safety, should have had control even over the contractor himself.

It appears that there was not any passenger in the Wyre train, and that it was only proceeding at the rate of five miles an hour; had it been otherwise, and had the waggons been overtaken when full, instead of being met when empty, several lives might have been lost.

I have only further to remark, as respects this accident, that the engine which was drawing the Wyre train had no "head light," and also that there was no light attached to the ballast waggons. Had either of these precautions been taken, in all probability the accident would not have happened, notwithstanding the other irregularities I have noticed.

It now becomes my duty to call your Lordships' attention to the crossing of the Preston and Wyre and the Lancaster and Preston Railways.

Your Lordships will not fail to observe that nothing short of the most stringent and well-considered orders to regulate this part of both lines can ensure the public against accidents at this point. The train from Lancaster and from Wyre may arrive within a very short distance of each other at this crossing, without the drivers of one train being aware of the approach of the other, in consequence of the view being obstructed by the ramp of a bridge; and therefore it is necessary, in order to prevent collisions, that a policeman should be stationed near the crossing to give notice to both. For the purpose of being enabled to pull up, if requisite, and to guard against the consequences that might arise from the policeman being absent, or neglectful of this important duty, both trains should pass the crossing at a speed *not exceeding* five miles an hour.

In the course of my inspection I observed that at the point where the Lancaster line unites with the North Union, near Dock-street, Preston, the railway is not properly fenced in. This I was informed is intended to be done by a stone wall; but it should be pressed upon the Company to put up some temporary fence, to prevent cattle straying on the line until the permanent fence can be completed.

I have to add that Mr. Bolden put into my hands a copy of a code about to be issued for regulating the duties of the servants of the Lancaster Company. This code seems to have been drawn up with considerable pains and judgment, and there is only one clause (viz. the XXII.) to which I have occasion to call your Lordships' attention, as it may be considered to exceed the powers of the Company, although useful in itself.

The accident which has been under consideration suggests the propriety of no line being opened for public traffic till the Company shall have engaged a sufficiency of servants for properly conducting its operations, and prepared a code of instructions for their guidance.

Had either been the case in all probability Henry Taylor's life would not have been lost, for the policeman alluded to (George Smith) would have had instructions for his guidance in the event of being disobeyed by a person so self-willed as the deceased is represented to have been; and the policeman would have been warned by the code, as is usual in, I believe, all Companies, never to go on duty without his signal-lamp.

It does not appear that the Wyre Company have as yet printed a code of regulations, or that the periods of the arrival of their trains at the several stations on the line are properly recorded. I consider both to be essential.

I cannot conclude this Report without observing, that the secretaries of the Lancaster and Wyre Railways evince the strongest desire to adopt every precaution that can be suggested to them for increasing the safety of the traveller. Nothing would tend more to effect this in regard to the passengers on *both* lines than the adoption of some arrangement by which the crossing of the Lancaster Railway by the Wyre train could be avoided, and the Companies concerned should, for the sake of the public, come to some equitable arrangement on this point at an early period.

I have, &c.

Frederic Smith, Lt.-Col. R. E.

Copy of Letter sent to the Lancaster and Preston Junction Railway Company, with Extract from Sir F. Smith's Report on the Accident of the 16th December.

Board of Trade, 13 January, 1841.

Sir,—I am directed by the Lords, &c. to enclose the accompanying extract from Lieut.-Col. Sir F. Smith's Report upon the late accident on the Lancaster and Preston Railway for the information of the Directors, and to call their attention to the recommendations therein contained, and to the necessity which exists for extreme caution in working the junction of the Lancaster and Preston and Preston and Wyre Railways.

With reference to that part of the Report which relates to the want of fencing at the point where the

Digitized by Google

Lancaster line unites with the N. Union, I am directed to say, that their Lordships consider it indispensable that the provisions of the Lancaster and Preston Act of Incorporation should be complied with without delay, and that a fence sufficient for temporary purposes should be erected until the stone wall or permanent fence is completed; and I am to request that you will state, for their Lordships' information, whether the Company have complied with this requisition.—I am, &c.

S. LAING.

To the Secretary of the
Lancaster and Preston Junction Railway Company.

Copy of Letter sent to the Preston and Wyre Railway Company, with Extract from Sir F. Smith's Report on the Accident on the Lancaster and Preston Railway of the 16th December.

Board of Trade, 13 January, 1841.

Sir,—I am directed by the Lords, &c. to enclose the accompanying extract from Lieut.-Col. Sir F. Smith's Report, for the information of the Directors of the Preston and Wyre Railway Company, and to call their attention to the recommendations therein contained, and the importance of adopting, without delay, the necessary arrangements for ensuring the public safety upon their line, and at the junction with the Lancaster and Preston Railway.—I am, &c.

S. LAING.

8.—REPORT OF LIEUT.-COLONEL SIR FREDERIC SMITH, OF THE ROYAL ENGINEERS, TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE, RESPECTING THE ACCIDENT WHICH OCCURRED ON THE 24TH DECEMBER, 1840, ON THE MONKLAND AND KIRKINTILLOCH RAILWAY.

Glasgow, 2nd January, 1841.

My Lords,—Pursuant to your Lordship's orders, I have inquired into the circumstances connected with the accident, attended with loss of life, on the 24th ultimo, on the Monkland and Kirkintilloch Railway, and I have the honour to submit the following Report for your Lordship's information:

It may be well, in the first place, to observe, that the Monkland and Kirkintilloch Railway is placed in connection with Glasgow by means of the Garnkirk Railway, and it serves to unite the Forth and Clyde Canal with the Ballochney Railway, and this last-named railway joins the Slamannan Railway, which runs to the Edinburgh and Glasgow Union Canal, at a point considerably to the eastward of that where the Monkland and Kirkintilloch line intersects the said canal.

By means of these railways and the canal, passengers are conveyed between Glasgow and Edinburgh at a cheap rate, in about four hours and a half.

The distance by the Edinburgh and Glasgow Railway, which is expected to be opened to the public in August or September next, will be 46 miles between these two cities, and as the ruling gradient does not exceed 1 in 880, it will be easy to perform the journey between the termini in little more than an hour and a half, including stoppages.

The Monkland and Kirkintilloch Railway was incorporated in 1824, and opened to the public in 1826. It was formed with a 4½-ft. gauge, as a mineral line only, but it is now used only by the Garnkirk, Ballochney, and Slamannan Companies for passengers; this renders it necessary that the working of this line should be conducted with the utmost care and attention.

The accident which your Lordships have instructed me to inquire into took place at about a quarter before five o'clock in the afternoon of the 24th December last, shortly after it had become dark.

I was informed by Mr. Leish, the Engineer of the Monkland and Kirkintilloch, that on the said afternoon a train of coal waggons came off the Ballochney Railway, and was proceeding along the Kirkintilloch to the Garnkirk Railway, for the purpose of being conveyed by the last mentioned line to Glasgow, when the accident in question took place.

The name of the driver of the engine was James Tennant, and that of his assistant, whose duty it was to act both a breaksman and fireman, was Daniel Maconnochie. The latter was unfortunately killed.

It appears that the accident happened at a point on the Kirkintilloch Railway, which is nine miles and a quarter from Glasgow, measured along the Garnkirk and Kirkintilloch Railways, and at about half a mile from the junction with the Ballochney line; here a gradient, falling at the rate of 1 in 400, commences; it is a furlong in length, and is followed by another gradient of the same length, and falling at the rate of 1 in [illegible] is found necessary to apply the breaks to all the waggons at the top of the first-mentioned incline of 1 in 400, and it was in doing this that Maconnochie was killed. On the lines connected with the Kirkintilloch, I was informed that in the coal trains the firemen in general act also as breaksmen, and that just before the trains (proceeding towards Glasgow) arrived at the top of the plane, the fireman jumps off the tender and applies the lever-breaks to the several waggons as they pass him, after which he places himself on the last waggon of his train, and sits on the end of the lever to increase the friction. This is the regulation of the Kirkintilloch Company, and it is the general practice, though not included in their regulations, that the train is stopped at the foot of the steeper incline, and the breaks taken off.

Mr. Leish stated, that it was in applying the breaks and after he had done so to four or five waggons, that the deceased (Maconnochie) slipped, and fell under the hinder waggons, by which his death was caused.

The trains of coals and other minerals do not, it is said, exceed a speed of five miles an hour, and are usually retarded on approaching the incline, in order to diminish the risk of the fireman in performing the duty of applying the breaks.

There can be no question, that however carefully the operation of using the breaks, according to this mode, may be effected, it must unavoidably be attended with considerable risk to the breaksman: and I am of opinion that the Kirkintilloch Company, and all other Companies adopting the same practice, are bound either to abandon or to place it on a safer footing. It is no justification of so unsafe a system to say that the accident which deprived Maconnochie of his life was the first of the kind that has happened, and that this misfortune was mainly attributable to the circumstances of the sufferer having been only a short time employed as breaksman, and also to the road having been slippery from frost. It is sufficient that a life has fallen a sacrifice to this dangerous practice, and it behoves the Managers of the Company to establish a system unattended with risk. I suggested to Mr. Leish that the trains should be stopped at the head of the plane, and that the waggons should remain at rest until the breaks are applied; but he objected, on the ground of the engine being then unable to move the train. This objection would of course be valid with a very heavy train, but then, the very circumstance of its being of so unmanageable a weight becomes, not a justification of the dangerous practice in question, but is an irresistible argument against such unwieldy trains being worked; and whatever inroad a change may make on the profits of the Company, I have no doubt that a recommendation from your Lordships will lead to the adoption of measures that may give greater security to the firemen or breaksmen attached to the waggons which descend the planes of the Monkland and Kirkintilloch Companies.

As an improvement of the present system, Mr. Leish proposes to station a man at the head of the plane, with no other duty to perform than to apply the lever break as the waggons pass him; and Mr. Leish reckons on such a man becoming so dexterous as to render him much less liable to risk than the ordinary fireman or breaksman. This no doubt would be an improvement of the present mode, but I cannot admit that it is sufficient.

If the objection urged by Mr Leish to stopping the train be found in practice as valid as he considers it to be, then I would suggest one of the two following courses:—

First, That the train should be stopped at the top of the plane of 1 in 400, and such a number of breaks applied as will diminish the velocity down that incline without being sufficient to prevent the engine from putting the train in motion. The train should be again stopped just beyond the top of the plane of 1 in 64, and additional breaks applied.

Secondly, If these arrangements are objected to, the number of breaksmen might be increased, and the break applied by them, without stopping the train, or quitting the waggons to which they are respectively attached. Other modes might be mentioned for effecting the required object, but those I have specified may be sufficient to bring under the notice of the Directors of the Company in question.

Mr. Mitchel, who is the legal adviser of the Company, and Mr. Leish, the Engineer, accompanied me in the inspection of the line, and both evinced the greatest anxiety to adopt steps to prevent future accidents.

I observed that both in the Kirkintilloch Company, and those in connection with it, a system of signals is in use, the symbols of which have a meaning the very opposite of that given to them in the southern railways. Uniformity seems to be essential in this point to prevent accidents, and must be established eventually by legislative enactments.

In passing along the Glasgow and Garnkirk Railway I remarked three crossings of public roads on the level. This I understand is not prohibited by the Act for this railway, nor does it appear that the Company are required to put gates across these roads; but as it is extremely dangerous to dispense with so important a means of adding to the security of passengers by the railway, or travellers along the high roads intersecting it, I would hope that a remonstrance from your Lordships would induce the Company to put up proper gates and to place a policeman at each crossing.

In conclusion, I have to suggest that the Kirkintilloch Railway Company should be required to make it one of their printed rules that the breaks should not be taken off at the foot of the steep incline until after the train of waggons has been stopped, so long as the lever breaks of the present description are used.

I have, &c.,
FREDERIC SMITH, Lt.-Col. R. E.

Copy of Letter sent to the Monkland and Kirkintilloch Railway Company, with Copy of Sir Frederic Smith's Report.

Board of Trade, January 7, 1841.

Sir,—I am directed by the Lords, &c., to enclose a copy of Sir F. Smith's Report, for the consideration of the Directors of the Monkland and Kirkintilloch Railway Company. With reference to the suggestions respecting the manner of applying the breaks and descending the inclined planes, their Lordships not being empowered by the Act for regulating Railways to require the Company to adopt regulations for the protection of their servants, confine themselves to expressing a hope that the Company will take every precaution in their power to prevent loss of life.

With reference to that part of Sir F. Smith's Report which states that he remarked three crossings of public roads on a level upon the Glasgow and Garnkirk Railway, at which no gates were erected, I am directed to draw your attention to the 2 & 3 Vict. c. 45, which provides "that wherever a railroad crosses any turnpike road, or any highway or statute-labour road for carts or carriages in Great Britain, the proprietors of the said railroad shall make and maintain good and sufficient gates across each end of such turnpike or other road at each of the said crossings, and shall employ good and proper persons to open and shut such gates, so that the persons, carts, or carriages passing along such turnpike or highway shall not be exposed to any danger or damage by the passing of any carriages or engines along the said railroad," and to request that you will inform their Lordships whether the provisions of this Act are disregarded, in any and what instances, upon any of the railways of which you are Secretary.—I am, &c.,

S. LAING.

To the Secretary of the Monkland and
Kirkintilloch Railway Company.

In reply to Letter from this Office, of the 7th January, enclosing Copy of Sir Frederic Smith's Report, &c.

Glasgow, January 9, 1841.

Sir,—I have this morning received your favour of the 7th, with the copy of the Report by Sir Frederic Smith therein referred to, which I shall lay before the Directors of the Monkland and Kirkintilloch Railway Company at their first meeting. In the meantime I have transmitted a copy of it to the Resident Engineer, in order that he may turn his attention to the valuable suggestions of Sir F. Smith, with a view to the adoption of the most decisive measures for better regulating the trains upon the inclinations of the railway. This subject will receive the immediate consideration of the Resident Engineer, and also of Mr. Macneill, the Principal Engineer, who is daily expected here, and of the Directors; and you shall be informed of the results to which they come, in the confident hope that they will be such as to meet your approval. It is exceedingly satisfactory to us to have the benefit of the able suggestions of Sir F. Smith, and you may rest assured that it is the utmost wish of the Directors, as well as of the Managers of the railway, to adopt the best system for the protection of the servants of the Company as well as of the traders. I have also called Mr. Leish's attention to the change of signals, which, however, seems of the less consequence that one uniform system is adopted *here*, both on the Monkland and Kirkintilloch, and Glasgow and Garnkirk line; but I have communicated your suggestion also to the Secretary of the Glasgow and Garnkirk Railway Company, to whom I have transmitted extracts from your letter and Sir Frederic's Report in regard to the three road crossings remarked upon by Sir Frederic, to which he will, I have no doubt, attend, and upon the subject of which he will doubtless communicate with you. In regard to the level road crossings on the Monkland and Kirkintilloch and Balloch-

ney Railways, the Directors, soon after the statute which you cite was passed, instructed the Resident Engineers to comply with the provisions of that statute, and I doubt not that this has been done ere this. The provisions of the statute were communicated to the Resident Engineers of the Wishaw and Coltness, and Slamannan Railways; and in the former case all the roads are, I understand, passed by bridges; and in the latter the crossings are either effected in this manner, or gates *have been* erected, as I understand; but I write to each of the Superintendents to-day for a specific Report.—I have, &c.

JAMES MITCHELL.

G. R. Porter, Esq., Board of Trade,
Railway Department, London.

NOTE.—The result was, that in all the cases referred to, the Companies have signified their intention of proceeding to erect gates with all possible despatch.

---

9. REPORT OF SIR F. SMITH ON THE MIDLAND COUNTIES, AND LONDON AND BIRMINGHAM RAILWAYS, TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE.

Board of Trade, Whit-hall, Jan. 16, 1841.

MY LORDS,—Pursuant to your Lordships' instructions, I have this day inquired into the causes of the accidents which occurred on the 8th inst. on the Midland Counties' Railway, and on the 13th inst. on the London and Birmingham Railway, and I have the honour to submit the following Report for your Lordships' information.

MIDLAND COUNTIES' RAILWAY.

The Secretary of this Company transmitted to your Lordships, on the day on which the accident happened, a statement of the circumstances, so far as they were then known to him. This statement, which I believe to be correct, is herewith enclosed.

The accident now under consideration was fatal to two servants of the Company, on whose bodies an inquest was held on the 9th instant.

The evidence given on that occasion is very fully detailed in the *Derby Reporter* of Thursday last, a copy of which I shall annex to this Report. I therefore shall not trouble your Lordships with a minute relation of the whole of the facts connected with this melancholy occurrence, but confine myself to those points which especially require to be brought under your Lordships' consideration.

It appears that a luggage train, consisting of 26 waggons, and drawn by two engines, left Leicester at 40 minutes past 12 on the morning of the 6th for Derby, and that the mail *down* train was due at Leicester at 40 minutes past 1.

When the luggage train arrived within three miles of Derby, one of the engines became disabled, in consequence of the pumps freezing; the train was therefore stopped, and the disabled engine, which was driven by Joseph Taylor, was taken to Derby by the other engine, which was driven by John Bonham; but before their departure it appears that Joseph Taylor directed his fireman, William Browne, to instruct a guard belonging to Pickford's waggons, as well as Thomas Wale, the Company's breaksman of the train, to take red lights sufficiently far back upon the line to warn the driver of the mail train of the detention of the luggage train.

After Bonham had left the disabled engine at Derby he returned with his own engine to the luggage train; but his engine not being sufficiently powerful to move the whole train he subdivided it, and proceeded to Derby with the leading subdivision. It appears from the information given to me by Wale, the breaksman, and by Pickford's guard, that they had not gone down the line with the red lamps above 50 or 60 yards, and that on hearing Bonham's engine returning they rejoined the train.

They admit that Bonham gave directions that they should go a long way down the line with the signal lamp, to prevent the chance of collision with the mail train, which Bonham expected might arrive on that part of the line before his return from Derby, or at least before he could get the train to its destination.

I was informed that when Bonham had disengaged his engine from the first subdivision of his train, he returned from Derby, and having attached the engine to the second subdivision, he put the whole in motion; and in order, as he states, to give notice to the mail train, if within hearing, he blew his whistle.

Unfortunately this whistle being heard by Pickford's guard and by Wale, they both rejoined the train, taking with them the signal lamp. The consequence was that the mail train, which was at hand, overtook and ran into the luggage train. By the collision the driver of the mail, Thomas Taylor, and the fireman, Richard Livesey, were thrown off and killed.

It appears that there was a red lamp at the tail of the luggage train, but it is presumed that this was not seen sufficiently early by the driver and fireman of the mail train, owing to the very heavy fog which is stated to have prevailed at the part of the line where the accident occurred.

The post-office guard of the mail train asserts that he heard a whistle about a mile distant from the spot where the accident happened, and he thinks that the speed of the mail train was immediately diminished.

In reviewing the circumstances of this distressing accident, it is impossible not to come to the conclusion that great praise is due to the engine-drivers, Joseph Taylor and John Bonham, for having given peremptory orders to Wale and Pickford's guard to go back with the red light; and it is only to be regretted, so far as these two engine-drivers are concerned, that they had not the forethought to direct Wale or Pickford's guard to remain at the spot to which they were directed to proceed, until the mail train arrived.

It does not appear that Wale had any positive instructions for his guidance, either printed, written or verbal, and therefore I do not consider that any blame is attachable to him for having rejoined his train.

This melancholy accident, however, points out the necessity of every railway servant employed with a train, having definite instructions for his guidance, under every conceivable circumstance connected with the safety of the public or of his fellow servants.

While investigating the causes of this accident, Mr. Dicey, the Chairman, Mr. Bell, the Secretary, Mr. Woodhouse, the Superintendent of the line, and Mr. Kersley, the Superintendent of the engines, were present, and these gentlemen produced a copy of the code of instructions of the Company, to which a clause had been added, since the accident, specifying that on similar occasions of the stoppage of a train during the night, a guard or breaksman should be sent back about 600 yards with a red light to warn approaching trains, and that such guard or breaksman should remain there to be brought forward by the expected train.

This regulation seems to meet the necessities of the case, and it would be desirable that it should be generally promulgated; but in working it out care must be taken not to leave the train without the means of having the breaks applied.

I cannot close this part of the Report without suggesting that the Midland Counties' Company should be informed how very desirable it is that they should have, at such a station as Derby, not only a pilot engine ready to assist in any possible emergency, but that some person of superior authority should be at hand to give directions, and to take the requisite assistance to any point where an obstruction may have taken place. If such a person had returned with Bonham after he had taken in the "dead" engine to Derby, he would naturally have seen the necessity of relieving Wale, as to his responsibility respecting the luggage under his charge, and would have directed him to remain on the line with his light. Moreover, if the pilot engine had returned with Bonham, after the first trip to Derby with the dead engine, the whole of the luggage might have been removed at once, and the accident thereby prevented.

In inquiring into this accident, as well as into that on the London and Birmingham line, it was most satisfactory to me to have the valuable co-operation of Mr. Laing.

The gentlemen of the Midland Counties' Railway, as well as Mr. Bruyeres, the Superintendent of the London and Birmingham, met us in the very best spirit.

LONDON AND BIRMINGHAM ACCIDENT.

This accident happened on the 13th instant, and is very fully detailed in the accompanying copy of Mr. Bruyeres' Report to the Coach and Police Committee of his Company. The facts are as follows:—

Attached to the Birmingham night mail train are generally two carriages destined for the Midland Counties. On reaching Rugby they are uncoupled, and connected to the hinder Birmingham carriage by a tail rope; by this they are drawn on from the Rugby stopping place to the spot where the crossing is formed, to lead off to the Midland Counties'. Here they are detached, and pushed over by the Birmingham porters to the Midland Counties' line, it being the duty of the pointsman of the Birmingham line not to open the points, unless he perceives that there is nothing on the up line from Birmingham likely to interfere with the crossing of the Midland Counties' carriages.

It is understood by the inspectors that it is the duty of the ticket collectors at Rugby, who are also foremen of the porters, to superintend the passing of the carriages from the London and Birmingham line to the Midland Counties' line; and it is quite obvious that the safety of the passengers should not be left, in so important an operation as the crossing of a line of great traffic, to the judgment, discretion, and attention of persons in the inferior grades of porters and pointsmen.

There are two ticket collectors at Rugby, namely, Mr. Leonard Lowden, who takes the day duty, and Mr. Blamire Shawe, who is charged with the night duty. The former stated that he considered it to be his duty to direct and superintend the porters in passing the carriages to the Midland Counties' line; but the latter said that although he has frequently attended to this matter, he did not regard it as a positive duty, and he admits that he was not present on the occasion when the accident of the 13th occurred.

On the night in question the down mail train reached Rugby at 1h. 4m. a.m., being 54 minutes after its time. The Midland Counties' carriages were detached in the usual manner, and pushed over to the points by the porters.

William Turrel, the policeman in charge of the points, states—that before opening them he exhibited his red light to another policeman, about 300 yards nearer to Birmingham, and as it was not responded to, he concluded that it had not been seen by the other policeman, Kerr, in consequence of the density of the fog; he adds, that being aware of the up-mail train not being then due, he fancied it would be safe to pass the carriages, and he therefore opened the points. However, the mail train almost instantly arrived, being 10 minutes before time, and, striking one of the buffers of the leading carriage, overturned both, and injured four or five of the passengers.

It is represented to have been the duty not only of Turrel to keep the points closed till his red signal was answered, but also of Kerr to exhibit a white signal to Turrel, giving him notice of the approach of the up-mail; and he should have detained it until Turrel responded to his (Kerr's) white signal. Both these men neglected these important precautions, and were thus both, though not in an equal degree, the causes of this accident.

Turrel had clearly the power of preventing it, by detaining the carriages until the cause was discovered of his signal not having been answered, and proper steps had been taken to ensure the safety of the Midland Counties' passengers by sending a red light along the line to meet the Birmingham up train. I therefore consider this man highly culpable. With respect however to Kerr, it is possible that, owing to the fog, he may not have discovered the approach of the up mail in sufficient time to stop it; but it does not appear that he took any pains to do so, and indeed it is not quite clear that he had received instructions to that effect. The inspector asserts, however, that these orders were given to him verbally; and this regulation seems to be generally understood on the line, but Kerr does not admit that he was aware of it.

I am of opinion that the ticket collector, Mr. Blamire Shawe, should have been present when the carriages were being crossed to the Midland Counties' line. Long experience has taught me that there is no reliance to be placed on orders or regulations verbally communicated, and I would strongly recommend that in all railway matters in which the safety of the public is concerned, such a practice should not be resorted to.

I find that Mr. Bruyeres has given directions that in future all trains shall stop 200 or 300 yards before they enter the Rugby Station, in order to prevent collisions; for in the event of two trains arriving at the same time, either may, according to this plan, be allowed the precedence without risk.

This arrangement should be adopted at all similar junctions. I understand it is the intention of the Birmingham Company to adopt a new and improved system of giving signals to trains, and I have no doubt that great advantage to the public will result therefrom; but I would strongly recommend that, until this new system is perfected, the various stations of this important line should be provided with revolving lamps, to be placed on fixed signal posts, upon the plan which I am aware was in preparation before the new system was suggested.—I have, &c.

FREDERIC SMITH, Lieut.-Col. Com. R.E.

Report of an Accident attended with loss of Life.

MIDLAND COUNTIES' RAILWAY.

The down luggage train with 2 engines and 26 waggons left Leicester, at 40 minutes past 12 this morning, one hour before the time for the down mail train.

Digitized by Google

On arriving within three miles of Derby, the pumps of one of the engines became frozen; consequently the fire was obliged to be put out, and the engine became useless.

The train kept on till within 1¼ mile of Derby, when it came to a stand. The engine which was working took the useless one into Derby; and the guards, one belonging to the Company, and the other to Messrs. Pickford, went about 500 or 600 yards backwards with a red light to warn the mail. The engine returned and took half the train, and then came back for the remainder. When it had returned the second time the driver whistled for the guards to come and get on the train, and put the train in motion. The fog during this time was very heavy; the place where this occurred being upon a low embankment in the meadows. The guards ran after the train, which was moving slowly on, and one of them had just pumped on the step of the break carriage, when the other called out, "Here is the mail." The guard threw himself off, and in an instant the mail-engine ran into a goods waggon, which was behind the break-carriage in which the guards of the goods train ride, and to which was attached the usual red signal-lamp.

The engine-driver and fireman of the mail were both so much hurt as to cause their deaths, which I fear was hastened by the intensity of the cold, before they reached Derby.

The Company's guard on the mail train, who was riding outside of the parcel van with the break to it, was a good deal shaken; but to my knowledge no one else was hurt.

LONDON AND BIRMINGHAM RAILWAY.

Copy of a Report submitted by the General Superintendent of the Line to the Coach Traffic and Police Committee.

13th January, 1841.

Gentlemen,—I have to Report to your Committee, that on Sunday last, the 10th instant, the down-mail train reached the station at Rugby, at 4 minutes after 1 A.M. (54 minutes after time) and was despatched at 10 minutes after 1.

The two carriages, a first and second class, were detached from the train as usual, and were being pushed across the main rails to the Midland Counties' line, when the up-mail train with two engines, No. 47, J. Hesketh, and No. 85, Martin Brown, driving, was seen approaching (this mail was 13 minutes before time); the steam was shut off the engines; and they were advancing at slow speed in order to run into the siding at the up station; but the atmosphere being very foggy, they were too close upon the Midland Counties' carriages to prevent a collision; the leading engine, No. 47, caught the buffer of the second class carriage, drove it back upon the first class, and upset both upon their sides.

Five or six of the passengers were more or less hurt; but, with the exception of three, they continued their journey with the Midland Counties' train, which was got off with all possible dispatch.

The three passengers most hurt were conveyed to the Eagle Hotel at Rugby, and Mr. Bucknell, the principal medical man of the place, called in to their assistance; it was ascertained that no bones were fractured, and the injuries received, although severe, not of that serious nature which was at first feared; they were all well enough to continue their journey the following morning, and they preferred doing so to remaining at Rugby.

I went down to Rugby on Monday to investigate the cause of the accident, when I ascertained that the two carriages in question belonging to the Midland Counties' were as usual taken down to the points; the policeman there stationed (Turrell) then waved his red light to the policeman in communication with him, and stationed about 250 yards lower down the line, to notify to him that the carriages were about to be crossed over the line; he then turned the points for them, and before they had proceeded far enough to be actually across the up line, the up-mail train arrived and caught the buffer of the leading carriage, as before stated; the night was very foggy, and he (Turrell) did not see the train until it was close upon them.

Policeman Kerr, who was stationed the next below Turrell states, that he did not see any signal given by Turrell to him; the fog might have prevented his seeing it; it was sufficiently foggy to do so; immediately after the down-mail train passed him, the up-mail arrived; it was before time some minutes; the other was nearly an hour late; on the approach of the up-mail train he passed the signal (waving his white light) to Turrell; this signal Turrell states he did not see, so that it would appear the night was too foggy to admit of the signals being visible between these two men. The engines of the up-mail, as usual, shut off their steam on passing him (Kerr).

Both Turrell and Kerr are somewhat to blame, the former for not seeing his red signal returned by Kerr before opening his points to cross the carriages, and the latter for not stopping the mail train up, in consequence of the down-mail having only that instant passed. Kerr knew that carriages were always detached from the down-train, to be crossed over to the Midland Counties' line; and he ought to have reflected, that sufficient time could not have elapsed to admit of their having done so when the mail train from Birmingham came up.

(Signed) H. P. Bruyeres, Supt.

Supplement to Sir F. Smith's Report to the Lords of the Committee for Trade on the Accidents on the Midland Counties' and London and Birmingham Railways.

Board of Trade, 18th January, 1840.

My Lords,—Mr. Dicey, the Chairman, and Mr. Bell, the secretary of the Midland Counties' Railway Company, having expressed a wish to be guided by the opinion of the Board of Trade with reference to the propriety of instituting a prosecution under Lord Seymour's Act against any of the servants of the Company concerned in the accident upon their line; and Mr. Bruyeres, on the part of the Directors of the London and Birmingham Company, having intimated a similar wish with reference to the accident at Rugby; I consider it my duty to state to your Lordships the reasons which induced me in both these cases to abstain from recommending that any prosecution should be instituted.

I.—With regard to the Midland Counties' accident.

It is clear that this accident was occasioned solely by the circumstance of the breaksman Wale having rejoined his own train, instead of waiting at his post to warn the mail train. It is clear, also, that this was done contrary to the intention and expectation of the engine-driver Bonham, who, according to the regulations of the Company, was placed in command of the train.

On the other hand it is admitted, that Wale had received no definite instructions either previously in writing, or at the time, from Bonham, as to the course to be adopted in regard to rejoining his own train, or waiting for the mail train; and under these circumstances there seems no fair ground for doubting the correctness of his statement, that he considered it his duty to rejoin his own train, and looked upon the whistle as a signal of recall. I consider, therefore, that the accident was occasioned by an error in judgment,—

First, on the part of Bonham, in not giving Wale more definite instructions.

Second, on the part of Wale, in adopting the less cautious, instead of the more cautious course, upon an emergency.

In either of these cases, however, do I consider the error of judgment of such a nature as to imply misconduct or to deserve punishment.

In Bonham's case, it must be recollected, that he did, on the whole, display considerable presence of mind and judgment, and conformed strictly to his printed instructions; and that if, in the hurry of the moment, he forgot to provide for a possible emergency which had been overlooked by the superior officers of the Company in preparing his instructions, he cannot fairly be considered, by such a slight error of judgment, to have forfeited the praise due to his general good conduct.

In extenuation of Wale's conduct, it must be borne in mind, first, that he had received no definite order from his immediate superior, Bonham; secondly, that he had received no instructions whatever to regulate his conduct on being appointed breaksman, a situation which he had only held for a fortnight.

Under these circumstances, I should not consider him a fit object for prosecution under Lord Seymour's Act, even if his error of judgment had been much more inexcusable.

The view I take of the provisions of Lord Seymour's Act for the punishment of servants of Railway Companies is this, that they are intended to apply only to cases of wilful and criminal misconduct, or to cases in which the Company having done its part in giving proper orders, the servant fails to fulfil his duty of obeying those orders.

In the present instance, without imputing any especial blame to the Midland Counties' Company for not having exercised more forethought than other Railway Companies in providing for a case which is generally unprovided for, it is clear that the Company had not done its part in giving proper orders, and that Wale, in rejoining his own train, was not acting in disobedience of any order. Under these circumstances, therefore, I did not consider Wale a fit object for prosecution, and I am happy to say, that Sir F. Smith fully coincided with me in this view.

II.—London and Birmingham Accident.

In this case the accident was occasioned by the conduct of two policemen, Turrell and Kerr, who neglected the precaution of seeing that their signals were properly responded to.

There can be no question that this precaution ought to have been invariably attended to, as it is obvious that if a policeman, after having asked by signal the question, "Is all right?" and received no answer, is to act as if an answer in the affirmative had been given, the signal might as well have not been made.

Notwithstanding, however, the obvious propriety of this precaution, I do not, upon the principles already stated, think that the want of judgment displayed in neglecting it, constitutes of itself a sufficient ground for prosecution under Lord Seymour's Act, unless it can be proved that such neglect was contrary to orders.

In the present instance, the evidence to establish the latter point is imperfect.

On the one hand, the inspector of police at the Rugby station, stated positively that he had given repeated verbal orders to Turrell and Kerr to consider a signal not responded to as equivalent to a signal of danger; and this statement was corroborated by that of Mr. Bedford, the superintendent of police on the London district of the line, who said that he certainly considered such to be the rule, and that orders to a similar effect were always given to the policemen in his district. On the other hand, Turrell and Kerr both affirmed that they had never received such an order, and that the practice of waiting until a signal was responded to, had been habitually disregarded, and never enforced; and their evidence received an important confirmation from the statement of Mr. Barker, the superintendent of police of the Birmingham district which includes Rugby, that he considered this to be the case, and that he should not have thought it the duty of a policeman invariably to stop a train because his signal had not been responded to.

The absence of any printed or written regulation upon the subject, and the fact of the existence of a discrepancy of opinion between the superior officers of police on different parts of the line, upon a point of such material importance, makes it impossible to say that in the present instance the Company had fully done its part in giving the necessary orders and instructions, although in this, as in the case of the Midland Counties', no greater degree of blame can be justly imputed to them than that of not having evinced a greater degree of foresight than other Companies, in providing for contingencies. At the same time, looking at this circumstance, and at the reasonable doubt which may be entertained, whether the evidence of the inspector would be sufficient to establish the fact of orders having been given to Turrell and Kerr, I did not consider that the case was one in which your Lordships could take upon you to recommend the Company to institute a prosecution. At the same time I think it right to state, that I arrived at this conclusion solely in consequence of the doubt which existed in my mind as to the sufficiency of the evidence to form the fact of Turrell and Kerr's having received orders from the inspector, and that if this fact could have been fully established, I should have had no hesitation in considering both cases as falling within the letter and spirit of Lord Seymour's Act.

I have, &c.,

S. Laing.

(To be continued.)

Accident on the Birmingham and Gloucester Railway.—The London mail, *via* Birmingham, which ought to have reached this city at five o'clock this morning, was delayed about three hours by an accident which happened to the engine, near the Droitwich station, on the Birmingham and Gloucester Railway. The engineer, perceiving something was out of order, cast his eyes about him, and discovered that the burr which fastens down the safety-valve plug had fallen off. He instantly stopped the engine, and had the presence of mind to put out the fire as fast as he could, in doing which he was almost smothered with dust, smoke, and water. One of his eyes was injured, but fortunately he escaped without other or more serious hurts. Had not the engineer thus promptly exerted himself to extinguish the fire, the consequences to all persons tending the engine would probably have been fatal.—*Worcestershire Chronicle*, May 5.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—SPECIAL MEETING.

On Tuesday last, a special general meeting of the proprietors in this Company, was held at Dee's Royal Hotel, in this town, "for the purpose of considering the propriety of increasing the capital of the Company, and of determining the mode in which any increased capital should be raised." There were about sixty shareholders present.

Captain C. R. Moorsom, R. N., the Chairman of the Board of Directors, having taken the chair, said that the proprietors had already been furnished with a special Report of the Directors, informing them of the reasons for calling the present meeting, and with the details of a plan by which the capital required might be raised. Since then certain modifications of that plan had been suggested, with the view of giving it legal efficiency and simplifying its details; both plans were however essentially the same. Before entering upon the consideration of the question, he thought it desirable to submit to the meeting, on the part of the Directors, a Report, which would now be read, explanatory of the circumstances under which certain estimates had been made, and which it appeared had been found inadequate to the completion of the works contemplated.

Mr. Weedon (one of the Solicitors to the Company) read the Report referred to by the Chairman. In August, 1840, the Directors stated that from their calculations the sum authorised to be raised by their Act of Incorporation would be sufficient to complete their original works, with the addition of the line between Cheltenham and Gloucester; but in February, 1841, actual experience had forced upon them the conviction that this expectation could not be realised; they, however, then thought that 60,000*l.* would meet the deficiency in the funds for the completion of the stations, together with the locomotive and carriage stock. Since the February meeting a minute investigation had been entered upon, and it was now ascertained that the excess of cost over the capital authorised to be raised amounted to 172,000*l.*, to which would hereafter be added the cost of a station in Lawley-street, should that be decided upon, together with a permanent station at Gloucester, and any new works which might be required for the development of the capalities of the line. The error in the estimates had mainly arisen, nor from any great error in forming the original calculations and cost, but from the construction of different works not originally contemplated, from an increased expenditure for the purchase of land, and from sums paid for expediting the contracts, and for various other expenses which the interests of the Company required. The Directors left the question as to the mode in which the required capital should be raised in the hands of the proprietors, with the simple expression of their opinion that the traffic upon the line would be found fully sufficient to make the Birmingham and Gloucester Railway a profitable undertaking after the increased capital had been added to the amount already raised.

The Report having been read,

The Chairman said, that the simple proposition before the meeting was the adoption of the resolutions already adverted to, printed copies of which had been placed in the hands of the proprietors at the commencement of the proceedings. Explanations having been entered into by the Chairman, in reply to some observations by the Rev. Mr. Formby of Liverpool, and other proprietors,

C. Shaw, Esq., moved that the recommendation of the Directors, as read by the Chairman, be approved and adopted.

E. T. Moore, Esq., seconded the resolution.

An amendment was moved by Mr. J. Hughes, of Gloucester, but subsequently withdrawn, that the meeting be adjourned for a fortnight, in order to institute an inquiry into the expenditure, with the view of ascertaining whether or not the proposed capital should be raised.

John Homer, Esq., then proposed to substitute for the original motion an amendment to the following effect: "That the Directors be empowered to raise, in addition to the sum of 60,000*l.*, already authorised to be borrowed by loan notes, the sum of 166,250*l.*, in 9,500 portions of 17*l.* 10*s.* each, and to issue scrip for the same."

The amendment having been seconded, was put to the meeting, and negatived by a small majority.

In the course of some conversation, which took place respecting the traffic of the line,

Mr. Weedon said, that he had taken some pains to obtain correct information upon this point. Having gone through the whole of the traffic accounts since the opening of the railway, he had ascertained that the average number of passengers per week, from the beginning of August, 1840, to the 22nd of January, 1841, amounted to 3,596, producing to the Company 767*l.*; for the subsequent twelve weeks, up to April 16, it would be satisfactory to the proprietors to know that the average number of passengers had increased to 5,665, producing 1,042*l.*; and for the last three weeks of these twelve the number conveyed had been fully equal to the parliamentary estimate, and actually exceeded that estimate in one week, the number of passengers being upwards of 10,000; and this was irrespective of what had yet to be paid for the conveyance of the mails.

In reply to questions by Mr. Tait, of Tewkesbury, as to the prospects of the goods and merchandise traffic,

The Chairman saw little reason to doubt that it would go on increasing even with the existing accommodation. The experience of the London and Birmingham Company would, however, convince those proprietors who had directed their attention to the subject, that it took a much larger time to get this description of traffic on the line than any other; and even now the goods' traffic on the London Railway was only two-fifths of the amount at which it had been estimated; but he had also to add, that it was going on steadily increasing.

Some alterations having been made in the original resolution in order to meet the views of the meeting, it was submitted in its amended form, and carried unanimously; after which a vote of thanks was passed to the Chairman, and the meeting separated.

The resolutions agreed upon, (and which explain the mode in which the required capital is proposed to be raised,) appear in our advertising columns.—*Midland Counties' Herald*, May 6.

NEWCASTLE AND CARLISLE RAILWAY—SPECIAL MEETING.

A Special Meeting of this Company was held in Carlisle, on Tuesday week, to hear the provisions of the bill, now before Parliament for altering and extending the powers of the Company.

Matthew Plummer, Esq., having been called to the Chair,

Mr. Clayton read an abstract of the Act, empowering the Company to increase the capital by a sum not exceeding 200,000*l.*, by shares, and also to raise a further sum of 100,000*l.* at interest, the Act also enables the Company to increase the purchase of land for depots, &c. The provisions of the Act were approved of and the seal of the Company was affixed to the bill.

The Chairman afterwards introduced certain alterations in the table of rates, observing that they were likely to have an accession of revenue by linens from Scotland imported into Liverpool. By reducing the rates on this article they would be able to have it conveyed by way of Newcastle and Carlisle. they had also made a reduction in the charges for conveyance of slate, and for goods twice sea-borne, the rates now standing at 10*s.* per ton, instead of from 16*s.* to 17*s.* 6*d.* as formerly. In consequence of this latter reduction they would have a great many goods from the Baltic, and several places in the north of Europe. There were a good many slates brought from the counties of Cumberland and Lancashire, and the west side of Scotland, and in accordance with the suggestion of the inspector, now at Dundee, they had reduced the rates on slates, and expected from that source a considerable increase of traffic.

The list of rates, with the proposed reductions, was then agreed to, as was also a code of bye laws, with the modifications made by the Board of Trade.

The Chairman said he had much pleasure in informing the meeting that the receipts for the week just passed exceeded those of the corresponding week in last year by 202*l.*, and he hoped their revenue would continue still further to improve till the proportionate increase amounted to 1,000*l.*

The meeting then adjourned to the 29th June.—*Carlisle Journal.*

GLASGOW, PAISLEY, AND GREENOCK RAILWAY—SPECIAL MEETING.

On Wednesday (the 28th ultimo) a special general meeting of the proprietors of the railway was held in the Sheriff Court Hall, for the purpose of taking into consideration the best mode of raising, by subscription, the additional capital of 100,000*l.*, authorized by the Act obtained during the present session of Parliament, and for fixing the amount and value of the new shares to be created and issued with a view to the raising of the additional capital. Provost Falconer, of Port-Glasgow, Vice-Chairman, was in the chair. He regretted that, in the absence of their excellent Chairman, a more able substitute than himself had not been called on to preside. He believed the best and shortest way of doing their business would be to commence by reading the clauses of the Act under which the meeting was called. Mr. Turner then read the clauses in question.

The Chairman submitted the following resolutions, which were read and discussed seriatim:—

"1st. That there shall be raised a further capital of 100,000*l.* in addition to the capital of 400,000*l.* authorized to be raised by the original Act of Incorporation, and that the said additional capital of 100,000*l.* shall be raised by the issue of 8,000 half shares of 12*l.* 10*s.* each, and every proprietor in the Company holding two shares, shall have the option of taking one such half share, in respect of every two original shares of which he is this day the registered proprietor.

"2nd. That a copy of these resolutions shall forthwith be sent by post by the Secretary or Clerk of the Company to each registered proprietor, addressed to him at his last or usual known place of abode; and in the event of any proprietor, or in his absence his authorised agent, not intimating his acceptance in writing, and delivering the same at the Secretary's office in Greenock, on or before the 29th day of May next, of the number of half shares allotted to him, he shall be held to have declined the same, and all such half shares not then so taken up, shall be sold by the Directors for the benefit of the Company at large, for such prices and in such way and manner as they shall see proper.

"3d. That a deposit of 1*l.* 10*s.* shall be paid on each such half-share, on or before the 1st day of June next, and a receipt or certificate for the amount paid shall be given to each subscriber.

"4th. That such new shares shall only entitle the holders thereof to a dividend from the profits of the undertaking in proportion to the amount which shall actually have been paid thereon at the time of declaration of such dividend."

Mr. Baird expressed a fear that the issuing of half shares would lead to confusion. He thought that they should issue whole shares as before.

Mr. Tasker said, if whole shares only were issued, the smaller shareholders—all who held fewer than four shares—would be excluded from the benefit of the new stock.

The resolutions were unanimously approved of.

The Chairman then congratulated the meeting on the auspicious opening of the railway, and the prosperity which had attended it since. It was now before the public, in whose estimation it must stand or fall by its own merits. It was for them to decide whether Mr. P. M. Stewart's prediction that the railway would beat the river was to be realized. The Directors would do all in their power to promote its success; and as they were now about to be furnished with more of the sinews of war, they would not fail to go on with spirit, and provide that additional machinery which an increased traffic would demand. There was no more business before them.

Thanks were then voted to the Chairman, and the meeting broke up.—*Greenock Advertiser.*

Bristol and Exeter Railway.—The contracts for the completion of the railway to Taunton are all taken and to be completed by Midsummer, 1842. Taunton will then be within six hours of the metropolis!

SUNDAY TRAVELLING ON RAILWAYS.

To the Proprietors and Directors of Railways in Great Britain.

GENTLEMEN,—We, the Committee of the Carlisle Association for promoting the better Observance of the Sabbath, in common with our countrymen generally, have participated in the alarm which has been occasioned by the several fatal accidents that have taken place on some of the public railways in the kingdom during the past year, and also in the shock which has thereby been given to public confidence in the safety of that mode of conveyance. We were likewise sharers in the general satisfaction that was expressed when the late Railway Conference was convened in Birmingham, consisting of practical men, the representatives of the different Railway Companies, to investigate the causes of such accidents, and consider the best means of preventing similar ones in future, hoping that the result of their deliberation would be, under Divine Providence, a greater degree of safety for railway travellers hereafter. That satisfaction has not been diminished by the Report of the said Conference that has appeared in the public prints, from which the following paragraph is transcribed:—"Those who were most conversant with the management of railways stated their conviction that by far the greater part of the accidents which had occurred were referable to the neglect and disobedience of orders on part of railway servants, and while some few casualties must be expected to occur in any mode of locomotion by such immense numbers of persons as are conveyed on railways, it must be to an improved state of discipline and moral responsibility on the part of the men employed on railways, that the exemption from accidents must be looked for. In these sentiments every one who delivered his opinion concurred." Also, "The grave responsibility of Railway Directors was admitted." Gentlemen, on the subject of "an improved state of discipline and moral responsibility on the part of the men employed on railways," to which you justly attach paramount importance, we take leave very respectfully to call your attention to the fact, that by the practice which we lament to observe is followed on most public railways, namely, of running trains on the Sabbath-day, that class of men who are confessedly the best qualified and most desirable to conduct them, cannot conscientiously engage themselves in your service.

There are many persons in the kingdom who are fully competent to act as engine-men, guards, &c., whose temperance, prudence, and sense of moral obligation, peculiarly qualify them for situations of trust and responsibility, of whose valuable services you and the public are deprived by the Sabbath desecration that we have mentioned. The truth of this statement is borne out by examples of characters of the above description that we have known, who have, solely on this ground, actually refused to be employed on railways; and others who having, on temporal considerations, so engaged themselves, now feel the necessity which is laid on them of spending the Lord's day in secular occupations, a hardship and burden to their conscience from which they would gladly be relieved—which relief they will be under the necessity of seeking in some other employment or situation that will not subject them to the evils complained of, unless you will concede it by granting them, in obedience to the Divine command, "the rest of the holy Sabbath." Moreover, gentlemen, there is so manifest an inconsistency in the inculcation of one branch of morality, when, at the same time, and by the same parties, another is habitually disregarded, that there can be no just expectation that your servants will observe those moral duties which you approve and enjoin, until both you and they pay due regard to all that God has commanded. And, although yourselves with your families, we take for granted, professedly keep the Sabbath and reverence the "Sanctuary of the Lord" (Lev. xix. 30), yet how can you expect the Divine acceptance of your worship, when so many of your fellow-redeemed creatures are by you virtually interdicted those sacred privileges? On this subject we recommend for your serious perusal the fifty-eighth chapter of the prophecy of Isaiah, where the inconsistent conduct of the professors of religion is assigned as the reason for the rejection of their prayers by the Almighty. True religion is the only proper basis of sound morality, as well as the defence and guard by which it is maintained; but the occupations connected with railway travelling are incompatible with the proper observance of the Sabbath, inasmuch as the desecration of that day is incompatible with religion, therefore to speak of a religious and moral Sabbath-breaker is a contradiction; consequently the stopping of your trains on that day is indispensable, in order to obtain men to conduct them on other days in whom the Directors and the public can place entire confidence.

In reasoning thus, we do not overlook, nor wish in the least degree to disparage mechanical skill and practical knowledge as means to the desired end, yet we maintain that even these, valuable as they are in themselves, and in their proper application, in the absence of that moral qualification by yourselves deemed of essential importance, cannot be depended upon alone, but let them be combined in the same persons with religious principle and moral character, and the happiest results may be justly expected.

There is yet another view of the subject to which we will advert, and that is in reference to your admitted "grave responsibility in regard to the public," by which we understand you to allude especially to those who travel by railways, whose lives are, as it were, put into your hands; and truly, when the immense importance of human life is considered, both as it respects the individuals themselves, and the families of which they are members, grave, indeed, is the responsibility of those to whose charge is committed the lives of such vast numbers of persons as now travel by railways. But in addition to this, we beg your serious attention to the still graver responsibility which, in our judgment, attaches to you in reference to the thousands of men employed in connection with railways throughout the kingdom, as engine-men, stokers, and guards, clerks, porters, and police, also coach and omnibus drivers, &c., who, by the running of trains on the Sabbath, are necessarily deprived of its sacred privileges; in all probability also the greater number of those men have families, for whose religious training they are responsible to God, and for which, among other important ends, the Sabbath was given to man. See ye not, gentlemen, how, by running your trains on the Sabbath, you contravene the will and gracious purpose of God! debar your servants and their families from the great moral advantages and benefits of the most benevolent of Divine institutions, and by familiarising the minds of both parents and children with the desecration of that day, expose them, with scarcely a check, to the demoralising tendencies of our depraved nature, and the influences of an evil world, from which the most awful consequences are to be apprehended. Perhaps it will be said that many of them would neglect and profane the Sabbath though they were not engaged on railways. To which we reply, then the responsibility would be on themselves and not on you. But we are persuaded it would be far otherwise with many, and all would have the opportunity, at least, of keeping that day as God has commanded. Thus the powerful influence of public example, instead of being against religion and morality, as now, would be enlisted on their side, and exerted in their favour.

In conclusion we submit the following alternatives to your consideration: Discontinue to run your trains on the Lord's-day, and, by so doing, open your service to a class of men most to be depended on. Evince a due regard for the safety of your fellow subjects, Give opportunity to all your servants and their families to enjoy the great privileges of that day, thereby promoting the best interests both in time and eternity, and secure for yourselves the promised blessing of him who has said, "Them that honour me I will honour;" or continue to run them on this day, and by so doing exclude from your employ the most suitable and trustworthy men—expose the lives of your passengers to constant peril—deprive your servants of the means of religious instruction and comfort, thereby promoting their demoralisation and ruin, and yourselves be amenable for these things to the righteous judge of all men.

Signed, in behalf of the Committee,
J. FAWCET, Chairman.

Carlisle, March 30, 1841.

NOTICE OF A NEW SIGNAL-LIGHT FOR RAILWAYS.*

BY ALAN STEVENSON, LL.B. CIVIL ENGINEER, EDINBURGH.

(From the *Edinburgh New Philosophical Journal* for April.)

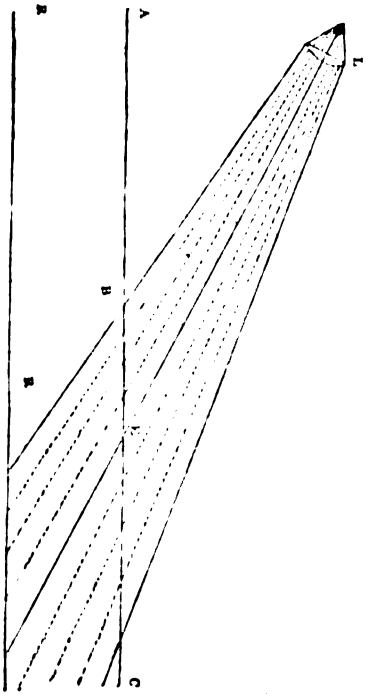
THE numerous accidents attended with fatal consequences which have lately occurred on railways have excited much alarm in the public mind, and the prevention of these casualties is unquestionably a matter of great importance. The object of this communication is, to point out one source of danger to which several of the late accidents may be attributed, and to suggest the means of its removal; and from the personal interest which all must have in the improvement of railway travelling, both as regards its speed and, what is of much greater importance, its safety, I venture to hope that the following observations, although limited to one part of the subject, will not be found to have been unsuitably addressed to a society whose province it is to improve the useful arts.

One of the most imperfect parts of the railway system is undoubtedly the uncertainty of the night signals, and to this it is well known many of the most fatal of the accidents which have occurred must be traced. The great object of these signal-lights is, to announce that the train has reached a certain point of its course, and to forewarn the engineman of his approach to a station, or the junction of a branch railway, so that the speed of the engine may be checked in proper time to prevent collision. The lights used for this purpose are generally exhibited at the place the approach to which they are intended to announce; but the distance at which light projected horizontally may be seen by a person approaching in the line of its transmission is very variable according to the state of the atmosphere, which in our climate is subject to great and sudden changes, in regard to clearness and fog. These variations in the visibility of lights of extensive range are by no means confined within narrow limits, as experience too amply demonstrates in the case of lighthouses, whose range has been known to vary with the state of the atmosphere, from sixty miles down to two or three miles; and this evil is unhappily one of those which, in the present state of chemical and optical science must, we fear, be pronounced irremediable. This defect, great as it is in regard to lighthouses, is, in the case of railways, materially aggravated by the excessive velocity of railway-travelling. Any variation in the distance at which a signal-light is first seen, must lead to great misconceptions as to the time of reaching a station, and all such misconceptions are fraught with the worst consequences, owing to the numerous sources of danger from the crossings of branch lines, the meeting of carriages on the rails, or the occurrence of other accidents, which may render a railway impassable. It is therefore obviously indispensable to safety that the signal-lights should be so constructed, that in all states of the weather they shall be constantly visible at the same point, and that this point shall be sufficiently distant from the station, the approach to which the signal is intended to announce, so as to allow ample time for checking the engine's speed before coming up to it; and upon no other grounds can the confidence of the public as to their security be reasonably based.

In the month of December last, it occurred to me in the course of conversation with my friend Mr. Errington, civil engineer, that although the variation in the visibility of lights of distant range must,

*Read before the Society of Arts for Scotland, 22nd February, 1841.

Digitized by Google



according to our present knowledge, be regarded as an evil without remedy, it might still be possible, by means of some arrangement of the lights, to render signals for railways constantly visible at the same point during every state of the atmosphere. For this purpose, all that seems to be necessary is, to limit the range of the lights, and at the same time to increase their intensity in such a manner that the combination of a short range with great power may not merely render them capable of penetrating any fog, however dense, but of producing, at a certain point, an effect so brilliant and striking as forcibly to arrest the engineman's attention. After considering the matter in various points of view, I came to the conclusion that the object could be best attained by placing the light considerably in advance of the station, the approach to which it is intended to announce, and by giving the beam such an inclination to the horizon, that its greatest power may fall upon the engineman's face, at so short a distance from the light itself, that it could not fail to be always visible at that point, even in the thickest fog.

According to the present practice, a comparatively feeble light is exhibited, at the station whose position it is intended to point out, and this light, which is permitted to pierce the gloom until its power is greatly diluted by the united effects of its own divergence, and the length of its passage through a foggy medium, must necessarily be subject to constant variation of visibility with every change of the atmosphere. The change which I have to suggest, is to place a light of great power about a mile in advance of the station, and at the same time to limit its range by the depression of the resultant beam within such a distance as to ensure its being visible at all times.

The arrangement I would propose for the attainment of this object is remarkably simple, and consists in placing one of Fresnel's annular lenses, illuminated by a gas or oil burner, as may be most convenient, in a small chamber, glazed in front, and supported on a stage of carpentry of sufficient size to span the rails, and permit the train to pass under it; but the purpose might perhaps be equally well served by placing the stage at the side of the railway, and inclining the beam obliquely to the line. In order to limit the range of the lens to a short distance, and thereby to ensure the light being visible in all states of the weather at the same point, I would incline the instrument, so that the length of the trajectory from the lens to the observer's eye should not exceed about 700 feet, which falls far short of the distance at which the light of the lens would be obscured even in the thickest fog. I may remark that the inclination of the lens is too small to require any correction in the position of the flame; but this could be easily accomplished if necessary, more especially when gas is employed. In curved lines of railway the same effect might in certain cases be produced by placing the lens on a level with the observer's eye, and directing the refracted beam so as to cut the railway obliquely. In this case the limitation of range would be produced without the necessity of inclining the lens; but the principle of rendering the signal at all times effective, by combining a short range and a powerful light, is the same in both arrangements.

The advantage of this arrangement I conceive to be great, for not only would the light be at all times visible to the engineman on his arrival at the same point, which, as already mentioned, is really the great object of signal lights; but it is obvious that his attention would be most effectually awakened by the contrast of suddenly passing from darkness to receive the full effect of a powerful light viewed from a short distance. One other advantage of the proposed signal-light, I must observe, lies in its being peculiarly susceptible of any modification of colour, whether of a temporary or permanent kind, which the numerous and growing wants of an extended railway-system may require. The alphabet of nocturnal telegraphy, wherever a distant range is required, is unhappily extremely scanty; for the practice of all Europe seems to have shown, that so far as colour is concerned, *red* and *white* are its *alpha* and *omega*: green and blue have been frequently tried; but cautious inquirers have all agreed in pronouncing them so equivocal when viewed from a distance, that they have been almost universally abandoned. These colours, however, and even much less marked varieties, although useless as distinctions for lights of distant range, are perfectly effective when viewed from short distances, as the brilliant display of an apothecary's window sufficiently proves.

I shall now add a very few words regarding what appears to me to be the chief arrangements which may in practice be found necessary for signal-lights on these principles; but I would not be understood as attempting to fix anything permanently, for I am well aware that various modifications may be suggested by experiment, which I do not at present foresee in their full extent; in particular, it seems probable that the range of visibility which I have adopted in the following view of the details falls short of what will be found quite sufficient in practice even during the thickest fogs, when a light so powerful as that which may be derived from Fresnel's lens is brought into play; and should this expectation be realized, the duration of the effect of the light, which depends on the range, might be increased beyond what I have ventured to state.

Referring to the above sketch, I would propose that the lens at L should be elevated 24 feet above the rails R R, or about 15 feet above the level of the engineman's eyes; and that the point where the centre of the beam would intersect the horizon, A C, of his vision at E, should be about 700 feet from the lens. The impulse of the light would be most advantageously received at some point as near the lens as is consistent with a full effect from a flame placed in its principal focus. A more remote observer would receive the rays diluted by distance; while a nearer approach of the eye to the lens would render it necessary to adopt an ex-focal arrangement, so as to cause convergence of the rays. By the latter arrangement their divergence would be decreased, and the space covered by the light would be lessened not only in proportion to the decrease of divergence, but also to that of the cosine of the beam's inclination to the horizon. Both these circumstances would therefore combine to curtail the duration of the impression on the eye.

It may naturally be expected that I should say something regarding the duration of the impulse of the light on the eye; and upon this topic I shall, in absence of actual experiment, content myself with stating briefly the result of my calculations. If we suppose that an effective divergence of only 2° were to be obtained (and this is just one-third of what is obtained from Fresnel's lens with the great lamp), I find that the light would spread itself along the horizon of the observer's eye between B and C to the distance of about 1000 yards, which, at the speed of 40 miles an hour, would be passed over in about 50 seconds, but at the ordinary railway speed of 25 miles an hour, about 80 seconds, or 1¼ minute, would be required. Such a flash of light falling upon the polished parts of the engine, and upon the observer's face, would undoubtedly act as a most effective signal. If, however, it should be thought advisable to increase the duration of the impression by spreading it over a greater length of the line, this effect could be easily produced by a slight alteration of the inclination of the lens, so as to cause the line of railway to cut the refracted beam more obliquely; but I by no means expect that any such modification would be found necessary in practice. The nearness of the eye to the lens, and the brilliancy of the flash, would, I am inclined to think, more than compensate for the shortness of the impression.

I must add a few words regarding the expense of these signals, which would be made up of the cost of erecting the scaffold of carpentry, the price of the lens, and the maintenance of the light. The price of the stage I shall pass over as a matter which may vary according to the circumstances of the situation and the taste of individuals; but the cost of the great annular lens does not exceed 10*l.*; and if a smaller-sized lens, which I think would be found quite sufficient for the purpose, were employed, the expense would not be more than 10*l.* The annual maintenance would consist of little more than the supply of a gas or an oil burner. The consideration of the expense, therefore, of maintaining such a system of signals at the necessary intervals on railways, is not for a moment to be set against the most remote risk of the least of all the numerous accidents, the records of which fill the public prints.

Edinburgh, 29th January, 1841.

RAILWAY CHASE EXTRAORDINARY.—On Thursday last, a person named George Comley (having with him his wife and six children) took places for himself and family by the 11 o'clock railway train from Gloucester to Birmingham. Soon after the train had started, Mr. W. Gillman, of North Nibley, arrived at the station-house, in the hope of intercepting Mr. Comley, who, he stated, had executed a forgery upon him to the amount of 40*l.*, and had also committed other fraudulent delinquencies, and was then *en route* for Liverpool, where it was understood he had engaged a passage for America. After a short consultation with Mr. Walker, police superintendent, on the best steps to be adopted, a pursuit was resolved upon, and for a payment of 10*l.* an engine was immediately got ready, with which Mr. Gillman and Mr. Walker started, at high pressure speed, in the hope of overtaking the train, which by that time had had the advantage of about twenty minutes' start. After a fine chace, they succeeded in getting sight of the train at Ashchurch, and followed close in its wake to the Spetchley station, where, much to the surprise and consternation of the fugitive, his pursuers came up with him, and sadly deranged the plans he had so cleverly laid for his escape. The remainder of his journey to Birmingham was performed in the Company of Mr. Gillman, who on arriving in that town, gave him into the custody of the police on the charge of forgery. On Mr. Walker's return to the Gloucester station, he found that the prisoner's landlord had a little too late sent a distress, in the hope of laying an embargo on his runaway tenant's luggage. It would appear that he had been carrying on the business of a clothier at North Nibley, till he suddenly decamped as above stated. Yesterday afternoon he was brought to this city in the custody of Mr. Stephens, superintendent of the Birmingham police force, and will this day be conveyed before the magistrates of the district where the offences are alleged to have been committed. His wife accompanies him back to Nibley, but his large and unfortunate family are left behind at Birmingham.

VARIATIONS IN RAILWAY ACTS.

[From the *Railroad Monthly Journal.*]

It is amusing enough to see how the public clauses of Railway Acts have been handled, some Bills being overburthened with the most stringent regulations, from which others are entirely exempt. Let any one look at the Appendix to the Second Report on Railways, where the Acts of 26 lines are compared, and they will become speedily sensible of this extreme want of generalisation; it exhibits some of the loosest legislation we know of. For example, the Liverpool and Manchester and several other Companies were bound to subscribe the whole of their capital before the powers of the Act were put in force, and a Justice of the Peace was to certify that this had been done, while in the Manchester and Oldham and several other lines no such security is required. The Grand Junction and Northern and Eastern were to do this before they commenced work, the Southampton and the Eastern Counties' before the compulsory clauses of the Act were put in force.

The Limerick and Carrick, and the Johnstone and Ardrossan Acts do not even define what the capital is to be expended on, while the rest all do. Some have power to raise money on loans and mortgages, others not. Some by assignment of property, others by annuities. In some the interest is to be paid before dividends, in others not. Some may borrow of the Exchequer Loan Commissioners, other not. It all seems a matter of chance. In some the holders of mortgages may demand payment after a certain time and six months' notice, in others not. In some the Directors may pay off debt after six months' notice, in others not. Some may create shares to pay off debts, others not. In some the calls must be paid up before selling the shares, in others not. In some the calls must not exceed 20*l.* per share, in others 10*l.*, in others 5*l.*, others 3*l.* Some must have an interval of three months between the calls, others two, others one. In some the calls in one year are not to exceed 20*l.*, in others 100*l.* All is perfect chaos.

In some a neglect to pay calls is fined, in others not. In some continued neglect entails forfeiture, in others it also entails an action for the debt. In four cases the Company are allowed to traffic in the shares. In one case the forfeited shares are only to be sold in a sufficient number to pay the required calls; in all the other cases the whole are sold, and the surplus paid to the late holder. In some cases, the dividends are to be declared at yearly meetings, or special ones, in others at half-yearly ones; and in the Eastern Counties', when and where the Directors like. The Liverpool and Manchester alone are bound to certify the amount to the Clerk of the Peace; they alone are bound to lower their tonnage 5 per cent.; for each 1*l.* above 10 per cent. they may divide, and to set 10 per cent. aside for contingencies. The Limerick and Carrick alone are allowed to set aside one-eighth of the profit as a fund for contingencies; the Southampton alone are to reserve 10 per cent., and the Glasgow and Garnkirk alone are bound to lessen their charges when their dividend becomes 10 per cent. What is the sense or meaning of these disgraceful restrictions?

The Liverpool and Manchester alone are obliged to keep dividends on carrying separate from those on tolls, they alone were made to pay 5 per cent. on all the subscribed capital, as interest. The Greenwich were allowed to pay 3 per cent. on all above 10*l.* subscribed. The Southampton, Great Western, North of England, and Manchester and Leeds, were allowed to pay 4, then 5 per cent., on all sums paid in advance.

The Liverpool and Manchester, and a few others, may call for and examine the accounts at the general meetings. The rest have not this power; and the Edinburgh and Dalkeith alone have the power of auditing them as well as calling for them. In some the accounts are to be made up yearly, in others half yearly. In some the books are open to inspection, in others not; and in the Edinburgh and Dalkeith only holders of 10 shares are to lift their profane eyes on the books. In the Liverpool and Manchester each holder has a vote for each share up to 20, then another for each four shares above 20; in the Manchester and Oldham, and others, every share has a vote; in the Heckbridge, each share up to 15 only: in the Ballochney, every four shares; in the Edinburgh and Dalkeith, 1 to 5 shares has one vote, 5 to 10 two, 10 to 20 three, and 20 or more four votes, and those holding office have none; in the Dundee, 10 shares have a vote each, and one more for each of the next 5—total 20 votes; in the Garnkirk one vote for each 2 shares; in the Limerick, one for each 5 up to 60 votes; in the Clarence one for each up to 20, in the Grand Junction one for each up to 20; then one for each 4; in the Birmingham one for each up to 20, then one for each 5; in the Southampton 10 to 25 shares has one vote, 25 to 50 two, 50 to 100 three, 100 to 150 four, 150 to 200 five, and above 200 six; in the Croydon 5 to 10 have one, and another for each 5 more up to ten votes. What floundering sea of absurdity all this reckless legislation presents.

In the Liverpool and Manchester alone is a clause, inflicting a 50*l.* fine on fraudulent transfers; all the others may cheat how they like. In the Johnstone alone votes are not allowed by proxy. In some those in arrear are not allowed to vote; in others they are. In some mortgagees and creditors are not to vote; in others they are. In some no person is liable for more than his stock; in others this clause in omitted entirely: while in the Croydon this is confined to the *new* shares only. In two railways parsons may hold shares; in the others their right is not recognised. The notice for holding meetings varies from seven days to fourteen; and no time is fixed in several cases.

Twenty-five persons holding 200 shares make a meeting in the Liverpool and Manchester; 100 shares in the Manchester and Oldham, a majority of shares in the Heckbridge; 30 shares in the Dean Forest; 300 in the Ballochney; 200 in the Dalkeith; 25 in the Hereford; no number stated in the Johnstone; 25 persons, and 200 votes, in the Grand Junction; 40, and 2,000 shares, in the London and Birmingham, Great Western, and North of England; 20, and 1,000 in the Greenwich; 15, and 500, in the Southampton; 10, and 500, in the Croydon; 30, and 2,000 in the Dover; 30, and 1,000, in the North Eastern; 50, and 5,000, in the Eastern Counties'; 30, and 1,000 in the Manchester and Leeds, and Brighton; and 32, and 300, in the Blackwall. Here is a mass of absurdity, in which all principles are utterly confounded!

The chairman, or deputy chairman, is to preside in several acts; in others no one is appointed; and in two, one of the proprietors is to be the man. The number of proprietors, who are necessary to call a special meeting, runs riot through all proportions, from 3, holding 20 shares in the Heckbridge; 5, holding 2 each in the Garnkirk; or 1, holding 5 shares in the Clarence, up to 50 holding 2,000 in the London and Birmingham, and 100 holding 4,000 in the Great Western, and 50 holding 5,000 in the Eastern Counties'. The requisite time for notice of their meetings varies from 10 days to 21. In the case of adjourned meetings, about half are restricted to the matter left unfinished; the rest are not. In some the place of meeting is fixed; in others not. There is nothing like the shadow of any plan at all in the whole business of this legislation.

The qualification for a Director is simply 5 shares in several cases, in others 4; and even 2; while some are to have 10. This is the Birmingham number: but we are told they leave the Act of Parliament in the lurch, and themselves fix the number at 30; 20 is the Greenwich number, and 50 the Croydon. The disqualifications are holding office, being concerned in contracts, and becoming a dealer in articles required or manufactured by the Company. This is the case on the Greenwich, Clarence, and the Edinburgh and Dalkeith, and goes too far. It is also that of the Manchester and Oldham; except coals, a black diamond merchant may be a Director: in five cases there is no dis-qualification given. The number of Directors varies through all shades, from 3 in the Johnstone to 24 in the London and Birmingham; and the go out in various proportions—in some cases by lot, in others by rotation, and in several instances they must go out annually, but are re-eligible, except on the Grand Junction, when six months must intervene. The vacancies are filled in some cases by the Directors; in others by the general meeting; in others by the first mode, till the meeting arrives.

The quorum varies through all figures, from 2 in the Johnstone—which is $\frac{2}{3}$rds to 3 in the Manchester and Oldham, which is $\frac{1}{4}$th; 7 in the Grand Junction, and the Liverpool and Manchester, which is about $\frac{1}{2}$; 3 in the Clarence, or $\frac{1}{4}$th; 6 in the Birmingham, or $\frac{1}{4}$, but practically $\frac{1}{3}$; and 8 in the Great Western, or $\frac{1}{3}$. In some cases the Directors' minutes are legal evidence; in others not. In some the Directors are responsible to and removeable by general meetings; in others not: and in one case only (the London and Birmingham) they are not personally answerable for acts legally done as Directors.

The by-laws are generally to be printed, published, and painted on boards; in one case this latter mode is expressly omitted, and in several the whole only applies to those of a public nature. These by-laws ought entirely to be abolished, and a printed set of rules given to each passenger. How would the business of a railway be conducted, if every passenger had to read these lengthy boards before he paid his fare? Yet it is clear he ought to do so. In the various acts these by-laws are in some cases binding, when not contrary to the law of England, in others the law of Scotland is substituted for that of England; which may therefore be violated at pleasure. In one case only they are binding, when not contrary to the laws of the United Kingdom.

The Treasurer and Clerk are appointed mostly by the general meetings, sometimes by the Directors; and vacancies follow the same rule. The officers are in some cases bound to account to the Company, in others to the Directors. The penalty for refusing the inspection of accounts varies from 5*l.* to 20*l.* In one instance alone (the London and Birmingham) no practising solicitor can be an officer of the Company. The quantity of land, which can be taken from incapacitated persons, varies from 5 acres up to 60. The quantity of land allowed for stations, varies from 2 acres up to 60. The breadth of the railway is sometimes restricted to 15 yards, in others extended to 30. The power to enter on land is generally one month after agreement on tender of purchase money; in one instance two months, in another three months, in another ten days, in another in no time at all—but simply on tender of the purchase money. Was there ever such wretched legislation as this—the plainest and simplest things treated in this utterly discordant way? This is the collective wisdom of the nation—the united effects of the great English constitution—the grand balance of King, Lords, and Commons. Here is their work!

In two cases only is it enacted that houses undermined must be purchased if required; in all the rest they may let them down as fast as they please. When land is separated, about half the Acts require the Companies to purchase all less than an acre; in the other portion it is all less than half an acre. In some cases the mines under the land are not to be claimed by the Companies; in others they may. In mortgages they are to be conveyed, in some cases, simply on the tender of principal and interest; in others, three months more interest is to be given; in others, six months. Leases are in some cases to be produced, in others not. Tenants at will are in some cases to have six months' notice, in others only two. Unexpired terms are in some cases to be paid for, in others not. The Company are in some cases to pay the expenses of the purchase, titles, and conveyance; in others not. Mines under the railway are in one instance only secured to the proprietors of the land: the surplus lands may be sold to any person in one instance; to the adjoining owners in others; and under no rule in others. All is confusion and absurdity from end to end.

The deficiency of the land tax is to be made up by some Companies, and not by others. In aban-

Digitized by Google

doned lines, the land is in most cases to revert to the adjoining owners; but not in several instances. Costs are to be taxed in some Companies, in others not. Some Companies can purchase land on cheap rents and rent charges, others not. In some the form of conveyance is given, in others not. No persons are to be compelled to sell part of their houses, if willing to sell the whole, in some Acts; by others they may. Only four or five Companies are bound to make good the deficiency in poor-rates, and the recovery of rates is in some cases by action at law, in others by order of two justices. Some Companies have the power to appeal against a rate, others not. Some may compound for tithes, others not. One Company alone (the Manchester and Leeds) is forbid to build a beer shop. There is no end to the insane folly of this desperate legislation.

The Liverpool and Manchester alone are to be handed over to two justices if they disturb any pipes—what these pipes are is not shown. Notices of injury are to be given within all times from six months to two. In jury cases the costs are to be paid by the Company if the verdict is more than the sum claimed; and if not, then half by the Company and half by the other party. Temporary damages are in some Acts referred to juries, in others to two justices. And money is to be recovered in some Companies by distress on their goods, in others by distress on their Treasurer's goods—in some Acts five days after demand, in others one month. The North of England alone are bound to make compensation for injury to mines. The Greenwich alone are bound not to deviate more than 50 yards from their plan.

The time for completing the works varies from ten years to five. Three railways alone are bound to a certain width between the rails. Sidings on one railway were to be three in a mile (since repealed); in another, at convenient distances; in another, two in a mile: all the rest are left to act as they please. The Greenwich alone are bound to make approaches at their own expense. The Birmingham alone have power to enter adjoining lands for temporary purposes. The North of England alone is bound to settle disputes relative to level crossing, by two enquirers and an umpire. Three railways are bound not to run locomotives, without the consent of the landowners!!!

Damages (p. 196), if under 20*l.*, may on some lines be settled by two justices; in others only under 5*l.* On some railways two justices must appoint constables, in others one; and on the Garnkirk alone they also fix their salary. On the Birmingham alone one justice may appoint who he likes, and also dismiss him. The Blackwall alone are bound to adopt additional security against fire. About half the Companies are bound to erect gates at level crossings, the others not. The same is the case as to the width, &c., of bridges. About half are not fettered at all; others must make them 15 feet wide and 16 high; the Greenwich 18 feet high, and, together with the Blackwall, to go the whole width of the road; the Croydon 20 feet high; the Brighton 25 feet wide and 18 high. The approaches to those over the railway are to rise 1 foot in 13 on the Liverpool and Manchester; 1 in 30 on the Edinburgh and Dalkeith, and others. Three railways alone are bound to repair bridges. The Croydon alone is bound to reinstate turnpike roads, if the line is abandoned, and also to maintain drainage of roads. The London and Birmingham alone are forbid to make tunnel shafts in highways; nor to turn their tunnels into open cuttings, without the consent of the land-owners. The Blackwall and Southampton alone have leave to stop up useless roads.

In the tonnage dues we might have expected, perhaps, at least, that our legislators would have come a little near uniformity; but, alas, *ab uno disce omnes!* limestone varies from 1d. to 3d. per ton per mile, or just 200 per cent. Coal from ¼d. to 4d., or 800 per cent. Manufactured goods from 2d. to 6d., or 300 per cent. The toll for inclined planes from 3d. to 1s., or 400 per cent. Passengers from 2d. to 4d., or 200 per cent. Cattle from 1½d. to 6d., or 400 per cent. Sheep, &c., from ½d. per mile to 3d., or 1,100 per cent. The carriage of passengers from 3½d. per mile to 6d.; and two conveyances are not limited at all.

Three railways are not allowed to measure their lines, and set up stones at every quarter of a mile; all the rest have to do it. Some Companies may vary their tolls when they like; others only every three years. In one it requires ¾ of the shareholders to enable them to vary; in others only the usual majority. Two Companies may reduce their rates, either partially or generally. Some may refuse to carry dangerous articles; others not. In recovering tolls the goods may be sold if not redeemed, at times varying from 3 to 21 days. Some Companies cannot lease their tolls for longer than three years; others can for 31 years. Some can compound; others cannot. Some cannot bring coals into London without paying the city exactions; others can. One alone (the Northern and Eastern) is allowed 1,000 tons for use, free of city dues; all the others only 500.

The tolls on private carriages are on some lines 4d. per mile; on others 4d. per ton per mile; on others 6d. per mile. Some Companies may fix the price of parcels under 500lb.; others only those under 100. The Blackwall locomotives, if they use any, are alone subjected to be inspected by a person from the Woods and Forests Office. One Company alone has power to use locomotives on other lines. Some can contract for power on other railways; others cannot. Two Companies alone have the power of finding the owners of goods, if they do not remove them. Some Companies have power of re-entry, if rents are unpaid four days; others not till ten days. All is utter confusion and chaos.

The serving legal notices must in some Companies be on two Directors; in others only one; in others on any shareholder or agent. The limitation of actions is from three to six months in different Acts: in one Company it requires three Directors to grant a release; in others the Secretary can do it: in some cases oaths are required; in others declarations are substituted. One Company alone is saddled with double costs if they lose an action. A clerk refusing to allow the book of proprietors to be inspected, is fined 5*l.* on some lines, and 2*l.* on others; and refusing the creditors to inspect the books, 5*l.* on some lines, and 20*l.* on others. On one line alone is a Director fined 50*l.* for holding office, or being concerned in contracts. This ought to have been the London and Birmingham, but it is the Southampton.

Leaving waggons on the railway, 10s. in some Acts, 5*l.* in others: not observing the regulations, 1*l.* on some lines, 10*l.* on others. Throwing rubbish on the rails, 1*l.* on some, and 20*l.* on others; and on one alone two years' imprisonment. Leaving carriages on the railway, 2*l.* per hour on some lines; 20*l.* an hour on others. Drunkenness, nothing on several lines; 5s. and 10s. on some; 5*l.* on others. Leaving gates open, 1*l.* on some lines; 5*l.* on others. Turning cattle on the line, 2*l.* in some Acts; 10*l.* in others: in some nothing at all. Destroying the works, 2*l.* besides the damage in one case; 10*l.* and the damage in others; simple larceny in some; felony and seven years' transportation in others, and felony with fourteen years' transportation, in one; we thought the judge apportioned the term of transportation, and all other punishments. Two railways alone are fined 5*l.* if they neglect to appoint gate-keepers. Witnesses refusing to attend, forfeit nothing in some cases, 5*l.* in others, and 10*l.* in others; and in one the fine goes to the jury. Evasion of toll, 10s. by some; 5*l.* by others. Riding or driving horses, on some lines 1*l.*; on others 10*l.*; on others nothing. Smoking tobacco, 2*l.* on some lines; 10*l.* on others.

We trust we have now established pretty well our position, and shown up about as abominable a system of legislation as could well be desired: and be it observed, that the Parliamentary Report from which we have culled this handsome collection of contrarieties, only embraces 26 Acts; if it had gone into the whole, there is no doubt that more absurdities would have been discovered. The evil is, however, arrived at a great head, and ought to be amended. Sometimes the fault has been that of the Companies asking for divers nonsensical powers; in other cases it has arisen from a Member of Parliament, of local knowledge, gripping to some particular Companies any some out of the way point. This has often been done when a second or third application has been made to Parliament—the holes in the coat having, perhaps, been discovered since the passing of the first Bill, and then Companies are thus unmercifully pinned down in committee.

ROAD *v.* RAIL.

[From the *John Bull*, anti-Railway Journal.]

We see with great pleasure that a new stage-coach, called the *Rival*, has been started to go the whole way to Cheltenham by the "old English road." A correspondent from that

"Sweet retreat of health and peace,"

has sent us the following "recollections," which come forcibly to mind on seeing a regular Drag *redivivus*.

THE OLD ENGLISH COACHMAN.

AIR—*The Old English Gentleman.*

I'll sing you a song of a fine old man, who drove a coach and four,
The pride he was of Cheltenham town, in by-gone days of yore;
With whip in hand he drove so well, he pleas'd both rich and poor,
And as he pass'd thro' ev'ry town, he'd leave you at your door,
Like a fine old English coachman, one of the olden time.

His coach so handsome, well-built, safe—the very best turn out,
The harness bright, well-made and strong, the horses swift yet stout,
You sat at ease and were well pleas'd, could safely look about,
And ran so smooth you scarcely knew, the time when you set out,
With this fine old English coachman, one of the olden time.

Now sounds the bugle's cheerful notes, the morning's fresh and fair,
The birds are singing sweet and loud, the lark's high pois'd in air;
The lambkins skip, the prospect's fine—can ought with this compare,
So happily we journey on, devoid of every care,
With our fine old English coachman, one of the olden time.

The road is good, we spin along, ten miles to ev'ry hour,
And pity those constrain'd to go by steam's propelling power;
Who sometimes are in *ditch* below—in *tunnel dark* next hour,
While we breathe free and daylight see, nor mind a passing shower,
With our fine old English coachman, one of the olden time.

Hark! hark! what dismal sounds are those, which distant now we hear,
What means that loud, that piercing cry, which falls upon the ear;
Some *train's* blown up or overset—some dire mishap, I fear,
Yet we have "hands and hearts" to help—quick! let us hasten there,
With our good old English coachman, one of the olden time.

But good old times will come again, railroads may have their day,
Fashion's fickle—lasts not long—to *comfort* must give way,
Our coaches yet will *Rival* them, and once more bear the sway;
For who will trust to *steam and smoke*, when travel safe they may,
With our fine old English coachman, all of the olden time.

AN OLD STAGER.

Cheltenham, April, 1841.

GREAT WESTERN RAILWAY.—The line through this parish [Wootton Bassett] progresses very fast towards completion, and will in a week or two be fit for traffic. The station house near the train is also in rapid progress, which will be of the utmost importance to factors and butter dealers, affording facility for the transmission of themselves and goods to and from the weekly market, and is within five minutes' walk of the market house. It is expected that Mr. Bedborough will discharge, from his contract alone, on Saturday next, 300 labourers. —*Wiltshire Independent.*

1. Toll to London and Birmingham 117*l.* 6s. 11d., to be deducted from gross receipts.

2. The receipts are exclusive of those from the Post-office.

5. Receipts include the Northern and Eastern toll, &c.

7. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*

10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.

12. The 41*l.* 7s. 6d. from goods, &c. is for toll only.

13. Ten per cent. is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

17. The capital of 741,000*l.* includes the new capital for London and Brighton station.

18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

22. The 3,172*l.* 6s. 1d. are the receipts after deducting the toll to the North Midland Company.

23. The receipts for goods, &c. include, carriages, 38*l.* 16s. 0d.; horses, 32*l.* 12s. 6d.; dogs, 0*l.* 18s. 0d.; parcels, 180*l.* 11s. 0d.; cattle, 38*l.* 16s. 0d.; corn, 5*l.* 18s. 3d; heavy goods, 459*l.* 5s. 4d.; coal, 42*l.* 17s. 9d. Total, 799*l.* 14s. 10d.

25. Including 126*l.* 15s. 11d., Manchester and Leeds traffic for present week.

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

An Edinburgh Shareholder of the Edinburgh and Glasgow Railway.—*We do not think that any good could arise from the revival of the personal questions involved in this matter; seeing especially that the Directors have at last, it seems, carried their disputes into the Court of Session.*

The Kelvedon and Bury St. Edmund's project.—*The correspondent from whom we received the statement respecting the non-deposition of the plans for this line gave us his name; the* Civil Engineer *who has sent us a contradiction of that statement must do the same, if he desires to have it inserted.*

"Expositors" *Nos. II. and III. have been received. The former, if we do not find room for it this week, shall appear in our next.*

W. R. *should enable us to write to him personally.*

Q. in the Corner *shall be informed of the "rumour" of which D. V. speaks, though, we dare say, he knows already all about it. Rumour, as usual, is in this instance a great storyteller.*

Subscriber.—*The Great Western Traffic Returns for week ending 14th February were, Receipts from 13,084 passengers, £5,502 2s. 4d.; goods, £765 1s. 0d.; Total, £4,270 3s. 4d.*

Mr. Milne—Mr. Hoby—A Railway Operative—Anglo-Scotus—Lancastriensis—E. L.—Viator—A First Class—*received.*

THE RAILWAY TIMES.

SATURDAY, MAY 8, 1841.

THE Report of Sir FREDERIC SMITH and Professor BARLOW, the Treasury Commissioners, on the best railway route to Scotland, has, as was to be expected, excited considerable commotion in those districts which have not been fortunate enough to secure the preference of these eminent authorities. We have no desire to interfere in the discussion of points possessing, for the most part, but a local interest, and certainly requiring more local knowledge than we can pretend to possess, to be determined satisfactorily; but there is an objection taken by certain parties to the whole principle of the Report, which requires, we think, some notice at our hands. This objection is in effect, that the appointment of a Commission was wholly useless, if not positively injurious, it being alleged that a Parliamentary Committee is the only proper tribunal before which the claims of competing railway projects ought to be discussed and decided.

Now, so far as the present case is concerned, it might be sufficient to remind the objectors that there was but little chance that *any one* of the rival schemes would, for a long time to come, have advanced sufficiently far, in the absence of a Commission, to be brought under the cognizance of a Committee. It is stated in the Report that much inconvenience and trouble arose from the non-production of sufficient data on the part of the promoters of the several projects, and the Commissioners express an opinion that this lack of the requisite information was occasioned by a deficiency of funds. If then, it were found impossible for the parties interested to raise a few hundred pounds, so as to have their pretensions put fully before the appointed arbiters of their fate, is it likely that they would have succeeded in securing subscriptions enough to enable them to comply with the Standing Orders of the House of Commons, and to encounter the well-known cost of a Parliamentary contest? It says little for the public spirit of the influential personages in the several districts examined, that any difficulty should have arisen in regard to these preliminary expenses, but that it has arisen, we have reason to know not only from the Commissioners' Report, but from other sources. In fact, instances have been brought under our notice, in which wealthy landowners have refused to subscribe one farthing towards the necessary surveys—not because they entertained or professed any hostility to the passage of a railway through their property, but because they had resolved, they said, to wait till it should be seen how the public (meaning thereby capitalists at a distance) would regard this or that particular scheme! It will be a comfortable reflection for these parties to think that their individual apathy may, by preventing the production of evidence, have contributed to the triumph of a project with fewer intrinsic merits than that which they were solicited to support—and so far as the result may affect *them*, it matters little; but it is quite clear that if such indifference were displayed in a matter so easily to be effected, it would have been madness to expect that the enormous risk of regularly organised Companies would have been incurred; and therefore the competing projects could not *all* have come before Parliament even if one or two of them had (which we do not believe they could have done) surmounted every preliminary obstacle.

But is a Parliamentary Committee the fittest tribunal for deciding upon matters of this kind, granting that the competing projects start fair? We answer unhesitatingly, No. It is no libel, we suppose, upon either House to say that however zealous, impartial, and removed from all corrupt and sinister influences honourable and noble members may be in the aggregate, there are individuals among them to whom these epithets do not altogether apply; and what if the decision in a case of the description referred to, should chance to fall into the hands of some five or six such parties? These matters, it is true, are much more watchfully inquired into now than they were a very few years ago, but the Committee system is still far from perfect, even in ordinary cases, without increasing the chances of improper decision by throwing in the various concomitants of rivalry and partisanship. But it is not necessary to call in question in the smallest degree the integrity of any one member of a Committee to show that this mode of deciding upon competing pretensions is not the best that could be devised. Honourable gentlemen cannot be expected to be previously acquainted with the many circumstances which it is absolutely necessary to take into account in determining upon a matter of this kind, and in the bustle and confusion of a committee room, and with the readiness of the opposing parties to hazard assertions and jump at conclusions, it were in vain to hope that they could subsequently gain much real acquaintance with the business before them. Then again, the virtual irresponsibility of a Parliamentary Committee. Let their decision be as absurd as it may, you cannot fix the charge upon the parties individually; whereas in the case of such a Commission as that already alluded to, the gentlemen composing it have a reputation to sustain, and being few in number, the merit or demerit of their decisions comes home to each of them as if he stood alone. The importance of this last-mentioned consideration will be evident from a comparison of the Reports of Sir FREDERIC SMITH and his colleague, with any Report upon competing lines that has ever emanated from a Parliamentary Committee. The former are as full, clear, and explicit as the latter are usually meagre, shallow, and unsatisfactory. The reason of this difference it is not difficult to discover. The Commissioners are competent to judge for themselves, and if they had no other motive but their own fame, are compelled to show sufficient cause for their decisions, whereas the members of a Committee have no alternative but to take things upon trust—the most unscrupulous witness being oftentimes the one most confided in—and having no criticism to dread, they are less careful as to the grounds of their proceedings. It may be added, as no slight argument in favour of having such points determined upon by a Commission, that the expense is almost incomparably less than under the ordeal of a Committee. Take, for example, the case of the competing lines to Brighton, where so many thousand pounds were as much thrown away, as regards the construction of a railway, as if they had been cast into the Thames, and where, moreover, heartburnings and animosities were engendered which we fear have not yet wholly subsided. A properly qualified Commission would, in one-tenth part of the time, and at one-hundredth part of the expense, have settled the matter in dispute—supposing that it was really the wish of all parties concerned to have the best line laid down—and we have no doubt would have given greater satisfaction to those whose plans might have been rejected than has been given under existing circumstances. In cases of this kind it is difficult for the public to divest themselves of an impression that influence and interest not unfrequently outweigh considerations of the general good, when the parties with whom the decision rests are so much exposed to external appliances as popular representatives must necessarily, and perhaps unconsciously, be.

It appears to us that this plan of having the merits of conflicting schemes thoroughly sifted at the outset by persons competent for the task, and above all suspicion of partiality or prejudice, might have been adopted with great advantage at an earlier stage of railway operations. We should not then have seen so many projects got up "to sell" nor been compelled to witness unprincipled oppositions set on foot, in which the opposers dreaded nothing so much as success in their *ostensible* objects. We should not have seen a few interested adventurers allowed year after year to peril a property in which millions have been invested, by persisting in a scheme which could neither benefit the public nor their own credulous dupes; we should not have seen the owners of that property—a property acquired at most fearful risks—compelled in self-defence to protect themselves and the public interests by an expenditure of thousands which a very slight investigation of the merits of the case by competent authorities might effectually and at once have rendered needless.

MR. LABOUCHERE'S Railways' Regulation Bill still remains in a state of suspense [the further consideration of the Report having again been deferred till Monday next], and it seems doubtful if, after all, it will be prose-

Digitized by Google

cuted to an issue during the present session. Whether the measure be modified or mutilated—perverted from its original purpose or wholly and for ever abandoned—whatever may be its fate—we shall not feel in the smallest degree surprised, seeing that it was brought forward under the auspices of an Administration notorious for nothing so much as its restless rage of interfering for interference sake, of unsettling ancient habits without the ability of supplying their place by anything of a better character, and of catching up measures of apparent public utility, only to lay them quietly aside when the purpose of the moment has been attained. The excitement which prevailed at the commencement of the session in reference to railway accidents, afforded an excellent opportunity for Ministers to parade their pretended zeal for the public welfare, and Mr. LABOUCHERE's Bill was accordingly introduced. Now, however, that the alarm very naturally excited by the lamentable catastrophes of last year has almost wholly subsided, and little more popularity is to be secured from this source by the self-styled guardians of the people, the measure is given up to the Railway Managements, to be "mangled, hacked, and hewed," preparatory to its final abandonment. It is fortunate that the Bill involves nothing, the non-prosecution of which can inflict any serious damage upon railway interests; for with the precedent before us of Ministerial misconduct in the case of the Irish railways, where an object which they professed to have so much at heart was treacherously given up at the very moment when it was within their grasp, we are doing Mr. LABOUCHERE and his colleagues no injustice in presuming that the importance of having the measure carried out during the present session, would not have weighed with them a straw in surrendering it to its fate.

Our readers need not be told that we entertain no particular affection for this new Bill of Mr. LABOUCHERE's, nor for that of Lord SEYMOUR which preceded it. Railways could not hope to be altogether exempt from the interference of the legislature, and we were thankful that such interference was to the limited extent, and of the comparatively harmless character, embodied in the measures referred to. With respect to the new Bill in particular, we expressed from the first our hope and expectation that it would be greatly modified before it became law, and had this been effected with judgment and caution, its operation might have been attended with the best results. The principal thing required was the power of carrying out, in the spirit intended by its framers, the provisions of Lord SEYMOUR's Act, which called for full and honest Returns from the Companies on all points of *public* interest. The absence of enforcing penalties rendered the Act of last session nearly valueless in this respect, leaving it to the caprice or courtesy of Boards of Management to refuse or comply with the instructions of those, to whom the carrying out of the measure was entrusted. One would have imagined that there would not have been a single instance of neglect or refusal on the part of Railway Boards, who had professed themselves so anxious to afford every information upon points connected with the working of their several undertakings, and so ready to give their best consideration to every suggestion for the public benefit, but so it was; and unless it were intended that these Returns should be a nullity and a mockery, it was absolutely necessary that more stringent enactments should be framed. Another valuable provision there is in the existing Act, namely, that for the punishment of railway offenders, which might have been enlarged and fortified with much benefit not only to the Companies but to the public. Already has considerable good been accomplished from the operation of this clause, and much more would have been effected but for the too prevalent indisposition of Railway Boards and local magistrates to carry it strictly into effect. The punishments which it prescribes are, however, much less severe than they ought to be, and an alteration in this respect would have formed a very fitting subject for a clause in the new Bill. Perhaps if there had been added the necessary powers for constituting an *efficient* Board of Appeal in matters wherein the public may feel themselves aggrieved by the conduct of Railway Companies, or one Company by the proceedings of another, all the purposes for which a Railways' Regulation Act is at present required might have been provided for. Public opinion would have effected the rest; or at any rate, time would have pointed out clearly the remedies which are now but very indistinctly discernible. A power greater than that of any Act of Parliament is at work to secure a more efficient management of railways than has yet prevailed—we mean the aroused spirit of Railway Proprietaries, who are beginning to perceive that perfection has not been so nearly arrived at as some of their representatives in the several Directories would fain have them believe. The exciting motive with the proprietaries is, doubtless, their own pecuniary benefit, but with this the public safety and public convenience are so inseparably intertwined that the agitation of Board reform, cannot fail to be productive of the best results to the community at large.

The main ground for any degree of legislative interference in the conduct of railway traffic is the confidence which would be created in the public mind, supposing the parties in whom the controlling authority might be vested to be such as would be trusted and esteemed. We do not suppose that any Board of Management deserving of the name would in the smallest degree relax their exertions for the safe and commodious accommodation of their passengers, merely because the Board of Trade might, to a certain extent, share with them the responsibility of their carrying arrangements. Neither do we affirm that the supervision of the Board of Trade, or of their duly qualified representatives, would add aught to the comfort of the travelling public; but one point at least would be gained, namely that that part of the public would *fancy* themselves more secure, and in a matter like this of railway locomotion, where experience has proved that "the sense of *danger* is most in apprehension," it is no trifling attainment to set the minds of the parties interested at ease. We have on previous occasions adverted to the incalculable injury which one fatal accident upon any one line of railway inflicts upon every similar undertaking—an injury distinctly set forth and deplored in several of the recent half-yearly Reports—and the converse of the proposition will hold good, so that if assurance of safety could be rendered, or could be supposed to be rendered, doubly sure, the effect upon the traffic of the several lines would be proportionably beneficial. Railway supervision would contribute to this most desirable end.

With respect to the semi-defunct measure of Mr. LABOUCHERE, there can be no doubt that if it *should be* revived, it will be with very considerable alterations. In particular, the *eleventh* clause as originally proposed by Mr. LABOUCHERE, will, we understand from the best authority, be abandoned. Whether the substitute for it recommended by the Committee of Railway Boards, and already referred to in this journal, will be adopted, is quite another question. The clause thus recommended, would go far to render the powers of the Board of Trade in the most important of their superintending functions merely nominal, but whether this alternative is not preferable to entrusting any set of men with almost illimitable and irresponsible authority over an interest so vast as that of railways, we shall not at present discuss. Our contemporary of the *Railroad Monthly Journal*, in the number just issued, appears mightily indignant that the Railway Committee should have ventured to propose the introduction of such a clause. His language is not of the most courtly kind, but he may nevertheless be pretty near the mark in his conclusions. We will first give the clause as proposed for insertion in the Bill, and then our contemporary's commentary:—

"Clause 11.—And be it enacted, that for the purpose of preventing accidents upon railways, it shall be lawful for the Lords of the said Committee to issue, from time to time, such regulations respecting the lights and flags to be used as signals on any railway, or for the government of enginemen, guards of the trains, policemen, and switchmen, as they shall deem necessary, provided always that such regulations shall not impede or interfere with the business and traffic of the railway for which such regulations shall have been made, nor shall prescribe anything of an experimental nature, or which shall not have been in use three months at least on some railway, on which passengers are conveyed by locomotive power, provided also that no such regulations as aforesaid which may be issued by the Lords of the said Committee, shall be binding upon any railway company, unless the Lords of the said Committee shall have given to such Company one calendar month's notice, in writing, of their intention to issue the same, in which notice the precise nature of such intended regulation shall be specifically stated, and any Company shall be at liberty to memorialise the Lords of the said Committee against such intended regulation, which memorial shall be filed by the said Lords in their proper office for such purpose, and submitted to Parliament as hereinafter mentioned; and every regulation to be issued as aforesaid, shall be, as nearly as circumstances will render it expedient, the same on all railways, due regard being had to the different circumstances, financial and otherwise, of the different Companies; and if any special regulations shall be issued, with reference to any particular railways, the reason for confining them to such railways shall be specified in the notice of intention to issue the same."

"This [says our contemporary] is pretty comfortable assurance—why it would have utterly and totally annihilated the whole Bill; look at the part which allows nothing to be done which will 'interfere with the business and traffic;' this is placing the Company above the Government, and shows the audacity of these railway oligarchs at once; the thing is positively absurd; we are to have not only no experiments, which, alas! are so grievously wanted, but nothing of an 'experimental nature'—nothing which has not emanated from the stand-still and perfection gentlemen, and been in use 'at least three months.' Is it possible these gentlemen could ever have supposed Mr. Labouchere would have swallowed this sharkhook?

"The unwieldy boards want a month's notice, too, in writing, before their highnesses can move in any matter, however trivial, and their remonstrances submitted to Parliament if they choose to dissent from the Government orders; or, in other words, they claim the rights of peerage—they must have their protest entered on the journals of the House! This is really the most consummate piece of impudence we ever heard of, and would have rendered the whole Bill a perfect delusion on the country, and of no more value whatever than the parchment on which it was engrossed."

A NOTICE was placed on the books of the House of Commons, last week, by Mr. BARNEBY, in the shape of a proposed instruction to the Committee on Railways, "that they do inquire into any agreements or arrangements, either written or verbal, made between Railway Companies and coach or omni-

Digitized by Google

bus proprietors, in London or the country, whereby the latter are prohibited from being concerned in coaches which may travel on the roads in opposition to the railways, and that they report the result of their inquiries to the House." It does not appear, however, that the motion has yet been brought forward, although set down for a day that has already passed.

It is probable that Mr. BARNEBY, being connected with a district not very remote from the Birmingham and Gloucester Railway, may have had in view certain disagreements between the Managers of that Company and the proprietors of rival omnibuses, of which more than enough has already been said in our columns: but it is to be regretted that the honourable member's motion has not been carried out in its more extended sense, and full inquiry made into all the bargains, verbal and otherwise, which have taken place between Railway Directors and their so-called competitors the coach proprietors. Had this been done, an effectual stop would, we hope, have been put to the foolish stories which the anti-railway press delight to circulate, of coaches "bought up" by Railway Directors, or "put down" by them by unfair means. We are rather surprised, indeed, that it has never occurred to those who profess to believe in the buying-up system, that the practice so loudly condemned by them would be likely to prove a most unprofitable one to Railway Companies. Granting that the merits of the two modes of conveyance were equal in public estimation, where would be the use of silencing one set of rivals if another might instantly spring up? Did the old coachowners hold so complete a "monopoly" of the road, that they alone could (to use the language of Mr. BARNEBY's motion) "travel in opposition to the railways?" Supposing some two or three coachowners to have been bought off, were there no others to start in their stead? It is said, that those who are noted for their liberality in ministering to the real or pretended wants of itinerant mendicants, are of all others the most exposed to their solicitations. One member of the fraternity communicates to another the tender-heartedness of the almsgiver; and just so would it have been had Railway Directors been simple enough to commence buying off the old conveyances. They might have withdrawn one coach to-day, and ten would have been on the road to-morrow, all prepared for the same profitable "arrangement!" Mr. BARNEBY speaks of certain parties as "prohibited from being concerned in coaches in opposition to railways," as if threats no less than bribes had been resorted to for the purpose of securing the "monopoly" which it was lately so much the fashion to decry; but it would, we fancy, puzzle both the honourable member, and the Committee to whom he appeals, to make out one well-attested case of either reward or punishment, on the part of Railway Boards, that should deter or prevent coach proprietors from pursuing their accustomed business, *provided they found it profitable*. Herein rests the whole secret of the matter. Railways, by their superiority in speed, ease, and cheapness, have so completely superseded the vehicles of the coach proprietors, that the latter are, as a thing of course, withdrawn from the unequal contest, and so they will remain until some means can be devised whereby they can excel their rivals in one or more of the particulars above referred to. Should some sudden discovery give the superiority to common-road locomotion, there will be as little need to buy off the opposition of the railways as there has hitherto been for the railways to "prohibit" in any way the competition of the coach proprietors. The public will judge for themselves, and give the preference where it is deserved.

Nevertheless, although all serious rivalry between the two modes of conveyance is entirely out of the question, there can be no doubt that it would be for the mutual benefit of the parties interested in both systems, to cultivate a good understanding among themselves. Coach proprietors, if they could but see their own permanent advantage, would look upon railways as their best friends, for although they certainly have in many instances diverted the traffic of the country from its ancient channels, they have given such an impetus to that which previously existed, and have opened up so many new and abundant sources of business, that if there is at present less need for horse conveyances than there was some few years ago (which, however, we not believe), there can, we think, be no doubt that in a very short time the demand for this description of labour will be much greater than it ever was in the palmiest days of the "road." On the other hand, Railway Managements should not rely too much upon their own unquestionable superiority. Coach proprietors, although not much to be feared as rivals, may be rendered very useful auxiliaries, and it is greatly to be regretted that caprice or a worse motive, should ever interfere to prevent a connection which might be rendered so beneficial to both.

THE Summer half-yearly meeting of the Cheltenham and Great Western Company has been held this week, and in our next we shall give an account of the proceedings. We may state in the meanwhile that they seem to have been altogether of a very satisfactory character. Immediately after the meeting, a number of the shareholders took a trip to Swindon, being conveyed thither and back by the *Venus* engine, at a rate exceeding forty miles an hour, and were satisfied from ocular observation that the slips which have occasioned the postponement of the opening of the Cirencester and Swindon portion of the line, were such as no human foresight could guard against, while at the same time they saw with admiration the prodigious efforts making by the contractors to effect the speedy restoration of the embankment. No day for the opening has been yet fixed upon.

—o—

IT has been decided by the Directors of the London and Brighton Railway to open 20 miles of that line from London to Haward's-heath, in June. The whole work will be completed and opened to the public in August.

—o—

MR. HODGSON HINDE has given notice of a motion for Thursday next, for "a Select Committee to inquire into the present arrangements for the transmission of the mails between London and Edinburgh, with a view to ascertain whether greater expedition cannot be effected, and increased accommodation afforded to the correspondence of the intermediate districts."

—o—

THE works of the Blackwall Extension line, from the Minories to Fenchurch-street, are now in such a state of forwardness that it is expected to be opened in the course of next July, when we may hope to see the commencement of a complete development of the immense traffic resources of this railway. "With the world at one end, and the metropolis of the world at the other," as was once forcibly observed by the first Chairman, and ever a most active promoter of this railway (Mr. John Robertson), it can scarcely fail to be, in the end, one of the most productive lines in the kingdom.

—o—

WE quote from the *Sheffield Independent* the following notice, with respect to the Sheffield and Manchester. "So great has been the progress made with that part of the line from Manchester to Godby, that it is now certain to be opened in July or August. The Directors have, therefore, given orders for the locomotive engines and carriages that will be required. With regard to the tunnel, the accounts are very satisfactory. At one of the driftways, the rate of progress is 10 yards per week."

—o—

Mr. HUME has given notice of his intention to move in the Committee on the Railways' Regulation Bill that a clause be introduced, making it compulsory on the Directors of all railways on which mails are conveyed in the week days, to carry them on Sundays also, at the same charge. This no doubt has reference to the alleged proceedings of the Postmaster-General in the case of the Ayrshire railways to which we have repeatedly called attention.

Mr. O'Connell has given notice of a motion that "Ireland be exempted from the operation of the Bill."

The Companies who have this week petitioned against the measure are the Maryport and Carlisle, the Durham Junction, the Chester and Birkenhead, and Preston and Wyre. The total number of petitions against the Bill, up to the 1st inst., was 39.

—o—

IN the House of Commons on Wednesday evening, the following returns were ordered on the motion of Mr. Wallace, member for Greenock, who has distinguished himself in the cause of Post-office reform. Some of the returns promise to be interesting:—

Return ordered, "to explain and amend a return made to Orders of this House dated the 3rd day of August, 1840, and the 18th day of February last, being No. 155 of the present session; the said return to show, in columns, the number, the names, and the wages (by the week and year), of those mail guards who are prohibited from taking fees from the public, with the sum total paid to this class of servants annually; also, the lines of road, in alphabetical order, to which these guards are appointed, stating whether all the guards on said lines are paid solely with public money or partly with public money and with fees from passengers, with the number in each class, where both are on the same line."

"As above, of mail guards who are paid partly with public money and partly by fees from passengers, with the reason for continuing this distinction, and the authority under which it is made."

"Of the number and names of mail guards employed on each line of road respectively, distinguishing railroads from common roads; thus showing the whole sum charged annually in the public accounts for mail guards, on each line of road, and for all roads whatever, respectively."

"To state the sum total paid by the public for mail guards in 1838 and 1840 respectively, and distinguishing the amount incurred in each year for those on common roads and on railroads."

"Showing the lines of railroad and common road by which mail bags are sent with carriages conveying passengers, but without mail guards, and the reason why mail guards are not employed on these roads; also, the hours and the number of times which mails are sent on these roads daily."

"Also, to state with whom the appointment of mail guards rests, and the numbers which have been appointed annually in each of the five last years, with the total number appointed in that period."

RAILWAY OFFENCES AND OFFENDERS.

We noticed last week the somewhat severe decision of two Derbyshire magistrates in sending a man for a month to the treadmill for an attempted fraud on the North Midland Railway Company. On Monday, a similar case was brought before the magistrates at Union Hall Police Office, whose judgment was, however, much more lenient. A Mr. Anten was charged with an assault upon Mr. Davies, the Superintendent of Carriages on the South-Western Railway, arising out of the refusal of the defendant to pay the difference between the second and first class fares, he having taken out a second class ticket at Thames Ditton, and yet ridden to town in a first class carriage. On being remonstrated with, the defendant, who admitted having done so, assaulted the Company's officer, and for this he was sentenced to a fine of 20s., besides being compelled to pay the difference between the first and second class fares. A fraud was as clearly to be inferred (legally speaking, though still perhaps not actually contemplated) in this case as in that recorded last week, and yet the London magistrates think not only this offence, but the additional offence of an assault sufficiently punished by a pecuniary infliction, just one half as severe as that which satisfied the Derbyshire justices, to say nothing of the probability that in the one case the delinquent was likely to be able to pay the fine, while in the other he had to be sent "to the treadmill" in default. We do not blame the London Bench for their decision—probably under all the circumstances it fully met the requirements of the case—but it is to be regretted that such discrepancies should occur in the administration of "*equal* justice."

We are not disposed however to be so well satisfied with the result of another case in which the South-Western Directors have been concerned, and which is thus noticed in the *Hampshire Independent* of Saturday last:—

"A slight accident occurred on the South-Western Railway, to the five o'clock down train, from London to Southampton, on Saturday last, at Bishop's Stoke, that part of the line where the Gosport branch joins the main line, by which the arrival of the trains was delayed nearly an hour. The cause of the accident was the "points" being misplaced, in consequence of which the line to Gosport was open, and the engine and tender ran into it. Some waggons were standing on the line, but the engine driver, perceiving the danger, immediately let off the steam and reversed the engine; the train was brought up without further damage than the fore part of the engine being slightly broken by striking against one of the waggons. All the trains approach this spot with great caution, and the rule was strictly followed in this instance or the consequences might have proved very serious. *The person whose duty it was to arrange the 'points,' and who was in the service of the contractor, has been dismissed.*"

Surely it was not enough that mere dismissal should follow so scandalous a neglect of duty, which might have resulted in a most serious calamity. Why was not "the person whose duty it was to arrange the points" taken before a magistrate and dealt with as the law directs? It mattered not whether he was in the service of the Company or the service of the contractor; in either case his conduct was equally criminal, and rendered him equally amenable to the law. The Directors of the South-Western Company already stand suspected of an inclination to screen delinquent servants—a course of proceeding as injurious to their own interests as it is unjust to the public. They should beware how they lend force to the accusation.

THE STEPHENSON STATUE.—What are the Committee doing in this behalf? We hear nothing about them: we trust there is no screw loose, and shall be glad of information as to the style of the work and the probable time of completion, because we shall not live for ever, and we wish to see the statue erected while we are yet inhabitants of this nether world.—*Railroad Journal*, No. 3.

MESSRS. COOKE AND WHEATSTONE'S ELECTRIC TELEGRAPH.

As the Electric Telegraph has recently attracted a considerable share of public attention, our friends, Messrs. Cooke and Wheatstone, have been put to some inconvenience, by a misunderstanding which has prevailed respecting their relative positions in connection with the invention. The following short statement of the facts has, therefore, at their request, been drawn up by us the undersigned Sir M. Isambard Brunel, Engineer of the Thames Tunnel, and Professor Daniell, of King's College, as a document which either party may at pleasure make publicly known.

In March, 1836, Mr. Cooke, while engaged at Heidelberg in scientific pursuits, witnessed, for the first time, one of those well-known experiments on electricity, considered as a possible means of communicating intelligence, which have been tried and exhibited from time to time, during many years, by various philosophers. Struck with the vast importance of an instantaneous mode of communication to the railways then extending themselves over Great Britain, as well as to government and general purposes, and impressed with a strong conviction that so great an object might be practically attained by means of electricity, Mr. Cooke immediately directed his attention to the adaptation of electricity to a practical system of Telegraphing; and, giving up the profession in which he was engaged, he, from that hour, devoted himself exclusively to the realization of that object. He came to England in April, 1836, to perfect his plans and instruments. In February, 1837, while engaged in completing a set of instruments for an intended experimental application of his Telegraph to a tunnel on the Liverpool and Manchester Railway, he became acquainted, through the introduction of Dr. Roget, with Professor Wheatstone, who had for several years given much attention to the subject of transmitting intelligence by electricity, and had made several discoveries of the highest importance connected with this subject. Among these were his well-known determination of the velocity of electricity, when passing through a metal wire; his experiments, in which the deflection of magnetic needles, the decomposition of water, and other voltaic and magneto-electric effects, were produced through greater lengths of wire than had ever before been experimented upon; and his original method of converting a few wires into a considerable number of circuits, so that they might transmit the greatest number of signals, which can be transmitted by a given number of wires by the deflection of magnetic needles.

In May, 1837, Messrs. Cooke and Wheatstone took out a joint English patent, on a footing of equality, for their existing inventions. The terms of their partnership, which were more exactly defined and confirmed in November, 1837, by a partnership deed, vested in Mr. Cooke, as the originator of the undertaking, the exclusive management of the invention in Great Britain, Ireland, and the Colonies, with the exclusive engineering department, as between themselves, and all the benefits arising from the laying down of the lines, and the manufacture of the instruments. As partners standing on a perfect equality, Messrs. Cooke and Wheatstone were to divide equally all proceeds arising from the granting of licenses, or from sale of the patent rights; a per centage being first payable to Mr. Cooke, as manager. Professor Wheatstone retained an equal voice with Mr. Cooke in selecting and modifying the forms of the telegraphic instruments, and both parties pledged themselves to impart to each other, for their equal and mutual benefit, all improvements, of whatever kind, which they might become possessed of, connected with the giving of signals or the sounding of alarums by means of electricity. Since the formation of the partnership, the undertaking has rapidly progressed, under the constant and equally successful exertions of the parties in their distinct departments, until it has attained the character of a simple and practical system, worked out scientifically on the sure basis of actual experience.

Whilst Mr. Cooke is entitled to stand alone, as the gentleman to whom this country is indebted for having practically introduced and carried out the electric telegraph as a useful undertaking, promising to be a work of national importance; and Professor Wheatstone is acknowledged as the scientific man, whose profound and successful researches had already prepared the public to receive it as a project capable of practical application; it is to the united labours of two gentlemen so well qualified for mutual assistance, that we must attribute the rapid progress which this important invention has made during the five years since they have been associated.

(Signed) M. I. BRUNEL.
J. F. DANIELL.

London, 27th April, 1841.

London, 27th April, 1841.

Gentlemen,—We cordially acknowledge the correctness of the facts stated in the above document, and beg to express our grateful sense of the very friendly and gratifying manner in which you have recorded your opinion of our joint labours, and of the value of our invention.

We are, Gentlemen, with feelings of the highest esteem, your obedient servants,

(Signed) WM. F. COOKE.
C. WHEATSTONE.

Sir M. Isambard Brunel and
J. F. Daniell, Esq., Professor, &c.

THE GREAT WESTERN RAILWAY.—This magnificent line of railway is fast approaching completion. The most strenuous exertions are being made (particularly in the neighbourhood of this city) for the accomplishment of that desirable object, and the opening of the line in June or July, so conducive, it is to be hoped, to the prosperity of Bath and Bristol. From the hilly nature of the country in this part of England, the works on the line in our own neighbourhood necessarily proceed with difficulty; but still, the supervention of these difficulties adds to the interest with which the progress of such a work is regarded, and at the same time affords scope for many beautiful contrivances in engineering and architecture.—*Bath Gazette.*

—o—

HALIFAX RAILWAY.—The Halifax Committee or Deputation who received from the Directors of the Manchester and Leeds Railway an engagement to make a branch to their main line, have lately given the Company a notice requiring them to make the branch. A Leeds, Bradford, and Halifax Railway has been projected, and Mr. Hamilton H. Fulton, from London, has been down to survey and to endeavour to form a Company; but the plan is not taken up by the capitalists of Halifax, and no Company has been formed.—*Leeds Mercury.*

—o—

RUSTING OF RAILS.—Can any of our readers explain the fact, that rails in the same station, for instance, will be far more oxidized if not travelled over than if they are. We have heard several attempts to explain this, but none have fully satisfied us; there is no doubt whatever of the fact, and the difference considerable, as any one may convince himself at any railway station.—*Railroad Journal.*

[Our penknife before us presents us with a parallel case. It has two blades, but we are in the habit of using one only. The one that is in use is bright, the other very rusty indeed. As to the cause of the difference we are slow to speak, seeing that so scientific and eminent an authority as our contemporary has been so seriously puzzled about it. If we might presume, however, to suggest a reason, we should say the rail or blade in constant work *has not time to rust.* We do not offer this as a very scientific reason, but it may at least take rank with the well-known and much-approved answer given by a certain eccentric nobleman to a learned doctor, who had expressed his admiration at some trees of his lordship's planting, growing so well—"*Sir, they have nothing else to do.*"]

MECHANICAL DISADVANTAGES OF THE PRESENT RAILWAY SYSTEM.

No. II.

[From a Correspondent.]

THE attention that appears to have been excited by our former article on this subject, induces us to enter further into the consideration of the principal features of the present Railway System, which are obnoxious to the mechanical disadvantages to which we have alluded.

Gravity and friction are the two grand powers, or more accurately speaking, the properties of matter that resist and tend to destroy motive power. It is to diminish the effect of the latter of these resistances that the efforts of the Railway Engineer have been so successfully directed. The friction of surface resistance on the common roads naturally varies according to the quality of the road metalling and its state of repair; the variations on the Holyhead road from London to Shrewsbury, according to Mr. M'Neil's experiments, being from 40.4 lb. to 118.6 lb. per ton, and the average value 76 lb. per ton. On the rail, on the other hand, the friction amounted, according to Mr. Nicholas Wood's early experiments, to 11.2 lb. per ton; it is stated by M. de Pambour at 7 lb. per ton; by Dr. Lardner at 6 lb. per ton, and an allowance of 8 lb., or at the utmost 9 lb. per ton is the highest at present made for this resistance on railways, and with carriages of modern construction.

A diminution to the amount of ninety per cent. in one of the principal resistances to motive power naturally involves an equivalent saving in power or in time, or in the two together, on a comparison of a locomotive railway with the best constructed and regulated of ordinary roads—an economy of which, however, owing to the system hitherto adopted, full advantage has not yet been taken. The obstacle has been in the mode of communicating the motive power—of transferring the force from the pistons of the steam-engine to the fulcrum of resistance—the Earth. In road vehicles, and on those railways where horse power is employed, the mechanical arrangements are far superior to that of the present locomotive. The horse having a fair purchase on the ground applies his force to the traction of a carriage; and as the friction of that carriage is diminished without in any way diminishing the motive power of the horse, the advantage of that economy may be taken fully in regard to power, though not, except to a limited extent, in point of speed.

The locomotive engine, on the other hand, depends for its motive force, solely on the adhesion between the rail and the driving wheel of the engine, and as the friction of the bearing wheels is diminished by rendering more smooth and slippery the surface of the rail, so is the adhesion of the driving wheel diminished, and the steam power of the engine rendered less available. Thus when owing to the state of the atmosphere or other causes, the rails have become so slippery as to offer the least possible resistance to the transit of a train, the line is so far from being in the best working order that the driving wheels of the locomotive may be seen to spin round and round, impotent to move the engine and its train a single foot in advance. Thus contrary qualifications are required from the same portion of the machinery: it is necessary for the rail to present as little resistance as possible to the passage of carriages, and at the same time to offer a sufficient adhesion for the driving wheels of the engine.

But this objection, while it exists in the very nature of a railway as at present constructed and worked, is of little practical moment on a level surface. The adhesive power, in such cases, is sufficient to enable the engine to draw with comparative ease, a load duly proportioned to the power exerted. It is when the force of gravity comes into more direct operation, when the moving power is required not only to overcome friction but to lift weights, that the ill effects of the adhesive system begin to be felt. It is to obviate this difficulty that such immense sums have been expended to procure favourable gradients, to depart as little as possible from the actual level, to escape from the unpleasant fact, that in railway locomotion that which is lost in time cannot always be saved in power. Mr. Booth, no mean authority in railway matters, has very clearly illustrated this startling difficulty in his "Account of the Liverpool and Manchester Railway."

"For instance," says that gentleman, "7 tons on an inclined plane rising one in a hundred, is a proportionate load to 30 tons on a level, at fifteen miles per hour, the weight of the engine being 4½ tons, as explained hereafter. But if it be attempted to take 30 tons up the plane by going proportionably *slower*, the *power* of the engine might do this, but the adhesion of the wheels would be insufficient, and they would turn round, while the engine stood still, because 30 tons on the inclined plane = 30 tons on a level, and we have supposed the adhesion to be equal to 40 tons on a level. It follows therefore, either that the engine must be worked *below* the adhesiveness of the wheels on the level, or you cannot increase the proportionate load by diminishing the speed on the inclined plane.'—pp. 79-80.

Mr. Parkes, in his valuable paper on steam-boilers and steam-engines, published by the Institution of Civil Engineers, remarks (p. 104,) that "no power of steam would impart progressive motion to the engine, if loaded beyond the force of its adhesion to the rails; that force is, therefore, the dynamic limit; the supply of steam is a mere practical condition of the boiler." Thus the *North Star* engine, which, according to the experiments of Mr. Nicholas Wood, took a gross load of 194.7 tons at a mean speed of 18.63 miles per hour, would be unable to *move*, if the rails were in an unfavourable state, a gross load of 50 tons on the very moderate inclination of one in a hundred. Nor with slippery rails, would it be able to crawl up, without any load, an incline of one in thirty—a rise by no means considerable on a turnpike road. The disadvantage of depending on adhesive force for the communication of motive power seems to need no further illustration.

As we have hitherto considered the defective mode of the application of the power when brought to the periphery of the driving wheel, let us now look at the loss sustained in its transmission to the periphery from the piston. In ordinary roads, if a heavily loaded waggon has become set just in the mud, it is not uncommon to see the trace attached to the tire of one of the wheels, that by means of exerting the power of the horse on the leverage thus afforded by the diameter of the wheel, a greater purchase may be gained than is afforded by a dead pull at the shafts. But if we conceive the case to be reversed, and that instead of the horse's power being so exerted, the leverage of the wheel shall aid the pull, or that the carriage, being pulled in advance has only to roll forward on the bearing wheels adapted for this purpose, it should be employed to turn round an axle, on the ends of which were fixed wheels whose motion, communicated from this axle, was to move the carriage—in this case, is it not evident how it would be applied to the power of the animal? Yet this is precisely the case with the locomotive steam engine. The motion of the piston being communicated by cranks to the main axle has to contend with the torsion of the axle—the spring in the spokes of the wheel, and the opposing leverage of the wheel itself (causes of the loss of so much power as to lead Mr. Brunel to abandon the ten feet driving wheels, which he had introduced on the Great Western); to arrive at the point of useful effect, which, after all, is then solely dependant upon the adhesiveness of the rail.

Attention to these, and similar details, will go far to explain the prodigal consumption of steam that has hitherto marked the locomotive engine, and raised the cost of locomotive power so far above the estimates of a few years ago. To obviate these manifest evils, as well as to economise the use and production of steam, is the aim of the patents of Messrs. Taylor and Conder, an object of no mean importance either to the engineer or the capitalist, the peer who transports his carriages and horses from town to country by the aid of the railways, or the humblest labourer who saves miles of weary toil, by the few pence he pays for his third class accommodation.

LONDON AND GREENWICH RAILWAY.

LETTER II.

To the Shareholders.

GENTLEMEN,—Having in my last letter taken a general view of the state of your prospects, and that chiefly with regard to your relations with other Companies, I propose now to enter more into detail, and first to consider your administration of your own traffic as at present conducted, and then to revert once more to your toll arrangements—always premising, that I have no interest in your railway, although I mean to have one whenever I see it likely to be managed upon better principles than those which have hitherto governed its direction. And first, with respect to your fares:—Of course, it is desirable that the public should be made to pay as much as it *will* pay for the accommodation you have to offer; but as the public cannot be *made* to pay more than it *will* pay, the question is rather how much can the public be *induced* to pay for the use of your railway? If people would pay 5s. each, *in sufficient numbers*, it would certainly be so much the better for you; but they will not. I don't suppose half-a-dozen people, in the course of the year, could be found who would pay 5s. each to be carried to Greenwich in your carriages. Will they pay 1s.? Ask for a return of the number of your first-class passengers through the year, and you will be answered. Will they pay 8d.; always be it remembered in *sufficient numbers!* The answer is, in *considerable* numbers, but not in *sufficient* numbers, for the railway, as a *Greenwich* railway, does not pay. Will they pay sixpence? Your Directors I understand, and I have made particular inquiries as to this point, say no! for that they have tried the experiment fairly, and it does not answer. To the first part of this reply I demur. I cannot allow that they have tried the experiment fairly, and I am not surprised that it should not answer. It is true they have constructed a certain number of uncomfortable carriages, for which they charge—not a third-class price, nor a second-class price—but actually a first-class price, as prices are arranged upon a neighbouring and partially a competing railway.* The consequence is, that a few persons to whom time is an object, accept of this miserable conveyance—but who can expect that the great bulk of the pleasure-seeking population of this metropolis, always the great support of such a line will consent to travel in so disagreeable a manner when they can find an easy and luxurious conveyance by a multitude of steam-boats on the river at the same price?

In the last number of the *Railway Times*, in an article which is a commentary upon a paper, likewise published in the same number, from the *Franklin Journal*—a paper which every man connected with the Greenwich Railway ought to study, and which your Directors ought to blush to read—in this article, I say, by the Editor of the *Railway Times*, is the following sentence:—"The passenger traffic, though it has exceeded, in most cases, the estimates (if not the expectations) of railway projectors, has in no case that we are acquainted with been allowed to expand to its natural magnitude, being always kept down by some restrictive influence or other, such as *high prices* (yielding generally the reverse of high *profits*), high taxes, defective accommodations, *inconvenient* arrangements, &c." Again, speaking of the same paper, "we shall probably return to the subject, but shall content ourselves for the present with stating here, that the general result which Mr. Ellet has arrived at, is this—that there is in the case of every railway, a certain constant quantity which may be safely added to the actual cost of conveying each passenger, WHOLLY IRRESPECTIVE OF COST OF CONSTRUCTION, *but that so important is the least deviation from that quantity, that the loss increases nearly in the square of the deviation from it.*"

I beseech you, one and all, to ponder well upon these sentences, and upon the paper on which they are a commentary, and consider if they do not convey the truth—if that should be your convic-

* The Blackwall Railway.

tion, after attentive consideration—lay this truth to heart, and ask yourselves if your railway be so managed as to conduce to its profit or welfare. In the meantime, as this letter has extended to some length, I must defer to another opportunity what further observations I have to make upon your toll arrangements.

I am, Gentlemen, your well wisher,
EXPOSITOR.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—I cannot resist addressing a few words to you, in consequence of your remarks on Sir F. Smith's Report on the best railway lines to connect the Scottish capital with your great English railways.

You suppose there will be an outburst from the promoters of the east coast line, in consequence of the preference given to that by Symington. I venture to assert thus early, that there will be no such thing. The supporters of the western lines should set about their subscriptions immediately, and try what they can do; but they know well, as every well-informed person in this country does, that from the Scottish landholders, locally situated, no support worth a thought will be got. They are, as a body, nominally poor. Most of them have mortgage debts over their properties, and in place of giving money will ask, "How much are we to get by this?" Indeed, many will be found who will say, "We travel fast enough already, we do not want your railways." No, Sir, that is not the source from which to procure the enormous sum necessary to carry through a railway from Lancaster to Edinburgh and Glasgow. The promoters of this huge project must go to Manchester and Liverpool, in the first instance, and there lay the foundation for forcing the line from Lancaster to Carlisle; nay, to get support also at Carlisle, and from the "statesmen" of Cumberland—but I fear from their generally small holdings they will not have much more money at command than the lairds on this side of Longtown. Glasgow should be tried next, and then Edinburgh. The men who have money, and liberal as well as adventurous ideas, congregate in large towns, not where their only place of meeting is the parish church of a Sunday. I think if you will inquire of any one conversant with the great English railway subscription lists, you will find that there is but a poor sprinkling of landowners in them. But to continue: let the scheme be set about and a fair trial made. We here, east coast men, will, I think, be quiescent in the mean time; but if the west coast men "give it up," we will take it up—by this I mean we will take up the east coast line—but there will be no opposition; we know how to set about our own plans; they have long been chalked out, from the absolute conviction that capital will not be got to carry through the other—about which it is worse than useless to talk, except the Manchester and Liverpool men stand forward. Well and truly, Sir, do you remark on the loose estimates of Railway Engineers. We here, are beginning to find them out. Low estimates before ground is broken, reckless expense when it is, and King's speeches during the period of contraction, are daily becoming more manifest.

I am, Sir, yours, &c.,
A CITIZEN OF EDINBURGH.

May 4, 1841.

DEVON AND CORNWALL, BRISTOL AND EXETER, CHELTENHAM AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—The perusal of the able and valuable Report of Captain W. Moorsom, on the Devon and Cornwall Railway, suggests the expediency of a resurvey of the unexecuted parts of the Bristol and Exeter as well as the Cheltenham and Great Western Railways, to learn what saving may be effected in completing those two lines, compared with their published estimates, by adoping the system recommended by Captain Moorsom, by making the governing gradient 88 feet per mile, and the minimum radius of curvature one quarter of a mile, forming only such a line as will admit of being travelled at the rate of 20 miles per hour clear for the speedy trains, or 16 to 17 miles for the slow trains, and using at first only a single line of rails.

There are still uncontracted for by the Bristol and Exeter Company 31 miles between Taunton and Exeter, comprising the most difficult ground on their whole line, and by the Cheltenham and Great Western 24 miles also of their most difficult ground There is an expensive tunnel on each, which, by Captain Moorsom's system might be shortened, or perhaps dispensed with altogether.

With reference to the above rates of speed, the following shows how little inferior they are to the rates now in practice on other lines with all their advantages in respect to favourable gradients and curves, and having double lines of rails throughout. The only line which greatly exceeds 20 miles per hour is the Great Western, and on that is a goods' train at less than 16 miles per hour.

There is little reason to fear that with so low a cost as Captain Moorsom proposes, the traffic will fail to prove amply remunerative. His estimate for 105½ miles is 1,331,839*l.* or 12,623*l.* per mile. Allowing the capital for this purpose to be one and a half millions, of which one-third part should be borrowed at 5 per cent. per annum, and supposing the working expenses to be 40 per cent. it would require a gross traffic per mile per week of only 26*l.* to yield a net income equal to the payment of dividends of 6 per cent. per annum on the calls paid up on shares.

Comparing this low sum with what is realised on other lines, it must be admitted to be exceedingly moderate; there is reason to hope that from passengers alone a much larger sum will be derived.

Yours respectfully,
F.

Bath, May 5, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Another Manchester and Leeds Shareholder," enters into a long and ingenious statement to show that when the weekly receipts amount to 6,500*l.*, the Manchester and Leeds line will make a dividend of 9½ per cent! No one will question the accuracy of his calculations—it happens, however, that our receipts hitherto only amount on the average to 3,000*l.* per week, and in my opinion are not likely to exceed that amount for a long period unless our fares are reduced.

The Leeds line has hitherto proved a total failure. It is needless to attempt to disguise the fact, and the public are of my opinion as is evident from the price of the shares; six or eight months ago our shares were at 31 premium old, and 16 premium new shares; they are now at 13 discount old, and 7 discount new, being a decline of no less than 67*l.* on each 100*l.* paid up!!

If your correspondent is desirous of raising the price of shares, he had better exert himself to bring about a reduction in our fares—*puffing* won't do now that the line is completed. Is he aware that we run 20 passenger trains daily, (and six on Sundays,) or 126 per week? As our weekly receipts from passengers amount to about 1,900*l.*, it appears that we draw only *the paltry sum of* 15*l. per train*, from passengers, being equal to 20 first class passengers at 15s. thoughout!!

It is evident that we get few or none of the through passengers; can this be wondered at while our fares are equal to 4½d. per mile first class, and 3d. per mile for second class, the distance being only 40 miles by the turnpike road?

Are our Directors aware that the first class fare from Glasgow to Greenock, 22½ miles, has just been fixed at 2s. 6d.? Why do they boast that their favourite third class fares pay well, and then discontinue them, except by three trains from each end daily?

I am at a loss, Mr. Editor, to account for the ominous silence our Directors preserve on every subject connected with the working of our line and the result of the opening throughout. If their object be that the shares should stand well in the market they have failed most signally. While the shareholders are suffering enormous losses by the heavy decline in the value of their stock, they are kept in total ignorance of the causes of the small amount of the receipts from passenger traffic. We are kept in the dark as to the number of through passengers conveyed, the number of coaches still running, the amount derived from London passengers booked to Rugby, &c. &c. Nothing is known respecting the agreement as to tolls entered into with the North Midland line, or the proposed Extension to the Liverpool line, without which the "Leeds" is a mere accommodation road in place of a grand trunk line connecting the east and west coasts.

Altogether, Sir, the history of our railway affords a strong proof of the necessity of that Railway Reform which you so ably advocate.

The patience of my brother shareholders is most exemplary. Not a murmur is heard, whilst 100*l.* of our stock has declined in value from 147*l.* in September last to 80*l.*, its present value!!! This, too, is only "the beginning of the end," for as 3,000*l.* per week will barely pay interest on loans (70,000*l.*) with a few thousand pounds against depreciation of stock, unless some means are adopted

Digitized by Google

to sweep the coaches from the turnpike road and increase our weekly receipts from passengers, it is not improbable that our 100*l.* shares will go to 30 or 40 discount, and the halves to 15 or 20 discount.

I am, Sir, yours respectfully,
A LEEDS SHAREHOLDER.

May 5, 1841.

THE CROYDON RAILWAY BOARD ON THE SUBJECT OF HIGH AND LOW FARES, OR PRACTICE *v.* PROFESSIONS.

To the Editor of the Railway Times.

SIR,—Through your journal we have been introduced to many articles ably put forward on the subject of high and low fares, yet I believe the question is now where it was. It is true, if Croydon "dogmas" would only prove infallible, the question of low tolls and fares is now as fixed as the monument, or the assurance of the dogmatists, with whom many of those articles originated. Unhappily the opinions of the Croydon officials, when examined by the test of truth, and stripped of their sinister adjuncts, are anything but decisive, as to the establishment of the principle of low fares being the most beneficial in practice. It is certainly true that the Croydon Chairman has proved to demonstration, (vide your journal of 19th November, page 1,102, and 19th January last, page 34,) that the fares of 1839, as compared with those of 1840, were low, and that in consequence of the rise in those fares, the Croydon Company lost 320,256 passengers, and (taking these passengers at the Chairman's own ascertained average fare of 1839) an income of 20,000*l.* per annum. This important illustration in favour of less against greater fares, when stripped of those advantages that are merely adventitious and local (but to which alone must be attributed this result in respect of the Croydon Railway) amount to no evidence whatever in favour of lower tolls and fares; and for these reasons, namely, that without the junction of the Croydon line with the Greenwich terminus, the Croydon line, as a mere *detached line*, would not produce traffic enough to give grease to the couple of engines that would certainly suffice to convey all their customers, even at the lowest possible fares.

[Would that I had the power of making an exhibition of the Croydon Board, in its detached importance, on the Croydon side of Corbet-lane, with a 10-ft. wall to detach the valuable from that which is mere waste, without its adjunct—the Greenwich Railway!]

And, secondly, even with the statements and figures of the Croydon Chairman, alluded to in his last letter, and that of his Solicitor, and of his friend "Expositor," (vide your journal of the 3rd and 10th instant, all in favour of lower fares,) yet this mere *professor* of lower fares continues in practice the highest fares, and that at an admitted *net* loss of 16,000*l.* per annum; the value of such contradictory testimony I leave to yourself and readers to estimate! The Greenwich Company has demonstrated that low fares or third class carriages, is productive of absolute loss, having last year carried 80,000 of that class, not only for *nil* relatively as to income, but actually at a loss of about 300*l.* solely from the advantage taken by the second-class passengers; the indignity of encroaching on the *boon* intended for the poor and humble, being no equivalent to the dirty *twopence* in the estimation of the really proud and rich. In consequence of such disgraceful conduct it is more than probable the third-class carriages will be discontinued. The Blackwall, under the most favourable circumstances, namely, novelty and stationary engines, commenced with *low* fares, but this soon proved unsatisfactory, and those fares were raised 33⅓ per cent., and at that rate I believe are now continued! In conclusion, may I beg the Croydon Chairman and his friends to give up their professions about low fares, and demonstrate by actual experiment on their own line from New Cross, that the lowest possible fare is the most profitable; until then do not, I beseech you, permit this all-accomplished gentleman to exhibit himself in a position so truly anomalous; let me assure him for once and all, that he may as easily make the statue of the Duke of York descend from its elevated position on Carlton Terrace, to dance a Welsh jig at the honourable gentleman's bidding, as to attain *his end* against the Greenwich charter or toll agreement! It remains to be seen to what extent, and for what period that agreement can be contravened by the Croydon cabal with impunity! Let the appeal be made to those honourable men parties to that agreement, and see if they deny the well-known fact that the reduction of the present toll from 9d. to 3d. gross (ascertained to net to the Greenwich Company no more than one penny five eighths per passenger) was not considered as a great sacrifice on the part of the Greenwich Company, but consented to in order that in all future time it should of itself sufficiently indicate that sacrifice, and the ample equivalent given to the Croydon Company for the largest possible income derivable from that Company under the most favourable circumstances. How does the worthy Chairman of the Croydon Company fulfil this sacred engagement, entered into by his predecessors? The columns of your excellent journal, will bear ample testimony. I hope, Sir, that as some set off for the series of misrepresentations relative to the Greenwich Railway toll, (which so far from being a *high* toll, is in fact the lowest in the kingdom, and on a line the most costly in existence,) which have appeared from time to time in your respectable journal, you will be pleased to permit the insertion of the foregoing, and oblige,

Sir, your obedient servant,
VERUS.

Tuesday, 20th April, 1841.

MANCHESTER AND BOLTON CANAL AND RAILWAY.

To the Editor of the Railway Times.

SIR,—It would be a great convenience to holders of shares in the Manchester and Bolton Canal and Railway, if the Directors of the Company were, with the statement of Railway income, also to furnish you with a statement of the Canal income; for the weekly returns in your most valuable paper, which information might very well appear in your note on that Company, No. 21, and instead of "the receipts given, are however those from the Railway only;" the conclusion of it would then be, *the receipts* from the Canal for the week are £——, this information is needful to enable the shareholders, distant from the Company's office, to judge of the welfare of the concern.

I would also observe, that the last dividend was at the rate of near 2*l.* 10s. per cent. per annum, and not 2*l.* 3s., being for the half-year 20s. per share on 83*l.* then called up.

A SUBSCRIBER.

Liverpool, 4th May, 1841.

THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY AND THE CHELTENHAM COACHMASTERS.

Continuation of correspondence.—Reply of Mr. Fleischmann to the answer of the Board inserted in our last.

George Hotel, Cheltenham, 30th April, 1841.

GENTLEMEN,—I have through your Secretary been favoured with a reply to mine of the 17th past, soliciting you to again allow me those privileges you have given others, but it appears you decline so doing.

I find frequent representations have been made to you respecting the irregularity of the omnibuses during the time four of them were admitted; it is a source of very great surprise to me that your Secretary never made a complaint to me on the subject, or even proposed or pointed out any plan for their better arrangement, *excepting* at the time when he informed me HE HAD (in consequence of the frequent complaints) made arrangements with Haines and Dangerfield to conduct the whole of the business.

I cannot but consider that since the opening of your line Mr. Burgess has shown every disposition to serve Haines and Dangerfield to my prejudice. If complaints were made, it appears he rather prevented them being communicated to me than *otherwise*, his aim throughout being to serve those who are now enjoying his patronage, or it would have been equally practicable to have made the same arrangement with the *four* proprietors as with *two*.

I beg respectfully to call your attention to *this fact*, that all complaints laid before you touching the omnibus business, have been *ex parte* statements, and I may say made with prejudice.

Seeking an inquiry into *my* statements, which if proved *not* to be correct, I will then withdraw my omnibus and consider myself *not entitled* to a share of your favours, but if on the other hand my assertions are not contradicted or proved to be false, I trust you will reject the prejudiced guidance of your Secretary, and allow me the same privilege as my competitors. Waiting your reply,

I am, your's, obediently,
J. B. FLEISCHMANN.

The Directors of the Birmingham and Gloucester Railway.

To the Editor of the Railway Times.

SIR,—As a reader of your paper, and an inhabitant of this town, I was induced to carefully read the letter of your correspondent in last week's number respecting the Birmingham and Gloucester Railway. I should qualify any remarks of mine by stating that I have not the paper at present before me, but am taking the first leisure moment to notice what appeared to me, at the time of perusing and carefully regarding the contents of the letter, to be penned by a very prejudiced, and probably an interested party. Having very frequently had occasion to go to and from the station, I can affirm that the omnibuses of the George and Fleece Hotels have always been well-conducted, and civilly served with driver and conductor, and if any disturbance or annoyance has been given to persons from the eagerness of the conductors to get them into their omnibuses, as far as my experience goes it has applied to the whole four equally the same.

As an enemy of monopoly wherever I meet with it, I must regard this act of the officers of the Railway Company alluded to as a most gross and unjustifiable one. I cannot suppose it to be the wish of the Directors to give such an unfair privilege of allowing this and that hotel liberty to send their omnibuses to the trains and excluding others belonging to other equally well-conducted establishments. As the best expression of the feeling of disinterested parties may be named, the fact of the excluded omnibuses carrying many more passengers, and I should suppose, earning for their proprietors more returns, than when they were admitted. However, I hope for the sake and character of the town the Directors will make an order for the admission of all upon equally fair and honourable terms, and then be strict in following their own laws for their good regulation, but not allow themselves to be guided from their strict path of duty by the representations of possibly *interested clerks* in their employ. Trusting that you will not consider this an intrusion, but again assuring you that it emanates from a totally disinterested party, I subscribe myself, Sir,

Your obedient servant,
A LOOKER-ON.

Cheltenham, April 28, 1841.

[We believe the writer of this letter to be, as he states, "a totally disinterested party," and think it but an act of justice to Mr. Fleischmann to give it a place.—ED. R. T.]

CHIPPENHAM.—We are sorry to state that a rather extensive slip of earth, causing a serious fracture of the new Culvert connecting the lands of Joseph Neeld, Esq., M.P., occurred a few days since, on the works of the railway near Foghamshire. It is fortunate that it will not delay the opening of the line to this town (where the station is fast approaching completion), but it must cause a considerable loss to the contractors.—*Wiltshire Independent.*

Digitized by Google

RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

SIR,—Instead of directly replying to any of your correspondents, I beg permission still to address myself to you. In so doing, "A Railway Shareholder" will not, I trust, for a moment suppose that I treat him with any disrespect. This method I adopt principally as being some check on the tendency to personalities, too apt to supervene in such discussions in spite of every wish to avoid them, but which are favourable neither to the elucidation of the subject, nor to the discovery of truth.

In answer to the intimation conveyed, Sir, in your own article, I must declare at once, that I neither am, have been, nor ever shall be, a Director. Not one of my relatives holds such an office. With respect to your remarks as to the salaries of Directors not having been complained of, or frequent changes recommended, I refer you at once to the "Railway Shareholder" himself. If any reader supposes that I wish to bolster up the present Directorial system, he is wholly deceived. My letter surely admits of no such construction. "A Railway Shareholder" and I, have in view the same objects—efficient directions—cheap directions—we differ in opinion only as to the *means* best adapted for securing these most important ends.

A much higher estimate has certainly been formed by me than by him of the qualifications required. He seems indeed to think that hardly any one can be found in the lists unequal to the duty. He admits the many gifts, natural and acquired, demanded for the successful prosecution of trade and commerce in their various branches, but railway Direction can be carried on by "as low an order of mind as any one occupation of civilised man. Not *well* indeed, but still carried on." What then, is he content to have his work *ill*-done? One is reminded of the opinions of the learned Dogberry,—"Who think you the most desartless man to be constable?—To be a well-favoured man is the gift of fortune, but to write and read comes by nature. You are thought here to be the most unable and fit man for the constable of the watch."—*Much Ado About Nothing*, Act 3, Scene 3. "A Railway Shareholder's" parallel of theatrical directors surprises me greatly; but I cheerfully adopt it. If any human vocation requires great qualifications of almost any kind, it is surely that of the manager of a playhouse. What knowledge, what ability, what vigilance, what tact are essential to success; and here rise up the mighty names of Garrick, Sheridan, Kemble, and how many others, whose great powers were taxed to the uttermost in theatrical direction. Neither do I think so contemptibly as he does of the successful venders of mutton pies and buttered potatoes. To persuade the close-peering, coy, shying, sniffing customer that old horse makes "a so called mutton pie," or that candle-ends and essence of cannon-balls make rich, rollicking, appetising buttered potatoes; this requires but a low order of intellect, does it? Indeed I do not think so. But I am ashamed to trifle on this serious subject, and will not so offend again.

If by Directors are meant merely men to hold a pen and sign heaps of papers shuffled before them by clerks, then "a low order of intellect" may well suffice for their office. But very different is my notion of a Director *as he should be*. Your correspondent says that Directors have to buy coals, oil, tallow, cotton waste, to provide engines and repair the roads, and then merrily observes, "these are the head and front of their mighty labours." To perform these labours well, however, requires the most efficient men. What qualifications do not the latter two only demand? What science, what economy, what knowledge of materials, of workmen, of the almost weekly improvements introduced? But all this is it seems done (God knows how) by secretaries, contractors, *et id genus omne*. Not a hundredth part by Directors. Is it so indeed? Now, on my system, not a hundredth part should be done by any body else. Neither "travellers over Europe, nor residents 200 miles off," will pass muster with me. "A Railway Shareholder" has drawn here a graphic and vigorous delineation of the existing Railway Directions. For a cure of this fatal system, my recommendation in my last letter is, I confidently submit, the only specific. The want of such Directions as I recommend, has been the cause of this ruinous and shameful state of things described by your correspondent.

Nothing, however, will, it seems, stay his pen but setting A B C doctors or Directors; "men of a low order of intellect," no doubt. This is his pet plan. I fear he is likely to write *currente calamo* for a very long time. The awakening of shareholders, to which he has so much contributed, will lead them to demand thoroughly efficient Directors. But Abcdarians are not such, though indeed quite good enough for the existing system.

On the subject of Auditors, we are, I rejoice to find, agreed. I adopt his proposal most fully here.

"A Railway Shareholder" concludes by saying that my letter weakens the case of the Directors now in office. Such was my object, and I am pleased to find that I have not wholly failed. He was startled by the broad enunciation of those round, general principles, which are, however, the only ones on which any great undertaking can be successfully conducted. He had himself been regarding the subject chiefly in its *details*. This is the only source of difference between us, for I am persuaded that he does in reality adopt in his reasonings the same general principles.

I now beg permission to offer my own ideas on the proper qualifications of Railway Directors. Being an executive they should be few in number. Captain Moorsom has, I think, recommended five, dividing the business into five departments—maintenance of way, locomotives, trains, finance, and the Chairman to exercise a general superintendance over the whole. Each of these Directors I would make answerable for the department assigned to him, so that there should be no shuffling off blame from one to another, and each should be liable to dismissal at any time, if found to be inefficient, or otherwise unworthy. Each should also make a separate annual Report for his department, and the Chairman a general one embracing the whole affairs of the Company. Now, according to this view of the subject, Directors should act as managing partners well skilled in the vocation. Thus, he in whose department was "maintenance of way," should understand natural history, (geology especially,) chemistry, mechanics. Such acquirements would be brought to bear on the subject with the utmost advantage. The present employés, it is to be feared, hardly regard such matters at all. Each Director should reside within three miles of the line. No Director should be on the Direction of more than one railway; he should be engaged in no private business; he should, in short, devote his whole time and powers to the railway on which he was employed. Auditors should be chosen annually from the share-lists; they should be thoroughly men of business—men of figures—men who could not be deluded by any specious representation, or have their imaginations run away with their judgments. On this system men of property would breed their sons to the business of Railway Direction, just as they now do to mercantile or manufacturing pursuits, and would educate them accordingly. Lads would take practical lessons on the line or in its offices. Shareholders once in possession of such Directors, will neither think of parting with them, nor of chaffering on a few pounds of salary.

On such principles of conducting their affairs, and on such only, will shareholders ever have any real control over them, or be independent of "Secretaries, Contractors, hole-and-corner men, or other subordinates." Professional Directors, as I describe them, would have a character to keep or gain—a valuable situation to retain or to lose; and moreover, in addition to all, a stake in the Company. The proceedings and accounts of such men, subjected to a vigorous *bona fide* audit, on the result of which their professional existence depended, would afford the shareholders a solid security for good management, of which at present they are wholly destitute; and the facilities enjoyed by such Directors for improving railway practice would no doubt be improved to the uttermost.

It may sound somewhat coarsely, but kick and plunge as shareholders may, to Directions formed on the principle I humbly advocate, must they consent eventually, or else see their property from year to year perishing before their faces. They must prepare themselves for a new era in railway history—for applying to railways the sound principles of private business. No men of straw, nor old women neither; no *faineants* paid for doing nothing, but accomplished energetic men of business, and the rather, as the interests entrusted to them are greater, and more difficult to conduct with advantage.

I am, Sir, your obedient servant,
C. D.

5th May, 1841.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Much is justly said and written on the necessity of diminishing the expense of working railways, if they are ever to become remunerative to the proprietors, and it must be admitted to be of *vital* importance in many railways, whose traffic is yet in an incipient state. I know of no line in which this important duty of Directors has been *so well* attended to as the York and North Midland, whose half-yearly expenses to the 1st January last, were little more than 28 per cent. on the gross returns, and the consequence was, that for the first half-year the line was opened, a dividend at the rate of 7 per cent. per annum, was declared, and a considerable sum remained for wear and tear. I find that since the month of February last, the receipts on that railway have averaged upwards of 1,250*l.* per week, which on a capital called of 334,500*l.*, and 190,500*l.* borrowed, will give a dividend of nearly 11 per cent., *allowing the same rate of working expense*, which I by no means admit to be the minimum to be attained. To those interested in a dividend from this line, the extra traffic of the two next summer months, and the profit to arise from the lease of the Selby line, promise better results than I have given. I call your attention to the above railway, in the hope that you will continue to use your able pen in showing other Directors that so enormous an annual deduction as 40 or 45 per cent. *ought not* to be any longer made by them, or tolerated by their *constituents*, if the latter so act as to make the term have any practical meaning.

I am, Sir, your obedient servant,
TENAX.

April 29, 1841.

RAILWAY BOARD REFORM.

To the Editor of the Railway Times.

SIR,—Amongst the various plans suggested by your correspondents for the improvement of Railway Management, there does not appear to be one that does not assume the necessity for a permanent Board of Directors. If, however, we look at the principal lines of canals, we shall find that however complicated and extensive the business may be, it is wholly and entirely confided to one individual, who is selected *chiefly* for his knowledge of and experience in canal management and engineering, and *partly* for his habits of business and other requisite qualifications. Some railways, the funds of which are inadequate for the support of a *permanent* Board of Directors, are also managed on the same system; and I believe it will be generally found that the business is conducted much better, and infinitely cheaper, than in those instances where the whole details are superintended by Directors; in fact, a divided responsibility is quite sufficient of itself to insure bad management—what then can be expected when the individuals composing the Board are selected from amongst the most wealthy?—the very circumstance which precludes their being good Managers, simply because they have no inducement to become such. I would, however, by no means wish to undervalue the ser-

Digitized by Google

vices of Directors. The presence of a Director operates as a powerful stimulus to good conduct and attention amongst the subordinates; but their *presence alone* is sufficient, and instead of being constantly engaged in all the petty details of management, let them each occasionally visit that part of the line nearest to their residences, and report to their Manager anything which at such times they might see going wrong, and above all hold themselves aloof from all interference in the appointment of persons to situations who are *known* to have no other qualification than that of having a friend at the Board. I do not expect that Directors would give up the patronage they enjoy—because if there were no patronage there would be no Directors; all I contend for is, that to insure proper subordination, *all* appointments ought to *appear* to be made by the Manager, and whatever influence the Directors might exercise in the way of serving their friends, it should never be perceived beyond the Board-room.

The Grand Junction is said to be the best managed railway in the kingdom, and I believe it was this where the Directors, finding what divided management would soon lead to, agreed amongst themselves to confide the entire outdoor business to one person, which having done, they have ever since scrupulously abstained from the slightest interference with the person to whom it was entrusted.

I am, Sir, yours very respectfully,

A RAILWAY ENGINEER.

28th April, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—As the *Railway Times* has now become the general medium for the circulation of all railway intelligence, may I beg of you to allow room in your next paper for the following remarks:—

Several letters have recently appeared in the *Railway Times* directing the attention of the shareholders to the present state and prospects of the Manchester and Leeds Railway. I entertain no doubt but the writers of these letters are like myself, desirous only of ascertaining what the present value of our stock really is. With this view I have lately referred to the Reports published by the Directors, a complete series of which I happen to have by me, and having done so, I must certainly confess my surprise at the present tendency of the public feeling with regard to our stock. I very much fear that the recent decline arises from unprincipled parties who, availing themselves of the present state of our traffic, endeavour to excite an undue prejudice against the railway, and then enter into speculations for a fall.

The following calculations, founded on the Directors Reports, and the published returns of traffic, appear to me to remove all just ground for despondency.

The traffic has since the opening throughout averaged 3,000*l.* and 3,500*l.* per week. I assume that this will average in the year 1841, 3,500*l.* per week, which will give		£182,000
The working expenses I estimate at 40 p r cent.		72,800
Total		£109,200
One year's interest on money already borrowed, say, 1,300,000*l.* at 5 per cent.	65,000	
Six months' interest on 160,000*l.* yet to be borrowed	4,000	
		69,000
		£40,200
Add surplus receipts during the partial opening, as shown in the Reports		31,481
Total		£71,681
There will be required to pay 5 per cent. on 13,000 old shares, 70*l.* paid, at 3*l.* 10*s.* per share	45,500	
And 5 per cent. on 13,000 new shares, 30*l.* paid, at 30*s.* per share	19,500	
		65,000
Leaving available for a reserved fund		£6,681

Then with regard to the future, if the experience of the London and Birmingham and Grand Junction Railways has any value in it, you will find, that taken together, these Companies have nearly doubled their receipts since they opened, so that you may at least expect a proportionate increase on the Manchester and Leeds.

My advice, brother shareholders, is this, "be of good cheer," and do not sacrifice your property to the "jobbers."

A SHAREHOLDER.

6th May, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—Permit me to direct your attention to an omission you have made in copying the Report of the Government Commissioners upon the proposed Railways into Scotland. I allude to what they have called "the conclusion," p. 65, in which they indicate a pretty decided opinion, that the west coast line will not "command much support as an "investment, from the general speculator;" and they add, that if it is not supported by the landowners (which is not very likely), not with a view to a remunerating dividend, but to the benefit of their estates—that then the East coast line "would, in our opinion, be entitled to the next preference."

This is a most important statement; and to those parties who are best acquainted with the two lines of country through which the East and West Coast Railways are proposed to pass, it is conclusive on the point, that the Report is *practically* in favour of the East Coast line. I trust that in your next paper you will publish the paragraph I have referred to, and call upon every well-wisher to Scotland to lend his aid in forwarding the East Coast line.

I am, your obedient servant,

AMICUS.

Edinburgh, 5th May, 1841.

FLORENCE AND LEGHORN RAILWAY.

WE present to our readers with much satisfaction an abstract of the Decree published on 27th April last in the *Gazette of Florence*, authorising the construction of the above important line of railway, which is to be commenced forthwith under the direction of our countryman, Robert Stephenson, Esq. The most important feature in this undertaking is one which redounds to the honor of the enlightened and liberal Tuscan Government, viz., the admission of the iron rails, locomotives, &c. (all which are to be supplied by this country) *duty free*. We have no doubt of this line proving hereafter but an integral part of a grand trunk railway from the south base of the Appenines throughout the whole of Tuscany and the Roman States to Naples, developing in a greater degree than ever yet known the commercial and agricultural resources of these fertile and charming countries, so much, and so deservedly, resorted to by English travellers.

A Supplement to the *Florence Gazette* of the 27th April, contains the Decree of H. T. and R. Highness, the Grand Duke of Tuscany, granting for the term of 100 years (to be reckoned from the time when it will be completed and opened to the public), the railway from Florence to Leghorn, to the Company announced by the Manifest of Fenzi and Senn of the 24th April, 1838, to be executed according to the Report of the celebrated English engineer, Robert Stephenson, Esq. His Imperial and Royal Highness graciously allows said railway to bear his royal name of "Leopold," and grants numerous advantages and privileges, among *others the importation duty free, of all the iron works, machinery, locomotives, and every other article required for its construction, and completely placing it in active operation*. The exemption from the Register Stamp due on all the deeds of the Company during the construction of the railway, the option of converting into perpetual leaseholds the amount of such lands as will be occupied by the Company, and which may belong to the State, or to religious corporations, and which from its nature should be subject to reinvestment. The right of expropriation fixed on a liberal basis, with the right of immediate occupation, and a low tariff for the transport of persons and goods.

The said Supplement also contains the schedule of the conditions of the grant to the Company, and the statutes of the same; and, lastly, a call for the first general meeting of shareholders to be held in Florence, the 7th June next, for the special purpose of electing the Council of Administration and the other officers of the Company. We have remarked that the branch from Leghorn to Pisa must be immediately completed and put in activity with the first instalment already collected and deposited, and that the Company is only obliged for the construction of the remainder of the road to Florence towards the Government, to prove *in two years*, that a second instalment of ten per cent. has been collected from the shareholders. We have also remarked that all the disbursements made by the shareholders bear interest at 4 per cent. until the road is completed, and that such interest will be paid, and the instalments reciprocally received in several cities of Europe, by bankers who will be named by the Council of Administration, and who will also be authorised to receive in deposit provisory shares so that every foreign shareholder who may own at least ten, may be represented at the general meetings of the Company. In order to provide for this object for the first general meeting, several banking and commercial houses have been authorised to that effect in Milan, Venice, Trieste, Vienna, Augsbourg, Geneva, Paris, and in London, Messrs. WILLIAM LEAF, CROFTS, & Co., in the hope that they will lend themselves to this voluntary trust, as for want of time they could not be consulted.

This undertaking presents very flattering prospects of success, arising not only from the concessions of the Tuscan Government, but more particularly from the uncommon facilities of its construction, the low cost of the iron and wood works which will be employed, owing to its importation, duty free, into the port of Leghorn, and the immense number of persons and quantity of goods travelling on this line; so that there is every reason to expect that it will prove one of the most prosperous railways in Europe.

RAILWAY ADJUDICATIONS.

MANSER V. NORTHERN AND EASTERN RAILWAY COMPANY.

Vice-Chancellor's Court, Saturday, May 1.—This was a motion to dissolve an injunction granted *ex parte* on the application of James Poulter Manser, the owner of a mill on the Hoddesdon stream, whereby the Northern and Eastern Railway Company were restrained from proceeding to build an intended bridge over the mill stream, having the soffit less that 7 feet 7 inches above the level of the water, or from driving any piles in the bed of the stream, or doing any act that might tend to contract the stream or obstruct the navigation. The point in dispute arose under the 31st section of the Company's Act, which contained the usual general provision, empowering them to enter the lands of any person where it might be necessary, to cross a river and to build bridges, &c., "doing as little damage as might be, and making full satisfaction to all persons interested in the lands for all the damage done." The Company had occasion to carry their line across the Hoddesdon stream near to a foot bridge, over which there was a public path leading to the plaintiff's mill. The plaintiff was the owner of the soil on one side of the river only, and made use of this part of it for the passage of barges to and from the mill. The height of the old foot bridge from the level of the water was about five feet, and the width of the river where it stood fifteen feet. The Company proposed to cross the stream in an oblique direction at another spot where it was 33 feet wide, and somewhat deeper, by means of a bridge with piles driven in the bed of the stream, but at such a distance as to leave a clear passage between the piles of 16 feet, and which, with the eight feet between each pile and the land afforded a clear waterway of 32 feet. This, the plaintiff alleged, upon the evidence of surveyors and bargemen, would greatly obstruct the navigation, prevent the removal of alluvial deposit, and subject his mill

Digitized by Google

to serious inconveniences and injury when the river became flooded, and insisted, that as the Company were compelled to build all the bridges on the Lea river, into which the Hoddesdon stream emptied itself 10 feet above the level of the water, he was entitled to have at least 7 feet 7 inches. The Company contended the bridge they proposed to construct would be much more convenient for the navigation, being higher, and affording a wider waterway than the old foot bridge. They were compelled to carry the railway across the stream somehow or other "doing as little damage as might be," and making compensation to the injured parties, and they conceived that a bridge whose soffit was 12 inches higher than the old foot bridge, with a draught of water of 32 feet instead of 15, was a liberal compliance with the provisions of the Act, as, if any injury were done to the plaintiff, he would be entitled to a full compensation; but they complained, that after the Act had defined the rights of the parties, and the negociations with the plaintiff had proceeded so far as to put him in possession of the intentions of the Company, he had pulled down the old foot bridge, and erected another with the soffit 7 feet 7 inches from the level of the stream, and affording a larger draught of water, and sought to compel the Company either to erect a bridge of the same increased dimensions, or extort from them larger terms for the alleged injury to his property. The concealment of this circumstance from the Court when the injunction was applied for *ex parte*, was a sufficient reason for dissolving it with costs, when it was shown that the Company were about to construct a bridge in every respect more convenient than the original foot bridge.

Mr. K. Bruce, Mr. Jacob, and Mr. L. Wigram appeared for the Company, and Mr. Wigram and Mr. Moore were the counsel for the plaintiff.

The VICE-CHANCELLOR said, the Company were certainly not doing a thing which by law they might not do if they made the proposed works under pressure of necessity, and doing as little damage to the plaintiff as possible. Now, it was contemplated that damage would be done by building the bridge in the manner proposed, but it did not follow because it was more to the advantage of the plaintiff to have the soffit 7 feet 7 inches from the level of the water, that of necessity the bridge must be of that height. The chief value of a navigation was to afford a direct communication with the main river, and the effect of the evidence amounted to an admission that some of the bridges on the Lea were not more than 6 feet high, which was the height the Company proposed to build the bridge in question. If this were so, his Honour did not see how the plaintiff could reasonably require the bridge to be built higher than those on the main river. In his opinion, therefore, it was competent to the Company to build the bridge of that height, and he thought it no reason, because the Act of Parliament expressly provided that all the bridges built by the Company over the Lea should be ten feet high, that they were obliged to build bridges of the same height over other streams which flowed into it. The Act required that the railway "should be made, doing as little damage as may be," and it was shown that if the centre of the bridge was higher than six feet, the embankment must be raised to the same level, if the railway were constructed on the present plan, which from the boggy state of the soil would be attended with very great danger. He did not therefore think, with respect to the height of the bridge, the Court was authorised in continuing the injunction. As to the draught of water, his Honour thought that if there were a clear passage of 32 feet for the water, by means of a waterway of 16 feet in the centre between the piles, and a passage left between either pile and the land of eight feet, it would be as ample and free a passage as existed at present; and that the plaintiff could not require more. If the Company, therefore, undertook to make the waterway of the width proposed, he thought the injunction ought not to continue. He did not think that the circumstance of the plaintiff's removing the foot bridge and building a more convenient one at all affected the case, or his rights under the 31st section of the act; and, as he thought there was quite enough *prima facie* case to justify the plaintiff asking the opinion of the Court, he should not give the costs of the motion.

THE QUEEN *v.* THE MIDLAND COUNTIES' RAILWAY COMPANY.

Bail Court, May 6.—Sir F. POLLOCK moved for a rule to show cause why the inquisition which had been taken on the body of Thos. Taylor, who was accidentally killed on the Midland Counties' Railway, should not be quashed, on the ground that certain words had been omitted—namely, in the following passage, "the said locomotive railway engine then was;" and this, "Thomas Taylor was thrown off," the words "suddenly stopped," or other words of a similar import, should have been inserted after the word "was."

Rule granted.

A similar rule was granted on a like omission in the inquisition on Richard Livesey.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

EASTERN COUNTIES' RAILWAY.

April 30.—Lords' Amendments agreed to.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

April 30.—Petition of James Dunlas against the Bill; referred to the Committee on the Bill; counsel ordered.

Lord Worsley (Lincolnshire), Mr. Winston Barron (Waterford), Colonel Salwey (Ludlow), selected, and added to the Committee.

May 6.—Petitions in favour—from Airdrie, Gorbals, and Glasgow (three petitions); to lie on the table.

Mr. Praed reported from the Committee on the Glasgow and Dundyvan Junction Railway Bill, that he was instructed by the Committee to move the House, that Robert Barlas, of Edinburgh, and George Lyon Walker, of Glasgow, do attend this Committee forthwith. Also, that George Crawford, writer in Glasgow, clerk to the Incorporated Trades of Glasgow, or other officer of the said Incorporated Trades, who has in his custody the plan of the lands of Tradeston, and others, belonging to the Trade's House of Glasgow, made by Thomas Richardson, land surveyor, which plan is referred to in the title deeds of George Lyon Walker and others, do attend this Committee forthwith, and produce the said plan.

Ordered, That Robert Barlas and George Lyon Walker do attend this House forthwith.

Ordered, That George Crawford, writer in Glasgow, clerk to the Incorporated Trades of Glasgow, or other officer of the said Incorporated Trades, who has in his custody the plan of the lands of Tradeston, and others, belonging to the Trades' House of Glasgow, made by Thomas Richardson, land surveyor, which plan is referred to in the title deeds of George Lyon Walker and others, do attend this House forthwith, and produce the said plan.

Committee on Bill adjourned till Monday, May 10th.

GREAT LEINSTER AND MUNSTER RAILWAY—(No. 2).

April 30.—Printed breviate of Bill laid on the table.

May 5.—Bill read a second time and committed, and referred to the Committee of Selection.

GREAT NORTH OF ENGLAND RAILWAY.

May 5.—Printed breviate of amended Bill laid on the table.

May 6.—Bill reported; amendments agreed to; clause added; Bill to be ingrossed.

LONDON AND GREENWICH RAILWAY.

May 6.—Printed Breviate of Bill laid on the table.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

May 5.—Report further considered; amendments agreed to; Bill to be ingrossed.

NORTH MIDLAND RAILWAY.

April 30.—Message from the Lords that they have agreed to the Bill without amendment.

POLLOC AND GOVAN RAILWAY.

May 3.—Petition of Magistrates and Commissioners of Police for the barony of Gorbals, against the Bill; to lie on the table.

Petition of the Provost, Baillies, and Councillors of Rutherglen, in favour; to lie on the table.

May 5.—To be read a third time on Friday.

May 6.—Petition from Airdrie, in favour; to lie on the table.

Petition of the Royal Incorporation of Hutcheson's Hospital in Glasgow, against; to lie on the table.

Mr. Lockhart, on third reading of Polloc and Govan Railway Bill, to move the following clause:—

Provided always, and be it enacted, That it shall not in any event be lawful for the said Company to carry across the said road a larger amount of traffic in any one day than 300 tons of goods, coals, or other articles, until the said road shall be carried over the said railway.

SHOTTS AND WILSONTOWN RAILWAY.

May 5.—Bill reported; Report to lie on the table and to be printed.

SOUTH-WESTERN RAILWAY (No. 2.)

April 30.—Bill read a second time and committed, and referred to the Committee of Selection.

Petition of Lessees of the common of Battersea and Wandsworth, for the introduction of clauses compelling the Railway Company to make good the injury done by them to the said common; referred to the Committee on the Bill.

Committee on Bill fixed for Thursday, 13th May.

HIGHLY IMPORTANT AND PEREMPTORY SALE.—Upwards of One Thousand Tons of Castings, chiefly in Machinery and Rolls for manufacturing Iron; Floor Plates, Foundry Boxes, &c.; likewise a valuable Engine-Turning Lathe, a large Iron Foundry Crane, Eight stout Oak Coal Boats, Two Iron Frigates, &c., at Tipton Old Church Iron Works, Tipton, Staffordshire.—To be Sold by AUCTION, by E and C. ROBINS and Co., on Monday next, May 10, and following Days, commencing each morning punctually at Eleven o'Clock, without reserve, at the above Works, upwards of 1,000 Tons of Steam-Engine Machinery, fixed and loose Rolls of all descriptions for the manufacturing Iron, two Forge Hammers, large and small Shears for various purposes, Slitting Mill Cutters, Floor Plates, Foundry Boxes, and other Castings; likewise, a valuable large Engine-Turning Lathe, complete; a powerful Iron Foundry Crane, with chains and pulley-blocks, equal to new; a large Punching Engine, with Fly-wheel, two Crab Windlasses, Lifting Jacks, Fairbanks and Co.'s Patent Weighing Machine, in perfect order; large Scales and Steelyards, Triangles with Winch, Iron Carriages and Trolleys, Foundry Patterns, several Tons of Puddling, Forge, and Mill Tools, large Forge Bellows, Anvils, Bick-Irons, Blacksmiths' Tools, Vices and Benches, several tons of Brass, seasoned Timber, &c. &c., also Eight substantial Oak Coal Boats, two Iron Frigates; Counting-House Furniture, Iron Chest, &c.

ORDER OF SALE.

Monday next, May 10th.—Various Articles of the Blacksmiths' and Cutters' Shops, large Turning Lathe, the Large Foundry Crane, Foundry Boxes, and various Castings in the Foundry Yard.

Tuesday next, May 11th.—Quantity of Cast and Wrought Iron, valuable Loose Machinery, Crab Windlasses, Slitting Mill Cutters, Water Boshes, &c.

Wednesday next, May 12th.—Quantity of Mill Brass, and various Articles of the Stock Taker's Office, remainder of the Loose Machinery, Weighing Machine, Scales, Pulley Blocks, seasoned Boards, and other valuable property; also the Eight Coal Boats and Two Frigates.

Friday, May 14th.—The Whole of the Extensive and Valuable Fixed Machinery, Cast Floor Plates, &c.; also the Furniture of the Offices.

Descriptive Catalogues are now ready, and may be had at the Counting House of the Works; the Hotel, Dudley; Swan, Wolverhampton; Talbot Inn, Stourbridge; Turk's Head Inn, Wednesbury; Limerick Inn, Great Bridge; Dartmouth Hotel, West Bromwich; Parrott's Arms, Oldbury; George Hotel, Walsall; the *Chronicle Advertising Office*, Shrewsbury; *Courant Office*, Chester; and of the Auctioneers, Birmingham.

To view the Machinery and Effects, apply to Mr. Jackson, on the Premises.

*** Some time in the month of June next, will be Sold the Three Steam-Engines, the whole of the Smelting and Heating Furnaces, strong Machinery, Timbers, and the remainder of the valuable Property of the above Works. Full particulars and time of Sale will appear in future advertisements.

Coaches leave Darlington immediately on the arrival of each Train, arriving in Newcastle in four hours.

The Train leaving London at 6 a.m. is the only Day Train through from London to Darlington, and passengers by it can be booked through to Derby and the North, only by the Train of the Birmingham and Derby Junction Railway.

Passengers to Wakefield, Huddersfield, Halifax, and the neighbouring towns, will, by the route *via* Derby, reach the Stations connected with those towns without quitting the Line of Railway, which they cannot do by any other route.

Passengers by the Trains leaving London at 8h. 0m. and 8h. 45m. A.M., and Derby at 2h. 15m. and 4h. 0m. P.M., must in each case be re-booked at Hampton.

A Coach to Lichfield runs from the Tamworth station every day (except Sunday) on the arrival of the Trains leaving London at 8h. 0m. and 8h. 45m. A.M.; and this Coach leaves Lichfield every morning (except Sunday) at 8 o'Clock, arriving at the Tamworth Station in time for the first Train from Derby, which reaches London at 3h. 15m. P.M.

By Order,

THOMAS KELL, Secretary.

BIRMINGHAM AND GLOUCESTER RAILWAY.—At a Special Meeting of the Proprietors in the Birmingham and Gloucester Railway, holden at Dee's Royal Hotel, Birmingham, on Tuesday, the 4th day of May, 1841,

Captain C. R. MOORSOM, R.N., in the Chair.

It was resolved—That the Directors be empowered to raise the sum of 175,000*l.*, in 10,000 portions of 17*l.* 10s. each, and to issue scrip for the same, numbered one to ten thousand.

That every registered Proprietor in the Birmingham and Gloucester Railway Company shall be entitled in respect of each Share holden in the undertaking on the 4th day of May, 1841, to the option of taking one of the new scrip, provided that the intention of taking such scrip be signified to the Company in writing, and a first instalment of £2 10s. in respect thereof be paid on or before the 25th day of May instant at the Bank of the Birmingham Banking Company in Birmingham.

That any scrip not taken under the foregoing resolution, together with the five hundred which will remain after providing one scrip for each of the nine thousand five hundred shares in the undertaking shall be sold by the Directors, for the benefit of the Company, in such manner as is prescribed by the Act of Parliament incorporating the Company, in respect of sales of forfeited shares.

That payment of the remaining part of the said sum of £17. 10s. in respect of each Scrip shall be made by the instalments hereafter mentioned, at the Bank of the Birmingham Banking Company in Birmingham, and upon any instalment not paid on the appointed day, interest after the rate of 5 per centum per annum shall be charged and payable.

1841.—August 25th,	Second Instalment	..	£5	0	0
November 25th,	Third	"	.. 5	0	0
1842.—February 25th	Fourth	"	.. 5	0	0

That any Proprietor of scrip shall be at liberty to pay any of the above instalments in advance; and in that case shall be allowed interest thereon at 5 per cent. from the day on which the payment is made.

That in case any instalment shall remain due for the space of one month after the day appointed for its payment, the scrip upon which such instalment shall remain unpaid shall thereupon be absolutely forfeited, with all payments previously made, and the Directors in that case shall be empowered to issue other Scrip in lieu of that which has been forfeited, and dispose of the same for the benefit of the Company, in such manner as is hereinbefore directed in respect of the scrip not taken up.

That the Directors be empowered to apply to Parliament for an Act to enable them to create 10,000 quarter shares of £25 each. That the registered Proprietor, or in case of transfer, the holder of each scrip shall, within six months after such Act shall be obtained, receive one of such quarter shares, in exchange for the scrip, and until then, interest after the rate of 5 per cent. per annum shall be paid on each instalment, from the day on which it is made; the first payment of interest to be made on the 25th day of May, 1842, and after that period by half-yearly payments.

That if no Act of Parliament be obtained for the creation of the 10,000 quarter shares on or before the 25th day of May, 1843, the registered Proprietors, or holders of the scrip, as the case may be, shall from that day be entitled, at their option (such option being declared in writing, on or before the 25th day of June, 1843) either to continue the receipt of interest, at five per cent., on the £17 10s. paid, until an Act shall be obtained, or to share with the original Proprietors the profits of the undertaking. Each scrip, on such division of profits, being reckoned as a quarter share, on which £25 shall have been paid.

That the name of the original holder of each scrip shall be entered in a book to be kept by the Company for that purpose, and be considered as its Proprietor until the scrip be produced to the Company, with an indorsement thereon, signed by the original holder, in the words or to the effect following:—

"Transfer my interest in the within scrip to the bearer."

And on any such indorsement being made, the holder of the scrip for the time being shall be considered as its Proprietor by the Company.

That should the Directors be enabled to borrow any further portion of £60,000, authorised by the last General Meeting to be raised upon loan notes, then that they be requested not to dispose of the 500 surplus scrip, and the scrip not taken up, or such portion thereof as the amount of moneys borrowed would supply.

That the following form of scrip be adopted, and the seal of the Company affixed thereto, with the counter-signature of the secretary:—

BIRMINGHAM AND GLOUCESTER RAILWAY.

Scrip, £17 10s. 0d. *No.*

The registered Proprietor of this scrip, or its transferee, will be entitled, on payment of the remaining sum of £15, at the Bank of the Birmingham Banking Company, in Birmingham, by the instalments hereinafter mentioned, to all the benefits and advantages conferred by the resolutions passed at the Special General Meeting of the Proprietors of the Birmingham and Gloucester Railway, holden on the 4th of May, 1841.

Second Instalment,	August 25, 1841	..	£5	0	0
Third ditto	November 25, 1841	..	5	0	0
Fourth ditto	February 25, 1842	..	5	0	0

N.B.—If any one of these instalments shall remain unpaid for one calendar month after the day above mentioned for its payment, the scrip will be absolutely forfeited with all moneys previously paid thereon.

Any registered Proprietor wishing to part with this scrip, must sign the indorsement on the back, in the presence of an attesting witness, after which the Company will recognise the bearer of the scrip as the Proprietor.

(FORM OF INDORSEMENT.)

To the Directors of the Birmingham and Gloucester Railway Company.

Transfer my interest in the within scrip to the bearer.

Witness

(Signed) C. R. MOORSOM, Chairman.

TO RAILWAY CONTRACTORS.—To be Sold 140 2½-yard capital EARTH WAGGONS, 36-inch wheels, 3¼ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, and six years at the option of the lender. Interest warrants, calculated at the rate of £5 per cent. per annum, and payable at the Company's Bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater & Heelis, Princess street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841,
43, Piccadilly.

MANCHESTER AND BIRMINGHAM RAILWAY.—CONTRACTS FOR WORKS.—Notice is hereby given, that on and after the 13th of May inst., the plans, specifications, and draft contract, for the erection of the Station at Manchester, for passengers and goods, with the approaches thereto, will be ready for inspection at the Engineer's office, in Manchester; and notice is hereby also given, that the Directors will meet at their offices, No. 43, Piccadilly, Manchester, at twelve o'clock at noon of Saturday, the 22nd of May instant, to receive Tenders for the same. Abstracts of the quantities of work, and printed forms of tender, will be furnished.

Tenders must be sent in by 12 o'clock on the 22nd of May, after which no tender will be received. They must be under a sealed cover, addressed to the Chairman, and endorsed "Tender for works," and no tender except upon the printed form will be attended to. The Directors do not bind themselves to accept the lowest tender, and they require the parties tendering to attend personally at noon, on the above named day of meeting.

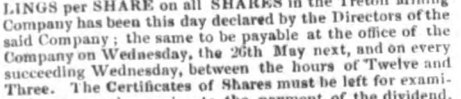
THOMAS ASHTON, Chairman.

Railway Office, Manchester, May 1st, 1841.

NORTHERN AND EASTERN RAILWAY. Call of Ten Pounds per share. NOTICE is hereby given, That the Directors of this Company have made a Call of £10 per share, payable on or before the 31st day of May next, and the shareholders are requested to pay the same to either of the following bankers, viz:—

London—Messrs. Masterman and Co.
Manchester—B. Heywood and Co.
Liverpool—Heywood and Sons.
Cambridge—Fisher and Sons.

Interest at the rate of five per cent. per annum will be charged on all sums which remain unpaid after the day above appointed.



WILLIAM CRAWSHAY, Chairman.
WM. BOURNE, Secretary.

London, Shoreditch, 3rd May, 1841.

TRETOIL MINING COMPANY.—Notice is hereby given, that a DIVIDEND of TEN SHILLINGS per SHARE on all SHARES in the Tretoil Mining Company has been this day declared by the Directors of the said Company; the same to be payable at the office of the Company on Wednesday, the 26th May next, and on every succeeding Wednesday, between the hours of Twelve and Three. The Certificates of Shares must be left for examination seven days prior to the payment of the dividend, and the books of the Company will be closed from the 15th to the 26th May, both days inclusive.

By order of the Board of Directors,
S. BUXTON, Secretary.

Tretoil Mining Company's-office, 6, St. Mildred's-court, Poultry, April 21, 1841.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic pistol, with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.
Planing machine; works by hand, will plane 5 feet by 18 inches.

TO CAPITALISTS.—WANTED by a Gentleman manufacturing largely for Railway Companies and others, and having an excellent connexion, a Sleeping Partner, who can command not less than £4,000. The most satisfactory references, &c. can be given.

Apply by Letter, A. D., at the *Railway Times* Office.

Digitized by Google

TAFF VALE RAILWAY.—NOTICE is hereby given, That the RAILWAY is now OPEN from Cardiff to Merthyr for the Conveyance of Passengers and Goods. The times of departure and arrival of the Trains will be as follows until further notice:—

UP.

	H.	M.
From Cardiff—		
8 morning, arrives at Merthyr.....	9	25
11 " " " (mixed train) ..	12	45
3 afternoon " "	4	25

DOWN.

From Merthyr—		
8 20 morning, arrives at Cardiff.....	9	45
11 35 " " (mixed train)..	1	20
3 20 afternoon " "	4	45

On Saturdays an additional Train leaves Cardiff at 5h. 30m. afternoon, and Merthyr at 6h. afternoon.

The mixed train, for goods and second and third class passengers, at 11 o'clock, from Cardiff, and 35 minutes past 11 o'clock from Merthyr does not run on Sundays.

Goods may be sent from the several stations by the mixed train, provided they are delivered two hours previous to the departure of the train.

STAFFORDSHIRE POTTERIES.—PHENIX IRON FOUNDRY TO BE LET with immediate possession.—The above newly erected Iron Foundry, lately in the occupation of Messrs. Thomas Edwards and Company, is situated on the banks of the Cauldon branch of the Trent and Mersey Canal, near Hanley, in the centre of the important manufacturing district of the Staffordshire Potteries.

The premises are extensive, and the buildings conveniently arranged for carrying on a very extensive business, for which there is an advantageous opening.

The foundry has been recently fitted up with a steam engine of 12 horse power, boring and turning lathes of the best construction, and machinery and fixtures of every description, and with the general business might be advantageously combined, manufacturing of locomotive engines for which the premises are admirably adapted, coal is got in the immediate neighbourhood and is cheap and plentiful, and the above canal affords a cheap mode of conveyance to all parts of the kingdom.

For further particulars, or to treat for the same, apply to Messrs. Ward, Son and Leman, Solicitors, Newcastle-under-Lyne.

NOTICE TO CONTRACTORS.—SHANNON COMMISSION.—In consequence of the parties with whom the Commissioners were in treaty for the execution of the works on the Lower Shannon having declined the same, the Commissioners will receive TENDERS from such persons who may be desirous to execute any or all of the Piers and Landing Wharfs, at the undermentioned places:—

County Clare—Querin; Kilrush; Kildysart.
County Limerick—Kilterry.

According to the Plans and Specifications which may be seen at the Commissioners Office, in Dublin.

The quantities of each description of work will be furnished by the Commissioners' Engineer, and upon such quantities the Tenders are to be prepared, the persons so tendering satisfying themselves as to the accuracy of the calculations.

No Tender will be received unless the printed Schedule of Prices shall be properly filled in.

Forms of Tender with specification can be obtained on application to the Secretary.

Security for the due performance of the work will be required, also a separate Tender for each work.

The Commissioners do not bind themselves to accept the lowest, or any tender.

Sealed tenders addressed to the Secretary, marked "Tender for Works, Lower Shannon," to be delivered on or before the 15th day of May next, at 12 o'clock noon, after which day and hour none will be received.

By Order,
EDWARD HORNSBY, Secretary.

Shannon Commission Office, Custom-house, Dublin, 30th April, 1841.

PATENT MANUFACTURE.—An excellent opportunity offers itself to any person disposed to embark in the Manufacture, under Patent, of an article in extensive demand; the present cost of which will be reduced by the patent process upwards of 50 per cent. For the purchase of the entire Patent Right, and the fitting up of the requisite manufacturing machinery, £5,000 will be required.

Letters from principals to be addressed to M. M., care of Mr. Robertson, Patent Agency Office, 166, Fleet-street.

HANCOCK AND PETTIT'S PATENT RAILWAY CONTROULER.—A Model Railway and Carriages, worked by Steam Power, exemplifying the manner of applying this most effectual method of arresting the progress of Railway Trains, independently of the Engine-driver or Guard, may be seen Daily, between the Hours of Twelve and Four, at the Zinc Works, No. 55, Parliament-street.

"Better calculated to effect the desired object than any other which has come under our notice."—*Railway Times.*

Applications for Licences to use, to be made to Mr. Walter Hancock, Civil Engineer, Stratford, Essex.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, I.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 130 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone: other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act to Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.....	55s.
Beer, Hides, Soap, Sugar, &c.....	60s.
Raw Coffee, Rice, Earthenware in Crates, &c. ..	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.....	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.....	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Compan

BASTENNE BITUMEN COMPANY.—At the adjourned General Meeting of this Company, held at the Company's Offices, on the 4th inst., the Committee appointed to report specially upon the affairs of the Company, not being prepared to make such Report to the Proprietors, a further Adjournment took place to Tuesday the 11th day of May, when it is hoped a favourable Report of the prospects of the Company will be received; at which General Meeting the attendance of every Shareholder is earnestly urged. The Meeting will be held at the King's Head, Poultry. The Chair will be taken at One o'clock precisely.

By Order of the Board.
2, St. Mildred's-court, Poultry.
th May, 1841.

TO CONTRACTORS AND OTHERS.—FOR SALE, by Private Contract, 50 capital Earth Waggons to carry 1¼ yards, with 2-ft. wheels, of the best construction. Also, a quantity of parallel rails, about 30lb. per yard, with Chairs and Crossings. Three portable Steam Engines, of 8, 10, and 14-horse power respectively. Several powerful Cranes. Two cast-iron Diving Bells, with Air Pumps, and the requisite gear: together with some excellent blocks, chains, &c. The whole conveniently situated for water conveyance.

Apply to Mr. Radford, 87, Upper Ground-street, Blackfriars road, London.

TO CONTRACTORS, WHARFINGERS, CORN AND COAL MERCHANTS, and OTHERS.—Twenty Useful Seasoned Cart Horses,—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, May 14, 1841, commencing at One o'Clock precisely, TWENTY useful, seasoned, powerful, active CART HORSES, being a further portion of the large and excellent Stock of Mr. Betts, of Leicester, that have been employed on the Midland Counties' Railway, and sold in consequence of the contract on which they have been working being now completed.

Colours—Bays, Blacks, and Browns.

☞ The above lot of seasoned draught Horses are worthy the attention of Wharfingers, Warehousemen, Cord and Coal Merchants, Contractors, Agriculturists, and all persons wanting them for immediate work, having just completed the above contract, and being now in excellent condition.

On view and catalogues had two days before the sale.

GREAT WESTERN RAILWAY.—VERY IMPORTANT TO RAILWAY CONTRACTORS.—Extensive Sale of Railway Plant, now in use on Contracts Nos. 5 and 6, C., near Wootton Bassett and Christian Malford. Mr. HUNT has received instructions to sell by public AUCTION, without the least reserve, about the first week in June, all the very useful and extensive Plant of Railway Materials belonging to the Contractor, who will have completed a distance of seven miles on the above line of Railway, in the course of a few weeks from the date hereof, comprising more particularly 200 Waggons, (half of which are nearly new); 150 tons of Railway Bars; 70 Iron Crossings; 40 tons of Chairs; 10,000 Sleepers; 3,000 Wheeling Planks; 700 Wheelbarrows; 70 sets of Bridge Centerings, of various sizes; 9,000 feet of Legging for ditto; quantity of Timbers such as Uprights, Wall-plates, Sills, &c. &c. Several sets of Materials for Brickmakers' Moulds; 2 sets of Blacksmiths' Tools, complete; 10 Pug Mills, for grinding clay and mortar; a good six-inch wheel Timber Carriage; quantity of Bricklayers' Scaffolding; 100,000 Bricks; 10,000 Pantiles; a large Water-butt; and a variety of other unmentioned effects.

Due Notice of the Sale with further particulars will appear in handbills and future advertisement.

Wootton Bassett, April 17, 1841.

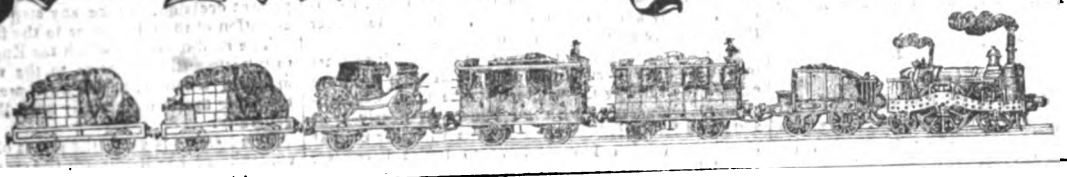
IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—From the

SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver, 10s. 6d. each pair.



Omnibuses to and from every train—Fare 6d.

RAILWAY CLOTHS.—ORCHARD and CO., MARQUEE, TENT, and RICK CLOTH MANUFACTURER, 5, WEST SMITHFIELD, LONDON, beg to recommend to Railway Companies, Waggon Proprietors, and others, their much improved Waterproof Cloths, expressly made for Railway Trucks and Waggons, which, for lightness and flexibility, surpass anything of the kind ever before offered to the public. Rick Cloths, Marquees, and Tents, of all sizes. Black Composition Paint for Outbuildings, 12s. per cwt. Orders per post duly attended to.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, May 8th, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another: to which, let me add knowledge and freedom."—Bishop Hall.

No. 176. Vol. IV.—No. 20.] SATURDAY, MAY 15, 1841. [Price, 6d.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, and for a term of not less than Three Years, and to Grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's Bankers in London and Birmingham, will be delivered to the Lender with the mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office, in Waterloo Street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton Street, London; or to Messrs. Laurence, Cazenove, and Pearce, Auction Mart, London.

By order,

THOMAS KELL, Secretary.

Dated this 14th day of March, 1841.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER (late of Humbers' Wharf), having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required; and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 2s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 4s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times.

TO RAILWAY COMPANIES.—WANTED by a Young Man 30 years of age, a Situation to attend to the Guards' Timepieces and Clocks, keeping them in Repair, &c. Has no objection to work at a Station, and to fill up his time at any thing else. He has been employed in making and repairing Guards' Timepieces for nearly the last five years.

Address to J. Hickling, Watch and Clock Maker, No. 2, Upper Rosoman-street, Clerkenwell, London.

TO BUILDERS AND OTHERS.—The Directors of the Northern and Eastern Railway Company will meet on Thursday, the 27th instant, at Ten o'Clock precisely, to open Tenders for the construction of Stations at Roydon and Harlow.

Plans and Specifications are in possession of the Company's Engineers, who will meet the parties wishing to Tender, at 24, Great George-street, Westminster, on Monday, the 17th instant, at Ten o'Clock, to appoint persons to take out quantities.

WM. BOURNE, Secretary.

Shoreditch, London, 13th May, 1841.

TO RAILWAY CONTRACTORS.—To be Sold, 160 24-yard capital EARTH WAGGONS, 36-inch wheels, 24 inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—Tender for Loans on Debentures.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than 200*l.* for terms of four, six, or ten years, on interest at the rate of 5 per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,

A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of 17,000*l.* per annum, payable half-yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

MANCHESTER AND BIRMINGHAM RAILWAY.—CONTRACTS FOR WORKS.—Notice is hereby given, that on and after the 13th of May inst., the plans, specifications, and draft contract, for the erection of the Station at Manchester, for passengers and goods, with the approaches thereto, will be ready for inspection at the Engineer's office, in Manchester; and notice is hereby also given, that the Directors will meet at their offices, No. 43, Piccadilly, Manchester, at twelve o'clock at noon of Saturday, the 22nd of May instant, to receive Tenders for the same. Abstracts of the quantities of work, and printed forms of tender, will be furnished.

Tenders must be sent in by 12 o'clock on the 22nd of May, after which no tender will be received. They must be under a sealed cover, addressed to the Chairman, and endorsed "Tender for works," and no tender except upon the printed form will be attended to. The Directors do not bind themselves to accept the lowest tender, and they require the parties tendering to attend personally at noon, on the above named day of meeting.

THOMAS ASHTON, Chairman.

Railway Office, Manchester, May 1st, 1841.

PATENT MANUFACTURE.—An excellent opportunity offers itself to any person disposed to embark in the Manufacture, under Patent, of an article in extensive demand, the present cost of which will be reduced by the patent process upwards of 50 per cent. For the purchase of the entire Patent Right, and the fitting up of the requisite manufacturing machinery, £5,000 will be required.

Letters from principals to be addressed to M. M., care of Mr. Robertson, Patent Agency Office, 166, Fleet-street.

TO RAILWAY DIRECTORS, ENGINEERS, CONTRACTORS, &c.—A Young Man from Scotland, of respectable connections, who has been employed as Assistant Engineer in the construction of a Railway recently completed, is desirous of forming a new engagement as Assistant to an Engineer or Contractor, or as Superintendent of a Railway Station. References to Engineers of eminence.

Apply by letter, addressed to P., care of the Publisher of the *Railway Times*.

BASTENNE AND GAUJAC BITUMEN COMPANY.—At the ADJOURNED MEETING of this Company, held at the King's Head Tavern, in the Poultry, on Tuesday, the 11th day of May, 1841, the Committee appointed by the Shareholders, on the 23rd day of April last, to examine into the accounts and the general prospects of the Company, presented their Report, and which now lies at the Office of the Company for the perusal of Shareholders.

It was resolved,—That the shares upon which default in payment of the second call of 10s. per share has been made be absolutely forfeited, unless such second call shall be paid within 14 days from the date hereof.

It was resolved,—That Mr. James Johnson and Mr. Henry Walker, two of the gentlemen of the Committee, be elected Directors of the Company.

It was also resolved,—That the meeting should be adjourned until Wednesday, the 26th instant, to receive the Report of the Directors as to the number of shares on which the call has been paid.

The shareholders are therefore requested to pay the second instalment of 10s. per share into the Union Bank of London, No. 8, Moorgate-street, London, to the credit of the Bastenne and Gaujac Bitumen Company, on or before Tuesday, the 25th instant, and to exchange the £3 certificates for those of £3 10s. Those shareholders who have not paid the first call of £1 per share, will be allowed to do so, if application be made at the Office of the Company, on or before the 25th instant.

It being found inconvenient to hold the meeting on the 26th instant, the same will be held on Wednesday, the 2nd of June, at the King's Head, Poultry, at One o'clock precisely.

By Order of the Board,

R. FOULERTON, Managing Director.

7, St. Mildred's-court, May 11th, 1841.

RAILWAY RETURNS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 3 and 4, Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

(Continued from page 502.)

BRANCH II.

Return of every Railway, or Portion of a Railway, which shall have been opened for the Conveyance of Passengers and Goods, after Inspection by Persons acting under the Provisions of the Act 3 & 4 Vic., c. 97; specifying any Railway, or Portion of a Railway, which shall have been reported to the Committee of Privy Council as unfit to be opened, but which nevertheless shall have been opened; and what (if any) proceedings shall have been adopted by the Committee of Privy Council, either before or subsequent to such openings.

1.—Return of every railway or portion of railway which shall have been opened for the conveyance of passengers and goods, after inspection by persons acting under the provisions of the Act 3 & 4 Vic., c. 97.

Birmingham and Gloucester Railway, portion between Cheltenham and Gloucester.

Great Western Railway, portion between 63rd and 80th mile from London.

Birmingham and Gloucester Railway, portion between Campbill and Cofton.

Eastern Counties' Railway, second line of rails between Romford and Brentwood.

Leeds and Manchester Railway, portion between Littleborough and Hebden Bridge.

Bolton and Preston Railway, portion between the Junction with the Manchester and Bolton Railway and Barton's lane.

2.—Railway or portion of railway which has been reported to the Committee of Privy Council as unfit to be opened, but which nevertheless shall have been opened.

Birmingham and Gloucester Railway, portion between Camphill and Cofton.

3.—Proceedings adopted by the Committee of Privy Council either before or subsequent to the opening of such railways.

This Return will be best complied with by giving the subjoined copies of the Reports of inspectors appointed by the Committee of Privy Council, and of the correspondence which has taken place relative to the opening of railways.

1.—REPORT OF CAPTAIN MELHUISH ON BIRMINGHAM AND GLOUCESTER RAILWAY, ADDRESSED TO THE LORDS OF THE COMMITTEE OF PRIVY COUNSEL FOR TRADE, WHITEHALL.

London, 5th November, 1840.

My Lords,—In pursuance of your instructions, under date the 15th October, directing me to inspect a portion of the Birmingham and Gloucester Railway, and to report to your Lordships my opinion whether it is in a fit state to be opened for public traffic, I lost no time in communicating with the Secretary of the railway Company on the subject, and on the 21st proceeded to Cheltenham for the purpose of carrying your Lordships' instructions into effect.

Impressed with the spirit of those instructions not to throw a damp upon an enterprise, which involves interests of such magnitude, without a sufficient cause, and at the same time with the importance of them, after the numerous appalling accidents that have lately occurred, not to allow anything to pass unnoticed which, in my clear and decided judgment, ought to be considered dangerous and improper; I have the honour to report to your Lordships as follows:—

The cuttings, embankments, bridges and culverts, &c., of this portion of the railway, extending from Cheltenham to Gloucester, a distance of six miles and a half, were constructed at the expense of the Great Western Railway Company, under the direction of their Engineer, Mr. Brunel; but being empowered under the provisions of the Act, should the Great Western Company find it inexpedient to continue the same, to dispose of it to any other Railway Company, this portion of the line has lately changed hands, and is now in the possession of the Birmingham and Gloucester Company.
